Unemployment in Trade Unions at the close of January, 1943

UNEMPLOYMENT in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only, to the organizations reporting.

At the close of January reports were tabulated from 2,276 labour organizations, having a total membership of 403,331 persons. Of these 5,898, or a percentage of 1.5 were without work, in comparison with percentages of 1.2 in December and 4.3 in January a year

ago. The percentage of unemployed members in trade unions advanced slightly over that of December, thus reflecting a minor employment recession. This slightly adverse trend was due in a large measure to a further moderate seasonal decline in work for union members in the building and construction trades, and to the slightly lower employment level for union members in the manufacturing industries. As will be seen in Table II, the percentage of unemployment for building and construction members was up from 5.1 to 6.2, while in the manufacturing group the corresponding percentages were 0.5 and 0.9. These decreases in available work were offset to some extent by the slightly better conditions, prevailing among the members in the transportation industries, in which the percentage of members without

work declined from 1.9 to 1.3. Employment conditions in trade unions in January were better than in any corresponding month since this report first appeared on a monthly basis, for the month of January 1919. From December, 1915 to the close of 1918, the return was made at the close of each quarter, only.

In Table I the unemployment percentage is shown for each province. In January, these percentages ranged from 0.4 in Nova Scotia to 2.7 in Manitoba. Slightly higher employment levels than those of December were manifested in Ontario, Alberta, Saskatchewan and New Brunswick. In Nova Scotia and Manitoba there were very slight declines in work while in Quebec and British Columbia there were mod-

and Edmonton. In Montreal the percentage of members shown as without work remained unchanged at 1.1. On the other hand, Halifax, Toronto, Winnipeg and Vancouver union members indicated slight employment recessions. In comparison with the situation in January, 1942, marked employment increases were reflected in Toronto and Edmonton. Substantial expansion was observed, likewise, in Halifax, Montreal, Winnipeg, Regina and Vancouver, while in Saint John there was a slight improvement, only.

The accompanying chart shows the trend of unemployment from January, 1937, to date. The point of the curve in January, 1943, rested at a slightly higher level than at the close of the previous month, thus reflecting a minor

Per
cent. PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Per
cent

erately lower employment levels. As compared with conditions at the end of January, 1942, pronounced employment expansion was apparent in every province with the exception of New Brunswick, where there was a slight decline only, in available work.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployed members ranged from 0.8 in both Regina and Edmonton to 3.0 in Winnipeg. Cities in which less than one per cent were without work were Halifax, Toronto, Regina and Edmonton. In comparison with the previous month, very slight employment advances were apparent in Saint John, Regina

and Edmonton. The level of the curve was a substantially lower point than in January a year ago, however, which was indicative of a much higher employment level for the period under review.

In the manufacturing industries 777 returns were tabulated, having a total membership of 222,525 persons, of whom, 2,094, or a percentage of 0.9 were without work, in comparison with percentages of 0.5 in December, 1942, and 3.1 in January, a year ago. In comparison with December, much better conditions prevailed for leather workers, as the unemployment percentage declined from 7.1 to 3.9. Among butchers, meat and fish packers also there was some improvement; the percentage of members without work in this trade was down from 3.2

to 1.8. Slight expansion only, was in evidence among hat, cap and glove, and clay, glass and stone workers; there was little or no unemployment among these members. Unions in which all of the members were reported as employed at both dates were soft drink workers, cigar and tobacco workers, electric current employees, textile and carpet, rubber, jewellery, aluminum and mineral products workers, etc. Although very little unemployment was manifested among bakers and confectioners and fur workers, there were, however, in both cases, very slight employment contractions. Among the larger organizations such as the printing and publishing groups, the garment workers group, which includes both men's and women's clothing workers and the iron and steel group, the percentages of unemployment were 1.6, 0.6 and 0.2, respectively; each of these reflected a slightly lower employment level. The percentage of unemployed members among paper makers increased from 0.5 to 2.0, while for unclassified manufacturing workers there was a substantial decline in activity; the percentage of these workers, who were reported unemployed stood at 11.5, in comparison with 6.9 in December. Among woodworkers there was a pronounced employment contraction; the unemployment percentage standing at 6.2, while among metal polishers, etc., although there were not many members involved as the membership is not large, the percentage of unemployment increased from 14.2 to 27.7. In contrast with the situation in January, 1942, as will be seen in Table II, employment for union members in both the garment and iron and steel trades was at a considerably higher level. The percentages of unemployment among the smaller organizations of leather and fur workers, were 3.9 and 0.8 respectively. These percentages were very much lower, thus, reflecting pronounced employment expansion. Union members who were employed at both dates included cigar and tobacco workers, electric current employees, etc., textile and carpet, and mineral products workers.

Reports were tabulated from 57 unions of coal miners having a combined membership of 20,390 persons, all of whom were employed, as compared with percentages of unemployment of 0.1 in December and 1.0 in January, a year ago. Union members in Nova Scotia, New Brunswick and British Columbia did not report any unemployment in either December or January, while in Alberta all members were employed in January, in comparison with an unemployment percentage of 0.3 in the preceding month. In comparison with conditions in January, 1942, union members in British Columbia indicated an appreciable improvement, as the entire membership was employed,

while in January, a year ago, the unemployment percentage was 3.9. In Nova Scotia, also, there was no unemployment as compared with 0.9 per cent. A very slight employment increase was observed in Alberta, while in New Brunswick there was no unemployment indicated at either date.

Returns were received from 8 unions of non metallic mineral workers. The total membership was 4,144, of whom, 210, or a percentage of 5.1 were without work, in comparison with percentages of 4.7 in December and 8.5 in January a year ago.

Unions in the building and construction trades returned 219 reports having a total membership of 35,003 persons, of whom, 2,185, or a percentage of 6.2 were without work in comparison with 5.1 per cent in December and 14.2 per cent in January, 1942. As compared with the previous month, steam shovel men, plumbers and steamfitters and electrical workers' reflected very slight betterment; little or no unemployment was reflected in these reports. Bridge and structural iron workers did not indicate any unemployment at either date.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1932	9.6	14.4	26.4	23.7	20.0	15.8	22.6	21.6	22.0

The unemployment percentages for bricklayers, masons and plasterers, unclassified building workers, granite and stonecutters and painters, decorators and paperhangers were 15·8, 8·1, 7·5 and 3·9 respectively; these percentages were slightly higher, thus reflecting minor employment contractions. Seasonal conditions were reflected, likewise, by unions of carpenters and joiners. The percentage of those without work in this group was 6·3; this was a fair employment recession. The percentage of unemployed members among lathers was 6·4, as compared with no unemployment in the previous month, but as the membership is very small the change involved but few workers. In comparison with conditions in January, a year ago, carpenters and joiners recorded a marked employment expansion, as the percentage of those without work dropped from 14·6 to 6·3. Much higher employment levels were attained, likewise, by some of the organizations with smaller memberships; among these were bricklayers, masons and plasterers, granite and stonecutters and painters, decorators and paperhangers. Union members of steam shovel men and bridge and structural iron workers did not report any unemployment, as compared with percentages of 18·1 and 20·0 respectively, in January, a year ago. These latter two groups are small, however, and consequently comparatively few members were involved in these changes.

In the transportation industries there were 895 returns tabulated. The combined membership was 80,279 persons, of whom, 1,081, or a percentage of 1·3 were unemployed, in comparison with percentages of 1·9 in December and 3·2 in January, 1942. Over 79 per cent of the entire group membership reporting, were in the steam railway division. The percentage of unemployed members in this group, as will be seen in Table II, declined from 2·3 to 1·5; this reflected a fairly higher employment level. The unemployment percentage for street and electric railway employees remained unchanged, while for teamsters and chauffeurs, likewise, very few members were without work, although the percentage inclined slightly to 0·5. A moderate contraction in work was in evidence among navigation workers, as in this group the percentage increased from 2·9 to 4·5. As compared with the situation in January, a year ago, a considerably higher employment level was observed for steam railway employees; the percentage of those without work declined from 3·4 to 1·5. Among the groups with smaller memberships, navigation workers indicated noteworthy improvement; the unemployment percentage for these workers dropped from 13·6 to 4·5. Very slight betterment was apparent for street and electric railway employees, while on the other hand, among

teamsters and chauffeurs the percentage of those without work was 0·5, as compared with no unemployment in January, 1942.

From unions in the retail and wholesale trade 9 reports were received, embracing a membership of 2,360 persons; as in December all of these were reported as employed, in January, 1942, the percentage of unemployment in this group was 0·1.

From unions of civic employees 108 reports were tabulated. These comprised a membership of 10,943 persons, of whom 5 or a percentage of ·0 were unemployed. This percentage was identical with that of December; in January a year ago the unemployment percentage for these workers was 1·9.

In the miscellaneous group of occupations reports were tabulated covering 143 unions with a combined membership of 12,235 persons, of these, 101, or a percentage of 0·8 were unemployed, in comparison with percentages of 0·5 in December and 1·7 in January, 1942. As compared with conditions in December, slightly lower employment levels were in evidence in all the occupations. When compared with the situation in January, a year ago, a pronounced increase in work available was in evidence among theatre and stage employees, while unclassified workers also, indicated heightened activity, although to a lesser degree; very little unemployment was indicated in this latter group. Among stationary engineers and firemen the percentage of those without work was 0·7, as compared with 0·8 per cent in January, a year ago. On the other hand, the percentage of unemployment for hotel and restaurant employees increased from 1·0 to 1·5, and for barbers from 0·3 to 0·5.

Returns were tabulated from 3 unions of fishermen, whose combined membership was 2,512 persons, of whom, 100, or a percentage of 4·0 were unemployed in comparison with 5·0 per cent in the preceding month and 13·6 per cent in January, a year ago.

Reports were tabulated from 2 unions of lumber workers and loggers. The aggregate memberships reported was 3,130 persons. As in December all of these members were reported as working. In January, 1942, the unemployment percentage for this group was 11·1.

Table I shows by provinces the average percentage of union members, who were unemployed each year from 1932 to 1942, inclusive, and also, the percentage of unemployment for January, of each year from 1932 to 1941, inclusive and from January, 1942, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Employment and Unemployment in Great Britain

THE British *Ministry of Labour Gazette*, January, 1943, summarizes the November-December employment situation in Great Britain as follows:—

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at December 14 (exclusive of 22,592 men who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 53,206; those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,148; and those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 2,699. As compared with November 16, the numbers

wholly unemployed showed a decrease of 5,945, those temporarily suspended from work showed a decrease of 211, but unemployed casual workers showed an increase of 107.

The corresponding figures for women and girls at December 14 were 28,737 wholly unemployed (exclusive of those, numbering 895, who had been classified by interviewing panels as unsuitable for normal full-time employment), 875 temporarily stopped, and 159 unemployed casual workers. Of the 28,737 wholly unemployed, 925 had been classified as unable for good cause to transfer to another area. As compared with November 16, the numbers wholly unemployed showed a decrease of 2,774, those temporarily stopped showed an increase of 194, and unemployed casual workers showed an increase of 11.

Trends in Employment in United States, 1899-1939

Trends in employment in the United States since 1899, and their relation to corresponding changes in production and unit labour requirements, are described in a report by Solomon Fabricant published in book form by the National Bureau of Economic Research, New York, entitled *Employment in Manufacturing, 1899-1939*.

The report shows how improved organization, more and better equipment per worker, superior technical methods, greater individual skills, and increased use of mechanical power have all helped to increase greatly the volume of goods produced by a given number of workers. The report attempts to show that increases in productivity have not usually resulted in fewer jobs in individual industries.

Spectacular Rise in Labour's Output

Manufacturing workers in 1939 numbered almost ten million in the United States, as compared with five million in 1899. Yet while factory jobs doubled, the output of these manufacturing industries increased four-fold. Thus during the forty years the number of factory workers required to produce a given volume of goods was cut in half.

This decline in unit labour requirements is the more notable in that the length of the work week was being steadily shortened over this period. Weekly hours of labour dropped from an average of about 60 hours per person in 1899 to about 40 hours in 1939. Thus only about one third as many man-hours

of factory work went into the fabrication of a given quantity of goods as forty years earlier.

In one fifth of the many individual industries analyzed in detail in the report, the number of workers per unit of product was cut by 70 per cent or more over the forty year period. Heading the list is automobile manufacture (with an 88 per cent decline), followed by industries as diverse as beet sugar, silk and rayon goods, industrial chemicals, and blast-furnace products.

"In young industries," Dr. Fabricant declares, "whose output characteristically shoots up quickly, the enormous gains in production usually more than counterbalance the declining trend in the labour-output ratio; as a consequence, employment too expands, usually rather rapidly.

"During the mature phase of an industry's development, output expands slowly, if at all; now the gain in volume of product is not great enough to offset the declining trend in the labour-output ratio, and as a result jobs decrease unless the working week is cut sufficiently to compensate for the lessening need for labour per unit.

"In old and waning industries, falling output offers no counterpoise to diminishing unit labour requirements, so that even substantial cuts in the hours of work per week fail to halt reduction in the number of workers employed."

Legislative Proposals of Labour Organizations

DURING February and March, proposals for legislation were submitted to the Dominion Government by the major Canadian trade union organizations. The nature of the proposals indicated the effects of the war both as regards increased production and the special problems created by present conditions.

Delegations were received by Government representatives in Ottawa from the following

labour bodies: Trades and Labour Congress of Canada; Canadian Congress of Labour; Canadian and Catholic Confederation of Workers; and the Railway Transportation Brotherhoods.

The following section gives accounts of the respective representations of these organizations.

Trades and Labour Congress of Canada

THE Trades and Labour Congress of Canada made its annual submission of legislative requests to the Dominion Government in the Railway Committee Room of the House of Commons on Monday, February 22.

Headed by the Congress executive—Percy R. Bengough, acting president; J. A. D'Aoust, secretary-treasurer; J. A. Sullivan, vice-president; and John Noble, general organizer, American Federation of Labour—there was a good representation of international unions supporting the recommendations.

The delegation was received by the Prime Minister, Rt. Hon. W. L. Mackenzie King, the Minister of Labour, Hon. Humphrey Mitchell, and the following other members of the Cabinet: Hon. Norman A. McLarty, Secretary of State for Canada; Hon. C. D. Howe, Minister of Munitions and Supply; Hon. J. L. Ralston, Minister of National Defence; Hon. J. A. MacKinnon, Minister of Trade and Commerce; Hon. L. R. Laflèche, Minister of National War Services; Hon. Alphonse Fournier, Minister of Public Works.

Prefacing his reading of the memorandum, Mr. Bengough expressed regret at the absence of the Congress president, Mr. Tom Moore, who is still ill in bed. Expressing appreciation of the courtesy of the hearing, Mr. Bengough assured the Prime Minister of the desire of the Congress to co-operate with the Government in the prosecution of the war.

Labour Representation

In the memorandum, this offer of co-operation was again emphasized and recognition of the difficulties of governments in having to interfere with the liberties of the individual citizen was expressed. But the memorandum observed: "It is deplorable that we have to

state at this time that our offer of co-operation has not been accepted."

The Congress was convinced that if "more attention had been paid by your Government to the repeated requests of this Congress for equal representation with employers on all Government War Boards, instead of receiving their offers with misgivings and mistrust, far more confidence in the Government would now exist in the minds of the workers."

It reiterated its request "for labour representation on all war boards, both administrative and advisory. We again emphatically state that many misunderstandings and mistakes which have arisen could have been avoided had Government and Labour been working together for the common good as Labour desired. It is a deplorable fact that little or no recognition has been given to Labour on the many Directorates administering the war-time production industries financed, controlled or operated by the Government, or on the many other bodies established to initiate and enforce policies vitally affecting the every day life and well-being of the workers as wage earners and consumers."

The Government was urged to consider the advisability of setting up a Board similar to the War Production Board in the United States, for the purpose of stimulating and developing Joint Production Committees in the major industries on which labour and management have representation.

Enforcement of Collective Bargaining

Drawing attention to what was termed "the hostile policies being enforced in Crown Companies prohibiting the recognition and proper functioning of trade unions in direct contravention to the provisions of Order in

Council P.C. 2685," the Congress regretted that the National Harbours Board and the Canadian Broadcasting Corporation had not been brought under the provisions of Order in Council P.C. 10802. The memorandum then added:

"There is no question but that the frustrations and interference of the employees' right to organize and bargain collectively through their chosen representatives is a state of affairs that should not be permitted in a democratic country at any time and when such practices are permitted to occur during a war period they become an actual menace. When hostile employers use such tactics it is in effect a representation of the very things we are waging a war to destroy.

"The results of such interference to-day are weakening the morale, enthusiasm and confidence in the Government that the workers of this country should and must have to give the utmost in productive efficiency. . ."

Control of Wages and Prices

The Congress did not agree with the position taken that reasonable increases in wages automatically result in inflation of prices, "and," the memorandum observed, "were that partially true it would provide no justification for the drastic regulations incorporated in Order in Council P.C. 5963." It was considered that this Order should be amended, allowing the National and Regional War Labour Boards to render more liberal interpretations; and particularly "where workers are earning less than \$25 per week or 50 cents per hour they should not be restricted by legislation from negotiating and securing an increase in their wages to this rate as stated and which the Government has accepted as a minimum necessary to maintain a decent standard of living."

The Congress also felt that in seasonal and irregular employment, cost-of-living bonuses should apply on overtime, and that there should be enforcement of the principle of equal pay for equal work. It advocated special consideration in investigating wage rates and living standards in non-essential industries, and that in transferring such workers, care should be taken to safeguard wage rates comparable to those received in their regular occupations.

As a further means of bringing more unity and stability in key war industries, it was urged that conferences be called of the representatives of organized labour and management in these industries with a view to stabilizing wages on a national basis.

(Some of the criticism directed in the memorandum at the National War Labour

Board was obviated by the reconstruction of that body into a three-man tribunal. Appreciation of this change was expressed by Mr. Bengough in so far as the National Board was concerned, and a change was requested in respect to the Quebec Regional Board.)

Fair Wages and Union Conditions

The Congress advocated as a matter of Government policy in placing contracts "that preference should at all times be given to those employers who have labour agreements with their employees, employ union workers and observe union conditions," and that "to check violations of fair wage regulations on Government contracts, the inspector appointed by the Government to supervise these jobs should be assigned the duty of inspecting all wages paid and hours worked and reporting all violations of the fair wages regulations to the Department of Labour."

Unemployment Insurance

The Congress recorded its strong opposition "to changes being made in the Unemployment Insurance Act without full consultation with the other two contributing parties." It also advocated the elimination of the provisions exempting those earning over any fixed amount.

Industrial Disputes Investigation Act

As submitted in its presentation last year, the Congress again requested clarification of the status of the Industrial Disputes Investigation Act. It noted, with approval, the recent addition of Section 8 relative to the appointment of Industrial Disputes Inquiry Commissions to investigate potential disputes.

National Health

In a section on national health, the memorandum stated "that maximum production cannot be maintained where excessively long hours are worked." It also recommended early consideration to the enactment of a national health insurance scheme on a contributory basis, and the co-ordination of agencies "to increase the fitness of our youth."

Shipping

In regard to shipping, the Congress requested action as follows:

"That the Draft Conventions and Recommendations of the International Labour Organization as passed at Geneva 1936—dealing with shipping matters be ratified by the Government of Canada.

"That it be made compulsory for all ships sailing on what may be classed as salt-water runs, to adopt the three-watch system; that all Canadian ships, regardless of tonnage, should carry ship-to-shore communication for the purpose of safeguarding the lives of the crews; that shipping legislation be amended to incorporate the conventions and recommendations of the International Labour Organization covering coastal and inland-water boats."

Speaking on this section, Mr. Bengough stated that the Congress also requested that Order in Council P.C. 2511 be reviewed since it placed certain restrictions on working conditions of longshoremen.

Other Recommendations

Other recommendations contained in the memorandum included:

Paying of a subsistence allowance to the wives and families of men in the Reserve Army during camp training.

Adjustment in old age pensions to meet the increased cost of living.

Payment of income tax in year within which such is earned and cancellation of the eight months' arrears.

Commending the Beveridge plan of social security and urging planning of a post-war program.

Enabling civil servants to transfer to the Civil Service Superannuation Act.

Commending the action of the Government in not being "stampeded" into the enactment of prohibition legislation.

Minister of Labour's Reply

In replying to some of the questions raised in the memorandum, Honourable Humphrey Mitchell pointed out that he had only received a copy of it just prior to the meeting and that "it covered a lot of territory".

As regards the longshoremen, the assistant deputy minister was in constant consultation with them, but, the Minister emphasized, "the ships just have to be turned around".

The Minister noted the criticism directed against the National War Labour Board and considered that criticism was inevitable. However, the Minister indicated that the controls in operation in the national economy were working successfully in the fight against inflation. At a comparable period in the last war the cost of living index increased 39.3 points whereas in the present struggle the rise was 17.7 points, leaving a margin of 21.6 per cent more purchasing power for the workers.

He recalled that at the Trades Congress convention of 1919 there was criticism that no government action had been taken to protect

the living standard of the workers. However, the present administration had faced up to that problem. In so facing up to it, the Minister observed that "we are in goodly company" and pointed to the policies adopted in New Zealand, Australia, and the United States.

Referring to the industrial and labour front, the Minister declared that there was not at that moment a strike in Canada over which the Federal Government had jurisdiction. During the last war there had been five times as much interference in war production in 1917 as in the past year. He regarded this favourable comparison as reflecting credit not only on the government but on the labour organizations of the country.

In connection with conferences on social security he felt that the Trades Congress would take a constructive part in post-war planning.

The Minister commented on the rapid expansion of the Department and that its personnel now totalled over 6,000. This great development in the work of the Department, particularly in the emphasis on manpower, had brought pressing problems, but these were being solved.

With reference to labour representation on Government Boards, the Minister declared: "As far as the Labour Department is concerned I know of no section taken more into consultation by the Department than Labour, and as far as I am personally concerned Labour will be consulted and given recognition on Boards under my jurisdiction."

Prime Minister's Remarks

Following the Minister of Labour, the Prime Minister, Rt. Hon. W. L. Mackenzie King, addressed the delegation. He first regretted the absence of Mr. Tom Moore, the president, who is ill. He recalled that when he started the Department of Labour "there were just six of us", and that in those early days "there were no two men more helpful than Mr. Moore and Mr. Draper," and added: "I think the history of this country will record the services they rendered as among the best in our land."

The Prime Minister then congratulated Mr. Bengough on "the very fair manner" of the presentation, and regretted that there had not been more accomplishment in some of the recommendations. Continuing, the Prime Minister said: "I want to sincerely thank Labour for the co-operation it has given the Government in these trying times. I am sorry if you feel we have not co-operated to the same extent, but it is the magnitude of the problems confronting us that has caused any failure to reach the goal on our part. We

will try to improve where we have fallen short. I am anxious to see as complete a Labour representation as possible on Government Boards, and will emphasize this matter to the Cabinet."

Referring to social security, the Prime Minister stated that this was an important matter for consideration, and "your representations will be helpful to the Government and members of parliament generally."

In concluding his remarks, the Prime Minister warned against the growing impression that the war is nearing a close. He pointed to the factors precluding such an assumption—the fact that Germany has control over a large section of Europe, "converting free citizens into industrial slaves"; and the strong position of Germany as a bastion with vast supplies.

"In the invasion of Europe, British, American, and our own forces will first have to cross water. There will be the tremendous difficulty of landing and then the equally difficult task of keeping them supplied with all the essentials of war."

He considered that the problem of supply for the United Nations "depends on how far our transportation facilities can be made effective."

"There you see the importance of the industrial effort, and I was never more concerned than when I saw the steel industry in danger of lowered production," he said.

"This year the need for the co-operation of all classes is greater than at any stage. This year we face ordeals greater than ever before because of the more intensive problems involved."

Canadian Congress of Labour

THE Canadian Congress of Labour submitted its memorandum of labour recommendations to the Dominion Government on March 8 in the Railway Committee Room of the House of Commons. Heading the delegation, was Mr. A. R. Mosher, president of the Canadian Congress of Labour, and the memorandum was read by Mr. Pat Conroy, secretary of the Congress.

Receiving the delegation were the Prime Minister Rt. Hon. W. L. Mackenzie King, and the following members of the Cabinet: Hon. Humphrey Mitchell, Minister of Labour; Hon. Norman McLarty, Secretary of State; Hon. J. L. Ralston, Minister of Defence; Hon. Ian Mackenzie, Minister of Pensions and National Health; Hon. Colin Gibson, Minister of National Revenue; Hon. W. P. Mulock, Postmaster-General; Hon. J. L. MacKinnon, Minister of Trade and Commerce; Hon. Major General L. R. Laflèche, Minister of National War Services; Hon. Louis Fournier, Minister of Public Works.

Mr. Mosher, in introducing the delegation, stated that the organization represented workers in the mass production industries of the country and that the delegation was smaller than usual because of the fact that many present in other years were doing important war work and it was considered advisable that they stay on their jobs.

The memorandum expressed appreciation of the opportunity granted the Congress to present to the Government the views of its members.

Stating that Canada's war effort had reached "levels of achievement which have attracted widespread admiration, and of which every Canadian may properly be proud," the memor-

andum yet expressed "profound regret that the failure of the Government to accept the co-operation offered by organized Labour, and to adopt adequate labour and wage-policies, has prevented the attainment of a still more effective war-effort, and a higher morale among the workers and the people of Canada."

Reference was made to the Congress' presentation of the previous year when the Government had been urged to take action "to provide adequate representation of Labour on Government bodies, including the establishment of industrial councils for the attainment of maximum war-production; to establish a comprehensive labour policy, under which the right to organize and bargain collectively through the union of the workers' choice would be fully protected by the provision of penalties for infringement of that right, and of machinery for the imposition of such penalties; and to establish a wage-policy under which wages and working conditions would be determined by negotiation between representatives of employers and organized workers, subject to such control as might be necessary by industrial councils." It was stated that because of failure to take action on these proposals made by the Congress, setbacks to the war effort had occurred. The Minister of Labour was criticized for "advocating a seven-day continuous production plan for the Vancouver shipyards, without proper consultation with the shipyard workers, and without adequate study of the industrial conditions involved. This created a great deal of unrest among the shipyard workers, and the difficulties which it caused have not yet been overcome. The wage-situation in several shipyards in Eastern Canada has also been very unsatis-

factory, as a result of the failure of the National War Labour Board to deal adequately with it."

It was stated that the administration of the National War Labour Board and the Regional War Labour Board had, with some exceptions, "been a continuous source of irritation to many workers and their organizations." Specific reference was made to the disputes occurring in the steel industry. The recent reorganization of the National Board was, however, commended.

Disapproval was voiced that "the only independent body on which Labour was represented, the Unemployment Insurance Commission, was virtually abolished in October last, thus leaving the Labour movement with no voice whatever on any administrative body."

Labour Representation

In requesting "adequate representation on government bodies," labour representation was especially asked in the administration of National Selective Service, and on the Wartime Prices and Trade Board, particularly in connection with rationing. It was stated that because no distinction was made between sedentary workers and those engaged in heavy physical labour so far as the amount of rationed commodities were concerned, the productivity of workers in certain industries was being affected.

The Government was asked to establish for each basic industry an industrial council on which labour and employers would be represented, following the precedent established in the building industry.

Stress was laid on the desirability of encouraging the establishment of labour-management production committees. "The initiative would have to come from the Government in view of the consistent attitude of opposition toward Labour unions adopted by many Canadian employers.

Government's Labour Policy

The memorandum repeated the declaration made by the Congress the previous year that the Government was failing to enforce the labour policy enunciated in Order in Council P.C. 2685. It was asked that P.C. 10802, authorizing collective bargaining in crown companies be extended to include employees of the National Harbours Board and the Canadian Broadcasting Corporation.

The Congress urged "that the Government ensure by legislation the right of workers generally to organize in the union of their choice, and to negotiate agreements with employers by collective bargaining through that union,

and that penalties be provided for infringement of that right." This, it was stated, "would permit Labour to make a maximum contribution to the war-effort, hasten victory, and provide greater security and freedom in the post-war world."

Government's Wage Policy

The Congress registered its "strong objection" to the wage policy of the Government as established by Order in Council P.C. 8253, of October 24, 1941, and extended by Order in Council P.C. 5963, of July 10, 1942.

In effect, the contention of Congress was while assurances were given that it was not the intention to freeze unfair wage rates and "while some wage levels in isolated cases have been adjusted, the attitude adopted by the Government in connection with the request for a basic rate of 55 cents per hour in the steel industry indicated that the Government was unwilling to establish this rate, in spite of its low level, on the ground that this would make price-control impossible and lead to inflation."

The Congress memorandum then continued:

The Congress does not believe that the increase in purchasing power which would result from the establishment of proper standards of wages in Canadian industry would have a serious effect upon prices. It would involve nothing more than a slight redistribution of the national income in favour of low-paid workers, to enable them to improve to some extent their standard of living, without being detrimental to other classes of the community. The practice of rationing commodities is being extended, and the income tax and compulsory savings are absorbing any excess of income above moderate levels. In the circumstances, the Congress believes that the requests made by organized workers for the raising of wage-levels which are admittedly low, and which employers have agreed to in wage-negotiations, should be approved by the National and Regional War Labour Boards.

One of the most serious objections to the present legislation is that it permits employers to refuse to negotiate with their workers regarding improvements in wages and working conditions, on the ground that this will increase their costs, and, in the absence of an adequate labour policy, the workers find that the Government's wage policy actually strengthens the hands of employers who are opposed to labour organization. The Congress would therefore strongly recommend that a wage policy be adopted which will be more satisfactory to the workers of Canada.

Unemployment Insurance

The Congress reiterated its recommendation for amendments to the Unemployment Insurance Act as follows: (1) to include all employees of the Government; (2) to include all workers regardless of income; (3) to provide for sickness and hospitalization; (4) to prevent discrimination against workers because of

strike activities; (5) to increase the benefits as required to meet standards of health and decency; (6) to increase the contribution made by employers, where necessary, to meet increased costs; (7) to provide benefits for all unemployed persons regardless of their contribution; (8) to provide payment of benefits for the full period of unemployment, and (9) to provide payment of benefits to part-time workers.

Other Recommendations

Other recommendations of the Congress included:

Endorsing social insurance, with Labour representation on any body which would administer it.

Increasing old age pensions to \$60 per month plus cost of living bonus, and reducing the qualifying age to 60 years.

Exemption of cost-of-living bonus from income tax and inclusion of payments on pre-war debts as compulsory savings.

Appointment of a national fuel council.

Increased pay and free transportation for members of the armed forces with protection under the Unemployment Insurance Act on their return to civilian life.

Representation for Civil Service organizations on the Committee dealing with civil service conditions.

Enunciation of post-war reconstruction program with adoption of policies ensuring the four freedoms of the Atlantic Charter.

Reply of Minister of Labour

The Minister of Labour, Hon. Humphrey Mitchell, observed that it was difficult to appraise such a lengthy memorandum when it is only received a few minutes prior to the meeting. He declared that the government "has a positive labour policy," and that "in the advancement of those things that vitally affect the workers, Labour has been and will be consulted."

Referring to the operation of the controls, he said that their acceptance required a measure of self discipline, but that these controls have effected an increase in purchasing power of about 30 per cent. The Minister pointed out that unless there was a stabilized currency and price structure, it would be most difficult to establish a social security policy akin to the Beveridge report.

"The Canadian people," stated the Minister, "have rallied to the Government in support of its anti-inflationary policy, and in its price structure the Government is laying the foundation for stability in the post-war period."

The Minister informed the delegation that Labour-Management Production Committees were being established.

As regards P.C. 4020, the Minister considered that it has had a great deal to do with industrial stabilization. Some policies, he noted, which at first appeared not to be in the best interests of the workers had operated to the benefit of Labour, and he instanced the Industrial Disputes Investigation Act, "which was well ahead of its time" and which the present Prime Minister had instituted.

The Minister assured the delegation that as far as the Labour Department is concerned "you will get that co-operation you have received in the past, and in matters of policy your leaders will be consulted before the policy is set in motion."

Secretary of State

In referring to the request for broadening the scope of unemployment insurance, Hon. Norman L. McLarty, Secretary of State, who was Minister of Labour during the enactment of the measure, pointed out that it was agreed to keep unemployment insurance on a sound actuarial basis. "For that reason," said Mr. McLarty, "it was decided not to take in too much territory, and Labour had agreed that the section of the Act pertaining to strikes was fair and reasonable."

Minister of National War Services

Major General L. R. LaFleche, Minister of National War Services told the delegation that soon there would be a labour representative on the Board of Governors of the Canadian Broadcasting Corporation.

Prime Minister

The Prime Minister, Rt. Hon. W. L. Mackenzie King expressed his pleasure at meeting with representatives of the Canadian Congress. Emphasizing the long view in the approach to problems, the Prime Minister pointed out that the Government had taken a broad attitude in the recent steel strike. "Notwithstanding that it was an illegal strike, I took the longer view that there were circumstances which had to be considered in the national interest in the settlement of the strike," he said.

On the question of labour representation on Boards, the Prime Minister stated that he had impressed that matter upon his colleagues, but was met with the reply that "if we can get the different organizations to agree it would be an easy matter to make such appointments." He pointed out that when "a choice is made in one direction it does not meet with approval in another."

Referring to the National War Labour Board, he hoped that the changes made in

that body would prove beneficial, and added: "Justice McTague has in mind certain improvements which are being carefully considered, and developments in the National War Labour Board may prove very far-reaching in the development of industrial relations on a sound basis."

In conclusion, the Prime Minister referred to the developments which led up to the adoption of the Industrial Disputes Investigation Act, and his own part in the formulation of that legislation.

President of the Canadian Congress of Labour

At the conclusion of the Prime Minister's remarks, Mr. A. R. Mosher, President of the Canadian Congress of Labour declared that the two major labour organizations in Canada—the Trades and Labour Congress and the Canadian Congress of Labour—were now co-operating very closely and that there would be no difficulty in agreeing on Labour nominees.

Canadian and Catholic Confederation of Labour

A DETAILED memorandum was presented to members of the Cabinet by the Canadian and Catholic Confederation of Labour at Ottawa on February 10. The memorandum dealt with a number of questions, some of specific interest to the Confederation and others related to workers generally.

The memorandum was read by Mr. Albert Charpentier, President of the Confederation, who prefaced his remarks with an expression of satisfaction on the part of his organization with the way in which the Minister of Labour was carrying out his tasks, and of confidence in the Minister's sense of justice in respect to granting fair treatment to unions affiliated with the Confederation.

The memorandum opened with an expression of the Confederation's desire to co-operate with the Government in its program for 1943, as outlined in the Speech from the Throne, working towards an Allied victory and elaborating a Canadian post-war charter of social security. The Confederation would appreciate being represented on a commission to study social insurance.

Conciliation and Arbitration

The Government's wartime measures extending federal jurisdiction over investigations of industrial disputes to all war industries, and providing for preliminary inquiries through commissioners, were declared to be satisfactory in principle to the Confederation. However, it was suggested that preliminary inquiries should be confined to provincial Departments of Labour, except in cases of enterprises directly under federal jurisdiction. The provincial departments would be free to recommend, if necessary, the creation of a federal commission. It was claimed that provincial inquirers would be more familiar with provincial legislation and with local complexities of labour unions, etc.

Strikes

The Confederation had voiced its opposition to strikes in wartime as early as the fall of 1939, and was maintaining its stand. It advocated, however, that "some organism be set up to make social injustices disappear and to give additional protection to responsible labour unions."

The holding of a federal-provincial conference was suggested to study the obligatory incorporation of labour unions under federal and provincial laws. "These laws, which should concur as much as possible, could determine the rights and obligations of labour unions, a procedure of conciliation and arbitration for disputes, and the formalities to be followed in the case of strikes."

The Confederation was opposed, however, to Government intervention in the internal administration of unions.

Strike Votes

In regard to the strike vote provided for in the Industrial Disputes Investigation Act preliminary to the establishment of a board of conciliation and investigation, the Confederation considered that this system was obsolete and suggested that the vote be abolished.

Representation Votes

The Confederation was opposed to the holding of representation votes in any plant unless all interested parties had previously consented thereto. It was declared that such votes gave no exact details on the strength of labour unions, and that they came into opposition to certain provincial laws.

Wages and Cost of Living Bonus

The Confederation asked that article 25 of the Wartime Wages Control Order, P.C. 5963,

be amended "to give more powers to the War Labour Boards and to abolish the comparison bases in cases of salaries too low to enable a workman and his family to live decently." It was suggested that the cost of living bonus "should be made obligatory in all cases from the date of the last general increase in salaries, and, if there has been none, since September, 1939." The Confederation also considered that the order should provide for the institution of family allowances.

With regard to P.C. 7679, the order in council relating to minimum wages for men and women working in war industries, the Confederation asked that the same rates be applied to women workers as to men; and that provincial governments be authorized to increase existing rates determined by the minimum wage laws to the rates provided for by P.C. 7679 without necessity of application to War Labour Boards.

It was urged that night work be prohibited for women workers.

Collective Bargaining

The Confederation declared that employers should be obliged by law to recognize regularly constituted unions and to negotiate collective labour agreements. The Confederation favoured the closed shop in plants where only one representative syndicate of employees existed, provided that the union would be responsible before the law and that its members would have legal recourse against it if their rights were violated.

Where employees belonged to different unions, the law should either contain provisions to enable the formation of a cartel which could negotiate with the employer or provide some other procedure for the settling of disputes after consultation with the interested parties.

Company unions should not be allowed by law, the Confederation believed.

Unemployment Insurance and Selective Service

The memorandum submitted that the Unemployment Insurance Commission should operate free of National Selective Service; that both unemployment insurance and employment service should be under the jurisdiction of the Unemployment Insurance Commission instead of, as by virtue of Order in Council P.C. 7994, under the control of a director-administrator "who is, in reality, a representative of the employers."

It was suggested also that the title and powers of Unemployment Insurance Officers

be extended to local officers, in order to expedite procedures regarding payments; that a union should be able to designate its own representative to a court of referees from among the arbitration officers eligible; that all wage earners getting up to \$2,500 a year be subject to the unemployment insurance law; that payments be increased for workers with family burdens; and that women workers should have a representative on the Commission.

The Confederation thought that some simplification of procedure was needed in the registration of workers in local Selective Service Offices, and that more exact information about the occupations of workers should be obtained.

Taxes

The Confederation believed that taxes should be collected on regular wages and not on the cost of living bonus or payments for overtime. It was declared that a bonus sometimes raised the worker's income into a higher classification where he was subject to heavier taxes. Since the bonus was paid to workers to help them meet the higher cost of living and "not merely to be paid right back to the Government in the form of taxes," the object of the bonus was being completely missed. Moreover, a worker might hesitate to work overtime under present conditions, because in addition to increasing his physical fatigue he ran the chance of becoming subject to much heavier taxes.

(In this connection, the Hon. Louis S. St. Laurent, Minister of Justice, replied that a tax on the bonus or on overtime pay could not reduce the workers' income; and that in certain cases a rebate could be obtained at the end of the year.)

The Confederation suggested that sickness insurance and unemployment insurance premiums and labour union contributions be deductible from compulsory savings in the same manner as life insurance premiums. Further it was suggested that each employee periodically be given an official receipt indicating what he had actually paid in as compulsory savings.

Cost of Living and Price Control

The memorandum stated that the Confederation had no objection against the calculation methods used by the Federal Bureau of Statistics in determining the cost of living; however, it suggested that federal authorities verify carefully all information supplied to them which was to constitute the basis of official statistics. The Confederation asked

that a Royal Commission inquire into the whole matter of living costs.

Other Proposals

The Confederation asked that there be a French-Canadian in the post of either Deputy Minister or Assistant Deputy Minister of Labour; and that bilingualism and the representation of French-Canadians be fully taken into account whenever other functionaries were named by the federal Minister of Labour.

Representation was asked on the Unemployment Insurance Advisory Committee, on the National Employment Committee and on the National Conference for the Construction Industry.

The Government was asked to encourage the building of adequate lodgings in centres where workmen and their families could no longer find suitable living accommodation.

The Confederation favoured the adoption of a national flag for Canada.

Discussion of Memorandum

Considerable discussion took place over various points in the memorandum as they arose, as individual Ministers explained the Government's policy towards certain of the requests. Some of the matters were announced to be already under active consideration by the Government.

At the conclusion of the presentation, Hon. Humphrey Mitchell complimented the mem-

bers of the Confederation on their drafting of the brief, and on their fair and able manner of presenting the points to the Government.

In commenting on the friendly and reasonable spirit in which the discussion had taken place, he said: "We are fighting for continuance of the right to meet as free men, and to criticize the Government if necessary, including the Minister of Labour." In the enemy countries, he reminded the group, persecution had been substituted for reason.

He referred to the Government's deep desire to protect and advance the welfare of the working man of every colour, race and creed.

The Ministers who received the representatives of the Confederation included: Hon. Humphrey Mitchell, Minister of Labour; Hon. Louis S. St. Laurent, Minister of Justice; Hon. J. E. Michaud, Minister of Transport; Hon. C. D. Howe, Minister of Munitions and Supply; Hon. L. R. LaFleche, Minister of National War Services; Hon. Alphonse Fournier, Minister of Public Works; and Hon. Colin Gibson, Minister of National Revenue.

The delegation from the Confederation of Canadian and Catholic Workers included: Mr. Alfred Charpentier, General President of the Confederation; Mr. G. Picard, General Secretary; Mr. G. A. Bourdon, General Treasurer; Mr. O. Filion, 2nd Vice-President, Montreal, Mr. Alphonse Roberge, 2nd Vice-President, Quebec, Mr. S. A. Gagnon, Mr. R. Bellemar, and Mr. Irénée Rousseau; Mr. Lucien Gagnon; Mr. Maxime Lavigne; Mr. R. Groulx; Mr. E. St. Amand; and Rev. Léon Courchesne.

Railway Transportation Brotherhoods

A MEMORANDUM of proposed legislation was submitted to the Government by the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods on February 20. The Committee was received by Hon. Humphrey Mitchell, Minister of Labour; Hon. Norman A. McLarty, Secretary of State; Hon. Colin Gibson, Minister of National Revenue; Hon. James A. McKinnon, Minister of Trade and Commerce; Hon. J. E. Michaud, Minister of Transport; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. James G. Gardiner, Minister of Agriculture; and Hon. C. D. Howe, Minister of Munitions and Supply.

Present on behalf of the Railway Transportation Brotherhoods were: Mr. A. J. Kelly, Chairman of Committee, Brotherhood of Railroad Trainmen; Mr. Wm. L. Best, Secretary of Committee, Brotherhood of Locomotive Firemen and Enginemen; Mr. W. H. Phillips,

Vice-Chairman of Committee, Order of Railroad Telegraphers; Mr. H. B. Chase, Brotherhood of Locomotive Engineers; Mr. J. L. D. Ives, Order of Railroad Conductors; and Mr. J. J. O'Grady, Brotherhood of Maintenance of Way Employees.

The memorandum was read by Mr. A. J. Kelly, Chairman of the Committee; and contained the following requests and items:

(1) That a contributory pension plan be established to cover workers employed by the National Harbours Board.

(2) That a national transportation policy be adopted, designed to bring all forms of transportation under one jurisdiction. It was stated that unregulated competition from other forms of transport for hire had a destructive effect upon steam railways. In view of the constitutional difficulties involved in such a policy, appropriate amendments to the British North America Act had been suggested in previous

submissions. It was urged that consideration be given to planning for the equitable regulation of all forms of transport for hire by "some central body on which Federal and Provincial Governments, railway labour and other interests concerned shall have representation."

(3) That amendments be made to the Railway Act "at the appropriate time" to ensure continuance in peacetime of the practice allowed under P.C. 8663, September 25, 1942, making it "unnecessary to station a person on back of tender when engine is moving reversely over level crossings."

(4) That the annual appropriation of \$200,000 to the Railway Grade Crossing Fund be continued without interruption, until the national revenue will warrant an increase to at least \$500,000 annually.

(5) That persons who are paid on an hourly, daily, or monthly basis be allowed the same exemption from taxation on away-from-home expenses as is allowed to those paid on a mileage basis;

That those whose income is composed of payments from a superannuation or pension fund be exempt from taxation under the Income War Tax Act; it being pointed out that such persons receive no cost-of-living bonus.

(6) That the luxury tax of 25 per cent on standard watches be repealed in the case of employees required to carry such watches in the performance of their duties.

(7) That a health insurance scheme be adopted to ensure adequate medical, dental and hospital services. It was stated that such a scheme should ensure preventive as well as curative measures. While recognizing that there might be constitutional considerations involved, it was believed that health security was of national importance and merited Federal financial assistance and co-operation, even if existing provincial health services and facilities were continued.

(8) Interest was expressed in the appointment of a Parliamentary Committee on social insurance.

(9) Co-operation was offered in the forming of a comprehensive plan to cope with post-war conditions, especially in regard to railway transportation.

(10) It was requested that men in engine and train service be allowed an additional ration book to meet conditions caused by irregular hours in the handling of wartime peak traffic.

(11) That labour be given representation on all public boards and commissions, and in the Senate.

The various items and proposals were discussed as they were presented by the members of the Cabinet and of the delegation, the discussion aiding in the clarification of some of the points under consideration.

The Minister of Labour, in replying to the presentation, referred to the unavoidable absence of the Prime Minister due to pressure of duties. He congratulated the delegates on the logical and well-drafted document which had been presented, and praised the contribution which had been made by the railroad organizations in the war period. In declaring that he was particularly interested in the reference made in the memorandum to health insurance and social security, the Minister expressed his hope that when the Parliamentary Committees met to deal with these matters and with post-war reconstruction they would have the benefit of the railroad organizations' experience and opinions.

Some of the items, he stated, were already under consideration by the Government. He would forward copies of the memorandum to the Prime Minister and to other interested Ministers.

Strikes in Wartime in U.S.A.

For the year 1942, man-days lost to war production in the United States from strikes and lockouts amounted to 6/100ths of one per cent of the man-days worked according to the U.S. National War Labour Board. Six days were lost out of every 10,000 days worked.

In 1941 all industries lost an average of 1,753,963 man-days per month. For the first

eleven months of 1942 the monthly average was only 376,725 man-days lost. Thus in 1942 the average monthly loss of man-days was cut more than 75 per cent below the monthly averages of the preceding year. In the same period average monthly employment was up by more than two million.

Labour Organization in Canada

THE thirty-first Annual Report on Labour Organization in Canada, covering the year 1941, has just been published. Owing to the unavoidable delay in publication and to the need for economy, the report is much briefer than usual, running only to 55 pages. It may be obtained for 25 cents from the Department of Labour.

The great increase in trade union membership from 365,544 at the end of 1940 to 461,681 at the end of 1941 brings the number of the members in Canada to the highest point yet recorded, exceeding the peak year of 1919 by 83,634. As returns for December 31, 1942 are not yet available no definite statement as to the gain in membership in 1942 can be made but it is probable that it is at least equal to that in 1941.

All industrial groups show increases but the number of new local unions in the building and metal trades and proportionately heavy gains in membership in mining and metal-working reflect the greatly expanded activity in these industries as a result of the war.

The tables below show the distribution of membership by industrial groups in 1940 and 1941; and, by provinces, the number of local branches of unions and the membership reported.

The Report contains a brief historical statement and shows the number of members, the names of the officers and the unions affiliated to the Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Confederation of Catholic Workers of Canada and the Canadian Federation of Labour.

In a list of national and international unions are shown the number and location of their branches and the name and address of the secretary or in the case of an international union, the names and addresses of the Canadian officers. The number of members of each national and international union is also given and the location and affiliation of local unions.

In addition there are lists of federations, district councils, trades councils and railroad brotherhood committees with the names and addresses of their presidents and secretaries.

Benefits paid by Canadian trade unions in 1941 aggregated \$54,867. To this amount may be added the \$208,504 paid by local branches in Canada of the international unions and \$61,188 paid by local branches of national unions, making a total of \$324,559 paid from the Canadian offices of unions in Canada. Paid

from the American headquarters of international unions to their members in 1941 was \$26,383,609 but no information is available as to what proportion of this sum was paid to the Canadian members of these unions.

Finally, the Report gives some information concerning teachers' associations and organizations of other public employees, including those employed by the Dominion, provincial and municipal governments.

THIRTY - ONE YEARS OF TRADE UNIONISM IN CANADA

Labour Law

Recent Regulations under Dominion and Provincial Legislation

National War Labour Board—Selective Service—Mobilization—Women in Steel Industry—Employment Agents—Japanese—Workmen's Compensation—Longshoremen—Unemployment Insurance—Alberta Hours of Work Act—Quebec Minimum Wages

THE National War Labour Board and the National Selective Service Advisory Board have been reconstituted. Minor amendments have been made in the National Selective Service Mobilization Regulations and two orders relating to fire-fighters and nurses were issued under the National Selective Service Civilian Regulations. Labour shortages in the steel and timber industries have been met by Orders in Council authorizing the Algoma Steel Corporation, Ltd. to employ women in certain occupations and lifting restrictions on the employment of Asiatics on Crown Lands in British Columbia. Income tax adjustments have been authorized for essential war workers from abroad. The charging of fees for procuring employment except by persons representing bona fide employment agencies has been forbidden. The regulations for the control of Japanese persons in Canada have been revised and the British Columbia Security Commission abolished. New regulations governing the payment of workmen's compensation to Canadian Government employees in Newfoundland have been issued. An amendment in the regulations for the protection against accident of longshoremen brings these regulations into conformity with a Convention of the International Labour Conference. All miners in Canada except those receiving a fixed salary have been brought under the Unemployment Insurance Act. Alberta has exempted certain classes of workers in the lumbering industry from the Hours of Work Act and Quebec has renewed Minimum Wage Order 4.

National War Labour Board

Certain provisions of the Wartime Wages Control Order, P.C. 5963 (L.G., 1941, p. 1368; 1942, p. 778), relating to the National War Labour Board have been revised by an Order in Council passed February 11 (P.C. 1141) under the War Measures Act. The Order provides for a three-man Board to replace the former Board of nine or more members and for a National War Labour Committee of

eight or more members equally representing employers and workers to advise the Board. Worker and employer representatives on the former Board have been named to this Committee. In addition, members of the Executive Council of the former Board, other than the Chairman and Vice-Chairman, have been appointed technical advisers to the new Board.

The new Board's functions, like those of the old, include the administration of the War-time Wages Control Order, the Fair Wages and Hours of Labour Act and the Order in Council relating to fair wages on Government contracts (P.C. 7679, L.G., 1941, p. 1226), the supervision of the Regional War Labour Boards and any other duties assigned to it by the Governor in Council or the Minister of Labour. In addition, the new Board has been authorized to enquire and report to the Minister of Labour on any matters under its jurisdiction.

Until repealed or altered by the new Board, all by-laws of the former Board remain in force except certain enumerated ones relating to meetings of the Board, duties of the Executive Committee, etc. The names of persons appointed to the new Board and Committee were given in the February LABOUR GAZETTE, p. 166.

National Selective Service

National Selective Service Advisory Board.—This Board which was established in March, 1942, by P.C. 2254 (L.G., 1942, p. 415) to advise the Director of National Selective Service on matters of man-power policy has been reconstituted by an amendment in the National Selective Service Civilian Regulations (L.G., Jan., 1943, p. 19) which was passed March 5 (P.C. 1788) under the War Measures Act. By the same Order the Interdepartmental Committee on Labour Co-ordination (L.G., 1940, p. 1101) has been abolished as the centralization of man-power administration in the Department of Labour eliminated the need for such a committee. The original National Selective Service Advisory Board consisted of the members of the Interdepartmental

Committee on Labour Co-ordination, the National War Labour Board and such other persons as the Minister of Labour might designate, with the Minister as chairman. The new Board has the Director of National Selective Service as chairman and consists of persons representing employers, trade unions and agriculture, the Government departments of Finance, National Defence, Agriculture and Munitions and Supply, the Wartime Prices and Trade Board and the Canadian Legion. In addition Associate Directors of National Selective Service and such other persons as the Minister may appoint are members. All members of the Board other than full-time Government employees receive \$15 for each day devoted to the work of the Board and expenses when necessarily absent from their places of residence.

Selective Service Orders.—Two Orders have been issued by the Minister of Labour under the National Selective Service Civilian Regulations. Order 1, dated February 10, exempts the temporary employment of persons engaged in fighting forest fires from the provisions of the Regulations relating to notices of separation, permits to seek employment, agricultural employment and advertisements. Order 2, dated February 22, requires all female graduate nurses under 66 years of age to register on March 17, 18 or 19 at an Employment and Selective Service office if they live in or within five miles of a city or town containing one, or at a Post Office or such other place as the Minister may designate.

Mobilization Regulations

Exemptions and Appeals.—The National Selective Service Mobilization Regulations (L.G., Jan., 1943, p. 153) have been amended in three respects by an Order in Council passed March 4 (P.C. 1713) under the War Measures Act. One change exempts from the Regulations all persons in Canada who are nationals of foreign countries or residents of countries other than Canada belonging to the British Commonwealth of Nations if such persons are employed full-time in Canada by their respective Governments. The provision authorizing Mobilization Boards to hear appeals brought under the National Selective Service Regulations, 1942, has been revoked as the new National Selective Service Civilian Regulations provide for the hearing of appeals by courts of referees set up by a procedure outlined in the Unemployment Insurance Act. One slight alteration has been made in Schedule A of the Regulations.

Registration of Men.—The Mobilization Regulations were further amended by an Order in Council dated March 8 (P.C. 1836) extend-

ing from March 1 to March 15 the date by which men who are at present liable for military service and who have not received medical examination notices must register (L.G., Feb., 1934, p. 266.)

Enforcement.—Arrangements made by the Dominion Department of Labour and the Ontario Attorney-General's Department for the Ontario Provincial Police to assist the Mobilization Section of Selective Service and the Royal Canadian Mounted Police in the enforcement of the Mobilization Regulations were authorized by an Order in Council of February 17 (P.C. 28/1280) under the War Measures Act. Ontario is to be reimbursed for out-of-pocket expenses incurred in this work.

Steel Company to Employ Women

To overcome a shortage of labour, the employment of women by the Algoma Steel Corporation, Ltd. in certain occupations in the blast furnace department has been authorized by an Order in Council passed March 1 (P.C. 1665) under the War Measures Act. The Ontario Mining Act forbids the employment of women except in a technical, clerical or domestic capacity in or about a mine which is defined to include mills, smelting furnaces, roast-yards and all places connected with the crushing, reducing, smelting, refining or treating of minerals. The Order stipulates that the Company must provide such facilities for safeguarding the health and welfare of women employees as are prescribed by the Dominion Minister of Labour in consultation with the Ontario Minister of Mines, and may employ women only in such occupations as the Minister of Labour determines are suitable for women workers. The International Nickel Company received a similar authorization last fall to employ women at its Sudbury and Port Colborne plants (L.G., 1942, pp. 1044, 1171).

Fees for Procuring Employment Prohibited

An Order in Council of February 12 (P.C. 1139) under the War Measures Act prohibits persons who are not acting on behalf of bona fide employment agencies or services established or registered under a Dominion or Provincial law from soliciting or collecting fees as compensation for procuring or offering to procure employment for other persons.

Income Tax Adjustments

Income tax adjustments for persons from abroad engaged in essential war work in Canada were authorized for 1942 and 1943 by an Order in Council of February 5 (P.C. 1/945)

under the War Measures Act. Such persons may be assessed at income tax rates comparable to those prevailing in the country from which they came if their employer furnishes reasonable proof that he may lose their services due to the fact that Canadian tax rates are substantially higher than the rates in the worker's former place of residence. The employer, however, must pay the difference between the amount payable under Canadian rates and the amount which the worker actually pays.

Timber Workers

To provide additional labour for timber production, restrictions on the employment of persons of Asiatic racial origin on Crown Lands in British Columbia, whether imposed by provincial statute or order in council, or by such instruments as contracts, leases, licences or concessions, have been suspended for the duration of the war emergency by an Order in Council of February 23 (P.C. 1422) under the War Measures Act. The Order is not to restrict the powers granted to the Minister of Labour for the control and placement of Japanese in Canada (*see below*) nor is it to affect the provisions of the Defence of Canada Regulations or orders issued there.

Control of Japanese in Canada

The regulations for the control and placement of persons of the Japanese race evacuated from the protected areas in British Columbia (P.C. 1665, L.G., 1942, pp. 254, 1368) have been revised and consolidated by an Order in Council of February 5 (P.C. 946) under the War Measures Act. Administration of the regulations has been transferred from the British Columbia Security Commission to a Commissioner of Japanese Placement who will work under the supervision of the Minister and Deputy Minister of Labour. The Security Commission which was established in March, 1942, by P.C. 1665 and 1666 (L.G., 1942, p. 254) served without remuneration and has now completed the initial placement of evacuated Japanese persons.

The new regulations empower the Minister of Labour to

plan, supervise and direct the evacuation from the protected areas of British Columbia of all persons of the Japanese race and the placement and control of such persons elsewhere in Canada and to take such measures as he deems necessary to provide or to arrange for the transportation, housing, feeding, care, protection, employment and welfare of such persons.

In addition the Minister's powers are enumerated specifically and include among other

things authority "to employ persons of the Japanese race for such purposes at such rates of wages and on such terms and conditions as he deems advisable," and to make rules and regulations respecting the conduct, activities or discipline of Japanese in Canada. He may also enter into agreements with any Provincial Government regarding the placement of Japanese persons in a province.

The Minister is to be assisted by an Advisory Board consisting of the Deputy Minister, the Commissioner of Japanese Placement, the former chairman of the British Columbia Security Commission, officials of the Royal Canadian Mounted Police and the British Columbia Provincial Police and such other persons as the Minister may nominate.

All orders and regulations issued under P.C. 1665 remain in force until revoked by the Minister. The new regulations went into effect on January 25, 1943.

Workmen's Compensation in Newfoundland

The Government Employees' Compensation Regulations, 1942 (Newfoundland) authorized by an Order in Council of February 8 (P.C. 1004) under the War Measures Act and the War Appropriations Act, No. 2, 1942, replace regulations on this subject issued a year ago (P.C. 992, February 9, 1942). The original Order in Council extended the provisions of the Government Employees' Compensation Act to employees of the Canadian Government who were injured or killed after July 1, 1941, in Newfoundland or while travelling between Canada and Newfoundland. Compensation was to be paid at the rates established by the Workmen's Compensation Act of the province in which the worker ordinarily resided or at Newfoundland Workmen's Compensation Act rates for residents of Newfoundland.

The new regulations clarify the meaning of such terms as "compensation", "employee" and "Newfoundland". The provisions relating to persons ordinarily resident in Canada are unchanged and provincial Workmen's Compensation Boards will deal with such cases. Compensation for all persons not ordinarily resident in Canada is to be paid according to the terms of the Newfoundland Workmen's Compensation Act, but the amount of compensation to which each worker is entitled under the Act is to be determined by the Minister or Deputy Minister of Transport.

There have been a number of other Orders in Council under the War Measures Act extending the provisions of the Government Employees' Compensation Act to various other groups of persons employed by the Canadian Government such as workers in Government-

owned plants, persons enrolled in the War Emergency Training Program and Employees of the Inspection Board of the United Kingdom and Canada.

Canada Shipping Act

The regulations for the protection against accident of workers employed in loading or unloading ships (L.G., 1939, p. 154) have been amended by an Order in Council passed February 19 (P.C. 1342) under the *Canada Shipping Act* to bring them into conformity with the provisions of the Convention adopted by the International Labour Conference in 1932 concerning the safety of this class of worker. The amendment stipulates that copies or summaries of the regulations must be posted up in a prominent position at all docks.

Unemployment Insurance Act

All persons employed in mines whose earnings exceed \$2,000 a year but who are not paid a fixed salary have become insurable under the *Unemployment Insurance Act* by an amendment passed February 26 (P.C. 656) in the regulations relating to contributions.

Seamen's Safety in Wartime

The International Labour Office has recently published a bulletin entitled "Life-Saving Measures for Merchant Seamen in Time of War" (Studies and Reports, Series P (Seamen), No. 4). It was prepared in accordance with a resolution of the conference of the Joint Maritime Commission held in London in June, 1942, which requested the I.L.O. "to communicate to the Governments as soon as possible, on the basis of existing practice in the countries having the widest experience in this matter and of the suggestions for further improvements—which have been approved by the Commission, a summary statement of the life-saving measures best calculated to protect merchant seamen in time of war . . ."

First Aid in Industry

In regard to the training of employees to administer first aid in cases of industrial accidents, the following points have been brought out in discussions with employers by Dr. W. J. Bell, Acting Commissioner of the Workmen's Compensation Board of Ontario:—

"(a) Trained first aiders are auxiliary to, and do not replace, professional personnel.

"(b) Owing to their larger numbers, they may be close to the scene of an accident so that necessary transportation is facilitated and the injury is not aggravated by unskilful handling pending the arrival of doctor or nurse.

Formerly only those miners whose annual earnings were below the \$2,000 limit on insurability under the Act and those whose earnings exceeded \$2,000, by virtue of war increments of various types (L.G., 1942, p. 69) were insurable under the Act.

Alberta Hours of Work Act

The annual Orders (L.G., 1942, p. 59) exempting cooks, cookees, bull cooks, night watchmen and barn bosses in the lumbering, logging and railway tie industries from the provisions of the Hours of Work Act requiring a weekly rest day and limiting hours to 9 a day and 54 a week were gazetted February 15 and 27. The Orders apply only to operations more than 10 miles from a city or in towns or villages of less than 1,000 population, and will expire October 31, 1943.

Quebec Minimum Wage Act

Order 4, which applies to all workers not covered by special Orders under this Act, (L.G., 1942, p. 586) was renewed to April 1, 1944 by a notice gazetted March 6.

Part I of the Bulletin contains the text of the resolutions adopted at the London Conference (L. G., 1942, p. 882). Part II is a summary statement of life-saving measures prepared by the I.L.O. in accordance with the request quoted above. This statement is based on the British practice, because the war-time rules applicable to the British merchant navy represent the practice of the country having the widest experience, and they were, as revised in the middle of 1942, the latest rules available to the Joint Maritime Commission. The Commission did not have an opportunity at its Conference to consider fire-fighting appliances, but the I.L.O. Bulletin outlines the British rules on this subject in Part III.

"(c) The trained first aider becomes accident conscious and through this, accident prevention conscious.

"In any consideration of industrial accidents, the human factor is the one element against which no mechanical safeguard, however perfect, can protect. For this group we require trained first aid. The elementary course and certificate is the portal through which all enter the first aid field but the trained first aider, who can be depended upon, in emergency, to know what to do and what not to do, is the result of years of study and practice."

Prices and Price Control

Price Control in Canada During February, 1943

Activities of Wartime Prices and Trade Board in Regard to Prices, Rationing, and Conservation—New Interdepartmental Relationships

AMONG the more important orders issued during the month were those affecting the prices of certain foods—oranges, potatoes, beef cuts sold at retail in Toronto and Winnipeg, and meals and certain beverages. Other pricing orders were concerned with miscellaneous items such as fertilizer sold in Ontario and the other eastern provinces, lumber sold at retail in the interior regions of British Columbia, and several used goods. In the field of pricing policy, the Board announced a new order setting forth the principles and procedure to be followed regarding applications for price adjustments and in the determination of prices for new or modified goods (B-214, Jan. 12; effective Feb. 15, 1943.)

Several simplification and conservation orders were introduced affecting chiefly certain textile and metal products. Also during the month certain changes were announced regarding the relationships between the Board and other government departments, viz., the Department of Munitions and Supply and the Department of Agriculture.

Relationships with Department of Munitions and Supply and Department of Agriculture

As announced by the Minister of Finance on February 9, certain changes in jurisdiction affecting relationships between the Wartime Prices and Trade Board (responsible to the Minister of Finance) and the Wartime Industries Control Board (responsible to the Minister of Munitions and Supply) have been arranged, and lines of responsibility between the Wartime Prices and Trade Board and the Department of Agriculture have been clarified. In announcing the changes and new definition of functions, the Minister pointed out that they presented "no substantially new alignment of authority", but that the rapid development of controls in different government departments resulted in some overlapping and some uncertainty of jurisdiction which required clarification.

A number of civilian end products which had originally been brought under the jurisdiction of the Wartime Industries Control Board because of their critical material content were transferred to the appropriate administrators of the Wartime Prices and Trade Board. Among the products were stoves, vacuum cleaners, washing machines, radios and radio parts, refrigerators, etc. The general principle underlying the transfer is "that jurisdiction over basic materials or end products, the principal use of which is for war purposes, should rest with the Wartime Industries Control Board, while those which are primarily of a civilian nature should be with the Wartime Prices and Trade Board". The transfer necessitated the rewriting of a number of controller's orders affecting these products as administrators' orders.

In order to bring all fuels under a single jurisdiction, the Coal Administration (including fuelwood) was transferred to the Wartime Industries Control Board which already had control over oil, natural gas and electric power.

In clarifying relationships between the Board and the Department of Agriculture, overlapping has been eliminated as far as possible and clear-cut responsibilities established. The Minister of Finance summed up the working principles as follows: "The Department of Agriculture is responsible for production by primary producers, for export arrangements under contract to meet the needs of Great Britain and the United Nations and, where its field organization is already functioning, for inter-area distribution and transfer of supplies as required. The Wartime Prices and Trade Board is responsible for imports, and for wholesale and retail distribution. The Board also has final responsibility in all matters of price and rationing. Wherever there are mutual interests, there will be the fullest consultation, interchange of information, and co-operation and mutual use of office and staff".

Food Price Orders

Beef.—During the month the Board passed an order specifying maximum retail prices for beef cuts in the Toronto and Winnipeg areas, effective during the period March 1 to March 24, 1943. This is the first order to be issued by the Board publishing specified maximum retail prices for a food commodity, and Toronto and Winnipeg were selected as representative eastern and western cities for its application. The order sets out in schedule form for each area the maximum retail price for the primary cuts, secondary cuts or miscellaneous cuts into which a side of beef is divided, and the retailer is required to keep this schedule posted in his shop, along with an illustrated cutting Chart showing the location of each primary cut on the side of beef. (B-232, Feb. 2).

In line with the Board's policy announced last October of allowing seasonal variations in beef prices, maximum wholesale prices for carcasses, sides and quarters of beef were advanced 50 cents per cwt. for the period Feb. 11 to March 25. (A-587, Feb. 8).

In order to facilitate the movement of beef from areas of surplus production in the West to those of heavier consumption in Eastern Canada, the Board approved a temporary policy of subsidizing part of the transportation costs involved. Beginning with shipments of February 8 moving at carload freight rates from Western Canada to the East, the Board, through the Commodity Prices Stabilization Corporation, Limited, will reimburse shippers to the extent that transportation charges per pound exceed the difference between the maximum price in the zone of destination and the maximum price in the zone of shipment. The zone of shipment comprises the three prairie provinces, while the zone of destination takes in the Maritimes, Quebec, and all of Ontario except the northern belt. The Board will cancel, modify or reinstate this arrangement as the beef supply position and market conditions warrant.

Veal.—Maximum wholesale prices for carcasses, sides and quarters of bone-in veal were fixed in an order, effective February 8. Prices are fixed for each of the 15 zones into which Canada has been divided for the purposes of the earlier orders regulating beef and lamb prices. The maximum prices are to serve as a year-round ceiling and seasonal variations may take place below that level. Maximum retail prices are to be so regulated as not to exceed the retailer's delivered price for the carcass, side or quarter plus a mark-up not exceeding 9 cents per pound. (B-233, Feb. 6).

Potatoes.—During the month the Board established maximum prices on potatoes in carload lots. Maximum wholesale selling prices in smaller quantities, however, remain as provided in a previous Board Order (No. 219). Under the previous order it was expected that normal market negotiations between shippers in the producing areas and wholesalers in the consuming areas would produce a sufficient differential between shippers' carload prices and wholesalers' maximum selling prices to allow normal and reasonable handling charges to the wholesaler. Climatic and other unusual conditions during the weeks following the passing of the Order served to produce a strong sellers' market, with the result that wholesalers were unable to obtain supplies at other than maximum prices. Since the Board was not prepared to force back prevailing prices to the shipper or grower, nor to permit an increase in consumer prices, it established a minimum and maximum spread between carload lots which the wholesaler buys and the smaller lots which he sells. This spread will be attained by permitting the wholesalers' maximum selling prices for potatoes sold in less than carload lots to follow seasonal increases as provided in a previous order (Board Order No. 219), and by retarding the price increase on carload lots until a reasonable spread is reached. The spread should allow the wholesaler to recover at least his handling and unloading costs. (B-236, Feb. 16).

Oranges.—The maximum mark-ups used in pricing oranges were revised in an order, effective February 22. The retailer's mark-up is limited to 25 per cent of his selling price. Previously the maximum retail mark-up was 20 per cent. In handling Florida oranges, retailers are allowed an additional 5 per cent of their laid-down cost to cover spoilage charges. The wholesaler's mark-up is similarly limited to 15 per cent of his selling price. Under the new regulations, retailers are to show the size with the price of all oranges offered for sale when not sold by weight and the price per pound when sold on a weight basis.

Milk.—The retail price of milk in the Vancouver area has been brought into line with other large areas throughout Canada. Under a new order, an increase of one cent per quart has been authorized, effective March 1. The new retail price to Vancouver consumers will be 10 cents per quart, after allowance has been made for the consumer subsidy of two cents per quart now in effect. The increase in price, which is passed on to the producer, allows an additional return of 35 cents per 100 lbs. of standard milk. The

Board's action was taken following a special survey of the Vancouver milk situation which had shown that total milk production had declined while a sharp increase in fluid milk sales had occurred at the expense of the production of concentrated milk products and butter. The survey further demonstrated that the reduction in milk output was due mainly to the farm labour problem and the dissatisfaction of producers with prevailing milk prices.

Other Price Adjustments

Meals.—Restaurant and various other public caterers were authorized, after having filed certain forms with the Board, to discontinue serving any beverage normally included with a meal without reducing the price of the meal or, alternatively, to charge 5 cents for any such beverage if served with the meal at the customer's request. Also, restaurants that had been serving tea or coffee without meals at less than 10 cents per serving were allowed to raise the price to not more than 10 cents. The purpose of the order is to afford some measure of relief to public caterers for increased costs brought about by higher prices, principally for fresh fruits and vegetables and certain other foods. It is also aimed at restricting the use of tea and coffee for which ration coupons are not required in public eating places.

Fertilizer.—In an order setting maximum prices per ton for fertilizer materials, mixed or complete fertilizers or approved tobacco fertilizers, the price of fertilizer to the farmer in Eastern Canada has been reduced by about \$2.00 a ton. The reduction has been made possible by adoption of simplified practice, elimination of extra transportation and selling costs, and through other economies in the trade affected by a zoning plan introduced recently. (A-601, Feb. 23).

Newsprint, etc.—The maximum price of newsprint in Canada has been raised by \$4 per ton, effective March 1, 1943, to conform with an increase of the same amount concurrently announced in the United States. In a joint statement released in the United States by the Office of Price Administration and the Wartime Prices and Trade Board, it was pointed out that newsprint is one of the few commodities which had not increased in price since the outbreak of war. During the past year the Board had been conducting a careful examination of the costs and operations of the newsprint industry for the purpose of discussing with the United States authorities the increase necessary to meet higher costs of wood operations, transportation and other

wartime factors. It was recognized that price increases in raw materials impose a considerable burden upon the publishing industry, but a study of conditions in the newsprint industry made it clear that relief was essential in order to prevent a serious impairment of production. (A-628, Feb. 27).

In another order issued during February, maximum retail prices were specified for lumber sold in the interior region of British Columbia. The new schedule replaces the ceiling established for this region under a previous order (A-585, Feb. 5, amending A-412).

Used Goods.—Regulations affecting used wine and distillers' bottles, used food jars and bottles, and used pharmaceutical, toilet goods and proprietary medicine bottles, set out maximum prices at which dealers may sell bottles of certain listed types. They provide a price differential for washed bottles, and rules are prescribed for washing of bottles which have contained pharmaceutical or food products. (A-605, A-623, A-624, Feb. 23).

Under two separate orders, covering used metal pipes and used steel shafting, the basis for determining maximum prices has been established. In addition, sales have been brought under control by making sales for civilian purposes subject to a permit from the administrator. (A-625 and A-626, Feb. 23).

Rentals

Under an amending order, landlords who formerly were required to wait as long as 17 months and 29 days for housing property purchased after December 10, 1942, may now occupy the property at the end of 12 months. The amendment refers only to "term certain" leases in effect in Ontario and Western Canada. Under the original order the purchaser of property occupied by a tenant having a "term certain" lease was required to give notice to vacate of at least 12 months expiring at the end of April or September, whichever day came first after receipt of the notice. Now the notice may be effective at the end of any lease month which ends the 12-month period. In Quebec and the Maritimes, where leases customarily expire on these days and where tenants would experience greater difficulty in finding accommodation at other times, the previous provision is still in effect. (A-600, Feb. 16).

With regard to rooming accommodation, householders renting rooms for the first time to boarders and lodgers are no longer required, except in certain areas, to apply to the Rentals Committee to have the rates fixed, provided

that the rooms are furnished and are equipped with bedding and linen for each occupant of the room. The landlord renting accommodation so equipped for the first time, must not, however, fix the charge at a rate higher than those which were charged on October 11, 1941, for similar rooms in the same locality. (A-598, Feb. 16). The areas excepted are those in which landlords must register all rented rooms and housekeeping rooms stating the rates they are charging, after which they are issued with maximum rate cards by the local rental authorities. There is a general order (A-488) which may be applied to any area which sets out the procedure for registration and control of rates of rooming accommodation. Landlords in any area designated as coming under the terms of this general order and also in Halifax to which a similar separate order applies (A-421) must continue to have rates for first rentings approved.

During February, the town of Trenton, Ontario, and a two mile radius around it were brought under the provisions of A-488 and forms for application for maximum rate cards were described. (A-590, Feb. 6.) Landlords in Dauphin, Manitoba, are required to register any rooming accommodation which they now rent or which they rented during the preceding month. (A-599, Feb. 16).

Consumer Rationing

Butter.—By arranging for the first butter coupon on the new ration book to become valid on March 10, to be followed by the second coupon on March 20, and the third on March 27, two pounds of butter for every person will be distributed during the month of March. In making this announcement it was pointed out that production normally reaches its lowest point during February and March, but that supplies were being moved as rapidly as they became available from surplus producing areas to the urban centres where there is a deficiency. The first three purple butter coupons in the new ration book are valid until April 30.

Dairy Butter.—Under a new order, effective March 1, wholesalers and retailers have been authorized to take any amount of dairy butter offered to them at prescribed prices. The order puts into effect a uniform price ceiling in each province, thus aiding farmers who had been operating under low ceiling prices. In buying dairy butter the storekeeper or wholesaler will surrender the usual ration coupons which are secured from the customers unless the farmer offers more dairy butter than can be sold in the normal course of trade. If this is the case, the farmer will be given a receipt, instead of coupons, and the stocks of butter will be turned over, through local agents, to the Commodity Prices Stabilization Corporation,

Limited. The corporation in turn will dispose of the stocks of butter for use in manufacturing and through other available outlets. In selling butter direct to the consumer, the farmer must still collect ration coupons for the amount of butter sold.

Ration Book No. 2.—Twelve million copies of Ration Book No. 2 were issued and distributed for use on March 1. Each book contains one green sheet of tea-coffee coupons, one pink sheet of sugar coupons, two purple sheets of butter coupons, several sets of spare coupons, one sheet of instructions regarding sugar for canning purposes, and one application for sugar for canning. Tea-coffee and sugar coupons have the dates they become due printed on the back. Butter coupons are dateless as are the spare coupons.

Ration Coupon Banking.—Beginning March 1, many distributors will be able to deposit the ration documents they receive on sales of sugar, butter, tea and coffee with their banks, thus relieving them of many of the difficulties of handling ration documents. Dealers in food, such as importers, wholesalers, creamery and cheese factories as well as retailers whose normal monthly gross sales in foods exceed \$5,000 were required to open ration bank accounts, and those who do not operate accounts may take their documents to their own banks and exchange them for a bank transfer voucher in favour of the supplier. Later, the system was extended to quota users such as public caterers and institutions.

Conservation and Simplification

Clothing.—The manufacture of work clothing, leather garments and cotton sportswear is to be further simplified as the result of an order amending the schedule of restrictions and eliminations affecting these garments and providing more specific and in some cases more rigid specifications. In addition, styles of these garments—leather garments, parkas, cotton windbreakers, ski slacks, etc.—are cut by 50 per cent and the remaining 50 per cent of the styles are frozen. (A-593, Feb. 11.) Another simplification order affects the manufacture of men's and boys' dressing gowns. (A-606, Feb. 23).

Contracts to be let by the Department of Munitions and Supply for a large number of leather jerkins for the Armed Forces, necessitated an order to control supplies of glove and garment leather now in tanners' hands in order that raw materials might be diverted from ordinary processing to meet the requirements of the Armed Forces. The order prohibited tanners and processors from selling or putting into process hides or leather suitable for such manufacture except on Government orders and

required them to send in reports on all hides and leather in their possession noting quantity, quality, etc. (A-609, Feb. 23). In order to conserve existing supplies and ensure a satisfactory distribution of shirts manufactured to meet the standards for officers' shirts, an order was passed requiring manufacturers and wholesalers selling such shirts to retailers to obtain the retailer's signed promise not to re-sell the shirts except to or for the use of commissioned officers of the Armed Forces. (A-608, Feb. 23).

Metals.—As mentioned above, certain Controller's orders respecting goods transferred to the jurisdiction of W.P.T.B. have been re-written as Administrator's orders. Further restrictions on production of these goods are contained in some sections of the new orders, Nos. A-610 to A-620, but in the main they carry through the former regulations issued by the Controller of Supplies. In general the manufacture of these products for civilian use is prohibited except with permission, and in some cases the sale or installation for civilian purposes also requires permission. In some of the orders, A-613, A-614 and A-619, the restriction concerns the use of metal in these products, and in A-620 the restriction concerns the use of film for certain purposes. These orders, listed below, were passed on February 23 to become effective March 1.

- No. A-610—Respecting electrical appliances for domestic use.
- No. A-611—Respecting radios, radio phonograph combinations, phonographs and replacement parts for radios.
- No. A-612—Respecting domestic washing machines, ironers and domestic and commercial vacuum cleaners.
- No. A-613—Respecting the use of metal in the manufacture of certain goods.
- No. A-614—Respecting metal furniture, upholstered furniture, bedding and parts.
- No. A-615—Respecting domestic refrigerators.
- No. A-616—Respecting refrigerating and air-conditioning equipment.
- No. A-617—Respecting commercial laundry and dry cleaning equipment.
- No. A-618—Respecting stoves and ranges.
- No. A-619—Respecting trunks.
- No. A-620—Respecting transparent film.

In order to conserve materials and reduce inventories, an order has been passed simplifying

the manufacture of incandescent, fluorescent and other electric discharge lamps in reference to the number of types, shapes, sizes and voltages. The order eliminates lamps for purely decorative purposes and reduces the number of sizes and shades of coloured lamps. A special schedule of certain types is allowed for the Departments of Munitions and Supply, National Defence, Pensions and National Health, Allied Governments or for ships' stores. (A-607, Feb. 23.) Amendments were made in the orders regarding the metal to be used in the manufacture of surface heating coils, and the use of metal in certain parts of coal stokers. (A-583, Feb. 2, and A-586, Feb. 6.) The order halting the sale of all new shotguns in Canada has been relaxed to permit the movement of all except 18 makes and types of 12 gauge guns, since the inventory required last fall has been completed and a considerable percentage of the guns required for the Department of Munitions and Supply have been ordered. (A-603, Feb. 20).

Paper.—The manufacture of paper boxes has been simplified by an order eliminating extension edges or flanges on set-up boxes except where the bottom ledge is necessary as a cover rest. The order also does away with lace and padded tops and the use of any textile in paper boxes for packaging or displaying jewellery other than rings and watches (A-592, Feb. 11).

Oils and Fats.—In order to maintain the supply of glycerine, the use of cocoanut and other high lauric acid oils now in short supply has been restricted to products in which at least 90 per cent of the available glycerine content of the oil is recovered. Finished products must not contain more than 1.5 per cent glycerine on an anhydrous basis. In addition 25 per cent of all stocks amounting to 60,000 pounds or over must be held in reserve, consisting where possible of crude whole oils, and may not be sold or used without the Administrator's permission (A-602, Feb. 19). The importance of fats in the manufacture of explosives and other vital war material is the reason for an order requiring persons who slaughter cattle for sale as beef to remove at the time of slaughter, from carcasses, sides or quarters, the kidneys and certain internal fats. Large quantities of beef fats will in this way be collected at the source before there is a chance of wastage or deterioration and be salvaged for essential war uses. (Board Order No. 231, Feb. 2).

Prices, Retail and Wholesale, in Canada, February, 1943

Cost of Living, Prices of Staple Articles and Index Numbers

THE official index number of the cost of living in Canada has declined during each of the last two months, the level at the beginning of February being one fifth of one point lower than at the beginning of January and 1.9 points lower than at the beginning of December, 1942. This index calculated by the Dominion Bureau of Statistics on the base of average prices during the period 1935 to 1939 as 100 was 116.9 at February 1, 117.1 at January 2, 118.8 at December 1, 1942 and 100.8 at August 1, 1939, the last pre-war month. The decline at the beginning of February was due mainly to lower prices for certain foods particularly eggs and oranges but minor decreases were recorded also in the fuel and clothing groups. Moderate increases were recorded in the prices of potatoes and meats.

The increase in the index since the outbreak of war was 16 per cent as compared with an increase of 41.3 per cent between July, 1914, and January, 1918, the comparable period during the last war. Between October, 1941, and February, 1943, the period covered since

the establishment of price control, the advance in the index was 1.2 per cent. For the comparable period during the last war, that is between October, 1916, and February, 1918, the advance was 23.4 per cent.

Foods advanced 27.6 per cent between August, 1939, and February, 1943; clothing 20.0 per cent; home furnishings and services 16.7 per cent; fuel and light 13.8 per cent; rent 7.2 per cent; and the miscellaneous group 6.1 per cent.

In compliance with Order in Council P.C. 6219, as amended, the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the special War Revenue Act.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the LABOUR GAZETTE

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wages rate of less than twenty-five dollars per week.

(f) Higher price is for coal in sacks.

(g) Natural gas used extensively.

(h) Including lignite.

(i) Six roomed houses not

and 5 roomed houses, modern \$25-\$35 per month, semi modern, \$10-\$15.

(s) Delivered from mines.

(v) Workingmen's

Quebec, and 2% in the other cities in the province are not included in the fuel prices.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—Monthly, Prices and Price Indexes (Canada); annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, farm-made cheese, onions, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between \$450 and \$2,500 in 1938. The average expenditure was \$1,453.90, divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.50; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index was \$40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100.0; September, 100.0; October, 103.8; November, 104.3; December, 104.3; January, 1940, 104.2; February, 104.3; March, 105.5; April, 105.5; May, 105.3; June, 105.3; July, 106.4; August, 106.8; September, 107.9; October, 108.4; November, 109.7; December, 110.0; January, 1941, 110.4; February, 110.1; March, 110.2; April, 110.7; May, 110.9; June, 112.7; July, 114.9; August, 117.7; September, 119.4; October, 120.1; November, 121.4; December, 120.6; January, 1942, 119.9; February, 120.3; March, 120.6; April, 120.6; May,

120·9; June, 121·8; July, 123·9; August, 123·5; September, 123·0; October, 123·7; November, 125·0; December, 125·2; January, 1943, 122·5; February, 122·2.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

In wholesale prices the Dominion Bureau of Statistics index number for February on the base 1926 as 100, was again slightly higher at 97·5 as compared with 97·1 for January and 97·0 for December, 1942. The increase during the month was due to advances in two groups, namely, the vegetable products group and the animal products group. In the former the increase was due to higher prices for oranges, grains, potatoes, onions, rolled oats and hay and in the latter to higher prices for furs, sheepskins, livestock, fresh meat, butter, cheese, animal oils, fats and fish. The advance in the index since February, 1942, was 3·1 per cent and since the outbreak of war was 34·9 per cent. Between July, 1914 and January, 1918, the comparable period during the last was the index advanced 90·5 per cent. The increase in consumers' goods since August, 1939 was 33·3 per cent, in producers' goods 36·6 per cent and in Canadian farm products 51·5 per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of February of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers. The exceptions are milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the *LABOUR GAZETTE*. The prices of

milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the *LABOUR GAZETTE*.

Commencing with this issue the prices of a number of items in the table on page 402 are not on the same basis as previously. These items together with the Dominion average prices for January 1, on the new basis in each case are: Flour, formerly per pound in 24-lb. bags, now in 7-lb. bag, average price January, 4·2 cents per pound; canned peas, formerly 16-oz. tin, now 20-oz. tin, average price January, 14·3 cents; canned corn, formerly 16-oz. tin, now 20-oz. tin, average price January, 14·9 cents; raisins, formerly 16-oz. package now per pound in bulk, average price January, 14·7 cents; canned peaches, formerly 16-oz. tin, now 20-oz. tin, average price January, 20·6 cents.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965 (L.G., 1941, page 1462), the price ceiling established by P.C. 8527 (L.G., 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (L.G., 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 104. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect of January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail prices of beef continued slightly upward at the beginning of February. An advance of 50 cents per cwt. was permitted by the Wartime Prices and Trade Board in the prices of beef carcasses for the period December 24, 1942, to February 10, 1943. Rolled rib roast averaged 33·6 cents at February 1, 33·2 cents at January 2 and 33·0 cents at December 1, 1942. Fractional increases were recorded also in the price of fresh pork and bacon. Eggs were lower in most localities the Dominion average price being down from 51·4 cents per dozen in January to 44·4 cents

in February. Creamery butter was unchanged at 40 cents per pound. Potatoes advanced from 40·9 cents at the beginning of January for 15 pounds to 42·7 cents at the beginning of February. The price in February 1942, was 37·6 cents. Oranges were again lower averaging 38·3 cents per dozen.

The following are the prices reported for Welsh coal "cobblers" and "French nut" at the beginning of February 1943; Halifax \$19·50; Charlottetown, \$17·90; Saint John, \$18·50; Quebec, \$16·50; Three Rivers, \$17·25; Sherbrooke, \$18·75; St. Hyacinthe, \$17·50; Montreal, \$17·75.

Prices in Great Britain and Other Countries

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the January issue of the LABOUR GAZETTE. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE.

Since the outbreak of war, control of prices, production and trade has been extended in many countries, resulting in much less movement in prices than occurred in the inflationary period during the last war.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 162·1 for January, an increase of 0·4 per cent for the month. Except for an increase of 3·1 per cent in coal prices, of 1·3 per cent in cotton and of 1·1 per cent in the meat, fish and eggs group, changes in all groups were less than one per cent.

The Statist index number, on the base 1867-1877=100, was 152·2 at the end of December, an increase of 0·6 per cent for the month. As compared with the price level at the end of December, 1941, food prices had risen 3·2 per cent and industrial materials 4·3 per cent, and prices generally had increased 3·9 per cent.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 199 at January 1, a decrease of $\frac{1}{2}$ of one per cent from the previous month. Food was one per cent lower and clothing two per

cent lower than the previous month while fuel and light rose about one per cent.

Newfoundland

COST OF LIVING.—The index number of the Department of Health and Welfare for the cost of living at St. John's, on the base October 1, 1938=100, was 148·1 at February 6, a decrease of 1·6 per cent for the month, due to decreases in food prices and in the fuel and lighting group.

New Zealand

WHOLESALE PRICES.—The Census and Statistics Department index number, on the base 1926-1930=1,000, was 1,456 in October, as compared with 1,460 for September. The principal change for the month was a fall of 7·4 per cent in meat prices.

COST OF LIVING.—The official index number of retail prices, on the base 1926-1930=1,000, was 1,132 for October, an increase of 0·6 per cent for the month due to higher prices.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1935-1939=100, was 101·9 for January, an increase of 0·9 per cent for the month. The principal change for the month was a rise of 2·8 per cent in farm products, chiefly grains and livestock and poultry.

COST OF LIVING.—The Bureau of Labour Statistics index number, on the base 1935-1939=100, was 120·6 at January 15, an increase of 0·2 per cent for the month. Food was 0·2 per cent higher, the fuel, electricity and ice group 0·9 per cent and miscellaneous items 0·3 per cent higher, while clothing and housefurnishings were unchanged.

Industrial Accidents

Fatal Industrial Accidents in Canada, 1942

Analyzed According to Industries, Causes, Localities and Months

AN analysis of fatal industrial accidents in Canada during the calendar year 1942 by industries, causes, provinces and months is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course of, or arising out of their employment; also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly reviews, each containing an analysis of accidents occurring during the period covered, appeared in the *LABOUR GAZETTE*, for May, August and November, 1942, and February, 1943.

The record is compiled from reports from the following governmental authorities,—The Board of Transport Commissioners of Canada; The Explosives Division of the Federal Department of Mines; The Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Chief Factory Inspector; and the British Columbia Department of Mines. In addition, reports were received also from the correspondents of the *LABOUR GAZETTE* resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces, and Table III by months. The last two tables also include summary figures for 1941, which are a final revision of the figures published in the *LABOUR GAZETTE*, March, 1942, by the inclusion of accidents occurring in 1941 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the *LABOUR GAZETTE*, for May, August and November, 1942, and February, 1943. The figures for 1942, being still incomplete, are accordingly

to some extent not comparable with the completed figures for 1941.

In some industries, where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences. For example, in the mining group there was a decrease in the number of fatalities from 262 in 1941 to 193 in 1942, which may be partly explained by the fact that during 1941 there was a major disaster in coal mining resulting in the loss of 29 lives; and there was also a decrease of 41 fatalities in metalliferous mining in 1942, which may be largely due to a reduction of employment.

In the manufacturing group there was an increase from 263 in 1941 to 298 in 1942; also in the construction group there was an increase from 176 to 219 which may be accounted for by increases in the employment index figures for these industries.

There was one disaster during the year under review, which occurred at Shipshaw, Quebec, on January 11, when 16 construction labourers employed on power development were burned to death in a fire that destroyed a large, wooden camp hut.

A serious accident occurred about December 17, when a tug was lost in a storm on the Lower St. Lawrence River and the crew of ten men were drowned. When a schooner foundered and sank in a storm on the St. Lawrence River, near Isle Verte, Quebec, on October 27, the crew of six men were drowned. On September 21, a first officer and two deck hands were drowned when washed overboard in a storm on Lake Superior. A captain, a mate and an engineer were swept overboard from a schooner in a storm and were drowned, off Lunenburg, N.S., about November 30.

In a collision of two trains, near Chapleau, Ontario, on January 14, two engineers, two firemen, a brakeman and a trainman were killed. In a collision of two freight trains, at Montanben les Mines, Quebec, on November 9, two engineers, two firemen and two brakemen lost their lives; and, in a similar accident at Nipissing Junction, Ontario, on December 28, two engineers, two firemen and a brakeman were killed.

Two civilian pilots, a flight engineer and a radio officer were killed in an Atlantic ferry plane crash, on October 14, while en route from Dorval, Quebec. In a plane crash at Whitehorse, Yukon Territory, on December 4, a pilot and two mechanics lost their lives. On December 20, a plane disappeared near Vancouver, B.C., and a pilot, a co-pilot, and a stewardess were lost.

Three miners died when buried in a cave-in following a premature dynamite blast in a chromite mine, near Richmond, Quebec, on June 12. On August 5, at Cadomin, Alberta, five coal miners were killed when crushed under a mass of wreckage when pent-up waters swelled by heavy rains burst into the mine shaft level causing a collapse of the workings and a flood in the mine.

Three female workers in a munition factory died from burns in an explosion and fire at Thetford Mines, Quebec, on January 26. Three pulp millworkers were killed when crushed between belting and pulleys when a machine started while they were adjusting the belting,

on March 1, at Port Alfred, Quebec. On March 13, three female workers in a cap factory at Montreal, perished when trapped in a fire in the factory. On April 22, six workmen lost their lives following an explosion in a mixing room of a chemical plant for manufacturing pyrotechnic stores, near Waterloo, Quebec. A test pilot, a test engineer and a mechanic, employed by an aircraft factory, were killed in a plane crash, at Halifax, N.S., on December 3.

A carpentry foreman and two labourers lost their lives when buried in an excavation under a cave-in of clay, at Sarnia, Ontario, on April 3. Five construction labourers died following a collapse of a concrete roof, at Welland, Ontario, on November 20.

On March 14, a taxi proprietor, two taxi drivers and a helper died from carbon monoxide poisoning from a snow-choked exhaust pipe while trying to free a car from a snow drift. While fighting a fire that destroyed an apartment block, following a furnace explosion, three firemen lost their lives in Montreal, on

March 1. When a boat capsized on Shipshaw River, Quebec, three loggers were drowned on October 24.

Fatalities by Causes

The classification of accidents according to causes shows that the largest number, 481, came under the category "moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft (civil aviation). The largest number of accidents in this category, 127, appears under the heading "automobiles and other power vehicles and implements", with 108 classified under the heading "being struck or run over by, or crushed by or between cars and engines", (78 of these being engaged in steam railways); 87 were in connection with watercraft (16 of these being in logging, 23 in fishing and trapping, and 40 in water transportation); 42

were due to derailments and collisions (39 of which were in steam railways); 41 appear under aircraft (25 of which were in air transportation); 32 were caused by mine and quarry cars; 23 by animal drawn vehicles and implements, and 21 were caused by persons "falling from or in cars or engines."

Next in order were "falls of persons", causing 261 fatalities as follows: 90 from elevations, 71 into pits, shafts, harbours, rivers, etc., 22 from loads, etc., 20 due to collapse of support, 17 from ladders, 14 falls on the level, 10 down stairs and inclines, 8 into holds of vessels, 7 into tanks, vats, kilns, etc., and 2 on sharp objects.

"Falling objects" caused 235 fatalities, of which 75 occurred in mines and quarries; 68 were due to trees and limbs; 42 to objects falling from elevations, loads, piles; 16 to breaking or loosening of straps, cables, etc.; 14 to collapse of structure; and 20 to other falling objects.

Fatalities numbering 188 were caused by "dangerous substances", classified as follows: 46 were due to explosive substances, 42 to

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some boards.

(b) Preliminary figures.

(c) Subject to further revision.

electric current, 34 to conflagrations, 31 to hot and inflammable substances and flames, 17 to gas fumes, poison, etc., 16 to steam escapes, boiler explosions, compressed air, and 2 to mine explosions from gas, coal dust, etc.

Striking against or being struck by objects caused 42 fatalities, 40 were caused by prime movers, 29 by hoisting apparatus, 26 by animals (20 of which were due to horses), 21 by working machines, 16 by handling of objects, and 5 by tools.

The category "other causes" includes 113 fatalities of which 59 were due to industrial disease, strain, etc., 22 to cave-ins, land slides, ice jams, etc., 10 to lightning, frost, storms, sunstroke, 7 to shooting and violence, 6 to infection not elsewhere specified, 4 to drownings not elsewhere specified, and 5 concerning which no particulars were available.

Fatalities by Provinces

The classification of accidents according to provinces shows that the largest number, 450 occurred in Ontario. There were 440 in Quebec, 221 in British Columbia, 120 in Nova Scotia, 74 in Alberta, 54 in Manitoba, 44 in New Brunswick, 42 in Saskatchewan, 9 in Prince Edward Island, and 3 in Yukon and Northwest Territories. In Ontario the fatalities occurred by industries as follows: manufacturing, 105; transportation and public utilities, 99; construction, 66; mining, non-ferrous smelting and quarrying, 59; logging, 36; agriculture, 27; service, 25; trade, 22; electricity, gas and water production and supply, 8; and fishing and trapping, 3. In Quebec, the largest number, 109, was also in manufacturing, with 96 in construction, 90 in transportation and public utilities, 43 in logging, 34 in mining, non-ferrous smelting and quarrying, 30 in agriculture, 24 in service, 6 in trade, 5 in electricity, gas and water production and supply, 2 in fishing and trapping, and 1 in finance. In British Columbia there were 58 fatalities in logging, 41 in manufacturing, 40 in mining, non-ferrous smelting and quarrying, 33 in transportation and public utilities, 21 in construc-

tion, 13 in fishing and trapping, 8 in service, 3 in agriculture, 3 in trade, and 1 in electricity, gas and water production and supply. In Nova Scotia and Alberta there were respectively 30 and 20 fatalities in mining, non-ferrous smelting and quarrying, and no other industry experienced as many fatalities as these industries. Transportation and public utilities registered the largest number in Manitoba, New Brunswick and Saskatchewan, there being respectively 18, 14, and 10 in this industry.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,457, being classified under the various groups of industries as follows: transportation and public utilities, 303 or 20.80 per cent of the total; manufacturing, 298 or 20.45 per cent; construction, 219 or 15.03 per cent; mining, non-ferrous smelting and quarrying, 193 or 13.25 per cent; logging, 162 or 11.12 per cent; agriculture, 106 or 7.28 per cent; service, 79 or 5.42 per cent; trade, 42 or 2.88 per cent; fishing and trapping, 33 or 2.26 per cent; electricity, gas and water production and supply, 21 or 1.44 per cent; finance, 1 or .07 per cent.

The fatalities by months indicate that the greatest number, 140, occurred in October, while the lowest total, 103, was recorded in February. The table gives the total number of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance, service, etc., the figures were those of the decennial census of 1931, for mining and manufacturing, from the annual census of industry for 1940, for fishing, electricity, steam railways, street and electric railways, telegraphs and telephones, and express, from the annual census of industry for 1941.

While the latest figures available as to numbers employed are not in any instance those for the year under review, they are included, however, for general comparative purposes.

Fatal and Non-Fatal Accidents in Canada Reported by Provincial Workmen's Compensation Boards

THE Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, including those due to industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, and steam and electric railway opera-

tion, additional information is available from various governmental departments and commissions.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation

Boards for 1941 were summarized in the following issues: New Brunswick and Nova Scotia, June, 1942, pages 699-700; Alberta and British Columbia, August, 1942, page 919; Manitoba and Saskatchewan, September, 1942, page 1098; Quebec, November, 1942, page 1344; and Ontario, elsewhere in this issue.

In none of the provinces does the Board have jurisdiction over accidents in all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but include to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by

the several Workmen's Compensation Boards for 1936, 1937, 1938, 1939, 1940, 1941 and also include some preliminary figures for 1942. It may be observed that the Department of Labour's figures show more fatal industrial accidents as occurring during each year than the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year. This difference is largely accounted for by the fact that the Provincial Boards do not record accidents in all industries. In addition, however, the Board's records only show accidents to employees, while the records of the Department of Labour register accidents to all persons occupied in industry, including employers and workmen carrying on their own business, of whom there are many, particularly in trucking, trade, etc., as well as in agriculture.

Workmen's Compensation in Ontario

THE Report for 1941 of the Workmen's Compensation Board of Ontario gives an account of accidents occurring in that province during the year, the payment of benefits, and the various activities of the Board.

Accidents.—During 1941 there were reported to the Board 113,822 accidents, as compared with 81,116 during 1940, and 60,520 during 1939. This increase in accidents was attributed for the most part to increased employment.

The number of accidents in which compensation or medical aid was paid during the year was 104,655, as compared with 70,111 during 1940. The 104,655 comprised 438 deaths, 1,616 permanent disability cases, 40,275 temporary disability cases, and 62,326 medical aid only cases.

Benefits.—The total benefits awarded during the year amounted to \$9,898,893, compared with \$7,282,877 during 1940, and \$6,152,407 during 1939.

Of the total benefits awarded during the year, \$8,126,517 was for compensation, and \$1,772,376 was for medical aid.

The total benefits awarded from the commencement of the Act (January 1, 1915) to January 1, 1942, amounted to \$152,135,326, and the total accidents reported during the same period were 1,568,615.

Assessments.—Some of the industries covered by the Act are under the collective liability system (the employer not being individually liable for accidents to his workmen but being assessed to provide a general fund out of which accidents occurring in his class of industry throughout the Province are taken care of), while others are under the individual

liability system (the employer being liable to pay for accidents happening to his own workmen).

For industries in the first category (Schedule I), provisional assessments for 1941, including estimated adjustments, amounted to \$9,034,812, an average rate of \$1.08 for each \$100 of payroll. This compares with a provisional estimate of \$6,409,486 in 1940 and \$6,686,948 actually assessed during that year. The rate of assessment was \$1.02 for 1940 and \$1.06 for 1939. The provisional surplus to the credit of these classes of industry at the end of 1941 was \$1,651,520.

In regard to industries in the second category (Schedule 2), the Dominion Government (including the Defence Industries), the Provincial Government, and the employers pay for accidents in these industries as they arise, on the adjudication of claims by the Board. Hence, these industries do not pay assessments to the Board on a percentage of their payroll.

Finances.—The provisional surplus of \$1,651,520 standing to the credit of the classes comprising Schedule 1, is in addition to a Disaster Reserve of \$236,045, a Reserve for Depreciation of Securities (which belongs to the classes) of \$922,401, and an excess of \$191,970 in the Silicosis Account of cash over liabilities for silicosis in the mining industry. This makes a total of \$3,001,937, as compared with \$3,607,697 at the end of 1940. These assets in excess of liabilities are in addition to accrued interest on investments.

The Disaster Reserve is a fund set aside under the provisions of Section 101 (2) of the Act to meet any unforeseen disaster or other circumstance which might unduly burden the

employers in any class of industry. The fund has been accumulated by a transfer of one per cent of the gross assessments up to the end of 1922, and for the year 1928. These are the only moneys set aside or held by the Board which do not directly cover liabilities actually incurred by reason of accidents which have already happened.

In addition, there was at December 31, \$28,537,870 in the Pension Fund, which is not a reserve but a fund to pay pensions to widows, children, and disabled workmen, which pensions run for life or lesser periods, and which were calculated on an actuarial basis, the liability being equal in amount to the fund. From time to time actuarial revaluations of the liabilities are made to ensure the proper amount being kept in the fund. The last such revaluation was made during 1941.

Safety Associations.—The Board's aid to Safety Associations was increased from \$241,760 in 1940 to \$250,775 in 1941, and for Mine Rescue Work from \$15,777 to \$20,228.

The safety or accident prevention associations are organizations of employers established under the authority of the Act by the employers in 23 out of the 24 classes of industry. They are under the management of the employers but the expenses are paid by the Board out of the Accident Fund.

The Report also contains complete information concerning operations during 1940, including statistics regarding accidents during the year, their causes, nature of injuries involved, number, time loss, total and average cost of the different classes of cases, the age, wage, nationality, sex, and marital condition of injured workmen.

Notes of Current Interest

Survey of absenteeism in Canadian war industry.

A sample poll of a number of industrial plants across Canada carried out by the Department of Munitions and Supply indicates that absenteeism in Canadian war industry is remaining within the limits maintained since September of from $6\frac{1}{2}$ to 8 per cent.

It should be emphasized that the figures in these reports refer to absence from all causes, including sickness and vacations, and absence with and without leave. No breakdown is given as to the various causes of absences, or as to the proportion that is involuntary or justifiable, and the proportion that is preventable.

For January, thirty-three firms submitted returns, and for February the same number, with, however, three changes in constitution so that the comparison from month to month is not exact.

	Jan.	Feb.
Firms submitting returns	33	33
Employees	86,523	82,477
Average absent daily....	6,617	6,623
Percentage absent daily.	7.6	8.0

The rate of absence varied considerably from plant to plant. One company which reported a 24 per cent rate during January was able to announce a reduction to 17 per cent during February. Some half a dozen firms with rates of 10 per cent or more balanced a larger number with rates of 4 per cent or less.

For certain large plants located in suburbs the transportation problem, which already obliged many workers to spend up to two hours or more each day in travelling, was aggravated by winter conditions. This had its effect on the absence rate.

One such company noted that 20 per cent of its female employees were away from work daily whereas only 9.6 of the men were absentees. The same company noted a somewhat higher absence rate for employees of both sexes on the night shift than on the other two shifts.

Firms with a low absence rate were frequently old established companies with experienced employees whereas the newer war plants, with a high proportion of women workers and with many employees unaccustomed to industrial life, had difficulty in maintaining steady attendance.

Fractional increase in cost of living index.

A slight advance in the official index of the cost of living was recorded at the beginning of March due entirely to increases in the prices of certain foods notably beef, potatoes and oranges. A seasonal decline was recorded in the price of eggs. At the beginning of March the index (on the base of average prices during the period 1935 to 1939 as 100) was 117.2 compared with 116.9 the previous month and 100.8 for August, 1939, the last pre-war month.

The advance in the index since the outbreak of war therefore was 16.3 per cent. For the comparable period during the last war, that is, between July, 1914, and February, 1918, the advance was 43.3 per cent. Since the establishment of the ceiling on prices in the autumn of 1941, the advance in the index was 1.5 per cent, the official index at the beginning of October 1941 being 115.5. For the comparable period during the last war, that is between October, 1916, and March, 1918, the advance was 24.3 per cent.

Employment and industrial statistics.

The latest statistics available reflecting industrial conditions in Canada are given in the table below.

The index of employment at the beginning of February was 1.3 per cent lower than for January but was 9.6 per cent higher than for February 1942. In four of the last five years February has been lower than January but for the period 1921-1942 on the average some advance has

been recorded. Per capita weekly earnings which at the beginning of January had declined owing to reduced operations in many establishments at the holiday season advanced for February to about the level of the beginning of December 1942, and were about 8 per cent higher than in February 1942.

The index of the physical volume of business, reflecting activity in the production and distribution of goods, in February was

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

† Week ended March 25, 1943.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base June 1941=100. (4) Base, 1935-1939=100

(5) Adjusted, where necessary for seasonal variation.

(6) Notes in the hands of the public.

(7) Figures for four weeks ended March 27, 1943, and corresponding previous periods.

(8) MacLean's Building Review.

at the highest level on record. Only a slight advance was recorded as compared with the previous month but as compared with February 1942, the increase was about 18 per cent. Manufacturing production, especially in those activities producing for war purposes was materially higher than for the previous month, the index for the group recording an advance of about four per cent. Substantial increase was recorded also in construction contracts awarded indicating greater activity for this industry than in January. Decline was recorded in the production of electric current.

Cumulative figures for the first two months of 1943 show manufacturing production 26.9 per cent higher than for the same period of 1942. Flour production increased 25.9 per cent, in the same comparison creamery butter production 24.3 per cent, numbers of cigarettes released 20.3 per cent, the value of construction contracts awarded 29.5 per cent, and the index of grain marketings 45.4 per cent, while the index of livestock marketings declined 25 per cent, the volume of mineral production 9 per cent, factory cheese production 56.3 per cent, newsprint production 24.5 per cent and steel ingot production 10 per cent.

Strikes and Lockouts during March.

During the month of March the number of strikes recorded was less than the previous month but the number of workers involved showed a decided increase and the time loss in man working days was somewhat higher. The figures show 28 strikes, involving 17,008 workers, with a time loss of 30,683 man working days, as compared with 32 strikes in February, involving 5,243 workers and showing a time loss of 24,306 days. During March, 1942, there were 18 strikes on record, involving 3,770 workers, with a time loss of 23,191 days. During the month under review the strikes which involved a large number of workers were: a strike of 6,000 shipyard workers at Vancouver, B.C., a strike of 3,000 street railway employees at Montreal, P.Q., and eleven strikes in the coal mining industry involving more than 5,000 workers. None of these strikes, accounting for about two-thirds of the total time loss for the month, was of long duration.

Of the 28 disputes during March, 26 were terminated during the month. Eleven resulted in favour of the workers, seven in favour of the employer, four were compromise settlements and four were indefinite in result. Two strikes, involving 204 workers, were reported as unterminated at the end of the month.

Industrial Disputes Investigation Act.

Twenty-four applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received during the month of March. Five boards submitted their reports; ten boards were established and the constitution of six boards was completed during the month. Fifteen disputes were referred to Industrial Disputes Inquiry Commissioners and reports were received from commissioners in ten cases. One dispute was referred to an Industrial Relations Officer. As the result of negotiations arranged by a Board of Conciliation and Investigation, the settlement of one dispute was reported, an agreement having been reached between the parties. Two applications were withdrawn during the month and one application rejected.

Meeting of Committee on Industrial Hygiene.

The fifth meeting of the Technical Advisory Committee on Industrial Hygiene was held in Ottawa on March 29, 1943, under the chairmanship of Dr. C. F. Blackler of the Department of Pensions and National Health.

Discussion centred mainly on progress made towards implementation of Order in Council P.C. 1550 (March 2, 1942) which requires owners of war contract premises to "provide medical, surgical, nursing and preventive services to the satisfaction of the Minister" (of Pensions and National Health).

An account was given of the steps being taken to acquaint employers with the importance of health services in enabling workers to make a better contribution to war production, and with the procedure necessary for the establishment of such services in industrial plants.

(An article on medical services in industry as related to Canada appeared in the November, 1942 issue of the *LABOUR GAZETTE*, page 1274. New York State recommendations on the subject were described on page 227 of the February issue.)

Other matters discussed by the Committee included absenteeism and production in relation to fatigue; night work for women in war industries; pre-employment and placement examinations; the hazard of radium in industry; and tuberculosis control.

Labour representative appointed to C.B.C.

The appointment has been announced of Mr. Howard B. Chase as labour representative on the Board of Governors of the Canadian Broadcasting Corporation.

Mr. Chase is head of the Brotherhood of Locomotive Engineers in Canada, and Assistant Grand Chief Engineer of the international brotherhood.

The appointment of Mr. Chase followed requests made by each of the major trade union organizations in their legislative proposals to the Dominion Government during February and March that labour be accorded further representation on government bodies. The Prime Minister at that time indicated his desire to see "as complete a labour representation as possible on government boards."

Labour leaders from Britain and Dominions meet in conference.

Representatives of trade unions in the British Dominions met in England at a conference beginning April 12. The conference was convened by Sir Walter Citrine, Secretary of the

British Trades Union Congress, and was attended by delegates from labour organizations in Canada, Australia, New Zealand and South Africa, as well as from the British unions.

The Canadian representatives were Mr. Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, and Mr. Alfred Farnilo, President of the Alberta Federation of Labour, representing the Trades and Labour Congress of Canada.

The purpose of the conference was to establish closer communication between the labour movements of the countries represented and to exchange first-hand information on labour conditions in the various countries in wartime. Topics discussed included wartime legislation affecting labour, and the way in which labour unions are meeting the problems of the war effort.

Death of P. J. Jobin, first correspondent of Labour Gazette.

The death occurred on March 3 of Patrick Joseph Jobin, the first correspondent of the LABOUR GAZETTE who had served the Department in that

capacity from the first issue of this periodical in September, 1900.

He was appointed LABOUR GAZETTE correspondent for the Quebec District when the present Prime Minister, Rt. Honourable William Lyon Mackenzie King was establishing this official publication, and serving as its first editor. The letter covering Mr.

Jobin's appointment is still on file, bearing the approving comment of the late Sir Wilfrid Laurier, then Prime Minister.

For more than 42 years Mr. Jobin faithfully covered his assignment in the field of prices and industrial disputes. He was fearless and outspoken in situations that called for plain speaking. Some of his communications are gems of frankness and yet he had the respect of all those with whom he came in contact in his official duties.

Mr. Arthur MacNamara, the Deputy Minister of the Department, paid tribute to the long and faithful service which Mr. Jobin rendered in such full measure to the service of the Department of Labour all through its evolution to one of the most important departments of the Government.

Publication announced of "Canada 1943". 1943 edition of the Official Handbook "Canada".

Canada 1943 covers the present situation in the Dominion from Atlantic to Pacific, the weight of emphasis being placed on those aspects that are currently of most importance. So far as space permits, all phases of the country's economic organization are dealt with and statistics are brought up to the latest possible date. The text is accompanied by a wealth of illustrative matter that adds to the interest of the subjects treated.

The Introduction reviews Canada's war program, covering the development of her armed forces, the financial steps that have been taken, and the governmental organizations that have been created with their principal activities. It also reviews Canada's economic condition at the close of 1942. This Introduction is followed by special articles dealing with "Canada's Industrial War Front, 1942" and "Power in Relation to Canadian War Production". The former article treats of the extensive industrial organization that has been developed under the control of the Department of Munitions and Supply for the rapid production of all forms of war munitions.

The seventeen chapters review in detail economic conditions in the Dominion. All sections of the Handbook are well illustrated by up-to-date half-tone reproductions.

The price of the publication is 25 cents per copy; the special price concession granted, in the past, to teachers, bona fide students and ministers of religion has been discontinued. Application for copies may be made to the King's Printer, Ottawa.

Training and resettlement of disabled persons in Britain.

A scheme intended to guarantee, as far as possible, the return to active life of all disabled persons, whether injured in the armed services or in civil life, is contained in the

final report of the *Interdepartmental Committee on the Rehabilitation and Resettlement of Disabled Persons* in Great Britain. This committee was set up in December, 1941, under the chairmanship of Mr. G. Tomlinson, Parliamentary Secretary to the Ministry of Labour and National Service.

It is suggested that the scheme should be open to all, regardless of the nature or cause of the disablement. Hospital facilities would be provided for the specialized treatment of general and surgical medical cases. It is emphasized, however, that the successful rehabilitation of a person disabled by injury or sickness is not solely a medical problem but calls for the services of the social and industrial expert. There must be the fullest co-operation between the medical and industrial service, and in order to complete the process of rehabilitation the employment in which disabled persons are placed must be suited to individual capacity and make the best use of individual skill. The Committee discuss various aspects of both medical and post-hospital rehabilitation and they make a number of recommendations on these matters, including proposals regarding a reconditioning and vocational training service.

On the subject of resettlement, the Committee emphasize that the only satisfactory form of resettlement for a disabled person is employment which he can take and keep on his merits as a worker in normal competition with his fellows. With careful assessment of individual capacity and selection of employment a large proportion of disabled persons are capable of taking their places in industry on normal terms. In order to secure the resettlement of such persons in employment the Committee consider that some measure of statutory obligation will be required, and they accordingly recommend that provision should be made by legislation for:—

(a) a restriction upon the engagement of non-disabled persons by an employer who is employing less than a prescribed percentage quota of registered disabled persons, the prescribed quota being permitted to be varied for different industries, and to be relaxed for individual employers in special circumstances;

(b) the scheduling of certain occupations for the benefit of disabled persons and the prohibition of the engagement of non-disabled persons in such occupations without a special licence;

(c) the setting up of a register of persons handicapped by disablement, this being confined to those whose disablement is likely to last more than six months and substantially handicaps them in obtaining or keeping employment of a kind generally suited to their age, previous experience, and qualifications.

The scheme established by the proposed legislation should, the Committee consider, be administered by the Ministry of Labour and National Service through local committees set up in association with the employment exchanges. Disabled ex-service men (1914-18) still in receipt of a disability pension should be entitled to registration under the scheme, and the King's Roll Scheme should be terminated.

For the more severely disabled it is proposed that employment under sheltered conditions should be provided through voluntary undertakings, as at present, and through special centres established and administered by a public corporation.

On the subject of the financing of the scheme the Committee are of the opinion that the scheme should be regarded as a social service and that its cost should be met and recognized as a public obligation.

In their concluding remarks the Committee refer to the Report by Sir William Beveridge on the problem of social insurance, and point out that their own proposals do not conflict in aim or principle with those advocated in that Report; acceptance of the Committee's proposals therefore, would not prejudice action on the lines advocated by Sir William Beveridge.

Control of employment of women extended in Britain.

An extension of the powers of the Minister of Labour and National Service in Britain to direct women into employment and to channel their employment through employment exchanges or approved agencies was announced recently by Mr. Bevin. In future, women up to 45 who have no children under 14 may be directed into employment which now includes part-time work and occupations not covered by Essential Work Orders, and by the Employment of Women (Control of Engagement) Order passed January 28, 1943, women between the ages of 18 and 40 may not obtain employment except through an employment exchange or approved agency. For both groups the former age limit was 30.

The conditions of employment of the first group are to be safeguarded by a Government Order which is at present under study by the Trades Union Congress and the British Employers' Confederation, and will be issued

before the new policy is put into effect. Over half a million women have already taken up part-time work voluntarily.

The Control of Engagement Order replaces an earlier Order of January 22, 1942. As before, certain types of employment such as agricultural work, nursing, teaching, etc., and certain classes of women such as those with children under 14 are exempted from it, but employers wishing to fill specified positions which require special qualifications may now secure permits to hire persons without reference to the local exchange in the same way as certain individuals could obtain permits to seek employment outside the exchange under the former order.

In addition, men up to 65 and women up to 60 are now compelled to notify the Ministry of Labour and National Service whenever they leave or are discharged from any job covered by an Essential Work Order, so that they may be placed in other essential work immediately.

**Employer in
Britain fined
for permitting
women to work
excessive
overtime.**

A cotton-spinning firm in Britain engaged on Government work was recently fined for employing several women for longer hours than were permitted by law. The women had volunteered to work overtime to overcome a bottleneck in the doubling room which was caused by absenteeism and which affected various processes in the factory. They had begun work at 7.45 a.m. and were not expected to finish until 10 p.m. on the day on which the district factory inspector discovered the case. Their actual work-day was 12½ hours because an hour for tea and three-quarters of an hour for lunch were subtracted from the 14½ hour period of employment. The factory inspector in giving evidence at the prosecution declared: "This is the longest period of work I have ever come across. Even in the engineering industry the maximum which can be granted is 60 hours per week and 11 hours per day, and there is no factory in my area working anything near 60 hours." He said he understood that excessive overtime had been worked the week before in the same establishment.

Under the British Factories Act of 1937 the hours of women are limited to 9 a day and 48 a week and the period of employment may not exceed 11 hours a day. A limited amount of overtime is permitted but in no case may hours exceed 10 a day or the period of employment be more than 12 hours. However an Emergency Order was issued on

February 5, 1942, under the Defence (General) Regulations, 1939, exempting cotton spinning and doubling from these provisions of the Factories Act, but employers could only avail themselves of the exemption by obtaining the written permission of the district factory inspector and complying with conditions laid down in the Order. The Order authorizes the inspector to fix a maximum for women's hours somewhere between 48 and 52 and permits women to work 9½ hours on weekdays and from 5 to 7 hours as the inspector may determine on Saturdays. The period of employment may not exceed 10½ hours a day.

In imposing the fines, the Stipendiary Magistrate said he was disposed to leniency in view of the firm's small degree of responsibility for the offences and was satisfied that there was no exploitation of the women. He added: "I read of people getting the M.B.E. and the O.B.E. and being generally commended for turning in to work at all hours to increase production. When does a commendable act become a criminal one?"

**Harvest
labour in
Australia.**

Regulations in Australia relating to labour supply and conditions of work in harvesting were gazetted on October 23, and amended on November 9, 1942. They are entitled the National Security (Wheat Harvesting Employment) Regulations. The original regulations applied only to wheat but the amendment extended their application to oats, rye and barley.

Under them a Wheat Harvesting Employment Commission has been set up consisting of a chairman and two representatives each of the Australian Wheat Growers' Federation and the Australian Workers' Union. Its functions are to co-operate with manpower authorities in obtaining and allocating manpower for harvesting crops sown during 1942 and to determine wages and conditions for this work. Local Wheat Harvest Employment Committees have also been set up, and they exercise such powers of the Commission as the Commission specifies.

A determination relating to wages and conditions has been issued by the Commission. Basic rates are set for the various classes of labour and these are to be adjusted in a prescribed manner with changes in the cost of living. Normal hours are limited to 48 per week and time and one-half must be paid for overtime. Wages are to be paid weekly in cash or as mutually arranged. Local Committees may sit as Boards of Reference to settle disputes as to matters under the determination and other matters.

**United States
conference on
employment of
women in
war industries.**

Problems connected with the employment of women in war industries in the United States were discussed at a conference of State labour department officials from 11 eastern and central States and the District of Columbia. The conference met on March 10 and 11 at the invitation of the United States Secretary of Labour and was conducted by the Women's Bureau of the Department of Labour. Topics on the agenda included the types of work women can do, working hours in wartime, industrial health and safety standards, and adjustments in home and factory to reduce absenteeism and increase production. States represented were Delaware, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania and Rhode Island.

The conference agreed that reasonable hours of work must be maintained in both war and civilian industries and endorsed the 8-hour day, 48-hour week and one day's rest in seven recommended by eight Federal Government agencies last year (L.G., 1942, p. 881). Only in cases of emergency should these standards be relaxed. The conference also advocated the same wage rates for women as for men and proper safeguards for the health and safety of women workers.

In regard to civilian industries, the conference was of the opinion that relaxation of standards should be permitted only to maintain production of essential goods and should be confined to areas with extreme labour shortages.

**Principle of
guaranteed
minimum wage
established in
N.Y. state.**

The principle of a guaranteed minimum-weekly-wage for workers employed for a short work-week was upheld in a recent decision of the highest Court in New York State. Minnesota in 1920 was the first State to adopt the principle of setting a weekly minimum wage for workers who were employed for less than the regular work-week, and since then 25 to 30 minimum wage orders of this nature have been passed in various States. Such orders have a two-fold aim of inducing employers to spread their work more evenly over the week and of providing workers with a basic subsistence wage regardless of whether they are employed full-time or not. Wage adjustments of this type are permissible under the United States wage-stabilization policy which is concerned with eliminating substandards of living as well as checking inflationary wage

increases. The U.S. National War Labour Board declared in General Order No. 7 that since State minimum wage legislation is designed to eliminate substandards of living, the Board approves in advance all wage increases made in pursuance of State minimum wage laws.

The Order under attack in the New York Courts applied to the confectionery industry. It set a minimum wage of \$14 for a 40-hour week and a 35 cent hourly rate, but stipulated that employees who work three days or less in any week during the busy season (September 1-April 1) must be paid a minimum of \$10 a week and those who work two days or less in the slack season must receive \$7 a week. For a third day in the slack season the worker is to receive three-fifths of the full weekly minimum or \$8.40, and four-fifths or \$11.20 for a fourth day in either season.

The employers objected to paying workers for hours not actually worked, but the Court held that all minimum wage legislation was based on the principle of providing workers with a decent standard of living rather than reflecting the market value of the worker's services. It asserted that "the idea of a 'living wage' is the heart and core of such legislation" and declared that when the New York State legislature, in passing the Minimum Wage Act

directed the Wage Board and the Commissioner to take into account the cost of adequate maintenance and health as well as the value of the services and the wages paid in the State for like work, the Legislature of course realized that a wage sufficient to provide a decent standard of living would sometimes exceed the strict bargain-and-sale value of the worker's services.

The Court was of the opinion that if the Wage Board could only fix minimum hourly rates without being able to set a minimum number of hours for which the rates had to be paid, it could not carry out the obvious intent of the Minimum Wage Act which was to provide workers with a living wage.

**Post-war
planning
for textile
industry.**

A committee representing management and labour in the textile industry of the United States and including representatives of the public has been established to advise the International Labour Office in its current studies of the probable position of the textile industry in the post-war period.

The new committee will be known as the Advisory Textile Committee of the United States, and will be composed of four members representing management, four representing labour and four representing the public.

The function of the committee, it was explained, will be "to assist with constructive criticism and suggestions" in the preliminary work now being carried on by the I.L.O. in exploring the feasibility of a World Textile Office under I.L.O. auspices in the immediate post-war period.

Such a World Textile Office would be based on the tri-partite principle and would be responsible for the international organization of economic and social measures to secure prosperity and social justice in the textile industry.

Social Security in the Americas.

The Permanent Inter-American Committee on Social Security which was established by the first Inter-American Conference on Social Security, held at Santiago de Chile on September 10-16, 1942 (L. G., Nov. 1942, p. 1285), has decided to publish a periodical Bulletin. The Provisional General Secretariat has issued the first number of this Bulletin, which is a provisional issue pending a decision of the Executive body as to the character of the publication. This first issue, which may be obtained from the International Labour Office at Montreal, is an outline of the principal developments during the past two years in the social insurance field in the Americas. A tabular summary of the legislation in effect in this field on January 1, 1943, appears at the end of the Bulletin.

The general conclusion is that "the social security movement in the Americas is progressing at an accelerating pace, and that, inspired by a wide social vision and learning from one another's experience, the insurance schemes are being improved in order to meet the needs of the populations concerned and to play their part fully in economic and social life. . . . One is struck particularly by two facts: the number of new general schemes introduced and the ever-growing importance which is being attached to sickness insurance and to measures for the conservation of health."

In Canada and the United States, it is pointed out, a large proportion of the medical profession has been drawn into the armed forces, and it is suggested that the great strain imposed on the remaining doctors, especially in munitions centres, might have been reduced if there had been compulsory sickness insurance to provide an organization to enable the most economical use of the doctors available. It is noted, however, that in Canada plans are now being drawn up for the establishment of compulsory insurance to provide medical care.

Absenteeism of dissatisfied workers in Italy.

Italian workers absent from their factories without permission for one day are now liable to trial by military courts and may be imprisoned for as much as six months, according to the American Labour Conference on International Affairs.

Absenteeism, the report states, has assumed grave proportions in Italy, where the workers are dissatisfied, underfed and exhausted by long working hours.

Dissatisfaction arises chiefly from widespread shut downs. German coal deliveries have proved insufficient to keep factories going, and power shortages and shortages of raw materials have further contributed to the shutdowns. In December 1942 and January and February 1943, work in all cotton mills was suspended and the unemployed were forced into the army or sent to Germany to work.

Still other factories have been forced to close because of shortages of skilled workers, who have been sent to Germany.

Wages and salaries in Italy have been frozen for the duration of the war. Two years ago the government, worried by persistent grumbling and dangerous discontent, ordered a single wage increase of 4 per cent and a salary increase of 8 per cent. There have been no further increases since.

Long working hours and inadequate food have slowly undermined the health of the Italian workers. At the beginning of the war the government fixed the working day at ten hours. Later it increased it to twelve hours in the metallurgical and machine industries without any overtime pay. Italian railroad employees engaged in loading and unloading freight are now obliged to work seven days a week.

Correction

In a note in the LABOUR GAZETTE for March (p. 303), on the maintenance of membership formula of the U.S. National War Labour Board, there appeared this sentence: "As applied to a typical union contract, the formula provides that after a specified date no existing union members may terminate their employment for the duration of the contract."

In the above sentence, the word "membership" should have been used instead of employment.

Social Security

Report on Social Security for Canada

Plan to Establish a Basic Minimum of Economic Security for Every Citizen Submitted to House of Commons Committee

PROPOSALS that would assure to every Canadian certain standards of economic protection against the hazards of life were submitted to the House of Commons Committee on Social Security by Hon. Ian Mackenzie, Minister of Pensions and National Health, on March 16. The proposals were incorporated in a *Report on Social Security for Canada*¹ prepared by Dr. Leonard C. Marsh of the Dominion Government's Advisory Committee on Reconstruction (of which Dr. F. Cyril James is chairman).

The report, which is concerned with rural as well as urban needs, contains a survey of existing social legislation in Canada. It sets out methods by which this legislation can be improved and extended, and outlines principles for the construction of a comprehensive social security system suited to Canadian conditions. It does not contain specific draft measures, but provides a framework upon which legislation may be based.

Dr. Marsh's report recommends protection against the following contingencies:

- (1) unemployment;
- (2) sickness;
- (3) disability;
- (4) old age and retirement;
- (5) premature death of breadwinner (the risks of widowhood and orphanhood);
- (6) family needs (extra expenses due to births, deaths and the upkeep of children).

The report proposes that these contingencies be met by the following methods:

- (1) extension of Canada's present system of unemployment insurance; an unemployment assistance program for those not covered;
- (2) a national system of health insurance to provide medical and dental care and hospitalization; the provision of cash benefits to compensate for time lost through sickness to be considered as a separate scheme;
- (3) retention of existing workmen's compensation provisions; establishment of benefits for those disabled by non-industrial causes;

(4) revision of present old age pension scheme; to be eventually replaced by retirement pensions on a contributory basis;

(5) pensions for widows and orphans;

(6) children's allowances; cash grants for funeral expenses; maternity benefits for women wage-earners.

National Employment Program

In addition to the above recommendations, the report stresses the essentiality of a national employment program without which, it declares, the social insurance structure would have no solid foundation. Social insurance, the report emphasizes, "merely anchors the basic minimum, the absence of poverty . . . The first positive measure in providing social security is a program which will make work available, or, in other words, which will offer wages rather than subsistence maintenance . . . The only basic answer to unemployment is employment."

Anticipating a period of economic dislocation at the close of the war, varying from six months to two years or more, during which a considerable amount of occupational change-over will be inevitable, the report advocates an expenditure of the order of a billion dollars in the first post-war year on a government program to provide employment. While not going into details of projects, as outside the scope of the report, Dr. Marsh points to the need for a program of major public works, requiring "a co-ordinated effort of mobilization in which provinces, municipalities, utilities and private industry must be invited to join" and refers in this connection to the work of the sub-committee on Post-war Construction Projects, which has already reported on various aspects of the subject.

In such a full-employment program, Dr. Marsh suggests, it will also be imperative to maintain a system of facilities which will help to equip people to find work, or to give them access to new skills if there are no openings for those they already possess. "For many categories of workers," he points out, "the proper requisite in the event of unemployment

¹Published at 50 cents by the King's Printer, Ottawa.

is not maintenance in idleness, or even employment on works projects, but training." The continuance of the present Vocational Training program into the post-war period is recommended; and the better equipment of the Dominion Employment Offices, the importance of whose role, Dr. Marsh says, "it is impossible to over-emphasize."

Basic Standard of Living

The report attempts to estimate the amount of income that a Canadian family must receive as a minimum in order that poverty be eliminated. While pointing to the difficulty of ascertaining exact standards in dollar terms, the report refers to surveys of income needs that have been undertaken by various agencies, and uses as a basis standards prepared by the Toronto Welfare Council. On the basis of these standards, and judging from a table of Canadian family incomes in 1941 prepared by the Dominion Bureau of Statistics, Dr. Marsh concludes that one-third of Canada's urban families received in that year incomes insufficient to provide an "assistance minimum budget," while another one-third received less than a "desirable minimum budget." In rural districts the figure is estimated at 50 per cent of families receiving less than the "assistance minimum budget," with an additional 23 per cent receiving less than the "desirable minimum budget." In practice, whether or not an individual family were below the minimum would depend on the number of children. But for all these families social insurance techniques are particularly appropriate.

In terms of these findings the report evaluates past and present provision for the various categories of social need, and notes certain anomalies, insufficiencies, regional variations in coverage, and, in general, a lack of uniform or adequate standards.

The question of legislating for an adequate minimum standard of wages as a necessary part of a program to eliminate poverty is touched on, but is not pursued, as beyond the scope of the report. However, a topic closely related to this question and deemed to be of importance in the social insurance scheme is the problem of whether a minimum wage standard should be based on the needs of a single individual or of a family.

The report argues that wages are primarily a payment for services or for productivity, and that "fundamentally, insistence on relating a wage rate to family needs is illogical."

Children's Allowances

Accordingly the report advocates the supplementing of income by the nation in the case of wage-earners with children by the provi-

sion of children's allowances. These should be payable in the form of monetary grants at a standard rate and payable without reference to whether the family is employed or unemployed, in receipt of an insurance benefit or not. They are urged as a straightforward recognition of the special claim of children on the family budget, and of the fact that large families may be as much a cause of poverty as the economic hazards of unemployment, sickness and premature death of the breadwinner. The whole structure of social insurance recommended proceeds on the assumption that these allowances will be part of the total system, and its advantages are followed through consistently at all points in the report. Rates of payment would vary with the age of the child; rates varying from \$5 to \$12.50 per child under the age of seventeen being tentatively suggested.

Unemployment Insurance

The report discusses Canada's present unemployment insurance system as a base from which other social security units may be built. In looking towards a comprehensive social security system, and especially in relation to the anticipated period of stress at the close of the war, the report suggests consideration of "gaps" in the existing system as follows:—

- (1) extension of coverage to important groups of workers not at present included in the scheme;
- (2) provision for those who exhaust their benefits, whether at the end of six months or more rapidly;
- (3) provision for persons not eligible for other reasons.

In regard to benefits payable under the Act, the report points to the fact that "there is only a very restricted recognition of the extra dependency obligations of married men." The present scale calls for payment of benefits about 15 per cent higher to married workers than to single. The report recommends that this differential be substantially increased, specifically for a wife or other adult dependent; it is assumed that child dependents will be covered separately by children's allowances as proposed elsewhere in the report. If increased contributions are required to effect the change in benefits, they should not be collected from workers in the lower-paid categories.

Unemployment Assistance

For those not covered by unemployment insurance the report proposes a system of unemployment assistance. Benefits payable under this scheme might be about ten per cent

less than benefits under unemployment insurance. The plan would be administered through the Dominion employment offices, and would be closely bound up with rehabilitation training and with transference programs. The latter aspects of the plan would be of service in relation to establishing in employment some individuals previously considered unemployable.

Health Insurance

The Marsh report emphasizes the need for a health insurance plan in Canada to cover both rural and urban dwellers, and states certain general principles. (A draft bill on health insurance in Canada, submitted to the Social Security Committee by Hon. Ian Mackenzie at the same time as the Marsh report, is summarized elsewhere in this issue.)

Unlike unemployment insurance, "which must be confined not only to the industrial population but to persons actually or potentially of employee status", health insurance should be of universal coverage.

"To approach the problem comprehensively", the report declares, "it is important to recognize that there are actually four major aspects of health and sickness contingencies rather than one":

- (a) public health measures (including positive action to prevent illness from developing);
- (b) medical care;
- (c) sickness benefits (cash payments to cover loss of earning power);
- (d) disability, chronic illness, and other forms of long-term interruption or cessation of earning power.

Workmen's Compensation

Workmen's compensation, the oldest form of collective provision by the insurance or pooling techniques, is well developed in Canada. Mostly, it provides for those whom it covers a substantial range of benefits including medical care, and payments in the event of temporary incapacity, permanent disability and death. The Ontario system, which dates from 1919, is "frequently quoted as a desirable model in literature on the subject".

The report notes certain omissions in some of the provincial systems in respect to coverage of workers in stores, restaurants and other commercial establishments; clerical workers; casual and irregular workers; seamen; and agricultural workers.

The relation of workmen's compensation to a general scheme of social insurance is considered. The provision of benefits for industrial accidents and diseases separately from

provisions for accidents and illness incurred by the general public is noted to be somewhat anomalous. Nevertheless in view of the good record of workmen's compensation and its value as an encouragement to industrial safety work, it is recommended that the system should be retained.

Non-Industrial Disability and Invalidity

The report shows that for disability from non-industrial causes there is at present very little provision. In cases of temporary invalidity the report recommends that, in addition to medical care, cash benefits should be provided to compensate for loss of earning power. These would commence, typically, after a waiting period, and would amount to approximately one-half of the normal wage. For cases of permanent or long-term disability pensions should be provided. Persons who become partially disabled should receive special consideration in regard to rehabilitation and to placement in suitable employment, and receive appropriate compensation.

Cash maternity benefits, the report suggests, would be a normal counterpart to sickness benefits in the general health insurance scheme. For employed women, benefits would be payable six weeks before and six weeks after birth of the child, absence from work being the condition of payment, and might, it is proposed, be at a somewhat higher rate than sickness benefits.

Old Age Pensions

The report links old age with permanent disability as a contingency for which pensions should be provided. Recognizing that some persons lose their capacity for work at an earlier age than others, the report suggests a basic non-compulsory eligible age for old age pensions with premiums for those postponing retirement until later. The basic age suggested is 65 for men and 60 for women.

"In no province", according to Dr. Marsh, "can it be said that the old age pension administration carries out an adequate social treatment of the problem of assistance and service to the aged person". He suggests removal of "many of the unjustifiable restrictions as to eligibility", including residence qualifications, both Dominion and provincial, citizenship provisions, the principle "zealously adhered to in certain provinces of the responsibility of the children to the point of assuming that income is actually forthcoming from children for the support of the applicant even in cases where it is not. . . . Equally it is unsound to assume income from property of the pension applicant when such income is non-existent".

The maximum pension payable, even in the more generous provinces, at present provides "less than a basic minimum for those who are reliant solely on the pension itself A maximum \$30 monthly pension, with means-testing and income-deduction more rigidly applied than at present, would be fairer to the completely destitute and dependent than the present scale of assistance".

Compulsory Retirement Insurance

The report suggests a gradual transference in principle from old age pensions to compulsory retirement insurance (except in certain cases where the collection of contributions is not practicable, where the present pension could continue). Persons under the insurance scheme would pay contributions and on reaching retirement age would be entitled to benefits as of right and not subject to means test. Such a plan could be integrated with company retirement schemes already in effect.

Mothers' Allowances and Survivors' Insurance

Mother's allowances in Canada, that is, the payment at present made to widows with dependent children, are, the report states, "a special example not only of the divergences which arise in a situation in which there is no Dominion legislation or co-ordinating arrangements between provinces, but of the complexities and anomalies which arise when a particular category of need is administered on a poor-relief or charitable-grant basis."

The seven separate systems in effect in Canada are discussed, as to their variations and deficiencies in administration, coverage and rates of benefit.

To the extent that the recommendations made in the report with respect to family allowances and other types of insurance are carried out, the provision of survivors' benefits would, it is suggested, very largely make mothers' allowances unnecessary.

In cases where the breadwinner passes away the children would continue to receive allowances, and the widow, if her presence in the home was essential for their proper care, would receive \$30 a month. For widows able to take employment, pensions would be available "subject to attendance at the employment office within an appropriate period." The rate would be relatively high for an initial period of six months or a year, and at a low level thereafter.

Full orphans would receive a survivor's benefit of \$15 a month in addition to the

regular children's allowance, this amount being considered sufficient to provide full maintenance to provincial or local child-caring authorities.

Funeral Benefits

Funeral cash benefits are recommended, at a rate of \$100 for adults, ranging down to \$25 for children. Families would be free to spend more than the grant if their resources and desires dictated.

Graduated and Flat-rate Benefits

Unlike the Beveridge plan in Britain, which is built on flat rates of benefit for all the various units of insurance, the report recommends a combination of graduated and flat-rate benefits, the graduated scales applying to those insurances dealing with more temporary situations and particularly important to wage-earners (unemployment insurance, sickness cash benefit, workmen's compensation); the flat rates applying to the longer-term provisions (disability pensions, widows' pensions, old age pensions). The first procedure avoids the difficulties which a single rate would raise in view of the considerable regional differences which characterize Canada, and the latter avoids the difficulties of cumbersome computations and records such as have been necessary, for example, under the old age insurance legislation in the United States. For health insurance a new term has been invented—the "degressive" principle—to describe the procedure of assessing a standard rate of contribution, of which varying proportions are made up by government contribution according to the income category into which the insured person falls. The net result is a scheme which is part contributory, part government financed.

Implementation of Program

Whether the whole program of social security system should be brought into operation at one time, or in some ordered sequence, is left to be decided by the pattern of the events of the war's termination and of other items of postwar policy, and presumably by public opinion as well. It is strongly emphasized, however, that the main shape and inter-relationships of an integrated scheme must be conceived beforehand if Canada is to build her social insurance in the best possible way.

The final section of the report brings together the most important matters calling for decision, particularly (a) the inter-relationship between units in a comprehensive scheme, (b) constitutional and administra-

tive issues, and (c) the finances of social security legislation.

Constitutional Issues

On the constitutional issue the report emphasizes that proper integration and administration of a comprehensive scheme will not be possible unless the federal and provincial governments work out a clear understanding on their respective responsibilities. "On the revenue side the problem is not only one of financial contributions, but of economical collection machinery. On the distributive side, it is not only the organization of services, benefits and accounting which is involved; bound up with it are all the possibilities of development of constructive policies ancillary to the insurances, and other possibilities of raising welfare standards throughout the Dominion." Given this agreement, and probably constitutional amendment to give appropriate powers to the Dominion for the insurances which it is most likely to finance, there is room for considerable streamlining and economy of administration.

Cost of Program

Since the report stops short of actuarial calculations, and leaves open a number of alternatives on rates and conditions of benefit, no exact computations of total cost are made. The experience of other countries is analyzed, however, showing that comprehensive social security typically calls for some ten to twelve-and-a-half per cent of the national income. Only a part of this would be new expenditure, since the contributory revenue is merely the redistribution of existing income. The government part of the cost, moreover, would be much easier to fit into

a budget transmuted from wartime levels and objects of expenditure than has been conceivable before.

Dr. Marsh tentatively estimates the cost of a full program to be something under \$1,000,000,000; of which approximately half would be government expenditure. How soon this would be the subject of actual collection and disbursement depends on the decisions taken in co-ordinating Canadian economic policy in the post-war years.

The fundamental point emphasized is that social security legislation, like other elements in postwar policy, depends on the size and the maintenance of the national income. As the report suggests at one point, social security expenditures may be one of the "strategic factors" in postwar economic policy. "One of the necessities for economic stability is the maintenance of the flow of purchasing-power at the time when munitions and other factories are closing down and war activity in many other spheres is being liquidated. Sound social insurance, which is a form of investment in physical health, morale, educational opportunities for children, and family stability, is both a desirable and comparatively easy vehicle of expenditure. It is not only an eminently appropriate peacetime alternative for expenditures now being devoted to destruction: it is also a form of using some of the deferred backlog of consumer expenditure to which reference is so often made only in terms of radios, frigidaire and other tangible consumers' goods."

If present high levels of income can be maintained, it is indicated that a comprehensive social security system for Canada can be envisaged even in the context of considerable tax reduction after the war.

Proposed Measures for Health Insurance in Canada

Plan for Dominion-Provincial Legislation Presented to House of Commons Committee on Social Security

A PLAN for health insurance in Canada was presented for study and consideration to the House of Commons Committee on Social Security by Honourable Ian Mackenzie, Minister of Pensions and National Health, on March 16.

The plan was contained in the report of the Advisory Committee on Health Insurance (appointed February 5, 1942, by Order in Council P.C. 836, and under the chairmanship of Dr. J. S. Heagerty, Director of Public Health Services), and is in the form of specific

proposals for Dominion and provincial legislation.

It would provide to all citizens complete medical and nursing services, hospitalization, medicines and drugs, and dental care.

Every adult would contribute to the program according to a scale based on capacity to pay, at a cost not to exceed \$26 a year, or 50 cents a week per person over sixteen—no contributions would be required for children. Contributions would be collected where possible by payroll deductions.

The plan also envisages a public health program designed to prevent illness to the fullest possible extent, and to raise standards of health throughout the country.

Administration of Program

In presenting the report, the Minister referred to the constitutional question as to whether public health matters came under Dominion or provincial jurisdiction. He was of the opinion that the constitution, "as at present understood and interpreted, prevents the Dominion Parliament from adopting a single comprehensive national health insurance act."

Accordingly, he pointed out, the Advisory Committee had proposed that the administration of health insurance be allotted to the provinces, with the Dominion Government providing financial assistance. It was recommended that a federal statute be passed under which the Dominion Government would assist financially any province which enacted a health insurance measure along approved lines. It would be provided, however, that no aid should be given unless the province also agreed to undertake a general public health program approved by the Dominion. This stipulation was made in the belief that health insurance needs to be accompanied by preventive health measures in order to be of the greatest public benefit.

Draft Bill

The Report of the Committee contains a draft Dominion bill, which includes within it a model Provincial bill. Scope is allowed to the provinces, however, to alter the bill in respect of various details.

A summary of the proposals contained in the draft bill follows:

Coverage

The draft Health Insurance Bill is planned to include all persons resident in Canada. Nevertheless, no compulsion is placed upon the provinces in this respect other than that all indigents must be included in the plan.

Health Insurance Fund

To provide health insurance, it will be necessary to create a Health Insurance Fund comprising money contributed by insured persons, employers, the provincial Government and the Dominion Government. By so distributing the cost, the financial burden will be considerably lessened.

The payment of contributions has been so devised that each adult in receipt of wages or income will contribute on behalf of him-

self and his dependents over 16 in proportion to his earnings. He will not, however, be required to contribute for children under 16, the cost of whose care is to come out of the general fund. If employed, his contribution will be deducted from his payroll; if his income comes from other sources he will be assessed for the amount.

The contribution is estimated at \$26 per person. If a person is capable of paying the entire cost for himself and his dependents he shall be obliged to do so. However, in cases where the contribution would exceed three per cent of his income he will not be asked to pay the full amount. If he is a wage-earner his employer will pay the difference; if not, the province will do so. The combined contributions will be supplemented by a Dominion grant.

Registration

As soon as health insurance is adopted in a province, all residents will be registered and classified and will be instructed to select a doctor from a list provided after consultation between the Provincial Health Insurance Commission and the authorized medical body.

The method of payment of physicians, nurses and others will be left to the decision of the Provincial Health Insurance Commission, but it is suggested by the Advisory Committee on Health Insurance that payment on a capitation basis would facilitate the provision of medical benefits. Also, it is considered desirable that the services of the physician should be utilized for prevention as well as treatment. Thus, the physician will have a responsibility for the health of each member of the family and be responsible for public health measures designed to reduce morbidity and mortality. He will act as counsellor, advisor and supervisor in respect of the health of the whole family as a unit.

Benefits

The benefits comprise prevention of disease and the application of all necessary diagnostic and curative procedures and treatments, including medical, surgical, obstetrical, dental, pharmaceutical, hospital and nursing benefits and such other ancillary services as may be deemed necessary. Provision is not made for cash benefit due to unemployment caused by illness, as it is considered that such benefit should be provided by Unemployment Insurance or by other means. (See proposals on Social Security for Canada, page 429.)

Medical benefits include the services of a general practitioner, consultant, specialist, surgeon, obstetrician, hospitalization and nurse. Nursing in the home is confined to the visit-

ing nurse except where the circumstances are such that bedside nursing is essential.

Dental benefit must of necessity be restricted as the number of dentists in Canada is at present insufficient to provide full and complete dental care for all. It is proposed that the Provincial Dental Association make an arrangement with the Provincial Health Insurance Commission to provide every child up to sixteen years of age with a semi-annual dental examination and such reparative dentistry as is needed. Dental care may be provided others to the extent that the funds and the number of available dentists will permit.

Pharmaceutical benefit will be provided in accordance with a list of drugs to be drawn up in co-operation with the Provincial Health Insurance Commission and the Provincial Pharmaceutical Association. Special provision may be made respecting drugs and pharmaceutical preparations known as specialties.

Hospital benefit is to include general ward services unless the insured person wishes by paying the difference to obtain semi-private or private room. In special cases accommodation other than general ward may be provided. The terms of agreement for hospitalization will be arranged by the Provincial Health Insurance Commission with the Provincial Hospital Association.

Nursing benefit, outlined above, will be provided by the Provincial Health Insurance Commission in co-operation with the Provincial Nursing Association.

Administration

Provision is made for administration through a Health Insurance Commission in each of the provinces, comprising a Chairman who shall be a doctor of medicine, the Deputy Minister of Health of the province (ex-officio), and such other number of persons as may be determined from time to time by the Lieutenant-Governor in Council after consultation with representatives of professional groups, labour, agriculture, industry, etc.

Authority is given the Provincial Health Insurance Commission to study the resources of the province and facilities available for providing benefits and to divide the province into administrative and public health areas. The supervision of the provision of benefits is to be placed under Regional Officers.

Inasmuch as Dominion administration is confined to the administration of Dominion grants, it is not considered necessary to create a Dominion Health Insurance Commission as administration may be carried out by a Health Insurance Division in the Department of Pensions and National Health under a Director of Health Insurance.

Provision is also made in the Bill for the creation of a National Council on Health Insurance, comprising the Director of Health Insurance of the Department of Pensions and National Health as Chairman, the Deputy Minister of Health of each province, the Chief Administrative Officer of each province which has established a Health Insurance Act and such other persons comprising a representative of the Canadian Medical Association, the Canadian Dental Association, Canadian Hospital Council, the pharmaceutical and nursing professions, labour, industry, agriculture and urban and rural women respectively as may be appointed by the Governor in Council. None of these will receive remuneration but will be paid travelling expenses and maintenance.

Grants

The bill would authorize the Dominion to make agreements with the provinces to assist them with grants of money in providing various health services in addition to health insurance.

Eight such grants are proposed, under the stipulation that the province make statutory provision for their economic and efficient use. In no case, however, is an agreement to be made with any province unless the province agrees to use both the Health Insurance Grant and the Public Health Grant.

Health Insurance Grant: To assist the provinces in providing health insurance benefits.

Tuberculosis Grant: This grant is designed to help provide free treatment for all persons suffering from tuberculosis including the provision of additional buildings and bed accommodation. The reduction of mortality in those provinces which provide free treatment indicates that the provision of free treatment is an essential to the elimination of tuberculosis.

Mental Disease Grant: To assist in the provision of free treatment for those suffering from mental illness including the provision of additional buildings and bed accommodation. In this field the Committee considers that Dominion assistance is urgently needed.

General Public Health Grant: The object of this grant is to assist the provinces in establishing and maintaining public health services commensurate with the needs of their people.

These services are listed. They include: increasing facilities for the control of communicable disease and for the free distribution of vaccines, serum, etc.; dissemination of educational information in the field of public health; food and drug control; nutritional services; increase of laboratory facilities.

ties; improvement of the health and welfare of industrial workers; and other items.

It is proposed that the Dominion should make this grant to the people of Canada on a per capita basis, justified by the responsibility of the Dominion for public health problems that are national in character.

Venereal Disease Grant: To aid in providing preventive and free treatment for persons suffering from venereal diseases on the same basis as the original Dominion venereal disease grant of \$200,000 which was discontinued in 1932.

Grant for Professional Training: As the name implies, this grant is to afford financial assistance to doctors, sanitary engineers and others who wish to take university courses leading to degrees in public health.

Investigational Grant: To enable the provinces to carry out special public health studies, funds are needed. It has been found impossible to carry out studies in public health and to provide skilled personnel during epidemics because of lack of funds.

Physical Fitness Grant: The creation of a physical fitness plan to prevent physical defects is considered essential.

Cost of Program

One entire section of the Committee's report is devoted to estimates of the cost of health insurance in Canada.

The total cost of a year's operations on the known population figures for 1938 is calculated to be \$232,896,000; to which must be added the cost of administration, \$23,290,000; making a total of \$256,186,000.

It is estimated that the total of contributions from beneficiaries and employers would amount to \$124,750,000. This would leave

\$131,436,000 to be met jointly from the Dominion and provincial treasuries. Several alternative proposals are made in the report as to the proportions of the costs which might be assumed by each government.

In addition it is proposed that the public health grant, without the acceptance of which it is recommended that there should be no federal assistance to health insurance, should be at the rate of 25 cents per capita, which would aggregate \$2,872,428 to be paid out by the Dominion to the provinces.

Scope of the Report

The complete report of the Advisory Committee on Health Insurance is in seven parts as follows:—

Part 1, the draft bill and a summary of its contents;

Part 2, historical survey of health insurance throughout the world;

Part 3, a summary of the provisions of health insurance in operation in the various countries throughout the world at the present time;

Part 4, a report on existing public health agencies in Canada;

Part 5, a statistical survey of public health in Canada;

Part 6, estimates of the cost of health insurance for Canada;

Part 7, submissions by various organizations to the Advisory Committee on Health Insurance;

And an appendix containing miscellaneous useful information.

The report is available at a cost of \$1.50 from the King's Printer, Ottawa.

Social Security in Union of South Africa

The Government of South Africa has announced the appointment of a committee to investigate and report on the subject of social security.

The terms of reference to the committee are as follow: "To investigate and report on the existing social services and social security arrangements and to recommend a scheme for the future involving any necessary extensions of the existing measures or the introduction of new measures.

"In such investigation and report the committee shall have due regard to the productive capacity of the Union and its possible increase, to existing facilities for preventive and curative work and to necessary safeguards to preserve individual responsibility, initiative and thrift."

The committee will be required to report to the Prime Minister as soon as possible.

National War Labour Board

Public Inquiry into Labour Relations and Wage Conditions

THE reconstituted National War Labour Board announced on April 8 that it would "at once institute and conduct a public inquiry into matters affecting labour relations and wage conditions in Canada." Authority to conduct such an inquiry and to report thereon was conferred on the National War Labour Board by Order in Council P.C. 1141 when the Board was reconstituted.

In announcing this inquiry the Board issued the following statement:

"The situation prevailing in Canada to-day in respect to labour matters generally, and having particular regard to the existing war emergency, makes it appear necessary and advisable that an inquiry of this kind should be instituted at once. The Board will conduct public hearings which will afford an opportunity to all public bodies and to individuals, whether representing industry, labour or other interested sections of the community, a full opportunity to present their views and proposals on these matters upon which the Board might formulate a report with constructive recommendations for a co-ordinated program on labour relations and wage matters.

"The Wartime Wages Control Order, as amended by P.C. 1141, vests in the National Board power 'to inquire and report to the Minister of Labour from time to time as it may deem advisable' with regard to wage conditions and labour relations in Canada and to make 'such recommendations as it may deem necessary in connection therewith having regard to the principles enunciated in Order in Council P.C. 2685.' The Board is also empowered to enquire and make recommendations in respect of the administration of the Wartime Wages Control Order itself and the administration of other related legislation committed to the supervision of the National Board.

Right of Appeal to National Board Established

THE National War Labour Board issued an announcement from its offices at Ottawa on March 26 that the by-laws of the Board had been amended, establishing a right of appeal to the National War Labour Board from decisions or orders of Regional Boards.

The new provision as to appeal, subject to leave, reads as follows:—

"We are anxious to make it clear that we welcome the widest possible discussion of all matters falling within our scope and relating to labour relations and wage conditions in Canada. Without seeming to indicate any special restriction upon the matters which might be brought forward for inquiry, it would appear to us that the following topics should be inquired into:

1. A review of the existing provisions of the Wartime Wages Control Order P.C. 5963 having regard to the general principles underlying the same and the achievement of utmost production for war needs.
2. The functions and operations of the National War Labour Board and of Regional Boards and their relationship to each other in the administration of the Wartime Wages Control Order.
3. A review of the principles enunciated in Order in Council P.C. 2685 of June 19, 1940, and the means which might be adopted to achieve better application thereof with a view to the securing of improved relations between labour and industry.
4. Any other matters relevant to the above, specific or general, related to the complete and effective organization of industry and labour for the furtherance of the war effort."

For the purpose of completing suitable arrangements for the inquiry and the presentation of submissions, the Board held preliminary public sessions in Ottawa on April 15 and 16. These meetings were exploratory in nature for the purpose of enabling the Board to make a general canvas of the methods and program to be adopted (a more detailed account of these meetings will be given in the LABOUR GAZETTE for May).

"Any person interested in or affected by any decision or order of a Regional Board may appeal to the National Board if

- (1) The Regional Board making such decision or order grants leave so to appeal and the request for such leave to appeal has been made within thirty days of the announcement of the decision or order of such Regional Board; or

- (2) The National Board grants leave so to appeal; and on any such appeal, the decision or order of the National Board shall constitute the decision or order of the Regional Board as if originally made by it."

Prior to the establishment of this right of appeal decisions of a Regional War Labour Board would only be referred to the National War Labour Board if there had been disagreement between members of the Regional War Labour Board, in which event the opinion or direction of the National War Labour Board

would be obtained by the Regional War Labour Board before announcing any decision to the interested parties.

Under the new procedure provided for, in the event that an appeal to the National War Labour Board is allowed either by leave from the National War Labour Board or the Regional War Labour Board, opportunity can be furnished to the interested parties to argue the contested points before the National War Labour Board by public hearings, or otherwise, as the National Board may direct.

Amendment to Wartime Wages Control Order

BY Order in Council P.C. 2370 of March 23 the National War Labour Board or a Regional Board was enabled to make adjustments in the cost of living bonus in cases of unequal and unfair combinations of wage rates and cost of living bonuses within an industry.

Previous to this amending Order, the National War Labour Board and the Regional War Labour Boards were empowered to authorize or direct an employer to pay a cost of living bonus as he deemed fair and reasonable but not one exceeding that based on the rise in the adjusted cost of living index number from the effective date of the last general increase in wage rates made by an employer.

Anomalous situations had arisen wherein employers in an industry were paying similar basic wage rates to substantially similar positions but by reason of having established such rates at varying dates, one or more employers were (pursuant to Section 34, subsection 3, of the Wartime Wages Control Order, P.C. 5963) permitted to pay a cost of living bonus in an amount greater than that paid by others. The effect was, therefore, that the earnings of the employees of different employers were not equivalent.

In order to remove this anomaly the Wartime Wages Control Order (P.C. 5963) was amended by P.C. 2370 of March 23, 1943, by adding to subsection 3 of Section 34 the proviso that where in the opinion of the National Board (or a Regional Board) the subsection had or would result in unequal or unfair combinations of wage rates and cost of living bonuses within an industry, the Board might adjust the cost of living bonus by use of a month earlier than that prescribed by the date of the last general increase, although not in any event earlier than August, 1939.

The text of the amending Order is as follows:—

P.C. 2370

Whereas section 25 of the Wartime Wages Control Order authorizes the National War Labour Board to order an increase in any wage rate which it finds to be comparatively low;

And whereas subsection 3 of section 34 of the said Order authorizes the National War Labour Board to order an increase in a cost of living bonus only with respect to the rise in the cost of living index number above the index number for the month in which the last general increase in wage rates paid by an employer became effective;

And whereas the Minister of Labour reports that because of the variations in the dates and amounts of the last general increases in wage rates paid by employers there may be inequitable differences in the combinations of wage rates and cost of living bonuses paid by them even after the National War Labour Board has ordered such adjustments of wage rates and cost of living bonuses as are presently authorized by the said Order;

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour and under authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, is pleased to amend the Wartime Wages Control Order P.C. 5963 dated July 10, 1942, and it is hereby further amended by adding the following proviso to subsection 3 of section 34 thereof:

"Provided that where, in the opinion of the National Board, the application of this subsection has resulted in, or will result in, unequal and unfair combinations of wage rates and cost of living bonuses within an industry, it shall be within the power of the National Board to order such adjustment of the cost of living bonus through the use of a month other than as prescribed above but not earlier than August, 1939, as the National Board may determine."

Decisions of National War Labour Board

In the matter of Dominion Steel & Coal Corporation, Ltd., Nova Scotia, Algoma Steel Corporation, Limited, Sault Ste. Marie, Ontario, Trenton Steel Works, Limited, and Eastern Car Company, Limited, Trenton, Nova Scotia, and in the matter of applications by the employees of the said Companies, as hereunder set out.

The judgment of the National War Labour Board in regard to the applications of steel workers, employees of Dominion Steel and Coal Corporation, Limited, Nova Scotia, Algoma Steel Corporation, Limited, Sault Ste. Marie, Ontario, Trenton Steel Works, Limited, and Eastern Car Company, Limited, Trenton, Nova Scotia, was issued on March 31, 1943.

The background of events leading to these applications has been dealt with in the *LABOUR GAZETTE* as follows. The January issue (page 55) contained the text of the majority and minority reports of the Royal Commission appointed to report as to wage rates of employees in these companies, under the chairmanship of the Honourable Mr. Justice Barlow. The same issue (page 53) gave a description of events leading up to the strike in January of these employees.

In February's issue (page 191) an account was given of the settlement of the strike, together with the text of the Order in Council (P.C. 689, January 26) authorizing implementation of the terms of settlement and the "memorandum of understanding" appended thereto.

Under the terms of settlement, the steel workers were free to make fresh representations to the National War Labour Board, as reconstituted under P.C. 1141 of February 11 (*LABOUR GAZETTE*, February, 1943, page 166; March, page 388).

Application was made, and the first hearings, which were public, were held on February 23.

Following is the text of the "Reasons for Judgment" issued by the Board.

Reasons for Judgment

This is an application, as to the employees of the Dominion Steel and Coal Corporation Limited, as to its plant at Sydney, and of Algoma Steel Corporation Limited, as to its plant at Sault St. Marie, for Orders and Directions:

1. That the said firms be designated national employers under the terms of the by-laws of the National War Labour Board,
2. That the 55c minimum rate of earnings established by P.C. 689, and by the "Memorandum of Understanding" thereto attached, be declared to be the minimum or base wage at each of the said plants, and
3. For payment, in addition to the said 55c, of a full cost of living bonus cal-

culated on the rise in the cost of living since August, 1939, and,

as to the employees of Trenton Steel Works Limited and Eastern Car Company Limited,

1. That it be declared that the operations in each of these concerns "are involved in the production of basic steel", and
2. That pursuant to Section 6 of the "Memorandum of Understanding", and to the extent that the Board rules that such operations are in fact "involved in the production of basic steel", the same provisions with respect to minimum or base wage and cost of living bonus directed by this Board as to the said plants at Sydney and Algoma be extended to the employees of the above Trenton companies.

The applicants base themselves upon the provisions of P.C. 689, being an Order in Council passed on the 26th day of January, 1943, to which is appended the "Memorandum of Understanding" before referred to, the said Order in Council and "Memorandum of Understanding" reading as follows:

P.C. 689

Whereas the Minister of Labour reports that it is imperatively necessary that vital steel production which has been interrupted by a dispute at the steel plants in Sydney, Nova Scotia, Sault Ste. Marie, Ontario and Trenton, Nova Scotia, be continued without further interruption;

That the Government and the employees as represented by the United Steel Workers of America have arrived at a satisfactory basis for the settlement of the dispute as set forth in the Memorandum of Understanding dated January 22, 1943, and steel production has been resumed;

That, since the terms of the settlement incorporate the recommendations on which the majority and minority of the Royal Commission on the Steel Industry (Barlow Commission) were agreed and represent a reasonable and equitable adjustment of other matters in dispute, it is advisable formally to ratify them and to authorize the Minister of Labour and the National War Labour Board to implement them.

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and notwithstanding the provisions of any other law, order or regulation, is pleased to authorize and doth hereby authorize the Minister of Labour

and the National War Labour Board to implement the proposed terms of settlement as set forth in the Memorandum of Understanding dated January 22, 1943, a copy of which is attached hereto.

MEMORANDUM OF UNDERSTANDING WITH RESPECT TO THE SETTLEMENT OF THE DISPUTE IN THE STEEL INDUSTRY OF CANADA

The decision, as clarified, is as follows:

(1) That in the event of the steel workers now on strike returning immediately to work the Government will take immediate steps to implement the majority report of the Barlow Commission, namely:

1. That the management and the maintenance men enter into negotiations and that an application be made to the National War Labour Board for such increased wage rates or range of wage rates with respect to such maintenance men as pipe fitters, steamfitters, mill-wrights, electricians and carpenters as will bring their wage rates on a level with prevailing wage rates paid to maintenance men in such classifications.

2. That time and a half be paid for the seventh consecutive day worked by any employee.

3. That arrangements be made for the making of a careful study having in view a reclassification and an evaluation of jobs.

4. That management-union-employee committees be appointed in the different departments of each company.

The foregoing recommendations were also included in the minority report.

(2) The Government would be prepared to recommend that the Dominion Steel and Coal Corporation in respect of its steel plant at Sydney, Nova Scotia, and the Algoma Steel Corporation in respect of its steel plant at Sault Ste. Marie, Ontario, be designated as national employees.

(3) If, as belonging to a national industry the steel workers desire to present a new case to the National War Labour Board, they shall be free to do so.

(4) The Minister of Labour desires to be relieved of his duties as Chairman of the National War Labour Board, and therefore any new application by the steel workers will be considered by the National War Labour Board, headed by a Chairman who has not previously had the matter before him.

(5) The Government will undertake to recommend in the event of the steel workers desiring, as members of a national industry, to present a new submission to the National War Labour Board, that the Board be convened at the earliest opportunity.

(6) If the men return to work immediately the Government will immediately pass an order in council fixing 55 cents an hour as a minimum rate of earnings, effective from November 1, 1942, in the Sydney and Algoma Steel plants, the same rate to apply to those operations in the Trenton plant which are involved in the production of basic steel, the minimum rate of earnings of 55 cents an hour to be understood as including the cost-of-living bonus as of the present date. However, this provision shall not prejudice the right of the employees from making representations in respect to the cost-of-living bonus to the National War Labour Board and such repre-

sentations may be considered by the Board on their merits and the Board may make such orders thereon as in its judgment are warranted. However, for the duration of the war, should the cost-of-living bonus be reduced the 55-cent minimum earning rate shall not be reduced, but should the cost-of-living bonus be increased as from the present time the earning rate of 55 cents shall be likewise increased, thus establishing a guaranteed minimum earning rate of 55 cents.

(7) The steel workers at Trenton may apply to the National War Labour Board to determine how far operations at Trenton are to be regarded as basic steel production.

It is understood that the Government will adhere to its price ceiling and wage stabilization policy.

Nothing in these terms of settlement shall decrease the previous earnings of any employee.

A number of difficulties present themselves as a result of some of the language contained both in the Order in Council and in the "Memorandum of Understanding", some of which we deal with hereunder, but in the meantime reference should be made to the question resulting from the provision of the Order in Council, as follows:

His Excellency the Governor General in Council doth hereby authorize the Minister of Labour and the National War Labour Board to implement the proposed terms of settlement, as set forth in the "Memorandum of Understanding" dated January 22, 1943, a copy of which is attached hereto.

It is difficult to understand why the term the "proposed terms of settlement" is used, having regard to the recital in the second paragraph of the Order in Council that the Government and the employees, as represented by the United Steel Workers of America "have arrived" at a satisfactory basis for the settlement of the dispute as set forth in the "Memorandum of Understanding", dated January 22, 1943. Disregarding this item, the first difficulty which presents itself in applying P.C. 689 arises out of the fact that the language "doth hereby authorize the Minister of Labour and the National War Labour Board to implement the proposed terms of settlement" in no way attempts to allocate, as between the Minister of Labour and the National War Labour Board, the matters set forth in paragraphs 1 to 7 inclusive of the "Memorandum of Understanding".

Some discussion on this point took place before us and we have adopted the view that those matters set out in the "Memorandum of Understanding" which involve administrative or conciliatory treatment are intended to be implemented by the Minister of Labour. This would seem to us to involve the conclusions that all of the items 1, 2, 3, and 4, set out in Section 1 of the "Memorandum of Understanding" referring to negotiations with respect to maintenance men, payment of time

and a half for the seventh consecutive working day, the making of a "careful study having in view the reclassification and evaluation of jobs" and "that management-union employee committees be appointed in the different departments of each company" are matters which in the first instance fall within the administrative purview of the Minister of Labour and that, unless it should later become necessary to render a decision on some question arising from the application of any of these matters, they do not now require any intervention by this Board.

Proceeding now to deal with the application made on behalf of the employees, the first matter which we feel we should dispose of is the application that Dominion Steel and Coal Corporation Limited of Nova Scotia, as to its plant at Sydney, and the Algoma Steel Corporation Limited, as to its plant at Sault St. Marie, be designated as "national employers". While, during the course of some discussion in connection with the contention put forward later in the hearings on behalf of Trenton workers, it was suggested by Counsel for the applicants, that an application might be made later to declare the Trenton Steel Works Limited and the Eastern Car Company Limited as national employers, no such application has, in fact, been made before the Board. The application in respect to national employment is confined to the statement contained in the opening paragraph of the brief submitted by the applicants at the hearing of the 23rd of February, 1943, as follows:

The United Steel Workers of America, hereinafter referred to as the Union, has made application, pursuant to Order in Council P.C. 689, that Algoma Steel Corporation Limited and the Dominion Steel and Coal Corporation Limited be designated by the National War Labour Board as national employers.

In our view the presentation of the applicants, as well as references in the "Memorandum of Understanding" which will be shortly referred to, indicate quite clearly that the expedient of designating the Dominion Steel and Coal Corporation, as to its plant at Sydney, and the Algoma Steel Corporation, as to its plant at Sault St. Marie as national employers was deemed to be requisite in order to secure a hearing before the National War Labour Board of the claims of the applicants as to wages and cost of living bonus, or as to what has been referred to as a "new case" and particularly so in order that these matters could be considered and dealt with without any of the limitations which, in the view of the applicants, are said to apply to the exercise by a Regional War Labour Board of its jurisdiction.

This conclusion is borne out by Section 3 of the "Memorandum of Understanding" which emphasizes the opportunity which the steel workers would have, if their employment is designated as National employment, to "present a new case to the National War Labour Board", as well as by the provision of Section 4 indicating that the Minister of Labour desired to be relieved of his duties as Chairman of the National War Labour Board, and that, therefore, "any new application" by the steel workers would be considered by the National War Labour Board "headed by a chairman who has not previously had the matter before him" and also by Section 5 of the "Memorandum of Understanding" in which the Government undertakes, in the event of the steel workers desiring "as a member of a national industry" to present a new submission to the National War Labour Board "that the Board be convened at the earliest opportunity."

If the situation with respect to consideration by the National War Labour Board of a matter previously heard and dealt with by a Regional War Labour Board remained at this date as it prevailed on the 26th of January, 1943, the date of P.C. 689, or the 22nd of January, 1943, the date of the "Memorandum of Understanding", the Board would be inclined to give effect to the recommendation which the Government, in Section 2 of the "Memorandum of Understanding", declares itself prepared to make to this Board as to designation of the said two companies, as to the said two plants, as national employers, and we would have been inclined to do so notwithstanding that certain practical difficulties might result from designating only two employers as national employers in an industry which admittedly contains at least one other extensive employer, in contrast to designating the industry generally as national employment.

However, since the Order in Council was passed, and since the date of the "Memorandum of Understanding", an amendment has been effected to the by-laws of the National War Labour Board, designed at that time to deal with situations other than those involved in this case, by which a right of appeal to the National War Labour Board is now available as provided by the amended by-laws.

The earlier provision of the by-laws of the National War Labour Board, section 11 (4) replaced by the recent amendment, provided that:

Where with respect to any matter the opinion of a Regional Board is divided in respect of the interpretation or application of the order or of any ruling or instruction of the National Board, or where in any case in the opinion of a Regional Board there is doubt in respect thereof, the Regional Board

shall not make any decision or give any order or direction with respect to such matter or in such case until the Regional Board has referred such question of interpretation or application to the National Board.

This has now been repealed and has been substituted by the following:

Any person interested in or affected by any decision or order of a Regional Board may appeal to the National Board, if

- (1) The Regional Board making such decision or order grants leave so to appeal and the request for such leave to appeal has been made within thirty days of the announcement of the decision or order of such Regional Board; or
- (2) The National Board grants leave so to appeal; and on any such appeal, the decision or order of the National Board shall constitute the decision or order of the Regional Board as if originally made by it.

There is no material before this Board which supports the contention of the applicants either that the Regional War Labour Board of Nova Scotia or that the Regional War Labour Board of Ontario felt itself constrained, in applying P.C. 5963, and the earlier Order P.C. 8253, to an examination of the situation prevailing only within the boundaries of these respective provinces. While we do not take it for granted that this course was followed by these Boards, or either of them, since none of the parties has furnished the Board with any material on that point, we do feel it desirable to indicate that in our view no Regional Board is restricted or limited, in the manner which the applicants here suggest Regional Boards may consider themselves restricted or limited, in dealing with matters which come before them.

There is nothing in the Order in Council under which Regional Boards operate, or in the by-laws of the National War Labour Board which delegate powers to the Regional Boards, which in any way requires or suggests to any Regional Board that, in the course of examining the merits of any claim or making relevant enquiries, it is limited only to matters which exist only within its own province.

If there has been any question on that subject heretofore it is our hope that this expression of opinion will clarify the matter. Regional Boards, while confined, for administrative purposes, to matters which arise within their respective geographical districts, are administrative and judicial arms of an Order in Council, nation wide in its scope, and there is no limitation of provincial boundaries to the matters which any Regional Board may take into account, if relevant, in arriving at a decision.

In view of the amendment to the by-laws above recited which enables the National War

Labour Board to review in its entirety, by way of appeal from any Regional War Labour Board, the decision of that Board, we are of the opinion that full effect can be given to the practical intent and purpose of the "Memorandum of Understanding" as to hearing and decision by the National War Labour Board, as well as to the arguments put forward by the applicants in support of their contention for designation, if we treat this matter as appeals from the decisions of the Regional War Labour Boards of Nova Scotia and Ontario, waiving any formal application for leave.

In this view of the matter we find it unnecessary to give effect to the applicants' contention that these companies should be designated as national employers and we proceed, therefore, to deal with the application as one by way of appeal.

The question of the appropriate direction to be made by the Board in respect to cost of living bonus, or the associated question of minimum or base rate in the Sydney and Algoma plants, is quite involved and is not made easier by the language of the "Memorandum of Understanding".

Prior to the "Memorandum of Understanding" the minimum or base rates at each of these plants, the cost of living bonuses paid and the corresponding total minimum rates of earnings were as follows:

	Base rate.	Cost of living bonus	Total
Algoma ..	45½c per hr.	5c	50½c per hr.
Sydney ..	43½c " "	9c	52½c " "

The difference in cost of living bonus between the Sydney and Algoma plants arises out of the fact that in the Algoma plant a general wage increase was put in effect in December, 1940, affording an increase since August, 1939 of 4c per hour, thus furnishing the later month, namely December, 1940, by the terms of P.C. 5963, Section 34, subsection 3, as it formerly read, as the base rate from which the cost of living increase was to be calculated. There having been no such increase at Sydney to found a different computation, the cost of living bonus for that company is calculated from the base date of August, 1939, and constituted the full cost of living bonus payable under the Order in Council. The net result, as observed from the above, is that while the base or minimum rate at the plant of the Dominion Steel and Coal Corporation at Sydney is 2c lower than the base or minimum rate at the plant of the Algoma Steel Corporation at Sault Ste. Marie, the variance in cost of living bonus payable at

these two plants resulted in a net higher minimum rate of earning at the Sydney plant of 2c compared with the Algoma plant.

With this situation prevailing at the time of the "Memorandum of Understanding", the memorandum, by Section 6 thereof, provides as follows:

If the men return to work immediately the Government will immediately pass an Order in Council fixing 55 cents an hour as a minimum rate of earnings effective from November 1, 1942, in the Sydney and Algoma plants . . . the minimum rate of earnings of 55 cents an hour to be understood as including the cost of living bonus as of the present date.

The "Memorandum of Understanding" goes on to provide as follows:—

However this provision shall not prejudice the right of the employees from making representations in respect of the cost of living bonus to the National War Labour Board and such representations may be considered by the Board on their merits and the Board may make such orders thereon as in its judgment are warranted.

Whether by this proviso it was intended to give the Board a special jurisdiction under P.C. 689 altogether apart from the provisions of P.C. 5963 or whether in considering the application the Board was to be limited in giving relief strictly to the provisions of P.C. 5963 is perhaps open to doubt. However difficult the "Memorandum of Understanding" may be to construe otherwise there certainly can be no doubt that Section 6 fixed a common rate of minimum earnings at both the Sydney Plant and the Algoma Plant of 55 cents an hour. With the cost of living bonus at Algoma being 5 cents an hour at the date of P.C. 689 the real effect was to establish at Algoma a minimum wage rate of 50 cents an hour.

As to whether there should or should not be a uniform minimum rate of earnings at both plants we are not called upon to decide. P.C. 689 has decided that for us. This becomes most apparent when it is remembered that prior to P.C. 689 the minimum rate of earnings at Sydney was 52½ cents an hour and at Algoma 50½ cents an hour. Having in mind that the principle of uniformity appears to be undoubtedly established by P.C. 689 it appears to us that it should apply to the cost of living bonus as well. Accordingly, we propose to exercise the discretion given to us by amendment to P.C. 5963 passed on the 23rd of March, 1943, and reading as follows:—

Provided that where, in the opinion of the National Board, the application of this subsection has resulted in, or will result in, unequal and unfair combinations of wage rates and cost of living bonuses within an

industry, it shall be within the power of the National Board to order such adjustment of the cost of living bonus through the use of a month other than as prescribed above but not earlier than August, 1939, as the National Board may determine.

We feel, after fully considering the matter and having regard to the standard of what is fair and reasonable, that we should bring in a finding and direction fixing the minimum or base rate in both plants at 50 cents an hour and the cost of living bonus for all employees at both plants at the prevailing rate at Sydney, namely 9 cents an hour.

This conclusion involves an increase in the cost of living bonus at Algoma and a change of the minimum or base rate at Sydney. Authority for the former is to be found in the recent amendment to P.C. 5963, Section 34(3). The right of appeal now available under the by-laws enables the Board to effect the adjustment of the latter. The general result would seem also to be in accord with the principle of uniformity sought to be established by P.C. 689 itself. Furthermore the adoption of the Sydney rate as the cost of living bonus to prevail in these two plants is in conformity with the concluding provision of the "Memorandum of Understanding", and presumably any decision resulting therefrom, that "Nothing in these terms of settlement shall decrease the previous earnings of any employee".

Findings and direction substituting this decision for any previous decision rendered either by the Regional War Labour Board of Nova Scotia or the Regional War Labour Board of Ontario in respect to the minimum or base rate and the cost of living bonus will therefore issue accordingly. This includes of course, as provided by P.C. 689, the provision that for the duration of the war the minimum rate of earnings at each of these plants shall not go below 55 cents notwithstanding any possible reduction in cost of living.

No representation or application of any kind was made to us by the applicants, or argued or discussed by any of the parties, as to the date as of which any decision of this Board should take effect, nor was there any reference to this in the "Memorandum of Understanding". Having regard to this and to the fact that our authority to deal with the matter, as we have said above, accrues from the amendment to P.C. 5963, Section 34, ss. (3) and from the amendment to the by-laws of the Board, and that these changes only took effect as of March 23, the above decisions will take effect as of the first pay period commencing subsequent to March 23, 1943.

We deal now with the application of the Trenton workers that the operations of Trenton Steel Works Limited and Eastern Car Company Limited be declared to be "involved in the production of basic steel" as expressed in Section 6 of the "Memorandum of Understanding" or, using the language of Section 7 of the "Memorandum of Understanding", "how far operations at Trenton are to be regarded as basic steel production."

In dealing with this question we take it that our jurisdiction flows exclusively from P.C. 689 and that we are acting as a Board of Reference only. Just what was meant by the term "involved in the production of basic steel" or by the term "basic steel production" we find very difficult to determine. The term "production of basic steel" or "basic steel production" are not terms recognized in the industry save in a very narrow technical sense and the "Memorandum of Understanding" is anything but helpful in furnishing criteria upon which to base any considered opinion. It is true that there is a rolling mill operation at Trenton comparable with similar operations at Sydney and Sault Ste. Marie, but a rolling mill operation in itself has no part in the production of basic steel, whatever the term "basic" was intended to convey, though it has considerable to do with the primary processing of steel. If we were to give effect to the argument presented by the applicants in support of their contention that the employees at these Trenton companies are "involved in the production of basic steel" or are "to be regarded as basic steel production" we would have to read language of our own into the "Memorandum of Understanding" which is neither there nor indicated.

We are, therefore, obliged to conclude that no case has been made out that the operations in these plants are "involved in the production of basic steel" or are to be regarded as "basic steel production" within the language of the "Memorandum of Understanding" as therein set out.

However, we do not think it is constructive to leave the matter there. We feel it not inappropriate to recommend to the management and to the employees of both Trenton Steel Works Limited and Eastern Car Company Limited that they should enter into negotiations with a view to working out any questions of wage rates or cost of living bonus which may be indicated as a result of the increases now effected as to the workers at Sydney and Algoma.

There was no evidence put before us as to what application, if any, had been made to the Regional War Labour Board of Nova Scotia in respect to the workers at Trenton Steel Works Limited and Eastern Car Company Limited. Had there been evidence of any such application and the disposition made of the same it might have been open to this Board to deal with the question of minimum wage and cost of living bonus at these plants as an appeal from the Regional War Labour Board of Nova Scotia. There having been no such evidence we regard ourselves as being without power to treat with the situation in this proceeding.

However, it is our view that this omission should not foreclose the employees at Trenton Steel Works and Eastern Car Company from an opportunity of having their claims reviewed in these respects. We, therefore, expressly reserve the rights of the parties to proceed before the Regional War Labour Board of Nova Scotia or by way of appeal to this Board, as the parties may be advised.

The above disposes of all matters arising out of P.C. 689 and the "Memorandum of Understanding" save as to such questions, if any, which may arise for decision in respect to items 1 to 4 inclusive of Section 1 of the "Memorandum of Understanding", and save as to the "new case" referred to in Section 3 of the Memorandum. On the last day of public hearings on this matter, namely, on the 4th day of March, 1943, the applicants were asked to indicate what was contemplated as falling within the "new case" so that if any such matters bore directly upon those already placed in argument they could be fully argued and the Board fully informed. Subsequently, by communication from the applicants' Counsel received by the Board on the 16th of March, 1943, the Board was informed that all that was contemplated by the applicants in respect to the "new case" was the question of possible upward adjustment of rates above the minimum or base rate. In the event that the applicants find it necessary to address themselves to the Board on this question it will be treated as in effect an appeal from the decision either of the Nova Scotia or Ontario Regional War Labour Board, or both as the case may be and the rights of all parties are reserved in respect to any such matters.

Ottawa, March 31, 1943.

**Re: Montreal Aircraft, Lodge 712, International Association of Machinists;
Canadian Vickers Limited, Fairchild Aircraft Limited, Noorduyn
Aviation Limited.**

Reasons for Judgment

This is an application by way of appeal from the Quebec Regional Board from its refusal to equalize combined rates of pay and cost of living bonus at Canadian Vickers, Fairchild Aircraft and Noorduyn Aviation Limited to the level of that paid by Canadian Car & Foundry Company Limited at its Aero plant and Point St. Charles plant.

The union and also the companies concerned are at one in asking to have the cost of living bonus at the respective plants increased from \$1.50 a week to \$4.25 a week so as to bring the earnings level to those at Canadian Car and Foundry Company Limited. It seems clear that the nature of the work is the same at all four plants engaged in aircraft production and the basic wage rates are the same.

As to how the situation complained of came about there is little point in discussing. In all fairness to the Quebec Regional Board it should be said that under P.C. 5963 there was no authority to adjust cost of living bonus as such. That difficulty has been resolved since by amendment, passed the 23rd day of March, 1943, adding as a proviso to sub-section 3 of Section 34 the following:

"Provided that where, in the opinion of the National Board, the application of this sub-section has resulted in, or will result in, unequal and unfair combinations of wage rates and cost of living bonuses within an industry, it shall be within the power of the National Board to order such adjustment of the cost of living bonus through the use of a month other than as prescribed above but not earlier than August, 1939, as the National Board may determine."

It is our view that this case is one where adjustment should take place within the terms of the proviso. Accordingly we think leave to appeal should be granted and the appeal allowed by directing Canadian Vickers Limited (aircraft department), Fairchild Aircraft Limited and Noorduyn Aviation Limited to pay cost of living bonus of \$4.25 weekly based on the rise in the adjusted cost of living index number from August 1939. In view of the fact that specific authority to make such adjustment did not come into effect until March 23, 1943, we cannot give effect to the union's plea to make the adjustment retroactive beyond that date.

Findings and directions shall issue accordingly.

Ottawa, March 26, 1943.

Re: Application with Reference to "Proposed Formula for Application to Cost of Living Bonus to Locomotive Engineers, Conductors, Trainmen, Locomotive Firemen, Helpers and Hostlers", as Covered by Joint Application from Canadian National and Canadian Pacific Railways and the Railway Running Trades Organizations.

Reasons for Judgment

Under date of July 29, 1941, the Canadian National Railways and the Canadian Pacific Railway Company and their various classes of employees working under collective agreements entered into a "master agreement" providing for the basis on which cost of living bonus should be paid. Clause 2 (a) of the agreement reads as follows:

That effective June 1, 1941, a cost of living bonus of \$1.93 per week (calculated on the basis of an increase of 7.73 per cent in the cost of living from August 1939 to April 1941) will be paid full time workers and a proportionate amount for part time workers, subject to the provisions of Clause 5 of Order in Council P.C. 7440 and amending Order in Council P.C. 4643.

As stated on the joint submission made herein, on April 2, 1942, the representatives of the Brotherhood of Locomotive Engineers,

Order of Railway Conductors, Brotherhood of Railroad Trainmen, and the Brotherhood of Locomotive Firemen and Enginemen referred to this Board a dispute between the Canadian Pacific and the Canadian National Railways and their employees, represented by the above mentioned Brotherhoods, relative to the methods employed by the railways in applying the cost of living bonus under Order in Council P.C. 8253.

This Board by finding and direction dated May 27, 1942, determined the matter in principle and suggested that negotiations could be conducted and amendments made as mutually agreed upon in respect of applications of details but that no change was to be made in principle.

As a result of negotiations between the parties agreement has been reached on a formula consisting of ten different provisions but

the parties have failed to agree on one of the terms.

In respect of this term still in dispute the submission of the employees is that it should read:

Full bonus shall be allowed to all employees in regularly assigned service where the compensation is calculated on a mileage basis or on a combination of miles and hours who have fulfilled their assignment or who have been available for service during the entire calendar month less a number of days equal to the number of Sundays in the month or who have completed mileage equivalent to the minimum mileage prescribed by schedule agreement for their respective classes of service.

The Railways submit that from the clause in question there should be eliminated the words at the end—

or who have completed mileage equivalent to the minimum mileage prescribed by schedule agreement for their respective classes of service.

To determine the question involves a consideration of what is meant by the term "minimum mileage" and also the application of P.C. 5963. It would seem reasonable that where an assignment is taken by an employee in the exercise of his seniority rights, it is

contemplated that the employee will work the normal number of working hours or miles in the assignment each month whether the employee is paid on an hourly or mileage basis. If an employee absents himself from his assignment even though he so absents himself as of right resulting from his voluntary selection of his run, he would be entitled to such proportion of the cost of living bonus payable to him as the number of hours or miles worked by him in the assignment during the month, not including overtime, bears to the normal number of working hours or miles in the assignment for the month. This interpretation appears to be the one more consistent with the terms of the agreement of July 29, 1941, and also with Section 38 (2) of P.C. 5963.

We are of the opinion, therefore, that the clause as submitted by the Railways appears to be the one which should be adopted. There should be a Finding and Direction accordingly.

As to the remaining nine points agreed upon by the parties, since these appear to be in substantial compliance with the principles of 5963 there should be Findings and Direction approving the same.

In the Matter of Canadian Marconi Company, Employer; and, In the Matter of an Application by the Commercial Telegraphers' Union, Canadian Marconi System, Division No. 59, on Behalf of Certain of its Members Employed as Operators in the Central Telegraph Office of the Canadian Marconi Company.

Reasons for Judgment

This is an application by The Commercial Telegraphers' Union, Canadian Marconi System Division No. 59, acting on behalf of those of its members who are employed as operators in the Trans-oceanic Service in the Central Telegraph Office of the Canadian Marconi Company.

Stated simply, the request is that The Canadian Marconi Company, as the employer, be directed to increase its present wage rates paid to these employees by an amount equivalent to ten per centum (10%) and that such increase be made retroactive to July 1st, 1942. The application, which was heard by the full Board at Ottawa on March 11th, 1943, is opposed by the Company.

Before the Board the employees were represented by Mr. J. N. A. Blouin, General Chairman and Mr. L. F. Newell, District Chairman of the Union. Mr. James Fergus, Secretary of Canadian Marconi Company, appeared in behalf of the employer. The Board is indebted to these gentlemen for the assistance given by them in the clarification and solution of the issues raised by the application.

The operators support their request for the increase on alternative grounds. Firstly, they contend that in August, 1940, the Company put into effect an increase of ten per centum (10%) in the wage rate then being paid to them which increased amount continued to be paid until on or about July 1st, 1942, when the additional sum was withdrawn without their consent, no other upgrading of their wages having taken place in the meantime. They want this percentage restored on the ground that the Company had increased the wages by the amount of 10 per cent and that the Company was precluded from reducing the wages so increased. Secondly, if the Board should consider them not to be entitled to relief on the ground firstly put, the applicants submit that the wages now being paid are low within the terms of the governing Order in Council, and that it would be fair and reasonable to direct an increase of 10 per cent in the wage rates currently being paid by the Company.

On July 1st, 1942, The Wartime Wages and Cost of Living Bonus Order, P.C. 8253, was the governing Order in Council. By reason of the provisions of Section 11 of that order

an employer was prohibited from decreasing the basic scale of wage rates paid by him on November 15th, 1941. He similarly would be prohibited from decreasing such rates by the provisions of The Wartime Wages Control Order, P.C. 5963, which superseded P.C. 8253 on July 10th, 1942. Consequently, it becomes necessary to inquire carefully into the character of the additional payment of 10 per cent of the then wage rate which was commenced by the Company in August, 1940. From the copies of memoranda and other material filed on the application the nature of the payment is determinable.

As has been said, the employees claim the amount to have been an increase in wage rates. The employer asserts that it was a voluntary bonus only, liable to revocation, and thus subject to the treatment accorded to it by the Company on July 1st, 1942.

On or about August 5th, 1940, the General Manager of Canadian Marconi Company, by memorandum to the Comptroller, authorized certain "adjustments to employees' salaries, effective as and from August 1st, 1940, and to be continued until further advised". These adjustments took the character of a "special increment" of 10 per cent in the case of certain employees of the Company. In the case of the present applicants it took the form of "a bonus" of an amount equal to one-half month's basic salary. The adjustments were made to apply only to those employees who were specifically described in the memorandum, and were not general throughout the staff, although the benefits appear later to have been extended to additional groups. In certain of the memoranda dealing with the subject there is evidenced the intention on the part of the Company that the additional payment was to be regarded as entirely voluntary and revocable at will, although the operators maintain that this latter feature was not communicated to them. Notwithstanding the extra payment of the one-half month's salary in August, 1940, was accompanied in each case with a memorandum showing it separately under the title of "bonus", the men say they regarded it as an increase in their basic scale of rates. In January and July of 1941, extra sums were paid to these employees on a half-yearly basis in advance calculated as a straight ten per centum (10%) of their respective wage rates instead of the earlier one-half month's salary. A similar advance payment was made in January, 1942.

The Company contends that the sums so paid in August, 1940, in January and July of 1941, and in January, 1942, were voluntary allowances paid for the sole purpose of compensating the employees in respect of the then increase and anticipated future increases in the cost of living. At August, 1940, the

Cost-of-Living Index stood at only 105.9. The first declaration of Government policy respecting payment of a cost-of-living bonus was that enunciated in Order in Council P.C. 7440 of December 16th, 1940, some five months after the inauguration of the special allowance by Canadian Marconi Company.

Some time prior to April 10th, 1942, but presumably after the payment of January, 1942, the Company applied to the National War Labour Board for permission to convert the extra amount then being paid into a cost-of-living bonus pursuant to P.C. 8253. Having regard to the express provisions of this last mentioned Order in Council if the payment was in fact in the nature of a cost-of-living bonus, the necessity for the making of this application is not clear but, in any event, the National Board, by Finding and Direction dated April 10th, 1942, directed the Company to pay a cost-of-living bonus based on the full rise in the index from August, 1939, and calculated in accordance with the terms of the Order in Council. The employees were not parties to that application and had no knowledge of it being made until they were notified by bulletin on or about July 7th, 1942, that the former payment was then to be discontinued and "replaced by a cost-of-living bonus".

From and after July, 1942, the employees have been receiving the full cost-of-living bonus calculated in accordance with The Wartime Wages Control Order, P.C. 5963, of July 10th, 1942, in substitution of the former percentage allowance and subject only to this latter not being decreased in those cases where the percentage payment remains in excess of the bonus payable pursuant to the Order.

On consideration of all the aforementioned circumstances, the Board is of opinion that the additional payment inaugurated in August, 1940, was not an increase in wages to these applicant employees. While we do not regard the amount to have been paid as a "cost-of-living bonus" as that term is properly understood, we hold the view that it was a "special increment" or bonus which the Company might have discontinued but which it chose to have converted into a full cost-of-living bonus by Finding and Direction of the National Board dated April 10th, 1942. In the view we take of the whole matter we find it unnecessary to express any conclusion in respect to this ground of the application.

Proceeding to a consideration of the second part of the employees' case, it appears that these operators are performing a special type of work requiring particular skill and under conditions not generally comparable with those obtaining in railroad and other classes of commercial telegraphy.

It is urged by the applicants that the wage rates being paid to them are low within the meaning of Section 25 of The Wartime Wages Control Order P.C. 5963. They offer for comparison the remuneration paid to operators in the service of The Pacific Cable Board of Montreal. On behalf of the Company it is not disputed that such comparison is valid. While it appears that employees of The Pacific Cable Board performing substantially similar work are paid a salary equivalent to that which is received by the operators concerned in this application, it is alleged, and not denied by the employer, that they also receive a certain additional monthly living allowance and a substantial increment to their normal salary. It is the opinion of the Board that these special conditions applicable to the operators of The Pacific Cable Board are to be taken into account in comparing the range of wage rates payable to such employees and the group of operators of the Canadian Marconi Company performing similar work.

In addition to the monthly living allowance and the special increment to regular salaries received by similar classifications in the employ of The Pacific Cable Board it is said that these latter also have the benefit of a pension plan for which there is no counterpart in The Canadian Marconi Company's conditions of employment, and, further, that The Pacific Cable Board employees enjoy a more generous plan of vacations with pay. For the purposes of determining the merits of the present application, it is not necessary to decide as to whether or not the pension plan and the vacation allowance of The Pacific Cable Board should be taken into consideration in making the comparison of the respective scales of wage rates.

In the result, the Board is of opinion that the range of wage rates paid to the now applicant employees of The Canadian Marconi Company is low within the terms of the Order and that an increase of ten per centum (10%) in the existing scale of wage rates paid to the applicant employees of Canadian Marconi Company would not result in such range of wage rates being unduly enhanced.

The Board, therefore, finds that it would be fair and reasonable to direct that the existing scale of wage rates now being paid by Canadian Marconi Company to its operators employed in the Trans-oceanic Service at its Central Telegraph Office should be increased by an amount equivalent to 10 per cent of such wage rates. Under all of the circumstances, the increase should be made effective as and from the first payroll period beginning on or after March 1st, 1943. This direction shall not prejudice the right of such employees to continue to be entitled to the payment of the cost-of-living bonus, calculated in accord-

ance with the provisions of The Wartime Wages Control Order P.C. 5963 as provided in the Finding and Direction of this Board dated April 10th, 1942.

There should be a Finding and Direction accordingly.

Labour Deportations in Belgium

A German Ordinance of October 8, 1942, introduced labour conscription, making all Belgian men between the ages of eighteen and fifty, and all unmarried women between the ages of twenty-one and thirty-five, liable to be conscripted for work in Belgium or in Germany. Thus began, points out the British Labour Press Service, the repetition of the horrors of Belgian labour deportations which, in 1916, roused indignation throughout the world.

This time, however, the Belgian Labour Bureaux (replacing the pre-war Labour Exchanges) which are directly under the control of Nazi authorities are being used to supply Belgian manpower to Germany.

It is through them that all the unemployed and people in non-essential jobs (*i.e.*, non-essential to the German war machine) are being forced to accept work in the Reich by being deprived of all assistance to themselves and to their families.

In the summer of 1942, before the actual publication of the Ordinance on labour conscription, methods of compulsion were already applied on a large scale to all unemployed and to all those deliberately deprived of their normal employment. Thus instructions sent by the Ministry of Labour to all Labour Bureaux in one Flemish centre state that, during the ensuing week, all able-bodied wholly unemployed men must choose between: (1) work in Germany; (2) work in Northern France; (3) work on fortifications along the coast. Those who refuse to comply will be forced to do very heavy work in the water, at extremely low wages, and will not receive the extra rations usually granted to heavy workers.

Since October, 1942, when methods of persuasion and the more subtle methods of compulsion by the pressure of material conditions were not abandoned, but definitely judged to be insufficient, all the more brutal methods of Nazism have been resorted to.

In Brussels, Liege, Verviers, and other towns, round-ups in streets, in cafés, or in stations at the arrival of trains, are frequent. The Feld-Gendarmerie arrests whole groups of men, and all those between the ages of nineteen and forty who cannot prove that they are in permanent employment, or whose work is not considered to be of sufficient importance to the Germans, are detained in prison and then sent to Germany.

Manpower

Transfer of Workers to More Essential Employment

National Selective Service Regulations on Compulsory Employment in High Priority Industries of Low Category Men of Military Age

THE Minister of Labour announced on April 24 that two recent orders in council (2665 and 2907) amend National Selective Service Regulations (P.C. 246, January 19, 1943, LABOUR GAZETTE, January, 1943, page 16) by providing the procedure for the compulsory transfer from less essential to more essential employment, including farm labour, of men in age groups designated under Mobilization Regulations.

The Minister had already been authorized by the Regulations in a general way to direct these persons to accept alternative employment when, due to their medical category, they were not required for military training.

Under Order in Council P.C. 2665 of April 2, the Minister of Labour may make an order applicable to persons belonging to an age class designated for military training, forbidding employers in specified industries to continue these persons in employment after a specified date, unless a special permit in prescribed form is obtained.

Where these applicants are found eligible for alternative high priority work, they will be referred to any vacancies available, and will not be granted permits to continue employment in a low priority industry. In special circumstances a limited number of persons may be allowed to continue in present employment temporarily. In all cases those in the classes designated under Mobilization Regulations for military training, but not in the Forces, will have to apply at the nearest Employment and Selective Service Office between the issue of the Minister's order, affecting their present employment, and the date set beyond which they cannot continue in their present employment without special authorization.

For the present, persons who have their discharge from the Armed Forces will not be compulsorily directed to alternative employment. If, however, they are engaged in low priority industry, they will be encouraged to secure employment in high priority industry.

One important point in the new Regulations is that it is specified that a Selective Service Officer shall not, under the terms of the Order, direct any person to apply for employment

which is made available by a stoppage of work through a labour dispute.

The expenses of transportation will be met by the Government for those being required to transfer to more essential work, jointly by the Dominion and the Provinces where men are moving to farms. Also, expenses for work clothing may be advanced in special cases.

By P.C. 2907, of April 12, penalties are provided for non-compliance with a direction to transfer given by a Selective Service Officer. If any man refuses to comply with such a direction, he will be reported to an Alternative Service Officer and he then becomes liable for service in an alternative work camp on somewhat the same basis as a conscientious objector (see page 451), except that the restrictions as to maximum wages payable to him will not apply as in the case of the objector.

In commenting upon the amendment to the Regulations, covering compulsory employment, Hon. Humphrey Mitchell, Minister of Labour, stated: "With expansion in the Armed Forces, intensification of our industrial production, and the urgent need for farm production, the time has arrived when all men of military age, still employed in non-essential lines of work, must be transferred to employment where their services will tell directly in our war effort. Amendments to the regulations will provide us with the means of doing this. We expect very shortly to begin issuing the supplementary orders which are necessary to designate the classes of employment from which men will be drawn. The Government feels satisfied that the public will appreciate the fairness of moving men of military age within industry, where such men have been found unsuitable for military training, chiefly for medical reasons."

"Application of the new Regulations", the Minister continued, "will bring about some approach to parity of service between men required to undertake active military duties and those found unsuited for that purpose. At the same time, threatened labour shortages in essential industries will experience some relief, and farm production, as well as other vital production, will benefit as a result."

TEXT OF P.C. 2665 RE TRANSFER OF EMPLOYEES
TO MORE ESSENTIAL EMPLOYMENT

Whereas the Minister of Labour reports that it is expedient to simplify the procedure by which the Minister of Labour may direct employees who belong to age classes designated for the purpose of the National Selective Service Mobilization Regulations to transfer to more essential employment;

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour and under the authority of the War Measures Act, Chapter 206, Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, 1940, is pleased to amend the National Selective Service Civilian Regulations (Order in Council P.C. 246 dated January 19, 1943, as amended) and they are hereby further amended as follows:

1. Section 210 is revoked and the following is substituted therefor:

"210. (1) The Minister may by order forbid any employer or group or class of employers to retain in employment after a specified date any person or group or class of persons to whom the National Selective Service Mobilization Regulations apply and who belong to an age class or part of an age class which has been designated for the purpose of the said Regulations, without obtaining a permit in prescribed form from a Selective Service Officer, or may require any employer or group or class of employers to terminate, at such time and in such manner as he may specify, the employment of any such person or group or class of such persons.

"(2) A Selective Service Officer may, in accordance with principles and directions set out in instructions given by the Minister, by order in writing direct any person, to whose employment an order made by the Minister under subsection (1) of this section applies, to apply forthwith for specified employment which, in the opinion of the Selective Service Officer, is suitable, to accept such employment if it is offered to him and to enter such employment forthwith upon the termination of his present employment; and subsections (3), (5) and (6) of section 209 shall apply mutatis mutandis as if enacted in this Section.

"(3) A Selective Service Officer shall not, under subsection (2) of this section, direct any person to apply for employment which is available in consequence of a stoppage of work due to a labour dispute.

"(4) For the purposes of this section 'Minister' includes any senior officer appointed under these Regulations and designated by the Minister to exercise the powers conferred on him by this section."

2. Subsection (1) of section 212 of the said Regulations is amended by adding the following paragraph after paragraph (d) thereof:

"(e) advance such person an amount not exceeding his necessary expenses for work clothing."

3. Subsection (1) of section 214 of the said Regulations is amended by striking out therefrom the words "the Minister makes an order under section two hundred and ten or".

Proof of Compliance with Mobilization Regulations Made Condition of Employment

DESIGNED to locate men who appear to be defaulters under the Mobilization Regulations, an Order has been made by the Minister of Labour requiring persons applying for permits to seek employment through Employment and Selective Service offices, to present evidence that they have not contravened the regulations. After April 30, Selective Service Officers will not issue a permit to seek employment to any male person born from 1902 to 1924 (who has reached age 19) unless he presents such evidence.

It is not intended however that a well-intentioned individual who is unable to produce evidence immediately is to be kept out of work, even temporarily, particularly where the man's services are needed in high priority industry. Accordingly the Order states that in specific cases a permit may be furnished provided that the required evidence is supplied within three days after the date the permit is issued or within such longer period as the Selective Service Officer may allow where evidence must be secured from a distance.

The Order states that evidence in any of the following forms shall be considered satisfactory evidence:

(a) a certificate of discharge from His Majesty's Forces after service during the present war; or

(b) a rejection slip issued by the Army on application for enlistment; or

(c) a certificate of medical examination issued by the Registrar of a Mobilization Board pursuant to subsection (7) of section 7 of the National Selective Service Mobilization Regulations; or

(d) a postponement order certificate issued by the Registrar of a Mobilization Board; or

(e) in the case of a male person born in any of the years from 1902 to 1916 inclusive, a statutory declaration (on forms available in employment offices) that such person is not a person to whom the National Selective Service Mobilization Regulations apply (i.e., a declaration as to marital status).

The Order was issued pursuant to the provisions of section 505 (k) of the National Selective Service Civilian Regulations, Order in Council P.C. 246, dated January 19, 1943.

Employment of Conscientious Objectors

Those Excused from Military Training on Conscientious Grounds May be Assigned to Farms or Essential Industry

A NEW procedure has been established whereby it is expected that the services of conscientious objectors may be utilized to greater advantage. The new regulations permit the employment of conscientious objectors on farms or in essential industry. (P.C. 2821, April 7, 1943, amending P.C. 10924, December 1, 1942, and P.C. 246, January 19, 1943.) Doukhobors and Menonites are specifically mentioned as two categories of conscientious objectors.

Up to the time of the present changes in the Mobilization Regulations, it had been provided that a Mobilization Board might order any person to whom a Postponement Order had been granted by reason of being a conscientious objector, to report for "Alternative Service". In a statement to the House of Commons on April 15, the Minister of Labour said that a total of 3,401 Postponement Orders, as of February 3 this year, had been granted by Mobilization Boards to those seeking to be excused from military training on conscientious grounds; and that some of these men had been ordered to report for Alternative Service in work camps.

These camps are operated in some cases by the Government of British Columbia, in other cases by the Department of Mines and Resources. The province of British Columbia operates 17 of the camps, for forest protection. The Department of Mines and Resources operates the remaining 12—two in British Columbia, five in Alberta, two in Saskatchewan, one in Manitoba and two in Ontario—for work in connection with National Parks or in other like projects. A total of 1,273 conscientious objectors were working in these 29 camps as of February 3 of this year. The remaining 2,128 conscientious objectors had not been called out for Alternative Service due to a lack of facilities to place them at necessary work. The Minister pointed out in this connection that the camps were "by no means intended nor operated simply as concentration camps: in every sense they are work camps, performing useful and necessary func-

tions." The men in the camps earned a wage of 50 cents per day and board.

The new regulations provide that certain officers in the Employment and Selective Service offices across Canada shall be designated as "Alternative Service Officers", and shall be given authority to direct conscientious objectors to accept employment on farms or in industry where their services are most needed. Conscientious objectors will have the option of refusing to accept employment to which they may have been directed by these officers in which case they will then be directed to one of the Alternative Service camps.

Any farmer who engages a conscientious objector for farm work, will be required to pay such wage rate as is fixed by the Minister of Labour which rate will be from \$35 to \$40 per month depending upon local conditions. Where conscientious objectors are referred to employment industry, the employer must pay the going rate of wages for the work performed. In either case, however, the men themselves will receive \$25 a month, together with board and lodging, while any surplus earned over and above that \$25 will be assigned to and paid to the Red Cross Society. The arrangement in industry, the employer must pay the be that the man receives 50 cents a day and board and lodging.

As a substantial number of the conscientious objectors are experienced at agricultural work, it is hoped that many of them may become available to the farming industry. It is not expected that all of the men now in Alternative Service camps will be moved out immediately to other employment, although men with special qualifications, who can be used to better advantage elsewhere, will be so moved.

The Minister declared: "It is anticipated that the change in procedure will result in an addition to our manpower resources available for essential employments, and it is believed that the plan which has been developed will provide a fair means by which genuine conscientious objectors can make a contribution to the productivity of Canada and thus prove their loyalty".

Continuance of Insurance Services for Transferred Workers

ORDER in Council P.C. 2586 of April 1 provides for the continuance, where practical, of group insurance or participation in a medical service plan, of an employed person transferred or requested to change to more essential employment under National Selective Service Civilian Regulations.

In announcing the Order, the Minister of Labour, Honourable Humphrey Mitchell, pointed out that it is the intention of the Order that workers who are required or requested to change their employment within industry, so that their services may be utilized to greater advantage, shall not suffer the loss

of group insurance protection or participation in a medical services plan of which they may have been members, by reason of their move to more essential work.

Arrangements in regard to group insurance will not apply, however, where persons may

be accepting employment with the Dominion or the Provinces or any municipality.

In the case of medical services plans, employees or their families will continue under a scheme where they remain in the district in which the plan operates.

Employment Facilitated in Hospitals and Canning Industry

A RECENT order under National Selective Service Civilian Regulations, provides that hospitals may engage part time workers directly. In future, where a hospital wishes to engage staff for not more than 24 hours work a week, it will not be necessary to secure National Selective Service permission; however, Selective Service Regulations will continue to apply fully to regular hospital staffs. The intention of the order is that persons not normally in the employment market, particularly married women and handicapped persons, may be available for casual or part time employment with hospitals.

The Minister of Labour issued the order following representations from the Canadian Hospital Council, which pointed out difficulties in securing a sufficient number of suit-

able workers in some parts of the country. It was represented that some such arrangement as that provided for in this recent order might assist in meeting the situation. Employment in hospitals is given a high priority by National Selective Service.

With a view to assisting the canning industry in securing the labour required during the 1943 canning season, an Order has been passed under National Selective Service Civilian Regulations to permit factories canning food products during this year to freely engage female workers for any period of employment not to exceed ten weeks. It is expected that this order will facilitate the employment of married women especially, who may be induced to undertake canning work, but who ordinarily do not engage in industrial employment.

Re-examination of Men Subject to Military Call-up

MEDICAL Revision Boards, under the jurisdiction of the Army, are at present re-examining a number of men subject to the military call-up but previously placed in medical categories below those usually acceptable for Army purposes. Those who are re-examined will be dealt with under the military call-up on the basis of the new category assigned to them.

The Director of National Selective Service, Mr. Arthur MacNamara, announced that about 30,000 men had been re-examined up to March 22. It was anticipated that in the next few months 120,000 additional men would be given this special re-examination. Mr. MacNamara explained that the first medical examination, after a man is notified by his Mobilization Board, is regarded as a "screening", and that a further examination becomes necessary in view of the large number of borderline cases which develop. It

is not always possible in the preliminary examination to determine with finality what a man's category may be.

Men engaged in agriculture are not among those being called for re-examination except where it has been established to the satisfaction of the Mobilization Board that the individual is not essential to the agricultural industry.

Mobilization Boards are notifying each person when to report for medical re-examination. Warrants for transportation and an allowance for meals and lodging are made where required, 50 cents being allowed for each meal, and \$1.50 per night's lodging. "It is not necessary for any man," said Mr. MacNamara, "who has already been medically examined under the military call-up, to report until he is notified of his re-examination. His Mobilization Board will give him ample notice when he is required to report."

Military Call-up of Aliens in Canada

THE calling up of aliens ordinarily resident in Canada is proceeding under National Selective Service Mobilization Regulations as amended by recent Orders in Council.

Where those being notified to report are nationals of allied countries, they have the option of joining any forces being recruited in Canada by missions of their own nationality: If they do not join forces of their own nationality being raised in Canada, aliens of the class mentioned are liable for compulsory service with the Canadian forces. They will be entitled to apply for a postponement of military service, on the same grounds as Canadians who are called up. The instructions sent to the Mobilization Board Registrars point out that whether allied nationals join a unit being raised by their own country or the Canadian forces they will have equal opportunity to contribute to the war effort of the United Nations.

Nationals resident in Canada belonging to non-belligerent countries are also subject to compulsory military training in Canada under Mobilization Regulations.

Nationals of enemy countries are not, of course, included in the call-up.

Aliens are being called in the same age and marital categories as Canadians.

Citizens of the United States, resident in Canada, will be called up by the Registrars of the Mobilization Boards. Those Americans who have declared their intention of becoming citizens of Canada, will be treated on the same footing as Canadians under the military call-up. Americans living here who have not declared their intention of taking out citizenship papers, will be given an option of enlisting with the Armed Forces of the United States if they prefer that to serving with the Canadian Forces. The position of Americans under Regulations in Canada will be substantially the same as that of Canadians who are residing in the United States, under compulsory military service requirements in that country.

Exempt from the call-up are persons employed in Canada full-time by their respective Governments (L.G., March, 1943, p. 389). Aliens in doubt as to their status are advised to communicate with their country's Consul.

Conference on Canadian and United States Employment Problems

A CONFERENCE on wartime employment problems of mutual interest to Canada and the United States, was held in Ottawa on March 27 and 28, attended by representatives of the United States War Manpower Commission and officers of the Dominion Department of Labour.

Following a cordial welcome from the Minister of Labour, Hon. Humphrey Mitchell, and the Deputy Minister and Director of National Selective Service, Mr. Arthur MacNamara, there was a discussion on a number of subjects.

In regard to recruitment problems arising from construction of the Alaska Highway and defence bases in Alaska, two problems were

uppermost—(1) the co-ordination of recruitment and employment practices between various contractors; (2) the assignment of a War Manpower Commission representative at Edmonton. Methods of co-operation between the Canadian and American employment services were considered.

Other matters under discussion were the exchange of farm labour, the United States manpower program, and the determination of ways in which the two countries can be more helpful to each other in solving labour recruitment problems.

The conference was under the chairmanship of C. F. Needham, Associate Director (Civilian) National Selective Service.

Music as a Factor in Production

Summary of the Experience of Certain Canadian Plants in Providing Radio and Recorded Programs

IN the March issue of the *LABOUR GAZETTE* (page 319), reference was made to the importance of music in wartime industry in Great Britain, the United States and Australia. That its importance is gradually being recognized in this country is indicated in reports received from several large Canadian plants who are using this method of improving working conditions in their factories and thereby obtaining the following beneficial results:

- (1) Increase in production and efficiency;
- (2) Reduction in errors;
- (3) Decrease in absenteeism, tardiness, sickness and accidents, and early departure;
- (4) Reduction in mental fatigue;
- (5) Improvement in morale.

In Canadian Factories

Miss Phyllis Axford, Toronto, recently completed a tour of local war industries which are successfully using industrial music in their plants, and her findings are reported as follows:

Canadian General Electric Company, Ltd., Toronto.—Music has been in use at Canadian General Electric since 1926. This company was one of the first in the world to pioneer in using music regularly at work, and some of the employees remember having worked to music steadily for fifteen years. They began with an old phonograph picked up seventeen years ago, and bought records to use over the plant sound system. This proved so popular and pleasant that the management bought a radio-phonograph and used radio broadcast music to work to. However, it was found that the commercials and jingles split the programs ridiculously for the workers, and that time was lost turning the dials, so they went back to recorded music. In the plant suggestion boxes each week, they find several dozen titles of records in demand, and each week the firm buys six of the most popular ones requested by their workers. In this way they accumulate about three hundred records a year and have a very impressive library. The plant is noisy but not too noisy to prevent the workers enjoying music with vocals and occasionally light symphonic selections as well as string music and waltzes. Waltzes are by far the most popular and dance music with a dominant melody comes next. The music occupies an operator only part time, just long enough to turn it on and off each day, and to sort the records once a week, arranging a week's program at once. The programs go on every day at mid-morning dip time, noon,

mid-afternoon, and a half an hour before closing time.

Canadian General Electric has discovered by experience that the music system is valuable as a safety device. The industrial sound system over which the music is diffused, is equipped with a foot pedal device at the main switchboard of the factory, so that the switchboard operator may at any time cut the music off and make an announcement directly to the workers in case of fire. This prevents panic, yet makes an announcement instantly more effective than the buzzer which was formerly used. Another point advanced at this plant in favour of music was that it makes the workers happier. The management is of the opinion that the hours at work constitute the main part of the life of their employees, and these hours ought to be as full and enjoyable as possible. Absenteeism runs about three per cent, and they feel that this low rate is partly due to the fact that the workers have less desire to miss work when they feel that they are missing their favourite concerts.

The programs are planned, not by a psychologist, but by the trial and error method, taking into account the recommendations of prominent American psychologists as to the suitable types of music to be selected, and the noise level of the plant, as well as the tastes of the workers.

At this plant the emphasis is on music as a morale booster and in this way indirectly assists output. It is not intended to increase production but it is believed that the music keeps the workers refreshed and alert and on guard against faulty work or accidents.

Small Electric Motors (Canada) Ltd., Leaside.—This firm has a director of music, an English engineer, who installed music as a daily feature of the plant early last autumn because he had seen the beneficial results of music in the parent company in England.

There are about 250 day shift workers in the plant, serviced by nine ten-inch speakers. The public address system used for the music was designed and installed by the engineer personally. A new factory is being built and it is being designed acoustically to accommodate music. The music is relayed every morning from 10.30 to 11.00 and every afternoon from 3.30 to 4.00. In addition, there is half an hour of music at lunch, when popular dance tunes are played, so that those who wish to dance may do so in the sunny cafeteria. Brisk marches open the day's program. At this plant, the delicate precision work does not lend itself to speed in output, and the music is not intended to increase production, but here also

it is believed that the music keeps the workers refreshed and alert and on guard against faulty work or accidents.

John Inglis Company, Ltd., Toronto.—At this plant a different problem presents itself, because of the high noise level. In order to discover which music would have high enough pitch to be heard without strain over the noise of the machines it was decided to use string music exclusively. The waltzes of Johann Strauss are the most popular, and those of Irving Berlin, next. The music is heard for twelve to fourteen minutes each half hour, day and night, seven days a week. Because of the overlapping shifts, no dip period is noticed in mid-morning and mid-afternoon as in some plants, and programs must be suited to workers who have arrived at different times. At this plant speed is necessary and although the music does not constitute a speed-up device because of its slow tempo, it is intended to help keep the workers going through long hours of monotonous production or inspection jobs, buoying them up and keeping their energies renewed. Medical science has conclusively proved that music increases nervous and muscular energy without causing an after let-down and that it materially reduces fatigue.

The management reports that music has one noticeable effect, it keeps the employees from daydreaming or going to sleep, a dangerous tendency on night shifts especially. They feel that the music helps prevent rejects and accidents by keeping the attention level high during work which might be boring were it not for the accompanying music.

OTHER CANADIAN FIRMS

Information has also been received by the LABOUR GAZETTE concerning the following Canadian firms and their methods of employing music in their plants.

Sovereign Potters Limited, Hamilton.—In this plant "radios have been in operation for a great number of years and have proven so satisfactory that a change would not be considered. It is not an elaborate installation, and is operated by one central unit in the busiest part of the plant, together with individual sets on some work benches, provided by the employees. To avoid monotony and nerve strain, the radios do not go continuously but certain scheduled programs are used. The sound of music where crews are working together, tends to more concentration on the work at hand than idle conversation. Work is at a higher tempo with livelier programs—swing and hillbilly programs with vocals being the most popular".

Canadian Potteries, Limited, St. Johns, Que.—In this plant a radio has been installed in the casting shop in which there are approximately 55 men, with an extension in the mould shop in which there are five men. The radio has several loud speakers distributed throughout the casting shop in order that

the entire shop can receive any program desired. Programs to which the men may listen are not limited, as the extensions are controlled by one single dial. They receive programs of band music, outstanding speakers, current events and news broadcasts, orchestral music, or any other music to which they care to listen.

Radio Valve Company, Toronto.—A pioneer in the use of industrial music, the experience of this firm is quoted as follows: "Operators like music while working. It has a good effect on older operators, but we are not prepared to recommend it as a production stimulant for female operators on fine assembly jobs, or for new operators on these jobs, where considerable concentration is required; it results in poorer work and reduced speed. As it is impossible to get a desirable type of radio program, a carefully chosen selection of records is used instead. Ninety minutes of music during the day is all that is considered necessary. We believe every plant should have it but should adapt it to its own peculiar problem. It is extremely valuable for plant announcements and war-time fund raising campaigns."

Bata Shoe Company of Canada, Limited, Batawa.—This company has a house-broadcasting system installed in its factory which is used to broadcast music and news during working time.

"Every day from 9.30 to 9.40 a.m. a rest period is provided for the employees, during which music is played and news of general interest is broadcast. This rest period is on the Company's time and is used by the employees to take refreshments and to listen to the broadcast which has become a regular institution. During various war services drives, speakers are invited from the ranks of the employees or from outside. At Christmas the factory Glee Club sings carols. The spoken program ends with a second music record, usually a march to liven everyone up. Then the announcer, who is an employee of the Company, wishes a 'good morning to everyone'. The machinery which is used is an ordinary music and loud-speaking system, with a loud speaker on every floor. It has been in operation since 1940. In the summer, when a number of employees spend their lunch hour outside, the same kind of music is played for them through a strong outdoor loudspeaker (horn)."

Other plants using both radio and recorded music, include the following: RCA Victor Company, Montreal; Defence Industries, Limited, Montreal; Fairchild Aircraft, Montreal; Robert Mitchell, Company, Limited, Montreal; Crain Printers, Limited, Ottawa; Vail's Launderers and Dry Cleaners, Limited, Ottawa; Dominion Electric House Company, Limited, Kitchener; Canadian Westinghouse, Hamilton; Otis-Fensom Elevator Company, Hamilton; Tuckett Tobacco Company, Ltd., Hamilton.

Radio and Record Systems

As in British factories, Canadian plants can provide their own programs. This, it is stated, requires "custom-built speakers, installed at proper locations by acoustical engineers, to ensure soft, clear reproduction near each worker." It is recommended by English experts that loud speakers should be small and well-placed about the factory rather than large and only one or two to a shop. A properly installed sound system may be of invaluable service in (1) production; (2) personnel relations; (3) administrative control—air raid and fire alarms, paging, etc.

It is pointed out that recorded programs, which are frequently used, should be carefully chosen to follow a scientifically planned program and may supplement those received over the Canadian Broadcasting Corporation.

Several plants are equipped with central receiving sets and radios are placed in each workshop. In Hamilton, a special program, "Music Aids Production", is broadcast daily to industrial workers.

Planned Programs

Until the workers accustom themselves to the innovation, it is considered that a program should start at low tempo, otherwise it might detract from their work. It ought to contain as much variety as possible, but care should be used in preparation—the ideal factory formula takes into account such factors as nationality, age, character of work, and time of day. Dance music creates an atmosphere of cheerfulness, but vocal refrains, it is found, usually tend to distract, rather than stimulate the worker.

A scientifically planned program, it is agreed, consists of four types of music: (1) special selections, for occasions such as birthdays, presentations, etc.; (2) opening and closing selections—lively tunes such as jigs or fox trots; (3) fatigue period selections—soothing music such as waltzes; (4) luncheon and rest period selections—light orchestral music.

Benefits Derived

Information compiled by Canadian experts indicates that there is an increase of 14 per cent in production when music is played, with an additional 8 per cent production boost if planned programs are used. These programs have been found to give speed and contentment in such diverse establishments as an aeroplane factory, a bank, and a publishing company.

In eight weeks, the production line of a manufacturing company in the United States had bettered its own record by 6 per cent; rejects on the final inspection dropped slightly,

and wiring rejects fell from 3 per cent to 0.5 per cent. Employees who worked for an efficiency bonus demanded continuation of the music. In 75 per cent of the factories studied by a professor of the Stevens Institute of Technology (LABOUR GAZETTE, March 1943, page 319), total production was 4 per cent to 11 per cent greater with music than without, and tardiness on Monday morning was reduced from 22.75 per cent to 2.75 per cent.

When the principles of a planned program were followed in England, production was increased by between 12½ per cent to 15 per cent for an hour or an hour and a half after the program, while in some factories increases as high as 23 per cent were recorded.

Industrial music provides that "lift" which makes for a happier attitude towards work, and this very directly not only increases production, but cuts down absenteeism.

Conclusions

The following conclusions were reached at a conference between British workers and management on the importance of music in industry, and published in the March issue of *Manufacturing and Industrial Engineering*.

(1) The music should be familiar to the ordinary worker. Singing, humming or whistling is a sure sign that the music is having its proper tonic effect. As an important rider to this, it is added that the music can easily be overdone. Two and a half hours daily is the limit, and the best time to give the music is either at the beginning of the day's work, as an antidote to bad weather conditions or nervous strain, or at the end of a particularly tiring day.

(2) The melody should be clear and well defined. The workers want to hear a tune that rides over factory noises. They, incidentally, are much better at hearing it than anyone not used to that particular factory.

(3) The tone level or volume should be constant, and there should be no variation in audibility between one part of a tune or program and another.

(4) The tempo or rhythm should create a bright and cheerful atmosphere. Extremes of fastness or slowness should be avoided. Most important, rhythm and tempo should not be thought of in terms of "working speeds". They should be considered as a means of creating a spirit of cheerfulness and gaiety in operatives on any and all processes.

(5) Number (4) does not apply at all either to office and executive staff, for whom music is in itself unsuitable, nor to highly skilled workmen on individual tasks.

(6) The music is best suited for workers who are employed on repetition or other monotonous work (especially female labour). For them certain types of music are definitely undesirable. The tone of an organ is unsuitable for amplification in factories. "Hot" music is unsuitable, and so is "jazzing" of any melody. The rhythm should be clear but unobtrusive, and any lack of a "melodic line", any involved harmony or complex rhythm tend to create confusion of sound.

(7) Loud speakers should be small and well-placed about the factory rather than large and only one or two to a shop.

French Workers in Germany

Increasing Pressure Brought to Bear Upon Laval Government to Supply Manpower for Nazi Factories—Resistance of French Workers

AS a result of extensive Nazi preparations for precipitating a world conflict, a shortage of manpower had begun to develop in Germany even before the outbreak of the present war. As the struggle has progressed, every available physically fit German male has been placed in the armed forces. This would have made impossible the maintenance of industrial production had the Nazi Government not decided upon a policy of recruiting workers for German factories from the conquered countries of Europe.

It is estimated that some millions of outside workers have been taken into employment in the factories of the Reich.

The German attitude towards the recruitment of labour in conquered European countries is expressed in the following quotation from the *Frankfurter Zeitung*:

"Germany and her allies having undertaken the struggle against bolshevism, it behooves all nations and all peoples of Europe who will benefit by her protection to contribute to the common effort, if not by their arms at least by their labour."

Pierre Laval, head of the Vichy Government, has publicly supported this stand. "I hope for the victory of Germany," he declared in a broadcast, "because otherwise bolshevism will establish itself everywhere in Europe." He has repeatedly called upon French workers to "play their part for the benefit of the European Community by their work in France and beyond its frontiers".

In France, the Vichy Government's announced policy of "collaboration" with the Nazis influenced the Germans to allow recruitment for service in the Reich to be managed by the Vichy authorities rather than by the Germans themselves.

The plan was at first undertaken on a voluntary basis. In spite of all Laval's appeals, however, the workers of France failed notably to co-operate on anything approaching the desired scale. Accordingly the meaning of the term "voluntary" presently underwent a change. More and more elements of compulsion appeared; and Albert Guigui, secretary of the largest French trade union organization, the *Confédération Générale du Travail*, who escaped to London recently, declared in a press conference on March 26: "I saw workmen with handcuffs who would joke and say, 'Look at us volunteers!'"

Conditions of Employment in Germany

The recruitment of French labour for Germany began in 1941. At that time volunteers were invited to present themselves at employment offices; there was to be no compulsion. Conditions of employment were promised equivalent to those of German workers; there was to be no loss of seniority privileges or social insurance rights acquired by the worker in French industry; sickness benefits were guaranteed to the volunteers' families, who were also to receive temporary allowances from the German treasury until the amounts allotted by the workers from their wages began to reach them. Workers were entitled to reinstatement in their former jobs on their return.

Approximately 140,000 French workers are estimated to have gone to Germany under these conditions; although many of them returned later. By the spring of 1942, however, recruitment had fallen off considerably, all the trained labour willing to transfer having been exhausted.

German Demands

Meanwhile the German need for manpower was being intensified as a result of the Nazi losses during the army's first winter in Russia. At the end of March, 1942, the German Government formally asked France for a contribution of 350,000 workers, including 150,000 skilled men. Laval, who became head of the Vichy Government in April, obtained permission to find the men in his own way, by voluntary methods or by compulsion. Nazi authorities agreed that volunteer workers were more likely to prove satisfactory than draftees; but made it clear that the men must be supplied one way or another.

Laval now decided to undertake measures for the concentration of French industry, in order to release workers for service in the Reich. Hours of work were ordered increased; many factories were closed down, and the remainder were instructed to "use their staff, equipment, and raw materials to better purpose."

In this way many thousands of workers were thrown out of employment. Having no work, no chance of obtaining work, and no unemployment relief, these workers, it was expected, would now be glad to volunteer to be sent to Germany.

Exchange of Prisoners for Workers

In June a further incentive to recruitment was provided when the Nazi authorities agreed to release a number of prisoners in exchange for workers. At first it was thought that the exchange was to be on the basis of one prisoner for one worker; but it presently developed that the provision of 150,000 skilled workers would free only 50,000 prisoners.

An unrelenting propaganda campaign was carried on in an attempt to convince French workers that it was their patriotic duty to co-operate in securing the release of prisoners. It was hinted that the Germans would make reprisals if their demands were not met. Living conditions in Germany were attractively described.

Underground Press

This propaganda was combated to a considerable extent by the underground press, which attained a high degree of organization in both occupied and unoccupied France and is reported by escaped union leaders to maintain an impressive circulation.

An issue of *Libération* dated August 25, 1942 and smuggled out of France to De Gaulle headquarters in London declares:

"Fifty thousand prisoners for 150,000 workers—skilled workers, be it understood, which makes them worth at least three times as much as common labourers. One prisoner for nine French 'volunteers'? In truth, that is not expensive! A storm trooper costs much more: he is worth sixteen Frenchmen and a half . . . At the hour when Laval, worthily accompanied by Feldgraus, was conversing at Compiègne, 93 patriots fell in Paris under the bullets of the Gestapo in reprisal for the execution of two storm troopers.

"The release of one prisoner chosen from among the older, the sick, those the most weakened by two years of captivity, for the equivalent of nine workers carefully examined as to their health and their professional value. Nine fresh hostages, inextricably caught up in the pitiless German war machine for a single hostage without market value. Such an infamous bargain could have but one result: to prolong the war, and in consequence the captivity of 1,150,000 other prisoners . . ."

Even allowing for the possibility of overstatement due to strong feeling on the part of the writer, the following extract from the clandestine paper *Le Populaire* makes it obvious that the conditions of French workers inside Germany are by no means the pleasant ones depicted by official Vichy and German propagandists.

"FRENCH WORKERS, THIS IS WHAT AWAITS YOU IN GERMANY . . .

"It is a life of slavery. You will sleep on straw. You will be watched every moment by the police; even at night your door must be left open so the police can check on you. You will wear the yellow arm band—the mark of your slavery . . . You will not be allowed to enter into conversation with German women, but on the contrary your women will have to suffer the advances of the Germans.

"The cheapest wine costs between 5 to 10 marks (100 to 200 francs). Very poor beer without alcohol is rationed and costs 14 francs a litre. The food of the factory is so bad that the German workers prefer to bring food from home, which you will not be able to do. Your noon meal must be eaten in less than half an hour on the corner of your work table. . . .

"The factory can demand 80 hours a week work from you. From your wages—not as high as you may think—will be deducted health insurance and other 'expenses' which will leave you barely enough to live on."

Failure of Voluntary Recruitment

Not more than 17,000 trained workers were recruited between June 1 and September 1 for service in Germany.

Laval managed to obtain an extension of time until October 15 in which to attempt to provide the remaining 133,000 workers required. The French government now adopted a system of "nomination" under which workers who received an "appeal" were asked to "accept the duty imposed upon them." Those who responded would receive special privileges, but those who failed to "volunteer" on these terms were threatened with penalties.

Forced Labour

Compulsory labour was introduced by the Vichy government on September 4, 1942, by an Act applying to all physically fit men between the ages of 18 and 50 and to single women between 21 and 35. The Act did not specifically state that those affected would be liable for compulsory export for service in Germany but it did state in regard to such workers: "They may be required to do any work considered essential by the government in the higher interests of the nation." This wording revealed the potential scope of the Act. It was further stipulated in the Act that workers must be able to show that they are engaged in "useful" employment. Any person who is unable to produce

proof to this effect may be required to do any work to which he is directed by the agencies of the Secretariat of State for Labour. Furthermore employers were forbidden to employ or dismiss workers except in accordance with government principles.

"Volunteering" now meant that a worker, in response to an appeal or an order issued to him, signed voluntarily or under compulsion, a contract binding him to a specific German employer. German employment offices were plentifully located throughout both the occupied and unoccupied zones.

Resistance to these measures was widespread, and when the deadline for meeting German demands was reached on October 15, the quota was still short by over 100,000 trained workers.

On that date simultaneous demonstrations took place in many industrial centres against the efforts of the authorities to send forcibly a number of workers to Germany. The departure of some trainloads of workers was thus prevented.

Increased Pressure

Coercive methods were rapidly increased. On October 19 it was reported that 500 Gestapo agents had been naturalized as Frenchmen in order to help round up workers. Pressure was exerted on employers to organize their men into teams of workers, so that whole groups could be recruited at a time.

Since November, when the German army moved into the formerly "unoccupied" zone, information on events in France has necessarily become scarcer. The army of the Vichy Government, consisting of some 100,000 men, was demobilized. The names of the soldiers were retained, however, and they were required to state their residence within a week. Knowledge of residence was essential to the authorities because of the numbers of Frenchmen who had been evading the compulsory labour restrictions by moving from place to place and not maintaining a fixed home.

By December the Nazis were reported to be methodically going through French factories, forcing workers to lay down their tools and leave, sometimes without even the opportunity to notify their families.

On February 15, 1943, the Laval Government tightened up its compulsory labour system with the introduction of a policy of conscription for two years. A census was ordered taken of all men and women between the ages of 21 and 31. Those discovered to be not indispensable to French industry were

to be sent immediately to Germany or transferred to establishments in France working on orders from Germany. Failure to register would bring a fine or prison sentence, and in addition the refusal of food ration cards. To those coming within the age classification the measure thus meant in effect: "volunteer or starve".

The Germans were reported late in February to be going through cafes, hotels and railway stations and even launching raids in theatres, interrupting the performances to take those between 21 and 31 for questioning and to decide whether they were liable for service in Germany.

Results of Recruitment Program

It is difficult to estimate the degree of success that has been achieved in this unrelenting campaign. In a recent press conference Pierre Laval declared that 1,950,000 Frenchmen were actually at work for Germany. This figure, however, included 1,150,000 prisoners of war and over a quarter of million men working in French factories on production for the exclusive use of the Reich. Thus only about half a million workers out of the total would represent those who have been actually recruited as part of the campaign. On April 2 the Berlin radio declared that more than half a million French workers had been transferred to German armament factories in 1942. A Reuters dispatch from Switzerland of the same date referred to still further demands from Fritz Sauckel, German Labour Commissioner, for 150,000 more French workers, fifty thousand of whom would be sent to Sicily to construct defences against a possible Allied invasion, and the remainder to be employed on fortifications along the Mediterranean coast.

Tales of resistance continue to come from France in spite of the perils that such action entails, accounts in some cases of well-organized demonstrations, in others of individual gestures, such as that of a seventeen-year-old boy who was killed leaping from the train that was to carry him to Germany. Guigui tells of workmen, so-called "volunteers", going with policemen, singing the Marseillaise and shouting "Long live de Gaulle" on their way to Germany. There has been bombing of Nazi recruiting offices and blowing up of trains destined for the Reich, not to mention sabotage and slow-down campaigns on the part of workers actually transported. And so the struggle continues, with the French working class at one with the rest of the country in the nation-wide struggle against the invader.

Industrial Welfare

Recreation for Industrial Workers

A CONFERENCE on recreation for war workers was convened in Ottawa on April 9, the sessions being held in the Board Room of the Department of Labour, under the direction of Mrs. Rex Eaton, Assistant Director of National Selective Service, who presided.

Addressing the opening session, Mr. Arthur MacNamara, Deputy Minister of Labour and Director of National Selective Service, stated that while supervision and encouragement of recreational provisions do not usually come within Dominion jurisdiction, the rapid development of war industries had given rise to unusual living conditions, with the result that, particularly in some centres of war industries, inadequate arrangements for recreation are apparent. When making public announcement in regard to National Selective Service a few months ago, the Prime Minister had made special mention of recreational needs, particularly in their relation to the health and welfare of war workers. He suggested that recreation should be viewed as a necessary accompaniment of concentrated work on war production. As the readjustment to war production had taken place at too rapid a rate to permit of the development of the usual recreational arrangements wholly through community efforts, Mr. MacNamara explained that the Department of Labour felt it necessary to focus attention on the problem, and to endeavour to give some leadership in the matter. For this reason the Department had called together the national conference, in order that suggestions might be available from all those who already had had contact with the building up of facilities for spending leisure time profitably, from the viewpoints of health and of the community. The field was new, Mr. MacNamara added, but the Department of Labour hoped that just as considerable success had been met with in developing day nurseries over a comparatively short time, similar success would be encountered in regard to recreation.

Following the Deputy Minister of Labour, Miss Sheila MacDonald, daughter of the late

Right Honourable Ramsay MacDonald, former Prime Minister of Great Britain, addressed the conference on the experience of the old country in regard to recreational arrangements for war workers. Miss MacDonald stressed the need of furnishing proper facilities for recreation, in order to maintain physical and mental health, so necessary to ensure peak war production.

Representatives from the several industrial centres in the Provinces of Ontario and Quebec outlined what had been done up to the present in providing recreational facilities, but further provisions appeared to be required. Uniformly it was suggested that a good deal of co-ordination and stimulation of effort would be needed in the cities and towns with the larger war industries.

The discussions dealt with the fundamental purpose of recreation, pattern of organization, personnel and facilities, the program and the scope of activities.

There was unanimous agreement that the recreational program should be a community development, within the areas where the establishment of war industry had created an emergent need.

The conference, with an attendance of about sixty, included representatives of several national organizations, including the Trades and Labour Congress, Canadian Congress of Labour, Confederation of Catholic Workers, Y.M.C.A., Y.W.C.A., Y.M.H.A., Knights of Columbus, Canadian Welfare Council, United Church of Canada, Workers' Educational Association and Jeunesses Ouvriere Catholique. Representatives were also in attendance from McMaster and McGill Universities, the Civil Service and the Civil Service Recreational Association of Ottawa, from a few of the large war industries, and from welfare and recreational associations in the centres of war industries in Ontario and Quebec. The Wartime Information Board, the Department of Munitions and Supply, the National Film Board and Wartime Housing were also represented.

Day Nurseries in Ontario and Quebec

CANADA'S working mothers have taken advantage of the facilities of the Dominion-Provincial Day Nursery Plan and several hundred children are already registered at the various day nurseries which have been established to date.

The Province of Ontario has nine day nurseries in full operation, a tenth on the way, and various committees at work throughout the province on plans which will later be submitted to the Dominion and the Province for approval before new nurseries can be opened.

Allocation of day nurseries in the Province of Ontario is: six in Toronto and one in each of the following cities: Brantford, St. Catharines, Oshawa and Galt.

Due probably to greater difficulties in finding suitable premises near enough to the industrial centres, the province of Quebec has so far only one day nursery in operation in Montreal. Four others have been approved and are being organized as speedily as possible. It is expected they will be in operation within a few weeks. When completed these five day nurseries will offer accommodation for over two hundred children. All of them are situated in Montreal.

In order to fit into the requirements of the Dominion-Provincial Agreement and qualify for the grants necessary to carry on, the committee responsible for exploring and establishing the need for these day nurseries has been careful to locate the most suitable buildings and those requiring the least expenditure for remodelling, equipment, etc., so that in Toronto four of the nursery schools opened have been set up in church buildings utilizing spare space, rooms which were formerly class rooms or social quarters. Two of the day nurseries are in converted houses. All are in the vicinity of war plants and have been

filled with children as soon as they were opened.

Local Committees in and around Toronto are at work on six or more other centres, assessing the need and looking for suitable localities, which in these difficult housing times are often hard to find. In the city of Galt the Sunday School Department of Knox Church had a surplus room which has been remodelled and as the church has large and attractive grounds and is well located it forms an ideal centre for a day nursery. Houses have been converted for the day nurseries in Brantford and St. Catharines. In Oshawa the Children's Aid Department has given over premises which formerly were used as an isolation department for sick children. It is planned to send future cases to the local hospital or to Toronto for care. The building is modern and commodious and is set in a fine open section so that the children will have light, air and good space for playing.

It is anticipated that in addition to the day nursery work ten or more centres will shortly be opened in the Province of Ontario to give day care and oversight to children of school age.

In Ontario the Director of Day Nurseries, who is responsible for the oversight and for co-operation in planning is Miss Mary Blaklee, who was appointed by the Minister of Health and Social Welfare.

In Quebec the Director of the Department of Day Nurseries is Dr. E. Lalonde in the Department of Health and Social Welfare.

Present indications, from conferences now under way, are that the city of Ottawa will shortly open a day nursery under the Dominion-Provincial Plan, to meet the anticipated need for care of children of married women who may enter new war jobs in the vicinity which are now rapidly expanding.

Welfare Work Outside the Factory in Britain

Arrangements made by Ministry of Labour to Deal with Housing, Recreation, Shopping, and other Problems of War-Workers

THE Ministry of Labour and National Service in Great Britain has published two pamphlets* describing its welfare arrangements outside the factory for war-workers and merchant seamen. They cover the period from June, 1940, to August, 1942, the former date marking the transfer of the Factory Depart-

ment and Inspectorate from the Home Office to the Ministry of Labour and National Service and the setting up of a Factory and Welfare Department in the latter Ministry.

In taking this latter step the Ministry recognized that maximum efficiency could be achieved only if workers were properly fed and housed and provided with opportunities for recreation. Special welfare problems have arisen from the transfer of workers to new war plants often located far from populous

*Welfare Work outside the Factory, September, 1941. Welfare outside the Factory and Seamen's Welfare in Port, August, 1941-August, 1942.

centres. Two groups require particular welfare arrangements. Women in industry need assistance with shopping and housekeeping problems and facilities for the care of their children. Merchant seamen in ports must be provided with accommodation, opportunities for recreation and care when sick. Welfare arrangements for this second group are dealt with separately at the end of this article.

Organization of Welfare

The Factory and Welfare Department of the Ministry of Labour and National Service is assisted by an Advisory Board representing the Government, employers, workers, the health services and voluntary organizations, and by a Central Consultative Council of Voluntary Organizations. Local administration is carried on by eleven regional and 100 local Welfare Officers who assist local authorities and organizations. In 65 areas these officers are advised by local Welfare Advisory Committees composed of representatives of the local authority, regional offices of the Ministries of Health and Labour and National Service, employers, trade unions and the Women's Voluntary Services. In some cases Joint Advisory Committees covering several local authority areas are set up.

Transfer of Workers

Workers to be transferred from non-industrial areas to war plants are given a leaflet entitled "Going Away on War Work" with information about travelling, allowances and reception arrangements. Women workers from outlying districts travel in a group under the supervision of an official of the Ministry or a voluntary worker. Reception arrangements are centred at the Employment Exchanges although in some places voluntary workers or company representatives meet trains as a preliminary step. New arrivals are fed and lodged temporarily at reception hostels which numbered 76 by August, 1942. The Factory and Welfare Department bears the cost of adapting and equipping existing houses for hostels and will assist local authorities and voluntary organizations with running expenses, if necessary. Special reception arrangements are made for British subjects from abroad who volunteer for civilian employment in Britain.

Accommodation and Feeding

Arrangements for housing war workers in Britain were described in the LABOUR GAZETTE, 1942, p. 311. Several new measures have been undertaken in the past year. Local Welfare Advisory Committees are carrying on a publicity campaign to encourage householders to accept lodgers as a work of national service

and to educate landladies in their responsibilities to lodgers. Married women who board not less than two war workers are not now required to take other war work under the Registration for Employment Order. Attempts have been made to meet the domestic help shortage by giving married women and certain single women with household responsibilities an opportunity to assist householders in caring for war workers as an alternative to other war work. Helpers of this type are usually allocated only to householders who lodge at least four war workers and provide two meals a day. To keep lists of vacant rooms up-to-date a street representative system has been developed by the Women's Voluntary Services. One woman is made responsible for maintaining a record of all transfers and vacant rooms in a block of 50 to 100 houses and for establishing friendly relations between the transferred workers and the householders.

Landladies are encouraged to provide lodgers with two meals a day and most workers obtain their mid-day meal at factory canteens which are required by law in all factories employing more than 250 persons if the Inspector so directs. These facilities are supplemented by over 1,500 British Restaurants established by local authorities for workers not served by factory canteens and for those whose landladies are unable to provide meals.

Recreation

In providing recreation for war workers the Government works through existing voluntary organizations and is advised by the Recreation Group of the Central Consultative Committee of Voluntary Organizations. It gives grants-in-aid to voluntary organizations serving war workers, encourages them to expand their facilities and assists them in obtaining premises and equipment. Efforts are being made to have clubs and other facilities kept open on Sundays for war workers. Information about recreational opportunities is disseminated by Factory Inspectors and welfare supervisors. Some communities publish leaflets describing local facilities. The "Fitness for Service" campaign of the Central Council of Recreative Physical Training has been endorsed by the Government and the Council receives financial assistance in organizing classes, sports leagues and clubs in factories. Recreation for workers under 21 is arranged by the Board of Education and the Youth Committees.

Entertainment for war workers is provided by the Entertainments National Service Association which gives shows in factories and operates 34 mobile film units at Government expense. Factory concerts are pro-

vided by the Council for the Encouragement of Music and the Arts and various service bands. Workers have been permitted to act as audiences for B.B.C. factory broadcasts.

In regard to holidays, the Government has recognized that an annual holiday of a week is necessary to maintain the workers' efficiency, but it has asked that holidays be staggered over as wide a period as possible to minimize interference with production. Holiday travel is discouraged and communities are urged to organize holiday-at-home attractions.

Working Women

Shopping problems of working women have been met by the extension and alteration of shopping hours, the adjustment of lunch hours, the granting of time-off for shopping and the organization of "Neighbours Leagues" to do co-operative shopping.

To care for the children of working mothers, 826 wartime nurseries with space for 34,000 children had been established up to August 31, 1942, by local authorities with financial aid and co-operation from the Ministries of Health and Labour and National Service and the Board of Education. Over 400 more were being organized. In addition, over 100,000 children under five were being cared for in public elementary schools and there were 3,000 minders registered with the Maternity and Child Welfare authorities. For school-age children schools are kept open longer hours and during holidays and more school meals are provided.

Other Welfare Problems

The transport problems of workers have been studied by Transport Consultative Committees set up by Regional Transport Commissioners and representing factory managements, worker's organizations and transport authorities. Measures adopted to meet transport difficulties include staggering hours, adjustment of train and bus schedules, early closing of shops, control of queues and provision of sheltered waiting places for buses, etc. The Government has power to compel factories to adopt staggered hours.

Minor illnesses of workers in lodgings presented another problem. The Ministry of Health enlisted the co-operation of the District Nursing Services and factory welfare staffs to see that sick workers received proper care in lodgings. Special hospitals have been set up under the Ministry of Health Emergency Hospitals Scheme to care for workers who cannot be nursed in their lodgings. Government allowances are paid to sick workers. Occasionally free transport is

arranged to send workers home when sick or in cases of domestic emergency. Relatives may be given free transport to visit sick workers in special cases or to accompany sick workers to their homes.

Seamen's Welfare in Ports

The Factory and Welfare Department is also responsible for seamen's welfare but in this field the Minister of Labour and National Service is advised by a Seamen's Welfare Board and a Central Consultative Committee of voluntary organizations concerned with seamen's welfare. The Board represents shipowners, officers, seamen, interested Government departments and persons with experience in voluntary work. Local arrangements for seamen's welfare in the larger ports are under the supervision of Port Welfare Committees set up in accordance with the Recommendation of the 1936 International Labour Conference concerning the promotion of seamen's welfare in ports. The Committees represent owners, officers, seamen, local authorities, voluntary workers and the Consular Corps and Allied Trade Missions and have a Seamen's Welfare Officer appointed by the Minister as secretary. A Seamen's Welfare Fund to pay for special forms of seamen's welfare was created by donations from the Shipping Federation, the Royal Seamen's Pension Fund and private individuals and organizations.

The Government's policy is to co-ordinate and supplement existing seamen's welfare facilities and to assist voluntary organizations in obtaining equipment, food supplies, cigarettes, etc. Where accommodation and recreational facilities for seamen were insufficient, the Government established Merchant Navy Houses and Clubs. Sleeping accommodation is provided in the former which are run by the National Service Hostels Corporation, and both are equipped with dining-rooms and bars and reading, writing and recreation rooms. At Merchant Navy Reserve Pool Offices where seamen spend time waiting for postings, the Government provides waiting rooms equipped with facilities for recreation, reading, writing and obtaining light refreshments. They are run by voluntary organizations.

Seamen are informed of local welfare and recreation facilities by leaflets and information offices. Merchant seamen are admitted to canteens and entertainments provided for naval personnel.

The health of seamen is the responsibility of the Minister of War Transport who is assisted by the Ministries of Health and

Labour and National Service through a Joint Advisory Committee on the Health of the Mercantile Marine. The Committee arranges for the admission of seamen to hospitals, the establishment of clinics and bathing facilities in ports and the publication of literature containing health information and advice for seamen. Free hospital treatment is given to seamen who are injured or fall ill as a result of enemy action or accident while in service, and in other cases the Government bears whatever costs the seaman is unable to meet. Seamen in hospitals are visited and supplied with comforts by voluntary organizations. Relatives are notified if a seaman is dangerously ill and are provided with free travel warrants. Reduced fares are granted to relatives visiting seamen in ports or hospital. If necessary, free clothing is provided for seamen leaving hospital.

The Ministry of Labour and National Service also concerns itself with the welfare of Allied and neutral seamen. Hospitality Committees were established under the Port Welfare Committees to supervise arrangements for this group. Hostels and recreation centres set up at Government expense or by voluntary organizations are open to allied seamen, and their recreation needs met by the provision of foreign newspapers, books, periodicals and entertainments. Some Allied Governments furnish their seamen with separate hostels. Special arrangements are made for Indian, Chinese and colonial seamen. The welfare of crews of British vessels in overseas ports is looked after by British Consuls, Dominion or Colonial Governments acting for the Ministry of War Transport which provides financial assistance where necessary.

Australian Code of Working Conditions for Women

Standards Recommended Governing the Employment of Women in War Industries

A CODE of recommended standards governing the employment of women in Australian war industries has been drawn up by the Industrial Welfare Division of the Commonwealth Department of Labour and National Service and approved by the Commonwealth Committee of Industrial Hygiene in Munitions Establishments. The standards are minimum standards designed to meet wartime conditions in industry and to maintain the health and efficiency of workers rather than to secure their comfort. Matters adequately dealt with by existing legislation have not been included. In the introduction it is stated that:

While in the form of recommendations, the code sets out the minimum standards which, in the interests of production, should be observed in all industries employing women in wartime. Employers will, therefore, be expected to adopt these standards in all factories, workshops, etc., in which women are employed.

The code deals with such matters as welfare supervision, workroom conditions, amenities and sanitary facilities, health and safety, hours of work and meal breaks. In addition, the Industrial Welfare Division is prepared to furnish advice and information on these subjects.

In factories employing more than 350 women it is recommended that a full-time woman welfare officer should be employed. Those with more than 20 women workers should make one member of the staff responsible for supervising the women's welfare. The Industrial Welfare Division is conducting emer-

gency training courses of six months for such welfare officers. It is recommended that a responsible woman charge-hand be on duty on every shift on which women are employed. Women should not be required to work alone in isolated places or where all the other workers are male.

Hours of Work

Maximum hours recommended for women workers are 10 a day and 104 a fortnight, with one day's rest in seven. No work-spell should be more than 4½ hours without a meal break of at least 30 minutes unless women are employed on a five-hour shift. After each 2½ hours of work, a ten-minute interval should be permitted. Where possible, machines should be stopped and refreshments made available.

Women under 21, it is declared, should not be allowed to work on the night shift for more than four weeks at a time. Girls under 16 should be forbidden to work between 8 p.m. and 6.30 a.m. and those from 16 to 18 should not work between 12.30 a.m. and 6.30 a.m. Shifts should begin and end at times when transport facilities are available, but in no case should a shift change between 12.30 a.m. and 6.30 a.m. Shifts should not be rotated more frequently than once every two weeks.

Conditions for Safeguarding Health

Certain conditions are prescribed for safeguarding the health of women workers. For

every three women whose work must be done standing, at least one seat should be provided. Seats adjustable to the individual should be furnished for women on sedentary work. The seats should have backs, and if more than 19 inches from the floor, footrests should be supplied. Work should be arranged so as to eliminate unnecessary movements and lifting, especially lifting above the shoulder or from ground level. Women should be instructed in the most efficient methods of lifting and carrying. Women over 18 years should not be permitted to lift rigid or compact bodies weighing more than 35 pounds and non-rigid or bulky articles weighing more than 28 pounds. For women from 16 to 18 years old, the maximum permitted in the case of compact loads is 28 pounds, and 24 pounds for bulky ones. Girls under 16 years are limited to 16 pounds for compact articles and 12 pounds for bulky ones. Unless adequate protection is provided, women are not to be exposed to harmful concentrations of gases, fumes, dust, or toxic substances; nor should they be permitted to work in unduly high or low temperatures or other conditions likely to injure their health. Women should not be allowed to handle acids or corrosive liquids or solids likely to cause skin injuries unless proper protective measures are taken. The code adopts the standard of the International Labour Convention in declaring that women should not be employed within a period of six weeks after childbirth.

Amenities Suggested

Amenities suggested by the code include mess-rooms, canteens, locker rooms, rest rooms, casualty rooms, etc. In no factory should workers be permitted to take meals in the work room, and where possible canteens in which hot meals can be obtained should be provided. If 10 or more women are employed there should be a mess-room equipped with sufficient tables and chairs to accommodate the number using it at any time, means of boiling water and heating food, a sink and bench for dish washing, cupboards in which to store lunches, etc.

Locker rooms should be provided for the exclusive use of women. If less than 20 women are employed the locker room may be combined with the mess-room. In special cases where only women are employed in a work-room and no change of clothing is necessary, lockers may be placed in the workroom. Locker rooms should be equipped with seats for use when changing clothes, lockers in which to keep valuables and pegs for hanging clothes. Supervision must be provided to prevent theft or damage if clothes are not kept in lockers.

Adequate washing and sanitary facilities

are prescribed. It is recommended that one wash-basin or two feet of washing trough with sprays or taps and one toilet be supplied for every 15 women workers or for every fraction of 15 working on the premises at any one time. If more than 90 are employed, the ratio may be cut to one for every 20 workers. One footbath for every three washing points should be installed. Where there are 50 or more women employed, at least one shower is required, and more should be supplied if the work is hot and arduous. Employers should supply soap, clean towels and warm water. Sanitary facilities should be separated from the workroom, private and adequately lighted and ventilated. Drinking water, cooled if necessary, should be supplied by sanitary bubbling fountains in the ratio of one for every 100 women or fraction thereof. Common drinking cups should be forbidden. Stress is laid on the employer's obligation to keep all facilities in a clean and sanitary condition. It is suggested that hours of beginning and ending shifts be staggered to economize on the provision of facilities and amenities.

If there are 50 or more women workers on any shift the employer should provide a rest room separate from the other rooms, and where there are less than 50 women and more than 10, a couch should be placed in the locker room or mess-room. Rest rooms should be furnished with couches, chairs, hot water bottles, etc., in the ratio of one for every 100 women up to 400, and one for every 200 women thereafter. Rest rooms are solely for the use of ill persons and should be under the supervision of a responsible person such as a trained nurse.

Safety Measures

All dangerous machinery on which women are employed should be adequately guarded and women should not be permitted to work on machines until they have received sufficient training or are under adequate supervision. Necessary protective clothing should be provided by the employer and workers not required to wear uniforms must observe safety rules in regard to the type of clothing worn. An appendix to the code contains recommendations regarding good working clothes and a second appendix specifies how machinery should be guarded and floors stairs and passageways kept in a safe condition. If more than 10 women are employed there should be a woman trained in first aid on the staff. If the occupation is dangerous or unhealthy or there are more than 250 women workers a registered nurse should be employed. In certain dangerous or unhealthy trades or in plants where more than 1,000

women are employed, there should be a part- or full-time medical officer. For factories with more than 100 women workers a casualty room is recommended and its equipment prescribed. Minimum first-aid equipment for every factory is set out in an appendix to the code.

Minimum standards in regard to work-room temperature and ventilation are laid down in the code. Where women are employed on manual work the temperature

should be at least 60 degrees, and for sedentary work it should be 65 degrees. A fresh air supply of 30 cubic feet per person per minute should be provided and the carbon dioxide content of the air should not be greater than 8 parts per 10,000 parts in excess of the air outside. The minimum air movement and maximum humidity are specified for different temperatures. If floors are concrete, brick or stone, wooden platforms should be provided.

Joint Production Committees in the Engineering Industry in Great Britain

NEARLY two million workpeople in the engineering industries of Great Britain are now represented on over 2,000 properly constituted Joint Production Committees, which have been set up in the larger engineering firms throughout the country, according to an article in the March issue of the *Production and Engineering Bulletin*. This is considered remarkable progress since the agreement to form these Committees was reached in March, 1942, between the Engineering and Allied Employers' Federation and the various Trades Unions. In that agreement, it was laid down that firms employing less than 150 people need not form Joint Production Committees, but in point of fact, over 600 of these smaller engineering firms have done so in addition to the 2,000 larger firms mentioned above, and have thus demonstrated the wide appeal of this new development in the joint machinery between the two sides of industry.

These Joint Production Committees represent the management and the workpeople in equal numbers and can be set up in engineering shops on a consultative and advisory basis, for the discussion of matters relating to the improvement of production or to increased efficiency. It is no part of their function to discuss trade questions such as wages and similar matters which are normally dealt with in collective agreements, or by the regular machinery of negotiation between the two parties.

The question of size is determined on the one hand by the desire to keep the Committee small and so facilitate easy progress, and the need on the other hand for adequate representation of the many interests and activities in each works.

The workers' representatives are appointed by a ballot held in the section of the works which each represents. The agreement provides that all adult employees are entitled to vote in the ballot, but the actual representatives elected must be members of Trades Unions

who have had a certain minimum of service in the Company.

The Committees exist to discuss all those phases of production in the works which do not encroach upon the special field of wages and working conditions for which machinery has already existed for many years, or with those aspects of the direction of a Company's affairs which are in a very special way a function of management. The particular object of the Committee is, after all, to enable all concerned to benefit from the joint discussion to which each member is specially qualified in his own way to contribute, as for instance, in connection with methods of manufacture, design of tools, routing of work, design and enforcement of safety measures, and other problems.

Each side of the Committee appoints a Secretary, and the two Secretaries arrange a simple procedure for drawing up agendas and attending to minutes so that the affairs of the Committee can be handled in a business-like way.

The article points out that whenever new arrangements of this kind are initiated and two different points of view upon the same topic are brought together, it is inevitable that there should be a preliminary stage during which each side must get to know and understand the other.

During this stage there may be teething troubles, but it has been extremely interesting to watch many hundreds of Committees up and down the country passing out of this phase into a second stage in which good constructive work begins to emerge as a regular thing. Large numbers of Committees have reached this point, and it is only the minority which have failed. Such failure is probably due to some reluctance or reservations in the minds of some of the members, or the lack of the necessary desire and goodwill to reach a mutual understanding.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Recent Proceedings under the Industrial Disputes Investigation Act, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Industrial Disputes Investigation Act.—This article gives an account of all applications for Boards of Conciliation and Investigation, and the disposition of these applications. In cases where Boards are established, the *LABOUR GAZETTE* publishes in due course the full text of their reports, as submitted to the Minister of Labour.

Since the outbreak of war and the extension of the Industrial Disputes Investigation Act to cover disputes in war industries, the number of applications for Boards of Conciliation and Investigation has greatly increased. In recent months the majority of applications for Boards have been referred to Industrial Disputes Inquiry Commissioners for preliminary investigation, to determine whether the circumstances warrant the establishment of a Board. Reports of Commissioners appointed under the Act are summarized in this article.

Industrial disputes which concern wage demands are now administered by the National War Labour Board.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation. (Due to pressure of other activities no Conciliation article appears in this issue; next month's article will cover a two-month period.)

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published month by month in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1941 appeared in the *LABOUR GAZETTE* for May, 1942.

The latest available information as to strikes and lockouts in Great Britain and other countries appear from month to month.

Recent Proceedings Under the Industrial Disputes Investigation Act

IN the month of March, five Boards of Conciliation and Investigation submitted their reports in connection with the following disputes:—

1. Between the Manitoba Rolling Mill Company, Limited, Selkirk, Man., and its employees, members of Selkirk Rolling Mill Employees Federal Union, No. 120 (T. & L.C.).

2. Between the Hull Iron and Steel Foundries, Limited, Hull, P.Q., and its employees, members of Local 318, International Moulders and Foundry Workers' Union of North America.

3. Between the Hamilton Bridge Company, Limited, Hamilton, Ont., and its employees, members of Local 2537, United Steelworkers of America.

4. Between the Welland Vale Manufacturing Company, Limited, Hamilton, Ont., and its employees, members of Local 2853, United Steelworkers of America.

5. Between the Cannery Machinery, Limited, Simcoe, Ont., and its employees, members of the United Automobile Workers of America.

The text of the reports of the boards will be found at the conclusion of this statement.

Applications Received

Twenty-four applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of March. These were:—

1. From employees of the Commonwealth Electric Corporation, Limited, Welland, Ont., members of the United Electrical, Radio and Machine Workers of America. The dispute, which was said by the applicants to affect 102 employees directly and 46 indirectly, concerned union recognition and the negotiation of a collective labour agreement. On March 11, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as an Industrial Disputes Inquiry Commissioner to investigate the dispute.

2. From the employees of the John Inglis Company, Limited (Ordnance Division), Toronto, Ont., members of United Steelworkers of America. The dispute, which was said by the applicants to affect 13,000 employees, concerned union recognition, negotiation of a collective labour agreement and alleged discriminatory and unfair labour practices by members of the plant supervision staff. On March 30, Mr. Louis Fine, Chief Conciliation Officer, Ontario Department of Labour, reported to the Department that the parties to the dispute had agreed to the taking of a representation vote of the employees on April 19. In view of this arrangement the applicant union on March 29, withdrew the application for a Board of Conciliation and Investigation.

3. From employees of the Prairie Airways Company, Limited, Aircraft Division, Moose Jaw, Sask., members of Local 2688, United Steelworkers of America. The dispute, which was said by the applicants to affect 425 employees directly and 70 indirectly, concerned union recognition and the negotiation of a collective labour agreement. On April 1, Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Winnipeg, conducted a vote of the employees which resulted in a substantial majority for the applicant union.

4. From employees of the Galt Malleable Iron Company, Limited, Galt, Ont., members of Local 2899, United Steelworkers of America. The dispute, which was said by the applicants to affect 175 employees, concerned union recognition and the negotiation of a collective labour agreement. On March 11, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto,

was authorized as an Industrial Disputes Inquiry Commissioner to investigate the dispute. On March 18, the Commissioner reported that the union represented a majority of the employees concerned, but as the company would not meet with the union committee or officials, or agree to accept the result of a representation vote he recommended the establishment of a Board of Conciliation and Investigation. In accordance with the commissioner's recommendation, a Board was established on March 22. Messrs. F. Andrew Brewin and J. J. Robinette, both of Toronto, were appointed members of the board, representing the employees and employer respectively, and at the end of the month were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

5. From employees of the Canadian Machinery Corporation, Galt, Ont., members of Local 2905, United Steelworkers of America. The dispute, which was said by the applicants to affect 370 employees, concerned union recognition and the negotiation of a collective labour agreement. On March 11, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as an Industrial Disputes Inquiry Commissioner to investigate the dispute. The commissioner reported on March 18, that the union represented more than fifty per cent of the eligible employees, but the company would not meet with the union committee or officials or agree to accept the result of a representation vote. Therefore, he recommended the establishment of a Board of Conciliation and Investigation. Accordingly, a board was established on March 22. At the end of the month Messrs. F. Andrew Brewin and J. J. Robinette, both of Toronto, representing the employees and employer respectively, were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

6. From the employees of De Havilland Aircraft of Canada, Limited, Toronto, members of Local 1657, International Association of Machinists. The dispute, which was said by the applicants to affect 4,600 employees, concerned the refusal of the company to grant the union sole bargaining rights or to negotiate a collective labour agreement with it. On March 12, the Department was informed by the Company that discussions on the board application could not be held until the employees had selected their bargaining agency by a vote arranged as a result of an earlier investigation and report made by an Industrial

Disputes Inquiry Commissioner into an application received from employees of the company, members of the United Automobile Workers of America. Accordingly, a vote of the employees was held on March 22, and resulted in a substantial majority for Local 112, United Automobile Workers of America.

7. From employees of Underwood Elliott Fisher, Limited, Toronto, Ont., members of Local 518, United Electrical, Radio and Machine Workers of America. The dispute, which was said by the applicants to affect 91 employees, concerned the negotiation of a collective labour agreement embodying the classification and standardization of wage rates. On March 15, His Honour Judge Ian M. Macdonell was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute as well as charges by the union of discrimination against certain employees allegedly for union membership and activity.

8. From employees of J. Ford and Company, Limited, members of the National Catholic Union of the Paper Industry of Portneuf Station, Registered. The dispute, which was said by the applicants to affect approximately 125 employees, concerned the dismissal of certain employees of the company, union recognition and the negotiation of a collective labour agreement. On March 11, Mr. L. Pepin, Industrial Relations Officer, Montreal, was instructed to investigate the dispute and endeavour to arrange a satisfactory settlement. Subsequently Mr. Pepin recommended the establishment of a Board of Conciliation and Investigation since all conciliatory efforts had failed. On March 23, a board was established and Messrs. Laureat Morency, Quebec, P.Q., and Gerald Almond, Montreal, P.Q., were appointed members of the board on the nomination of the employees and employer, respectively, and at the end of the month were conferring with a view to submitting a recommendation of a person to be appointed third member and chairman of the board.

9. From employees of The C. Beck Company, Limited, Penetanguishene, Ont., members of Local 2, National Union of Woodworkers (C.C.L.). The dispute, which was said by the applicants to affect 61 employees, concerned the payment of a full cost-of-living bonus and a general increase in present wage rates. The applicants were advised that as matters pertaining to remuneration had been removed from the scope of the provisions of the Industrial Disputes Investigation Act, and were now under the jurisdiction of the National or Regional War Labour Board, a board could not be established.

10. From employees of the Montreal Tramways Company, Montreal, P.Q., members of

the Canadian Brotherhood of Railway Employees and Other Transport Workers. The dispute, which was said by the applicants to affect 3,500 employees, concerned the recognition of the union as bargaining agent of the employees of the company. On March 16, Mr. Bernard Rose, K.C., was authorized an Industrial Disputes Inquiry Commissioner to investigate the dispute.

A strike occurred on March 28, protesting the taking of a referendum as proposed by the previously recognized negotiating committee. On March 30, Mr. H. Carl Goldenberg was appointed an Industrial Disputes Inquiry Commissioner to mediate the strike. The Commissioner was successful in arranging a settlement of the dispute and the strike was terminated on March 31. The settlement provided that the Canadian Brotherhood of Railway Employees and Other Transport Workers "shall have the right to appoint forthwith three persons who are employees of the company to act as a negotiation committee and this committee will be recognized by the company as the sole bargaining agency for the employees until July 1, 1944". Provision was made for the annual election thereafter of the negotiating committee by secret ballot. The company was given the right to request a secret ballot at any time after July 1, 1944, to be under the supervision of the Federal Department of Labour if it had reason to believe that the negotiation committee did not represent a majority of the employees. Further provision was made for the submission to the National War Labour Board, or other agency set up by the Federal Government, of all matters pertaining to wages and working conditions that could not be amicably settled between the parties concerned. The Brotherhood agreed that there should be no strikes until recourse has been had to all Federal Government agencies provided for the settlement of industrial disputes.

11. From employees of the Toronto Terminal Railway Company, members of the Canadian Association of Railwaymen. The dispute, which was said by the applicants to affect 14 employees, concerned overtime pay and working conditions.

12. From employees of the Office Specialty Manufacturing Company, Limited, members of Local 7, National Union of Furniture Workers (C.C.L.). The dispute, which was said by the applicants to affect 275 employees, concerned union recognition and the negotiation of a collective labour agreement.

13. From the employees of the Canadian Pacific Railway Company, members of the Brotherhood of Railway Trainmen. The dispute, which was said by the applicants to

affect 825 employees directly and 950 indirectly, concerned recognition of the union as sole collective bargaining agency.

14. From employees of the Welland Chemical Works, Niagara Falls, Ont., members of Local 165, United Gas, Coke and Chemical Workers of America. The dispute, which was said by the applicants to affect 1,300 employees directly and 1,700 indirectly, concerned union recognition.

15. From employees of the Whitehall Machine and Tools, Limited, Galt, Ont., members of Local 2871, United Steelworkers of America. The dispute, which was said by the applicants to affect 75 employees, concerned union recognition and the negotiation of a collective labour agreement. On March 26, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as an Industrial Disputes Inquiry Commissioner to investigate the dispute.

16. From the employees of Canada Packers, Limited, St. Boniface, Man., members of Local 216, United Packinghouse Workers of America. The dispute, which was said by the applicants to affect 950 employees, concerns union recognition and the setting up of adequate machinery to dispose of grievances. On March 29, a strike, which involved 700 workers, resulted from the suspension of an employee of the company. The strike was terminated the same day, all the employees returning to work. Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

17. From the employees of the Canadian Furnace Company, Limited, Port Colborne, Ont., members of Local 1177, the United Steelworkers of America. The dispute, which was said by the applicants to affect 186 employees directly and 24 indirectly, concerned the negotiation of a collective labour agreement.

18. From employees of the H. J. Heinz Company of Canada, Limited, Leamington, Ont., members of the Leamington Cannery Workers Union (C.C.L.). The dispute, which was said by the applicants to affect 265 employees, concerned the negotiation of a collective labour agreement. As the application was lacking in certain details, it was returned. The revised application had not been received in the department at the end of the month.

19. From employees of the B. Greening Wire Company, Limited, Hamilton, Ont., members of Local 2950, United Steelworkers of America. The dispute, which was said by the applicants to affect 700 employees, con-

cerned union recognition and the negotiation of a collective labour agreement.

20. From employees of Silverwood Dairies, Limited, Windsor, Ont., members of the Windsor Milk Drivers' and Dairy Workers' Union (C.C.L.). The dispute, which was said by the applicants to affect 47 employees, concerned the negotiation of a collective labour agreement.

21. From the employees of the Anaconda American Brass Company, New Toronto, Ont., members of Local 1, Industrial Union of Copper and Brass Workers (C.C.L.). The dispute, which was said by the applicants to affect 2,000 employees, concerned the negotiation of a collective labour agreement.

22. From employees of Weston's Bread and Cake (Canada) Limited, Winnipeg, Man., members of the Weston's Salesmen's Unit, One Big Union. The dispute, which was said by the applicants to affect 100 employees directly and 95 indirectly, concerned the disposal of grievances arising out of the hours of labour covered in the agreement and grievances concerning products supplied.

23. From employees of Defence Industries, Limited, Brownsburg, P.Q., members of Munitions Workers Federal Union (T. & L.C.). The dispute which was said by the applicants to affect 1,500 employees, concerned the taking of a representation vote and the negotiation of a collective labour agreement.

24. From employees of Purity Dairies, Limited, Windsor, Ont., members of the Windsor Milk Drivers' and Dairy Workers' Union (C.C.L.). The dispute, which was said by the applicants to affect 100 employees, concerned the negotiation of a collective labour agreement.

Boards Established

On March 23, a Board of Conciliation and Investigation was established to deal with a dispute between the Davie Shipbuilding and Repairing Company, Limited, Lauzon, P.Q., and its employees, members of Local No. 3, Canadian Union of Boilermakers and Iron Shipbuilders (C.C.L.). (L.G. Mar. 1943, p. 326). Following the receipt of the application for the establishment of a board, Mr. Bernard Rose, K.C., was authorized an Industrial Disputes Inquiry Commissioner to investigate the dispute. Efforts having failed to bring about an amicable settlement the commissioner recommended the establishment of a Board of Conciliation and Investigation, and subsequently the Minister of Labour established a board. At the end of the month, Mr. Guy M. Desaulniers, Montreal, P.Q., had been appointed a member of the board on the nomination of the employees.

On March 5, a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Car and Foundry Company, Limited, Brantford, Ont., and its employees, members of Local 397, United Automobile Workers of America. (L.G., Mar. 1943, p. 324). Following receipt of the application for the establishment of a board, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized an Industrial Disputes Inquiry Commissioner, to investigate the dispute. The commissioner was unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a Board of Conciliation and Investigation. The board was fully constituted on March 24, the personnel being as follows: His Honour Judge James Parker, Toronto, Ont., chairman, appointed on the joint recommendation of the other two members of the board; Mr. Drummond Wren, Toronto, Ont., appointed on the recommendation of the employees; and Mr. D. A. Patterson, Montreal, P.Q., appointed on the recommendation of the employer.

On March 22, a Board of Conciliation and Investigation was established to deal with a dispute between the J. A. M. Taylor Tool Company, Limited, Galt, Ont., and its employees, members of Local 2903, United Steelworkers of America (L. G. March, 1943, p. 324). On March 5, following the receipt of the application, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized an Industrial Disputes Inquiry Commissioner to investigate the dispute. Efforts to bring about a settlement having failed, the commissioner recommended that a Board of Conciliation and Investigation be established. On March 22, the Minister of Labour established a board, Mr. J. J. Robinette being appointed on the nomination of the employer; and Mr. F. Andrew Brewin, appointed on the nomination of the employees. At the end of the month the two members of the board were conferring with a view to making a joint recommendation of a third member and chairman of the board.

On March 11, a Board of Conciliation and Investigation was established to deal with a dispute between Babcock-Wilcox and Goldie-McCulloch, Limited, Galt, Ont., and its employees, members of Local 2859, United Steelworkers of America (L.G. Mar. 1943, p. 324). On February 24, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. Being unable to effect

an amicable settlement of the dispute, the commissioner recommended that a Board of Conciliation and Investigation be established. The board was established by the Minister of Labour on March 11 and it was fully constituted on March 29. The personnel of the board is as follows: His Honour Judge James Parker, chairman, appointed by the Minister of Labour in the absence of a joint recommendation; Messrs. J. J. Robinette and E. Andrew Brewin were appointed on the recommendation of the employer and employees, respectively.

On March 22, a Board of Conciliation and Investigation was established to deal with a dispute between the R. McDougall Company, Limited, Galt, Ont., and its employees, members of Local 2890, United Steelworkers of America (L.G. Mar. 1943, p. 324). On March 6, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized an Industrial Disputes Inquiry Commissioner to investigate the dispute. Having been unable to effect a settlement of the dispute, the commissioner recommended that a Board of Conciliation and Investigation be established. A board was established by the Minister of Labour on March 22. On the recommendation of the employer, Mr. J. J. Robinette was appointed a member of the board, and Mr. Andrew Brewin appointed on the recommendation of the employees. At the end of the month the two members of the board were conferring with a view to making a joint recommendation of a person for appointment as third member and chairman of the board.

On March 11, a Board of Conciliation and Investigation was established to deal with a dispute between Shurly-Deitrich-Atkins Company, Limited, Galt, Ont., and its employees, members of Local 2895, United Steelworkers of America (L.G. Mar., 1943, p. 324). On February 24, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner, to investigate the dispute. The commissioner was unable to effect a mutually satisfactory settlement of the dispute and recommended that a Board of Conciliation and Investigation be established. Accordingly, the Minister of Labour on March 11 established a board, the personnel of which is as follows: His Honour Judge James Parker, appointed by the Minister of Labour in the absence of a joint recommendation of the other two members of the board; Mr. F. Andrew Brewin, appointed on the nomination of the employees; and Mr. J. J. Robinette, appointed on the recommendation of the employer.

On March 30, a Board of Conciliation and Investigation was established to deal with a dispute between Galt Metal Industries, Limited, Galt, Ont., and its employees, members of Local 2894, United Steelworkers of America (L.G. Mar. 1943, p. 324). On March 20, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized an Industrial Disputes Inquiry Commissioner to investigate the dispute. In view of the fact that an amicable settlement of the dispute could not be arranged, the Commissioner recommended that a Board of Conciliation and Investigation be established. The Minister of Labour established the board on March 30. On the nomination of the employees Mr. F. Andrew Brewin, Toronto, was appointed a member of the board.

The constitution of the Board of Conciliation and Investigation established in February to deal with a dispute between the Hamilton Bridge Company, Limited, Hamilton, Ont., and its employees, members of Local 2537, United Steelworkers of America (L.G. Mar. 1943, p. 325) was completed on March 3. The personnel of the board was as follows: His Honour Judge A. H. Dowler, Port Arthur, chairman, appointed on the joint recommendation of the other two members; Mr. Lynn B. Spencer, K. C., Welland, appointed on the nomination of the employer; and Mr. Maxwell Sauder, Hamilton, appointed on the nomination of the employees. The text of the report of the Board of Conciliation and Investigation will be found at the end of this statement.

The constitution of the Board of Conciliation and Investigation established on February 27, to deal with a dispute between the F. X. Drolet Company, Limited, Quebec, P.Q., and its employees, members of Local 74, International Moulders and Foundry Workers' Union of North America (L.G. Mar. 1943, p. 325), was completed during the month of March. The personnel of the board is as follows: The Honourable Mr. Justice Oscar L. Boulanger, chairman, appointed on the joint recommendation of the other two members; Mr. Joseph Matte, appointed on the nomination of the employees; and Mr. Guy Hudon, appointed on the nomination of the employer. All three members of the board reside in Quebec City.

Reference was made in the March issue of the LABOUR GAZETTE, page 325, to the establishment of a Board of Conciliation and Investigation to deal with a dispute between Welland-Vale Manufacturing Company, Limited, Hamilton, Ont., and its employees, members of Local 2853, United Steelworkers of America. During the month the personnel of the board was completed and was as follows: His Honour Judge A. H. Dowler,

Port Arthur, chairman, appointed on the joint recommendation of the other two members of the board; Mr. Lynn B. Spencer, K.C., Welland, appointed on the nomination of the employer; and Mr. Maxwell Sauder, Hamilton, appointed on the nomination of the employees. The report of the board was received in the Department on March 19, the text of which will be found at the end of this statement.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

An application for the establishment of a Board of Conciliation and Investigation was received in February from employees of the Dominion Glass Company, Limited, Hamilton, Ont., and its employees, members of Local 3, Canadian Brotherhood of Glassworkers (L.G. Mar. 1943, p. 324). On March 9, His Honour Judge Ian M. Macdonell, Toronto, was appointed as Industrial Disputes Inquiry Commissioner to make an investigation of the dispute.

On March 19, Mr. H. R. Pettigrove, Industrial Relations Officer, Dominion Department of Labour, Fredericton, N. B., was authorized as Industrial Disputes Inquiry Commissioner, to investigate the dispute between the Clark Ruse Aircraft Company, Limited, Lakeburn, N.B., and its employees, members of Local 2889, United Steelworkers of America (L.G. Mar. 1943, p. 324).

Mr. Harold Perkins, Industrial Relations Officer, Dominion Department of Labour, Ottawa, was appointed on March 3, as Industrial Disputes Inquiry Commissioner, to make an investigation of the dispute between the Metallic Roofing Company, Limited, Toronto, Ont., and its employees, members of Local 252, United Automobile Workers of America (L.G. Mar. 1943, p. 325).

On March 5, Mr. Bernard Rose, K.C., Montreal, P.Q., was authorized as Industrial Disputes Inquiry Commissioner to make an investigation of the dispute between the Montreal Cottons, Limited, Valleyfield, P.Q., and its employees, members of Local 100, United Textile Workers of America (L.G. Mar. 1943, p. 325).

Other Reports of Industrial Disputes Inquiry Commissioners

In the dispute between the Niagara, St. Catharines and Toronto Railway, St. Catharines, Ont., and its employees, members of System Federation No. 11, Canadian National Railways, and Lodge 340, Brotherhood of Railway Carmen of America (L.G. Mar. 1943, p. 324), a report was received from His Honour Judge Ian M. Macdonell, Toronto, who had been appointed an

Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner reported that the parties had conceded that there was no necessity for the establishment of a Board and expressed the hope that the Shop Committees representing the two unions involved would arrange a satisfactory settlement of the matter.

Settlement Reached

On March 25, the Department was advised that a settlement had been reached in the dispute between the Manitoba Rolling Mill Company, Limited, and its employees, members of Local 120, Selkirk Rolling Mill Employees' Federal Union (T. & L.C.) (L.G. Feb. 1943, p. 196). The parties concerned entered into a collective agreement. This

agreement forms part of the Report of the Board of Conciliation and Investigation established to deal with the application. The report of the Board will be found at the end of this statement.

Application Withdrawn

The Department was notified on March 19, that the application for the establishment of a Board of Conciliation and Investigation to deal with the dispute between the Canadian Pacific Railway Company and its employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G. Nov. 1942, p. 1247), had been withdrawn by the union officials, as a mutual understanding had been reached between the company and the applicant union.

Report of Board in Dispute between the Manitoba Rolling Mill Company, Limited, Selkirk, Man., and its Employees

On April 2 the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Manitoba Rolling Mill Company, Limited, Selkirk, Man., and its employees, members of Selkirk Rolling Mill Employees' Federal Union No. 120 (L.G. Feb. 1943, p. 196).

The personnel of the board was as follows: Mr. J. W. Morrison, K.C., Master and Referee, Court of King's Bench, chairman, appointed on the joint recommendation of the other two members; Mr. W. C. Hamilton, K.C., and Mr. C. W. Brock, K.C., appointed on the nomination of the employer and employees respectively.

The report of the board is signed by the chairman and Mr. C. W. Brock, while the report states that prior to his death Mr. W. C. Hamilton had concurred in the terms of the agreement which was subsequently signed by the parties to the dispute and forms part of the board's report.

The text of the board's report is printed below.

Report of Board

In the Matter of The Industrial Disputes Investigation Act; and in the Matter of a Dispute between Manitoba Rolling Mill Company, Limited, Employer, and its employees, members of Selkirk Rolling Mill Employees Federal Union No. 120.

To the Honourable Humphrey Mitchell,
Minister of Labour.

Sir,

The employees of the above company applied, under date of October 22, 1942, and

by amendment on October 26, 1942, to the Minister of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, R.S.C. 1927, Ch. 112. The company made its reply in writing, dated November 6, 1942.

On or about the 22nd day of December, 1942, Clifford W. Brock, K.C., the nominee of the employees, and William C. Hamilton, K.C., the nominee of the employer, were appointed by the Minister. On the joint recommendation of Mr. Brock and Mr. Hamilton, John Willson Morrison, K.C., Master and Referee of the Court of King's Bench for Manitoba, was appointed the third member and chairman of the board.

The regrettable sudden death of Mr. Hamilton on March 21 last, towards the conclusion of the work of the board, raised the question as to whether or not a successor should be appointed to replace him on the board. As both sides to the dispute had reached an agreement in principle at the last meeting Mr. Hamilton attended, and there only remained the extending and execution of the agreement and the ironing out of minor difficulties, it was the wish of both the company and the union that the remaining members of the board should function. It was also the feeling of the two remaining members of the board that no good purpose would be achieved by appointing a successor to Mr. Hamilton, as it might undo a great deal of the work that had already been accomplished and necessitate prolonged sittings of the board. It was therefore decided that the matter be concluded with the assistance of the two remaining members, especially

in view of the fact that Mr. Hamilton had expressed himself at the last meeting he attended as concurring with the other members.

The matters in dispute, as set forth in the application for a board, involved:

1. Recognition of the union;
2. The signing of an agreement;
3. Wage adjustments;
4. Improved working conditions.

The board commenced its sittings on January 18, 1943.

The representatives of Selkirk Rolling Mill Employees Federal Union No. 120 were:

Mr. Carl Berg, representative of the International union;

Mr. Beggi Sigurdson, an employee of the company;

Mr. Burton Van Blaricom, also an employee of the company.

The representatives of the company were:

Mr. H. A. Mackay, general manager of the company;

Mr. Robert Smith, manager of the company;

Mr. H. M. White, chief engineer of the company.

At the first sitting of the board a request was made by the company that their counsel, Mr. D. H. Laird, K.C., be heard on the question of the constitutionality of the appointment of the board. The employees' representatives agreed to hear Mr. Laird, and accordingly he made certain submissions which he was asked to put in writing, and which were subsequently carefully considered by the board. However, in view of the diametrically opposing views of the disputing parties with regard to recognition of the union as the bargaining agent for the employees, and in view of the wording of the Order establishing the board, wherein it is stated: "The Minister of Labour, Canada, is satisfied that the said dispute is one to which the provisions of the said Act apply," your board was of the opinion that it should continue with the investigation.

It became evident in the early stages of the proceedings that the main object of the representatives of the local union was to secure recognition by the company of local Union No. 120 as the bargaining agent of the employees. The representatives also stressed the importance of having an agreement signed between the parties in which this principle would be embodied. While the application also referred to the question of wage adjustments and working conditions, it was conceded that this board could not deal with the former, and there seemed to

be no real ground of complaint with regard to the latter as the representatives of the employees were satisfied to secure the assurance of the manager that any complaints as to the working conditions would be immediately adjusted in so far as practicable.

While the board concedes that it has no jurisdiction to deal with the matter of wages paid by the company, it was able to give a good deal of assistance to the parties in arriving at a satisfactory agreement as to the payment of overtime and the number of hours in each day shift. The agreement appended hereto deals with the matter of overtime.

It was contended by the company's representatives that there was no real dispute between the parties at the time the board was constituted, but it appeared to the board that their differences concerning the matter of union recognition and the signing of an agreement constituted a real dispute. The text of the agreement itself probably did not present as great a barrier to reconciliation of the parties as the form which the agreement was to take. Possibly the failure of the Industrial Relations Officer to effect a settlement of the difficulties and to get the parties to agree to the form which the agreement was to take, engendered a certain amount of suspicion in the minds of both parties, which had to be removed as far as possible, or better still, entirely eliminated.

Each party to the dispute presented a proposed agreement to the board, and from those two agreements the agreement which was finally adopted, and which is appended hereto, was evolved. After an agreement was drafted it was thoroughly discussed and amended in such a way that both parties were able to agree in principle. Following the discussions and amendments a new draft was made and this draft was gone over clause by clause. A great deal of time was consumed in arriving at a phrasing that would be satisfactory to both parties to the agreement. Finally as above stated, at the last meeting attended by the late Mr. Hamilton, this agreement was approved by both parties, and after being extended, with the exception of a few minor changes, was executed in the presence of the chairman of the board and Mr. Brock.

Under all the circumstances the board considers that this is a very happy solution, and both parties to the original dispute appear perfectly satisfied. The best of good feeling seems to prevail between the officers of the company and the employees, and your board feels satisfied that these conditions will continue to prevail.

In conclusion, the board desires to express its appreciation of the able and courteous

manner in which both sides to the dispute presented their respective cases.

(Sgd.) J. W. MORRISON,

Chairman of Board of Conciliation.

(Sgd.) C. W. BROCK,

Member of the Board.

Winnipeg, Manitoba,
March 30, 1943.

APPENDIX "A"

Agreement made this 24th day of March, 1943, between Manitoba Rolling Mill Company, Limited, hereinafter called "the Company" of the first part, and The Employees of the Manitoba Rolling Mill Company, Limited, Selkirk, Manitoba, who are or from time to time may be members of the Selkirk Rolling Mill Workers' Federal Union No. 120, represented by the undersigned Committee, elected by the said Federal Union No. 120, who and whose successors so elected are hereinafter called "the Committee" of the Second Part,

Witnesseth, that in consideration of the mutual agreements herein contained, the Company and the employees of the second part and the Committee representing the said employees agree as follows:

1. Agreement.

Each member of the Committee must be an employee of the Manitoba Rolling Mill Company, Limited, Selkirk, Manitoba and must be a member in good standing of the said Selkirk Rolling Mill Workers' Federal Union No. 120, and the Committee shall have full power to act, and does herein act on behalf of the said employees who from time to time may be members in good standing of the said Federal Union No. 120. This agreement shall not apply to employees who hold administrative, supervisory or clerical positions in the Company or positions in which they are given or have access to confidential information such as costs or payroll rates. The Company on its part recognizes that the Committee acting on behalf of the Selkirk Mill Workers' Federal Union No. 120 shall be the bargaining agent for all employees in the employ of the Company who are members or from time to time may be members in good standing of the said Federal Union No. 120.

2. Objects and Purposes.

The objects and purposes of this agreement are to maintain harmonious relationship between the Company and its employees, to provide an amicable method of settling any differences which may arise, and to suggest methods by which efficiency of the Plant may be maintained and improved. In carrying out these purposes the Committee may appoint a Subcommittee of employees to consider and report on any such subject and shall appoint the employee members of the Committee or Committees as hereinafter set forth. The decisions of the Committee shall be communicated in writing or in person as a recommendation to the

Manager of the Company at the earliest convenient time.

3. Strike or Lockout.

During the life of this agreement no strike shall be caused or sanctioned by the Committee or the Union and no lockout shall be entered upon by the employer until every peaceable method of settlement of difficulties shall have been tried.

4. Discrimination.

The Company agrees not to discriminate against any employee because of his membership in the said Federal Union No. 120 and the parties of the second part and the Committee agree not to discriminate against any employee who is not a member.

5. Grievance Committee.

A Committee of six shall be appointed, three to be appointed by and representing the Company, and three to be appointed by the Committee from the employees of the Company who are or from time to time may be members in good standing of said Federal Union No. 120 and representing such employees to adjust complaints and grievances. This Committee shall be known as the "Grievance Committee." If a grievance cannot be adjusted between an individual employee and his foreman, it shall be referred to this Committee. The recommendations of the Grievance Committee shall be communicated to the Manager of the Company for approval. If grievances cannot be adjusted by this Committee the parties will endeavour to effect an agreement by some other method. Failing such agreement within a reasonable time then either party shall have the right to apply for a Board of Conciliation under the provisions of the Industrial Disputes Act.

6. Employment and Discharge.

The Company's right to employ additional employees and to discharge or suspend any employee shall continue as at present or as may exist from time to time under the law applicable thereto. Upon request of the Grievance Committee, made within two days after the discharge or suspension of any employee the Company will give the Committee a statement of the cause for such discharge or suspension. If the Committee within two days after receiving the statement recommend reinstatement of the employee, the Company, on approval of their recommendation as in the case of a complaint will reinstate such employee and pay him for the time lost. In the event that work becomes slack and it is necessary to reduce forces, or when re-hiring takes place after layoff, the following factors shall be considered:

Length of service, ability, skill and experience. Where other factors are relatively equal, length of service shall govern. This rule shall apply only to employees who have completed at least three months of continuous service with the Company.

It is recognized that under Government regulations men who left the Company to join the active services of our country have a prior right to be reinstated on their return.

7. Department Representatives.

The Committee may appoint one or more representatives from each department of the plant but not more than one representative for each fifty employees covered by this agreement in a department. Two or more small departments may be grouped together and have the same representative. If any such employee

has a complaint his representative will, at the employee's request, accompany him to discuss the complaint with his foreman in an endeavour to reach a settlement without referring it to the Grievance Committee.

8. Meetings.

The Committee shall meet at regular monthly intervals and at the request of the Committee the Manager of the Company will meet with the Committee to discuss and consider all matters on which decision can be given immediately. Special meetings may be called by either the Committee or the Manager at any time as occasion demands.

The Grievance Committee shall meet as necessary to discuss and adjust complaints and grievances. Such discussions will normally be held during the last fifteen minutes before the working shift ends, but lengthy negotiations for settlement of any dispute will be discussed outside of working hours or as may be arranged.

9. Hours and Overtime.

(1) Open Hearth.

The Open Hearth furnaces operate continuously seven days a week. The regular working turn in this department shall consist of eight hours to be performed during any part of any day or night that constitutes a regular shift. The turn rate shall be for eight hours.

Under the present practice regular men are relieved one turn per week by extra men or floaters, one floater to each six regular men. Turns are changed once a week and at that time two of the three gangs work a long shift of a turn and a half or twelve hours, and have twenty hours off either immediately before or after this long shift, while the third gang has twenty-four hours off between regular turns. Thus in a three week period the average is six regular turns per week. In case of absence of an employee one of the floaters takes his place, or another regular man may work an extra turn as required to maintain continuous production. The above present practice shall be continued or other mutually agreed method that will maintain the same average number of turns per week may be substituted.

If on furnace repairs an employee work extra hours, the ninth hour in the turn shall be classed as straight time, and paid for at one-eighth of the turn rate, and hours in excess of the nine shall be termed overtime, and paid for at time and one-half. If an employee work an extra turn the first two hours of same shall be classed as straight time, and hours worked in excess of the fifty hour average week thus established shall be termed overtime, and paid for at time and one-half.

(2) Electric Furnace.

When this department operates three turns a day the shifts and the basis for overtime shall be the same as the Open Hearth, the turn rate being for eight hours. Should this department operate seven days per week, arrangements for relief by floaters and for change of turns will be on the same basis as the Open Hearth.

When this department is running on one or two turns per day basis, the regular working shift for turn men shall consist of nine hours five days a week to be worked during any part of the day or night that constitutes a regular shift, and on Saturday, day shift only, starting at 7 a.m. and commencing to charge the last heat not later than 1.15 p.m. Such hours shall be classed as single time, the turn men being paid for the ninth hour at one-eighth of the

turn rate and being paid the turn rate for Saturday shift. Time worked in excess of nine hours in any shift shall be termed overtime and paid for at time and one-half. Hourly men shall be paid for overtime on the basis outlined in subsection (5) below for other hourly employees on five and one-half or five shifts per week.

(3) Mills.

The regular working shift for turn and tonnage men in the Mills shall continue as at present, that is, day shift starting to roll at 7 a.m. and finishing charging at 4.15 p.m. five days a week, and night shift similar hours five nights a week and on Saturday, day shift only, starting to roll at 7 a.m. and finishing charging at 1.15 p.m. The turn rate in the Mills shall be for nine hours, and excess time worked in any shift shall be termed overtime and paid for at time and a half. Turn men shall receive the full turn rate for working the Saturday shift. The Company may, at its discretion, convert any of the turn rates in the Mill to hourly rates at one-ninth of the turn rate. Hourly men in the Mills shall be paid for overtime on the basis outlined in subsection (5) below for other hourly employees on five and one-half or five shifts per week.

(4) Engineers.

The regular working shifts for engineers shall continue as at present—that is, eight hours per turn—with relief, change of turns and overtime similar to the Open Hearth.

(5) General.

The regular working shift for Maintenance Men; Welders, Chippers and Grinders; Shipping Department; Yards and other hourly employees not covered by subsections (1), (2), (3) and (4) above shall consist of nine hours, five days a week and five hours on the sixth day, or ten hours five days a week and no work on the sixth day, said hours to be performed during any part of the day or night that constitutes a regular shift. All such hours of work shall be classed as single time, all hours worked in excess of the said fifty hours shall be termed overtime, and paid for at time and one-half. The rates of all men in the above departments who have been paid by the turn are being converted to hourly rates equal to one-ninth of their turn rate.

10. Statutory Holidays.

The following are recognized as statutory holidays:

- (1) New Year's Day.
- (2) Good Friday.
- (3) Dominion Day.
- (4) Labour Day.
- (5) Thanksgiving Day.
- (6) Christmas Day.

Any work performed on these days shall be paid for at the rate of double time.

11. Procedure.

The Committee and the Grievance Committee shall each confine its discussions to subjects within its jurisdiction. Any settlement between the Company and the Committee or the Grievance Committee shall be binding on the Company, the Committee and the employee or group of employees concerned. The management of the plant and the direction of the working forces shall continue under the jurisdiction of the Company. If any member of the Committee or any representative or member of

other Committee appointed by the Committee is required to leave his work for the performance of his duties under this agreement he shall obtain permission from his foreman before doing so. It is admitted that, according to the law known as the Wartime Wages Control Order P.C. 5963, all matters dealing with the adjustment of the basic scale of wage rates, overtime and other related working conditions must be first approved by the Regional War Labour Board for Manitoba so long as it continues. If the Company and the Committee acting on behalf of the employees who are members of the Selkirk Rolling Mill Workers' Federal Union No. 120 cannot agree on a joint submission, then each party has the legal right to make separate submissions to the Board.

The Company will continue to pay the full cost-of-living bonus to all employees in accordance with the Dominion Government Order in Council. No deductions from wages, except those required by law, shall be made, except by the written consent of the employee and the written approval of the Company.

12. *Committee Membership.*

The Committee shall consist of not more than nine members and shall notify the Company of the names of their members as soon as convenient after they are elected, and also of any changes that may take place in their membership from time to time. If any member of the Committee or of the Grievance Committee, or any representative cease to be an employee of the Company, or is promoted to an administrative, supervisory or clerical position, or to a position in which he is given or has access to confidential information such as costs or payroll rates, he shall automatically cease to be a member of such Committee or a representative.

13. *Posting Notices.*

No notice shall be posted or distributed, nor shall any meeting be held on the Company's property which has not been approved by the Manager. Notice boards for approved notices will be provided by the Company.

14. *Leave of Absence.*

If the Committee decide that they require the full time services of one of the employees covered by this agreement, the Company will give him leave of absence without pay for the time required for such services, but he may not be a member of the Committee, nor have any rights of an employee in the Plant during such leave of absence. During his leave of absence the Company will continue his seniority status, and at the completion of his services on behalf of the Committee the Company will at the request of the Committee give special consideration to his reinstatement. If at that time a position suitable to his ability and experience is open, he shall be given preference over other applicants, and preference over other

employees to the same extent as he would receive in case of a layoff at that time if he had not been on leave of absence in the meantime. The Committee agree to discuss with the Company their nominees for such leave before making the final selection and shall endeavour to select an employee who is not filling a key position, and who can be given such leave without adversely affecting the operation or output of his department.

15. *Duration of Agreement.*

This agreement shall continue during the present war and for one year thereafter. After the expiration of such period either party may give notice to the other of its desire to cancel this agreement, and thereupon the same shall be cancelled on the expiration of thirty days from the mailing of such notice. In case no such notice shall be given, the agreement shall continue for another year from the period covered hereby, and so on from year to year.

16. *Communication.*

A communication of any kind hereunder from the Company to the Committee may be given by mailing same addressed to the Secretary of the Committee or to the Secretary of the Selkirk Rolling Mill Workers' Federal Union No. 120. Any communication from the Committee to the Company may be given by the Secretary of the Committee or the Secretary of the Selkirk Rolling Mill Workers' Federal Union No. 120 by letter addressed and mailed to the Manager, Manitoba Rolling Mill Company Limited, Selkirk.

In witness whereof the parties hereto have executed these presents.

Signed, sealed and delivered in the presence of

(Sgd.) J. W. Morrison, Chairman of
Board of Conciliation,
C. W. Brock, Commissioner of
Board of Conciliation.

Report of Board in Dispute between Hull Iron and Steel Foundries, Limited, Hull, P.Q., and its Employees

On March 27 the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between Hull Iron and Steel Foundries, Limited, Hull, P.Q., and its employees, members of Local 318, International Moulders and Foundry Workers' Union of North America (L.G. Feb., 1943, p. 195).

The personnel of the Board was as follows: His Honour Judge Honore Achim, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Francois Caron, K.C., Hull, P.Q., appointed on the nomination of the employer; and Mr. Drummond Wren, Toronto, Ont., appointed on the nomination of the employees.

The text of the board's report is printed below.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Hull Iron and Steel Foundries, Ltd., (Employer) and its Employees, members of Local 318, International Moulders and Foundry Workers' Union of North America (Employees).

Dear Sir:

The Board of Conciliation and Investigation, established by you on January 13, 1943, and duly constituted on February 6, 1943, in the above matter, begs to submit its report.

The Board held hearings in Hull, Quebec, on the 16th, 17th, and 18th days of February and on the 2nd and 3rd of March, 1943, at which both parties to the dispute were ably represented.

The applicant union was represented by R. Y. Menary, International Representative, International Moulders and Foundry Workers' Union of North America, and Leo Lapointe.

The Company was represented by Harold P. Coplan, President, and C. V. Hacker, Superintendent.

The dispute is caused by the refusal on the part of the company to recognize Local 318 as a negotiating agent for its employees, members of the union.

The union claims that it should be recognized, since a vote taken on November the 22nd, 1942, under the supervision of the Department of Labour disclosed that 401 employees wanted to be represented by Local 318, while 201 wanted to be represented by the Foundry Workers' Union of Hull.

Report of Board in Dispute between the Hamilton Bridge Company, Limited, Hamilton, Ont., and its Employees

On March 17 the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Hamilton Bridge Company, Limited, Hamilton, Ont., and its employees, members of Local 2537, United Steelworkers of America (L. G. Feb. 1943, p. 196).

The personnel of the board was as follows: His Honour Judge A. H. Dowler, appointed on the joint recommendation of the other two members; Mr. Lynn B. Spencer and Mr. Maxwell Sauder, appointed on the nomination of the employer and employees respectively.

The Board's report follows:—

The Company refuses to recognize the International Moulders and Foundry Workers' Union of North America for the reason that it has come to an agreement with the Foundry Workers' Union of Hull, on the 1st of September, 1942, before the above-mentioned vote was taken, which agreement, according to its terms, should be in force until the 31st of August, 1942.

At the meetings of the Board on March 16th and the 25th and 26th, subsequently to the hearing, every consideration was given to the evidence adduced and to the arguments brought out by both parties. As a result, the Board recommends that the status quo between the Hull Iron & Steel Foundry Ltd., and its employees be respected until another vote is taken; that between the 15th of May and the 15th of June such a vote be taken to determine whether the employees desire to be represented by the Foundry Workers' Union of Hull or by the International Moulders and Foundry Workers' Union of North America. In the meantime, in order to avoid any possible discrimination, the Board suggests the advisability of the company considering the recommendations of a grievance committee formed of members of the International Moulders and Foundry Workers' Union of North America.

The members of the Board desire to express their thanks to both parties for the assistance they have provided to elucidate this matter. They also congratulate the representatives of both parties for the courteous manner in which all proceedings have been made.

Hull, March 26th, 1943.

(Sgd.)	Honore Achim	Chairman.
(Sgd.)	Francois Caron	Member.
(Sgd.)	Drummond Wren	Member.

Report of Board

Hamilton, Ontario,
March 17th, 1943.

The Hon. Humphrey Mitchell,
Minister of Labour,
Parliament Buildings,
Ottawa, Canada.

Re: Industrial Disputes Investigation Act, and re dispute between Hamilton Bridge Company, Limited, and its employees, members of Local Number 2537, United Steelworkers of America.

Dear Sir:

Following application of the employees on February 11th, 1943, a Board of Conciliation

and Investigation composed of His Honour Judge A. H. Dowler, Chairman, Mr. L. B. Spencer, K.C., of Welland, on the nomination of the Corporation, and Mr. Maxwell Sauder, of Hamilton, on the nomination of the employees, was established by you under the above Act to deal with a dispute between the above Corporation and its employees, in its plants No. 1 and 2, Hamilton, otherwise known as the West End Plant or Armoured Car Division, members of Local Number 2537, United Steelworkers of America.

The Board met at Hamilton on March 11th, and continued its sittings on the 12th, 13th, 15th, 16th, and 17th of March.

The dispute is not as to the right of the employees to a Collective Agreement, but is a dispute as to the right of Local 2537, United Steelworkers of America, to represent the employees of the Corporation in negotiations for such an Agreement in lieu of a "Shop Committee" described in some instances as the Works Committee, elected by a secret ballot of all employees in the Fall of 1942.

The Board endeavoured to have the parties themselves, by conference and discussion agree upon a settlement of this dispute, and regret that they were unable to do so.

After a careful consideration of all the evidence, a perusal of the briefs and exhibits filed by the parties and arguments by representatives of the Corporation and employees, the Board recommends that the Shop Committee be permitted to function and be recognized as the Collective Bargaining Agent of the employees until December 31st, 1943, and also that the Shop Committee, if it has not already done so, forthwith complete its organization and within one month hereafter establish its constitution and by-laws, and enter into negotiation with the Corporation on behalf of all employees in the said plants, with a view to securing and secure a Collective Agreement. If this is not done, the Board recommends that the vote which it hereafter recommends to be taken, be taken as soon as possible after the expiration of the said month.

Considering the circumstances surrounding the formation and organization of the Shop Committee and the position taken by the parties as appears in the discussions of settlement between them since, and the fact that some doubt may have existed in the minds of some employees as to whether the election of the Shop Committee constituted it the Collective Bargaining Agent of the employees in perpetuity, the Board considers, after the Shop

Committee has had a reasonable opportunity to function, that the employees should then have an opportunity to decide whether they desire to continue it as their Collective Bargaining Agent, or whether they desire to authorize another organization to act for them in such capacity, in the present case Local 2537, United Steelworkers of America.

The Board accordingly recommends as soon after December 31st, 1943, as possible, the Registrar, in co-operation with the parties conduct a vote by secret ballot of all the employees of the said plants on December 31st, 1943, (other than officials of the Company, salaried employees, foremen and sub-foremen (not working leaders), Company guards, inspectors, clerks and those having authority to discharge) for the purpose of determining the employees' choice of a Collective Bargaining Agent for 1944, and suggest the form of ballot be as follows:—

Do you wish to be represented in negotiations with the Hamilton Bridge Company, Limited, by The Shop Committee

Yes
No

Local 2537, United Steelworkers of America

Yes
No

Upon the result of the vote being ascertained and communicated to the parties, we would recommend that the employer enter into negotiations with the organization securing a majority of votes as the Collective Bargaining Agent of all employees of the said plants, with a view to a Collective Agreement in accordance with the provisions of Order in Council P.C. 2685.

We trust that all parties to this proceeding will recognize that their interests are mutual and will accept the recommendations contained herein.

All of which is respectfully submitted.

(Sgd.) A. H. Dowler,
Chairman.

(Sgd.) H. B. Spencer,
Member.

(Sgd.) Maxwell Sauder,
Member.

Report of Board in Dispute between the Welland-Vale Manufacturing Company, Limited, Hamilton, Ont., and its Employees

On March 19 the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Welland-Vale Manufacturing Company, Limited, Hamilton, Ont., and its employees, members of Local 2853, United Steelworkers of America (L. G. Feb. 1943, p. 195).

The personnel of the board was as follows: His Honour Judge A. H. Dowler, chairman, appointed on the joint recommendation of the other two members; Mr. Lynn B. Spencer appointed on the nomination of the employer; and Mr. Maxwell Sauder appointed on the nomination of the employees.

The text of the Board's report is printed below.

Report of Board

Hamilton, Ontario,
March 17th, 1943.

The Hon. Humphrey Mitchell,
Minister of Labour,
Parliament Buildings,
Ottawa, Ontario.

Re: Industrial Disputes Investigation Act, and re dispute between Welland-Vale Manufacturing Company, Limited, Hamilton, Ontario, and its employees, members of Local Number 2853, United Steelworkers of America.

Dear Sir:

Following application of the above employees on the 11th day of February, 1943, a Board of Conciliation and Investigation com-

posed of His Honour Judge A. H. Dowler, Chairman, Mr. L. B. Spencer, K.C., of Welland, on the nomination of the Corporation, and Mr. Maxwell Sauder, of Hamilton, on the nomination of the employees, was established by you under the said Act to deal with a dispute between the above Corporation and its employees, members of Local 2853, United Steelworkers of America.

The Board met at Hamilton on March 16th and 17th, 1943.

The dispute is not as to the right of the employees to a Collective Agreement, but is a dispute as to the right of Local 2853, United Steelworkers of America, to act as the Collective Bargaining Agent of the employees in negotiations with the Corporation.

On the evidence adduced before us, the Board is of the opinion that a substantial majority of the employees of the Corporation are members of Local 2853.

The Board therefore recommends that the Corporation enter into negotiations with Local 2853, United Steelworkers of America, on behalf of all employees of the Corporation, with a view to a Collective Bargaining Agreement in accordance with the provisions of Order in Council P.C. 2685.

All of which is respectfully submitted.

(Sgd.) A. H. Dowler,
Chairman.

(Sgd.) H. B. Spencer,
Member.

(Sgd.) Maxwell Sauder,
Member.

Report of Board in Dispute between Cannery's Machinery, Limited, Simcoe, Ontario, and its Employees

On March 2 the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between Cannery's Machinery, Limited, Simcoe, Ontario, and its employees, members of the United Automobile Workers of America (L. G., Feb. 1943, p. 195).

The personnel of the board was as follows: His Honour Judge James Parker, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. V. A. Sinclair, K.C., and Mr. Drummond Wren, appointed on the nomination of the employer and employees respectively. All three reside in Toronto.

The report of the board is signed by the chairman and Mr. Drummond Wren; Mr. V. A. Sinclair submitted a minority report.

The texts of the report of the board and the minority report follow:

Report of Board

To the Honourable
HUMPHREY MITCHELL, M.P.,
Minister of Labour,
Ottawa, Ont.

Re: Industrial Disputes Investigation Act, and re dispute between Cannery's Machinery, Ltd., Simcoe, Ont., and its employees, members of the United Automobile Workers of America.

Sir:

The Board of Conciliation and Investigation appointed to investigate this dispute was constituted as follows:—

His Honour Judge James Parker, Chairman, Mr. Victor A. Sinclair, K.C., nominated by the Employer,

Mr. Drummond Wren, nominated by the Employees.

Application for a Board of Conciliation was made November 6th, 1942, on behalf of the Employees, Members of the United Automobile Workers of America (Local 257).

The Board held four meetings, three in Toronto and one at Simcoe, Ontario, with all members of the Board present.

At the meeting at Simcoe on February 9th, 1943, there were present, in addition to the Members of the Board, the following:—

Mr. J. B. Doyle, General Manager of Cannery Machinery, Ltd.

Mr. Robert S. Stacey, International Representative, UAW-CIO.

Mr. Thomas Short, President, Mr. Percy Deacon, Member, Local Union 257.

At this date the number of employees eligible for membership in the Union was 47. Union representatives submitted for the Board's inspection signed membership cards, which were checked against the Company payroll. Of the total 35 were members of the Union.

It has been established that a substantial majority of the employees are members of the Union. There is no other trade union or employees' association seeking recognition as the agent of the employees of the plant. Inasmuch as the only request in the application was that the Company recognize the Union as the collective bargaining agent of the employees, we, the undersigned members of the Board, recommend that the Company recognize the Union through its officers, or through other representatives chosen by them, as the bargaining agent on behalf of the Company's employees who are members of the Union.

In making this recommendation, however, we wish to refer to observations made in the brief filed by the Company, wherein it is stated:

"The circumstances surrounding this matter are exceptional, in that in normal times the Company employs between fifteen and twenty men, except in the accelerated period of May, June and July in each year, when an additional small number of hands are employed temporarily for that accelerated three months period; and that no female help is normally employed.

"Since the outbreak of the war, the Company, at the request of the Dominion Government, accepted orders for war requirements consisting of essential machine parts, which necessitated the employment of additional help, which reached a peak in 1942 with 74 employees. The Company's war business has been gradually diminishing, and by the end of December, 1942, the Company's payroll had diminished from 74 to 58, and now stands at 57, of which eleven comprise office staff

and employees not classified as factory hands; this leaves the plant's factory hands at present at 47, made up as follows:

Men	40
Women	7

"If the business of the Company reverts to normalcy, then they will employ from fifteen to twenty hands, who will be retained to take care of the Company's normal business, and consisting of those employees of long service and who are skilled in the manufacture of the Company's normal products."

Nevertheless, as the Board was of the opinion that other aspects of the situation might also change, we could not anticipate the future, and we base our recommendation on the present situation.

We should like to state that the relationship between the representatives of labour and the Company at the meetings of the Board were most friendly and fair, and we desire to express our appreciation to them.

All of which is respectfully submitted.

Dated at Toronto this
1st day of March, 1943.

(Sgd.) J. Parker,
Chairman.

(Sgd.) Drummond Wren,
Employees' Nominee.

Minority Report

To: The Hon. the MINISTER OF LABOUR,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of the dispute between Cannery Machinery, Limited, and its employees, members of the United Automobile Workers of America.

There is only one question raised by the Union in the above application, and that is the refusal of the Management to recognize the Union as a collective bargaining agent of the employees.

The industry in question is only a small industry and, at the time of the hearing had on its payroll only 56 employees in all, including office staff, supervisors, foremen and others not eligible for membership in the Union. The employees produced cards signed by 49 employees in all, but such membership applications were dated over a period of several months and at the time of the hearing 11 of these applicants were no longer in the employ of the Company and the claim of the Company was that several of the remaining employees had expressed their desire in writing to withdraw from membership. Taking the unverified cards of ancient date for whatever they might be worth, not more than 33 employees could be considered as in favour of the Union being given the collective bargaining

rights. The evidence also disclosed that this condition was not a normal condition for the plant and the brief filed by the employer shows clearly the condition which existed in connection with the Plant to be as follows:

"The circumstances surrounding this matter are exceptional;

(a) The Company manufactures machinery for canning factories and normally employs between 15 and 20 men except in the accelerated period of May, June and July in each year when an additional small number of hands are employed temporarily for that accelerated three months' period. This additional help is purely temporary and changes almost 100 per cent from year to year. No female help is normally employed.

(b) Since the outbreak of the war, the Company, at the request of the Dominion Government and to assist while the Dominion was suffering from insufficient equipment for the manufacture of machine parts and as a temporary measure, accepted orders for war requirements consisting of essential machine parts. This necessitated the employment of additional help which reached a peak in 1942 of 74 employees.

The Company's war business has been gradually diminishing due to tooling up of other plants in Canada especially equipped for the manufacture of essential machine parts for war production.

By the end of December, 1942, the Company's payroll had diminished from 74 to 58 and now stands at 57, of which 11 comprise office staff and employees not classified as factory hands. This leaves the plant's factory hands at 47 made up as follows: Men, 40; women, 7; total 47.

The Company is not in a position to take on any more orders for the manufacture of machine parts and will within the next few months revert to its original business of the manufacture of machinery for canning factories. This will involve reducing plant hands from 47 to 15 or 20.

The 15 or 20 hands who will be retained to take care of the Company's normal business will normally be those who have been in the employ of the Company for a lengthy period of time and who are skilled in the manufacture of the Company's normal products.

Of the 15 or 20 hands who will probably be retained in the Company's employ, over 90 per cent have expressed themselves as opposed to the C.I.O. and have expressed their intention of refusing to be bound by

any collective bargaining agreement that the Company might enter into with the C.I.O.

Under these circumstances the Company is unable to accede to the demands of the Union for the collective bargaining rights."

The Company's brief and the evidence of its manager established that this is another case where the employer undertook certain war work as a patriotic duty, which increased the number of employees from 15 or 20 to a peak of 74 in 1942, so that there were a large number of new employees with no permanent relation to the employer and largely composed of floaters. These new employees temporarily outnumbered the old employees normally engaged who remained non-union and who have expressed their refusal to enter into the union or to be represented by it. As shown by the statement of facts in the brief of the company, this is an abnormal situation, purely temporary, as they are now ceasing to carry on war work and returning as rapidly as possible to their normal business. This will mean in a short time a reduction in the number employed in the plant to 15 or 20 and at least 90 per cent of these will be old employees and opposed to the union. Consequently, in dealing with a situation of this kind on the figures of to-day a report recommending a collective bargaining right would be abortive and simply result in confusion and a continuance of disturbance in the plant after normal conditions are restored within the next month or two and a majority find itself subjected to the minority.

It would appear to me that Boards of Conciliation should not be simply adding machines who count noses of those employed at the time of hearing and if it is found that the majority of the workers of the plant are then members of a union, that such union should at once be given collective bargaining rights for the employees. There is nothing in the Act which makes it compulsory to give such recognition on a bare majority of workers becoming members of a union, especially as in this case where the situation is clearly purely temporary. The Board has a much broader duty than this and it should consider carefully matters affecting the merits and right settlement which should be given under such temporary conditions and that irrespective of whether there is a small majority of employees members of the union or not, the Board should do all things possible to avoid a recommendation which can only lead to an early ridiculous situation. The Board should adjourn the proceedings for such time as it considers reasonable to allow for the anticipated time of re-adjustment and to postpone

its report in the matter for, say, a period of three months until the situation in this plant is normal.

The submission of the employers shows that the number of employees had already been reduced from 74 to 57 by the end of December, 1942, and that there were only 47 factory hands who were then eligible for membership in the union, so that the fact that the plant is rapidly returning to normal is clearly shown by the decrease in the number of employees.

A report in favour of granting collective bargaining rights to the union, because at the hearing they showed a present majority of employees, will result within two or three months in a situation where there will be 90 per cent opposed to the union and not members of it, and the bargaining rights held by a minimum of 10 per cent. This would appear to me to be an absurd situation which could not lead to anything but industrial unrest and dissatisfaction and be entirely opposed to the principles of the Industrial Disputes Investigation Act under which the Board is acting.

In addition to the above circumstances, there is also the question of desirability of recognizing this union as the bargaining agent of the employees. Having regard to the allegations made by the employers that since

the organizers for the union have appeared on the scene, the company received written threats, threatening the general manager of the company with physical violence and threatening to burn down the company's plant, it does not seem to me to be fit and proper under these circumstances that the Board should recommend that the company enter into a collective bargaining agreement with this particular union. I am unable to find any justification for suggesting that the company should be called upon to enter into a contractual relationship under circumstances suggestive of an entire lack of good faith and a disregard of all ethical and legal obligations.

I must, therefore, dissent from the report of the other members of the Board and report in favour of the rejection of the application of this union for recognition as the collective bargaining agent of the employees, or at least for adjournment of the Board for final decision of the matter until the expiration of three months, when a normal condition should exist in the plant.

All of which is respectfully submitted.

(Sgd.) V. A. SINCLAIR,
Representative of the Employers,
Canners Machinery, Limited.

Strikes and Lockouts in Canada During March, 1943

THE following table gives information for March and February, 1943, and for February, 1942, of strikes in Canada:—

Date]	Number of strikes	Number of workers involved	Time loss in man working days
*March, 1943.....	28	17,008	31,183
*February, 1943.....	32	5,243	24,306
*March, 1942.....	18	3,770	23,191

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless 10 days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

During the month of March the number of strikes recorded was less than during the previous month but the number of workers

involved showed a decided increase and the time loss in man working days was somewhat higher. The figures show 28 strikes, involving 17,008 workers, with a time loss of 30,683 man working days, as compared with 32 strikes in February, involving 5,243 workers and showing a time loss of 24,306 days. During March, 1942, there were 18 strikes on record, involving 3,770 workers, with a time loss of 23,191 days.

During the month under review the strikes which involved a large number of workers were: a strike of 6,000 shipyard workers at Vancouver; a strike of 3,000 street railway employees at Montreal; and eleven strikes in the coal mining industry involving more than 5,000 workers. None of these strikes, which together accounted for about two-thirds of the total time loss for the month, was of long duration.

Two strikes, involving 716 workers, were carried over from February and 26 commenced during March. Of these 28 strikes, 26 were terminated during the month. Eleven resulted in favour of the workers, seven in favour of the employer, four were compromise settlements and four were indefinite in result.

At the end of the month two strikes were recorded as unterminated, namely: shoe factory workers at Quebec, P.Q., and sheet metal workers at Windsor, Ont.

The record does not include minor strikes such as are defined in another paragraph nor

does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such strikes are listed in this paragraph for a period up to one year after removal from the table of current strikes.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1943*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		

Strikes and Lockouts in Progress Prior to March, 1943

MANUFACTURING—				
<i>Metal Products—</i>				
Metal factory workers, Preston, Ont.	2	55	500	Commenced February 8, 1943; against dismissal of a worker; terminated March 12; return of workers; in favour of employer.
<i>Non-metallic Minerals—</i>				
Glass factory workers, Wallaceburg, Ont.	1	250	3,500	Commenced January 30, 1943; for union recognition and agreement with another union; terminated March 27; conciliation (provincial); in favour of employer.

Strikes and Lockouts in Progress During March, 1943.

LOGGING—				
Pile drivers, labourers, etc., Gaspé Harbour, P.Q.	2	25	15	Commenced March 27; for increased wages; terminated March 27; negotiations; in favour of employer.
MINING—				
Coal miners, New Victoria, N.S.	1	190	340	Commenced March 2; against transfer of two miners to new working places; terminated March 3; conciliation (federal); in favour of workers.
Coal miners, River Hebert, N.S.	1	150	1,350	Commenced March 3; for dismissal of an overman; terminated March 12; conciliation (federal); in favour of workers.
Coal miners, Minto, N.B.	1	(a) 27	150	Commenced March 3; for employment of extra men on cutting machine crews and for increased wages; terminated March 10; conciliation (federal); compromise.
Coal miners, New Waterford, N.S.	1	1,090	1,090	Commenced March 4; demand that non-union miners join union; terminated March 4; conciliation (federal); in favour of workers.
Coal miners, Springhill, N.S.	1	1,400	2,100	Commenced March 12; against lack of coal for miners' domestic use; terminated March 13; negotiations; in favour of workers.
Coal miners, Nordegg, Alta.	1	367	367	Commenced March 16; for improvement in wash-house conditions; terminated March 16; negotiations; in favour of workers.
Coal Miners, Minto, N.B.	1	15	85	Commenced March 16; for employment of extra workers on machine cutting crew and for increased wages; terminated March 23; conciliation (federal); compromise.
Coal miners, Springhill, N.S.	1	1,400	2,100	Commenced March 19; against lack of coal for miners' domestic use; terminated March 20; negotiations; in favour of workers.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May, 1942, issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in January was 73 and 6 were still in progress from the previous month, making a total of 79 disputes in progress during the month;

18,700 workers were involved in the disputes in progress during the month and the time loss was 37,000 working days.

Of the 73 disputes beginning in January, 18 arose out of demands for increased wages and 19 over other wage questions; 2 on questions as to hours; 7 over questions as to employment of particular classes or persons; 20 over other questions as to working arrangements; 6 on questions of trade union principle; and one was a sympathetic strike. Final settlements were reached in 60 disputes, of which 12 were settled in favour of workers, 33 in favour of employers and 15 resulted in compromises; in 12 other disputes, work was resumed pending negotiations.

Australia

For the second quarter of 1942, 181 disputes were reported, directly involving 50,924 workers, with a time loss of 137,763 working days.

United States

The number of strikes beginning in February was 210, involving 42,000 workers in these new strikes. The time loss for all disputes in progress during the month was 170,000 man-working days.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining: Non-ferrous Smelting and Quarrying

JOLIETTE, QUEBEC.—STANDARD LIME COMPANY LIMITED AND THE CANADIAN UNION OF LIME PRODUCTS WORKERS LOCAL No. 1 (LIME QUARRY WORKERS).

See below under: "Manufacturing: Non-Metallic Minerals, Chemicals, etc."

Manufacturing: Fur and Leather Products

MONTREAL, QUEBEC.—A CERTAIN FUR DRESSING AND DYEING ESTABLISHMENT AND THE INTERNATIONAL FUR AND LEATHER WORKERS' UNION LOCAL 54.

Agreement reached following strike reported on page 336 of the March issue. Agreement to be in effect from March 1, 1943, to July 22, 1945; parties to meet before expiration date to negotiate renewal or change of this agreement. The employer recognizes the union as the bargaining agent for its employees who are members of the union. New help to be employed through the union if available; others employed to join the union after acceptance by the employer. Union dues and assessments may be deducted from wages of employees authorizing this.

Hours: 9½ per day, Monday to Friday, a 47½ hour week. Overtime, including all work on Saturdays and Sundays and holidays is payable at time and one-half if sanctioned by government authority. The union and employer agree to petition the National War Labour Board for a general increase in wages of 12 per cent and for time and one-half for overtime.

Manufacturing: Metal Products

LACHINE, QUEBEC.—DOMINION WIRE ROPE AND CABLE COMPANY, LIMITED AND THEIR EMPLOYEES (REPRESENTED BY A SHOP COMMITTEE).

Agreement reached following application for a board under the Industrial Disputes Investi-

gation Act and the withdrawal of the application (L.G. March, p. 327). Agreement to be in effect from January 1, 1943, to April 30, 1944, (or 1945 if no notice given). The company will bargain with the shop committee.

Hours: standard working day of 10 hours Monday to Friday, standard working week of 48 hours. Work on Saturday mornings and all other overtime is payable at time and one-half; work on Sundays and holidays at double time. Employees with one year's service prior to January 1, 1943, to receive the six statutory holidays with pay at basic rates. The wage scale shows the base rate, to which is added a special increase of 4 to 6½ cents and another increase ("government authorized") of 2½ cents, the total being the maximum rate. The following are the hourly base rate and maximum rate respectively: Class "A" closers 47 cents and 56 cents, Class "A" stranders and closers 47 and 56 cents; Class "A" spoolers 40 and 48½ cents, Class "B" stranders and closers 40 and 48½ cents, Class "B" spoolers 32 and 40 cents, Class "C" stranders and closers (small) 32 and 40 cents, Class "C" spoolers (small) 30 and 36½ cents; individual rates for miscellaneous occupations are also set varying from 33 and 40½ cents to 54½ and 62½ cents; floor men assisting the different classes of operators 40 cents; female labour 35 cents. For work on night shift, 2½ cents per hour extra. The cost of living bonus is as applicable at the date of the payment of wages. Provision is made for seniority rights and for the settlement of grievances.

LACHINE, QUEBEC.—ANGLO-CANADIAN WIRE ROPE COMPANY LIMITED AND THEIR EMPLOYEES (REPRESENTED BY A SHOP COMMITTEE).

Agreement reached following application for a board under the Industrial Disputes Investigation Act and the withdrawal of this application (L.G., July, 1942, p. 761 and March, 1943, p. 327). Agreement to be in effect from January 1, 1943 to April 30, 1944. No intimidation against any employee on account of union membership or activities.

Hours: standard working day of 9½ hours Monday to Friday, a 47½ hour week. Work on Saturday (if previous five days worked) and all other overtime is payable at time and one-half; work on Sundays and holidays at double time. Employees with one year's service to be paid for the six statutory holidays at the basic rate. Hourly wage rates for operators: Class "A" machine operators 57½ cents, learners 51½ cents; Class "B" machine operators 46½ cents, Class "B" learners 43 cents; Class "C", female, 35 cents; Class "A" spoolers 49½ cents, learners 44 cents; Class "B" spoolers 43½ cents, learners 40 cents; spoolers helpers 40 cents; Class "C" spoolers, female, 35 cents. Operators on night shift 2½ cents per hour extra. Hourly wage rates for general workers; mechanic 60½ cents, mechanic helper 41 cents, assistant shipper 43½ cents, truck drivers 42½ cents, shorts 41 cents,

reel builders 52 cents, splicers 60 cents, splicer helper and learner 42½ cents, all other male employees (except piece workers) 40 cents, other female workers 35 cents. The full cost of living bonus (amounting to \$4.25 for adult male workers and proportionately less for female workers and boys) is to be paid.

TILBURY ONTARIO.—A CERTAIN MOTOR VEHICLES FACTORY AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 192.

Agreement reached in conclusion of strike reported in the LABOUR GAZETTE, March, p. 336. Agreement to be in effect from February 22, 1943 to February 21, 1944, and thereafter from year to year, subject to notice. The Company recognizes the union as the bargaining agent for the hourly rated employees who are union members. Employees are free to join or not to join any union. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Non-Metallic Minerals, Chemicals, Etc.

JOLIETTE, QUEBEC.—STANDARD LIME COMPANY LIMITED AND THE CANADIAN UNION OF LIME PRODUCTS WORKERS, LOCAL No. 1 (CANADIAN CONGRESS OF LABOUR) (LIME QUARRY AND LIME PLANT WORKERS).

Agreement reached following strike reported in the LABOUR GAZETTE, January, p. 82. Agreement to be in effect from December 21, 1942, to December 20, 1943, and thereafter from year to year, subject to notice. New employees hired must join the union.

Hours: 8 per day, 6 days per week for lime plant employees; 10 per day, 6 days per week for quarry, crusher and yard employees; night shift employees, 12 hours per night for 5 nights and 6 hours on sixth night. Overtime: time and one-half for overtime and for all work on Sundays and holidays.

Hourly wage rates for some classes: quarry shovel operators 51 and 58 cents, firemen (shovels) 43 cents, locomotive operators 41 and 42 cents, well drillers, plug drillers, core drillers, blaster 40 cents; blacksmith 45 cents, labourers 38 cents; crushed stone plants—crusher operators and crusher repairs 40 cents, truck driver 40 cents, scaleman 38 cents; machine shop—machinists 55 and 61 cents, mechanic 55 cents, electrician 66 cents; repairs—42 and 53 cents; miscellaneous—carpenter 55 cents, bricklayer 53 cents, storekeeper 40 cents; lime plant—fireman 45 cents, linemen 43 cents, hydratorman and hydrate crusher 43 cents, plant barrelman 42 cents, labourer 38 cents. Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Shipbuilding

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED AND THE BOILERMAKERS AND IRON SHIPBUILDERS UNION, LOCAL No. 2.

Supplementary agreements to be in effect from March 22, 1943, until the cessation of hostilities, when the basic agreement will be reverted to and this supplementary agreement terminated except as to its provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic

agreement. This agreement terminates and replaces the supplementary agreements of April, 1942 (L.G., Feb., 1943, p. 217). (The original agreement and amendment were summarized in the LABOUR GAZETTE, May 1940, p. 493 and April 1942 p. 481).

Hours: The shipyards operate seven days per week and three shifts per day, and employees work six consecutive shifts and have the seventh day off as a day of rest. If required to work on a seventh shift or on statutory holidays, double time to be paid. The day off to be rotated every four weeks. For the day shift 8 hours to be worked, 48 per week, with pay for 51 hours; for the second shift, 7½ hours per shift, a 45 hour week, with pay for 56 hours; for the third shift, 7 per day, a 42 hour week, with pay for 56 hours. Premiums thus included of one hour's pay for the first shift and two hours each for the second and third shifts are payable only on working six consecutive shifts unless prevented from doing so by the Company or injury incurred during one of these shifts. The premium of two hours payable to the day shift for working the last half of the sixth shift to be paid even if six consecutive shifts are not worked. The number of statutory holidays is reduced to six, in accordance with Order in Council 8682 (L.G., Oct., 1942, p. 1171).

Vacation: After one year's service, one week's vacation with pay during the succeeding year.

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED, AND AMALGAMATED BUILDING WORKERS OF CANADA, SHIPYARD SECTION (SHIPWRIGHTS AND CAULKERS).

Supplementary agreements of March 22, 1943, are the same as summarized above for the boilermakers' union. (The original agreement and amendments were in the LABOUR GAZETTE Feb., 1941, p. 180; December, 1941, p. 1571; April, 1942, p. 482, Feb., 1943, p. 217.)

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 1598.

Supplementary agreements of March 22, 1943 are the same as summarized above for the boilermakers' union (The original agreement and amendments were in the LABOUR GAZETTE, June, 1941, p. 700; December, 1941 p. 1571; April, 1942, p. 482; Feb., 1943, p. 218.)

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 230.

Supplementary agreements of March 22, 1943, are the same as summarized above for the boilermakers' union. (The original agreements and amendments were in the LABOUR GAZETTE, April, 1942, p. 481, Feb., 1943, p. 218.)

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED AND DOCK AND SHIPYARD WORKERS' UNION, LOCAL No. 1 (LABOURERS, ETC.)

Supplementary agreements of March 22, 1943, are the same as summarized above for the boilermakers' union. (The original agreements and amendments were in the LABOUR GAZETTE, Feb., 1941, p. 181; April, 1942, p. 482; February, 1943, p. 218.)

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED AND THE NATIONAL UNION OF MACHINISTS, FITTERS AND HELPERS, LOCAL No. 2.

Supplementary agreements of March 22, 1943, are the same as summarized above for the boilermakers' union. (The original agreements and amendments were in the *LABOUR GAZETTE*, February, 1943, p. 217.)

VICTORIA, B.C.—VICTORIA MACHINERY DEPOT COMPANY LIMITED AND MOULDERS AND FOUNDRY WORKERS' UNION, LOCAL No. 2.

Supplementary agreement of March 22, 1943, is the same as summarized above for the boilermakers' union. (The original agreement and supplementary agreement was in the *LABOUR GAZETTE*, December, 1942, p. 1483.)

VICTORIA, B.C.—VICTORIA MACHINERY DEPOT COMPANY LIMITED AND BROTHERHOOD OF PAINTERS, PAPERHANGERS AND DECORATORS OF AMERICA, LOCAL 1163.

Supplementary agreement of March 22, 1943, is the same as summarized above for the boilermakers' union. (The original agreement and amendment was in the *LABOUR GAZETTE*, December, 1941, p. 1570 and April, 1942, p. 482.)

VICTORIA, B.C.—YARROWS LIMITED AND VICTORIA MACHINERY DEPOT COMPANY LIMITED AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 324.

Supplementary agreements of March 22, 1943, are the same as summarized above for the boilermakers' union. (The original agreements and amendments were in the *LABOUR GAZETTE*, February, 1941, p. 181, and April, 1942, p. 482.)

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, page 86. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of one new agreement, the amendment of twelve agreements and the correction of three, all of which are noted below. A request for the extension of a new agreement for the lithographing industry throughout the province was published in the *Quebec Official Gazette* of March 6; requests for the amendment of the agreements for building trades at Hull and barbers and hairdressers at St. Hyacinthe were published in the March 6 issue and for the building materials industry throughout the province, in the issue of March 13.

In addition, Orders in Council were published in the *Quebec Official Gazette* during March, approving or amending the constitution and by-laws of certain joint committees, and others approving the levy of assessment on the parties, or amending previous Orders in Council in this connection by certain other joint committees.

Manufacturing: Fur and Leather Products

LEATHER TANNING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated March 15, and gazetted March 20, amends the previous Order in Council for this industry (L.G., March, 1940, p. 282; Feb., 1941, p. 183; Aug., p. 1008, Oct., p. 1313; March, 1942, p. 353, Sept., p. 1097, Dec., p. 1490) by adding "Le Syndicat catholique des Travailleurs du Cuir et de la Chaussure, inc." (The Catholic Union of Leather and Shoe Workers) of Plessisville as a party to the agreement.

Manufacturing: Textiles and Clothing

MEN'S AND BOYS' HAT AND CAP INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council dated March 18, and gazetted March 20, amends the previous Orders in Council for this industry (L.G., April, 1940, p. 389; Oct., 1941, p. 1314) by the addition to the wage schedule of hand finishers at \$13 per week and general hands at \$11 per week.

DRESS MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.

A correction to the previous Orders in Council (L.G., Oct., 1940, p. 1075, Nov., p. 1202; March, 1942, p. 353; March, 1943, p. 340) corrected an error made in the French version only of the clause providing for the 48 hour week in the industry.

An Order in Council, dated March 5, and gazetted March 13, extends the term of the agreement to April 1, 1944.

Manufacturing: Pulp, Paper and Paper Products

PAPER BOX (CORRUGATED PAPER) MANUFACTURING, PROVINCE OF QUEBEC

A correction was gazetted March 27, to this agreement (L.G., April, 1942, p. 483, Sept., p. 1097; January, 1943, p. 88) which does not affect the summaries as published in the LABOUR GAZETTE.

Manufacturing: Printing and Publishing

LITHOGRAPHING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated March 2, and gazetted March 6 extends the term of this agreement (L.G., Dec., 1940, p. 1310; May, 1942, p. 631; Feb., 1943, p. 219) to April 17, 1943.

PRINTING TRADES, QUEBEC CITY AND DISTRICT

An Order in Council, dated March 20, and gazetted March 27, extends the term of this agreement (L.G., April, 1940, p. 388; Feb., 1941, p. 183) to June 1, 1943.

PRINTING TRADES, MONTREAL AND DISTRICT

An Order in Council, dated March 18, and gazetted March 27, extends the term of this agreement (L.G., Jan. 1943, p. 88, and previous issues as noted therein) to June 30, 1943.

Construction: Buildings and Structures

BUILDING TRADES, MONTREAL

A correction to the agreement for these trades (L.G., Nov., 1942, p. 1348, December, p. 1490) which was published in the *Quebec Official Gazette* March 13 does not affect the summaries as published in the LABOUR GAZETTE.

BUILDING TRADES, ST. JEROME

An Order in Council, dated March 5, and gazetted March 13, amends the previous Order in Council (L.G., Feb., p. 220 and previous issues as noted therein) by the addition of several contractors to the parties to the agreement.

Transportation and Public Utilities: Water Transportation

FREIGHT HANDLERS (LONGSHOREMEN) (INLAND AND COASTAL NAVIGATION), MONTREAL

An Order in Council, dated March 18, and gazetted March 27, makes obligatory the terms of a new agreement between certain Great Lakes and coastal steamship companies and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. This agreement which applies to freight handlers engaged in the loading or unloading of the vessels of the company in the harbour of Montreal, is effective from March 27, 1943 to March 1, 1944, and thereafter from year to year subject to notice.

Minimum hourly wage rates are 50 cents for day work and 52 cents for night work, with a cost of living bonus as provided by regulations of the federal government. Foremen to be paid 10 cents per hour extra. Time and one half for work during meal hours and until relieved and also for all work on Sundays and holidays.

Freight handlers operating piling machines or traders to be paid 5 cents per hour extra; freight handlers handling sugar at refineries one cent per hour extra; water boys 36 cents per hour.

Trade

RETAIL STORES, QUEBEC

An Order in Council dated March 15, and gazetted March 20, amends the previous Orders in Council for these workers (L.G., Dec., 1942, p. 1490, and previous issues as there noted) but does not affect the summaries as there given.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, THREE RIVERS

An Order in Council, dated March 20, and gazetted March 27, amends the previous Orders in Council (L.G., March, 1942, p. 353, Sept., p. 1098) but does not affect the summary as given in the LABOUR GAZETTE.

BARBERS AND HAIRDRESSERS, SHERBROOKE

An Order in Council, dated March 15, and gazetted March 20, amends the previous Orders in Council (L.G., Oct., 1941, p. 1315; Oct., 1942, p. 234) by changing the hours during which barber shops may be open from 71 per week to 56 per week.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE

An Order in Council dated March 5, and gazetted March 13, amends the previous Orders in Council for these trades (L.G., Nov., 1941, p. 1426; Sept., 1942, p. 1098) by a change which does not affect the summaries as given in the LABOUR GAZETTE.

HAIRDRESSERS, MONTREAL

An Order in Council, dated March 5, and gazetted March 13, amends the previous Orders in Council (L.G., Oct., 1941, p. 1315, Dec., p. 1573; July, 1942, p. 857) by making certain changes in the apprenticeship regulations including provision for the trying of an examination after three years' apprenticeship for a certificate as journeyman.

Accidents in Ontario

In the first quarter of 1943, there were 32,683 accidents reported by firms under the Workmen's Compensation Board of Ontario. The figures include Crown cases. Among these accidents were 107 fatalities.

The awards by the Board for compensation and medical aid in the same three months totalled \$2,791,507.14, of which \$500,572.17 was for medical aid alone.

On the basis of these figures it is estimated that the Workmen's Compensation Board handled, on the average, 430 reports each working day, for the first three months of 1943.

In March, the accidents reported were 11,934, including 40 fatalities. Awards made in March were \$943,253.10, including \$176,147.03 for medical aid.

War Emergency Training

Review of Program During March and During Fiscal Year 1943

ON March 31, the end of the Dominion fiscal year. War Emergency Training completed its third year of operation. The enrolment during the year was the greatest of any year as is shown by the pictorial chart on the front cover of this issue of the *LABOUR GAZETTE*.

On March 31, 1942, the number enrolled at that date in classes was, Armed Services, 7,920, Industrial, 7,197 (including 5,148 in full-time pre-employment classes). On March 31, 1943, the total enrolment was, Armed Services 10,497, Industrial 9,375 (of whom 3,299 were in full-time pre-employment classes).

During the year there was developed greater variety in the types of training, both for the Services and for Industry. In the R.C.A.F. classes there was a greater expansion in all types of training, and one new trade category, wireless mechanics, was added during the year. An interesting development was the holding of a class in aircraft recognition at the Rockcliffe Station in Ottawa for a group of instructors from the Pre-Aircrew Schools. For the Navy classes the development of the training of engine-room artificers and motor fitters has been found most successful. A new feature, made at the request of the Army, was provision of training for boys of seventeen years of age who were being enlisted. These are selected, for the most part, from boys with some high school education and the period of training, including academic subjects as well as practical shop work, will last approximately a year. After a preliminary course of three months, the trainees will be assigned to one of the following trades: electricians, instrument mechanics, fitters, motor mechanics, clerks, draughtsmen.

In the industrial classes the month showed a still further decrease in the number enrolled in full-time pre-employment classes, and it is believed that the peak enrolment in this type of training has been passed and that as time goes on there will be a still further reduction. During the month members of a special class for women, (laboratory technicians), finished their training at the University of Western Ontario after a six months course, and were all placed. Additional classes are being started this month.

The biggest development of the year has been in the sphere of training employees already in industry. Eighty-one plant schools were approved during the year and there was a large increase in the number of employees taking part-time classes although this latter number dropped substantially during the month of March. The training for foremen and supervisors continues to be well received by industry and, judging by reports, is giving satisfactory results. The use of a selected group of Vocational School teachers as instructors, as announced in the January issue of the *LABOUR GAZETTE*, has been most successful and enabled many small companies in Ontario and Quebec to participate in the plan. It is expected other groups of selected Vocational School teachers will be given additional training for this work during the Easter vacation.

Training for Discharged Members of the Forces

Arrangements have been completed with the Department of Pensions and National Health by which War Emergency Training will provide the vocational training for all discharged members of the Forces except for special categories of severe disabilities. Training may be given in any one of the following ways, whichever is the most suitable: regular classes of the technical schools, regular classes of the War Emergency Training, special rehabilitation classes, classes in approved private trade or commercial schools and in industry. The number of discharged persons given training, up to the present, has been comparatively small totalling 1,196, during the fiscal year. It is expected that there will be a substantial increase during the coming year.

By Order-in-Council P.C. 2039, March 15, 1943, the War Emergency Training agreements entered into between the Dominion Government and the Provincial Governments, have been brought under the authority of the Vocational Training Co-ordination Act commencing April 1, 1943. As these agreements were entered into several months prior to the passing of this Act, it was not possible to include them for the present year, but it was considered advisable that all forms of training should be co-ordinated for the future under the one legislative enactment.

Britain's Training Scheme for the Building Industry

THE British Government in co-operation with representatives of the building industry has drafted a twofold plan to ensure an adequate supply of trained craftsmen for the building industry which is expected to play an important part in the post-war reconstruction program. Short-term courses are planned to train the 70,000 workers a year which the Central Council of Works and Buildings estimates will be required immediately after the war, and a scheme to regulate the recruitment and training of apprentices has been drawn up to meet the long-term requirements of the industry.

In addition, the Government is proposing that employment in the industry be regularized and casual employment eliminated as far as possible. In the White Paper outlining the scheme it states "The Government would favour the adoption by the building industry of measures for a guaranteed period of employment" but it is of the opinion that the nature and scope of any guaranteed payment in the industry should be determined by the negotiating machinery in the industry. The Government also announced that it was prepared to consider favourably the continuance, at least during the immediate post-war period, of the wartime controls which require building and civil engineering contractors to observe the terms and conditions of employment fixed for the industry by agreement or arbitration.

The Government plans to set up a Building Industry Advisory Panel under the Minister of Labour to consider and advise on labour questions arising out of the post-war building program. A Special Training Committee under it would determine such technical details as the number to be admitted to training, methods of selection, curriculum, standards of proficiency, etc. Local advisory committees would be attached to employment exchanges to assist in the selection of appli-

cants, subject to the approval of the Minister, to make arrangements for their entry into the industry and to advise on methods of training.

Training will be offered by the Ministry of Labour in collaboration with the Ministry of Works and the Education Department either in Government training centres or technical schools or similar establishments. If large forces have to be kept abroad after the war, training may also be offered outside the country. The Central Council of Works and Buildings has recommended that men with experience in the building industry be demobilized early and that 3,500 places be provided in technical schools to train men for supervisory and managerial posts.

Apprenticeship in the Building Industry

As regards apprenticeship, the government proposes to appoint an Apprenticeship and Training Council for the Building Industry to conduct a survey of existing apprenticeship schemes and make recommendations concerning the recruitment, education and training of young persons for both craft and managerial positions in the industry. The Council will consist of representatives of labour and industry, other interested groups and the Government departments concerned. Its functions will include drawing up minimum standards for approved apprenticeship schemes and encouraging employers to adopt them, maintaining a register of apprentices in training under approved schemes, issuing certificates on completion of the training and giving publicity to the opportunities for employment in the building trades. It may also concern itself with the development of pre-employment technical education and continued vocational training in school during apprenticeship. The Council will be presided over by an independent chairman and will be appointed and financed by the Ministry of Works.

Activities of the Unemployment Insurance Commission

Open Meetings of Local Employment Committees Recommended—Unemployment Insurance Book Renewal—Insurance Registration—Claims for Benefit.

AS a means of acquainting the general public with the workings of employment control in Canada, it has been recommended that open meetings be held by Local Employment Committees throughout the country. Local Committees act in an advisory capacity to managers of local employment and selective service offices. Their members are representative of employers, employees, women's organizations, veterans, the retail trade, etc.

Such open meetings have proven successful in certain cities where they have been tried. They give an opportunity to the Local Office to explain the operation of selective service directly to those persons who are primarily interested in its working. Through the medium of these open meetings, where demonstrations are given and questions answered, much better relations are frequently established between the Local Office and business generally. Also, problems which may be irritating to the public are brought forward and frequently solved.

The importance of open meetings was discussed at a meeting of the National Employment Committee held in Ottawa on Monday, April 12, when it was decided to urge upon Local Committees the desirability of holding such meetings.

The National Committee is a central body, with general supervision over Regional and Local Employment Committees. It is an advisory body to the Unemployment Insurance Commission and to the Director of National Selective Service on employment and selective service matters.

There are five Regional Committees, corresponding with the five regions into which Canada has been divided for insurance and employment service administrative purposes: the Maritimes, Quebec, Ontario, the Prairies and British Columbia. Regional Committees assist Regional Superintendents in respect to problems arising in their areas.

There are now forty-three Local Committees in Canada, advisory to managers of Local Offices.

The membership of all Committees, National, Regional and Local, represents various segments of the public, including manufacturers, trade unions, veterans, and others. The

National Employment Committee meets once a month, while meetings of Regional and Local Committees are held at intervals of a month or less.

During the illness of Mr. Tom Moore, Chairman of the National Employment Committee and President of the Trades and Labour Congress of Canada, Commissioner R. J. Tallon, of the Unemployment Insurance Commission, is Acting Chairman of the National Committee. Mr. Tallon presided at the meeting on April 12, and members present were: Mr. A. R. Mosher, Ottawa, President of the Canadian Congress of Labour; Mr. E. R. Complin, Montreal, Manager of Industrial Relations, Canadian Industries Limited; Mr. George S. Hougham, Toronto, Dominion Secretary, Retail Merchants Association of Canada; Mrs. Florence F. Martel, Montreal, representative of women, and Mr. Carl Berg, Edmonton, President of the Alberta Federation of Labour.

Progress was reported at the meeting in obtaining agricultural representation on all Committees.

The increasing importance of the farm labour situation is emphasized in minutes of many of the Local Employment Committees, as well as the Regional Employment Committees, copies of which, in summarized form, were before the meeting of the National Committee.

Attached to the minutes of the Prairie Regional Employment Committee, which were before the National meeting, was a report respecting the distribution of available farm machinery. This report pointed out that in view of the scarcity of threshing machines and the shortage of manpower in Western Canada, planning would be necessary to avoid a loss in production. It suggested that farmers with machinery should make it available to farmers in districts without necessary machinery. Arrangements might be made whereby the owner would supervise the use of his machinery, and that he be guaranteed that his own spring operations would be taken care of should he be absent from his farm with his machinery.

The Committee will hold its next meeting on May 10.

Unemployment Insurance Book Renewal

Commencing March 31, approximately two and three-quarter million unemployment insurance books now in the hands of employers and insured persons across Canada are to be recalled and replaced by new books.

On or about February 22, firms having ten or more insurable employees received a Circular Letter outlining instructions for the renewal of insurance books in their possession, together with a form to be filled out and returned by March 1 to the nearest Employment and Selective Service Office, showing the name and insurance number of all insurable employees whom it was anticipated would be in their service at March 31. Additional details were required if the employee was discharged from the Armed Forces since July 1, 1941 or if his insurance number ended in "four".

The information was used to write up 1943-44 insurance books in advance. These books were then filed pending the return of old insurance books on March 31, thus saving valuable time in transcribing essential information.

On or about March 15, all employers with less than ten employees received a letter covering instructions for renewal of insurance books currently held on behalf of their employees. With this letter was included a report form similar to that sent to the larger employers already mentioned for completion and return.

Commencing March 31, all insurance books in circulation at that date will be returned to Local Employment and Selective Service Offices for renewal. These will then be exchanged on a strictly book for book basis. Where a person is not in employment on March 31, a new book will be issued upon personal presentation of the old insurance book at a Local Office.

Insurance Registration

Reports from Local Offices of the Unemployment Insurance Commission showed that at April 1, 1943, 167,529 employers establish-

ments and 3,862,876 persons were registered. Of the persons registered, 3,033,373 were insurable and 829,503 were uninsurable.

The insurable group consisted of insurable employees of registered firms and unemployed persons whose last employment was insurable. The other group of persons registered included employees of registered firms not coming within the coverage of the Act, and partners and proprietors of these firms. Also forming a part of this group were persons unemployed at date of registration whose last employment was uninsurable and women between the ages of twenty and twenty-four not engaged in insurable employment at the time of the recent registration.

Claims for Benefit

The amount paid in claims for unemployment insurance benefit during the period from February 1, 1942, to February 28, 1943, was \$548,620.19. In this period 33,021 claims were received for adjudication at the nine offices of the Commission of which 24,911 claims were allowed, 6,575 claims were not allowed, with 1,535 claims pending.

An analysis of the 6,575 claims not allowed by insurance officers reveals the following reasons for non-allowance: 2,288 claims under Section 28 (i) in which 2,287 claimants had insufficient contributions and 1 was not in insurable employment; 207 claims under Section 28 (ii) in which 130 applications were not made in the prescribed manner, and 77 of the claimants were not unemployed; 130 claims under Section 28 (ii) in which 84 claimants were not capable of work and 46 were not available for work; 145 claims under Section 43 (a) for loss of work due to labour dispute; 51 claims under Section 43 (b) (i) for refusal of an offer of work; 43 claims under Section 43 (b) (ii) for neglect of opportunity to work; 1 claim under Section 43 (b) (iii) for failure to carry out written directions; 3,652 claims under Section 43 (c) in which 696 were discharged due to their own misconduct, and 2,956 were disqualified for voluntarily leaving without just cause; 6

and 56 were withdrawn. The Courts of Referees disallowed 376 claims and allowed 199.

Appeals to Umpire

Appeals and References

During the period from February 1, 1942, to February 28, 1943, there were 543 references and 43 appeals made by claimants to Courts of Referees. In addition there were 118 references by insurance officers to Courts of Referees. Of the 704 references and appeals, 575 were heard, 73 have not yet been heard,

Six claimants have sought permission from the Chairman of the Courts of Referees to appeal to the Umpire under Section 58 (c) (ii). Four requests to appeal were refused and 1 was granted. In addition, one other appeal was made by a claimant or association on behalf of the claimant. Of the two appeals reaching the Umpire, 1 has been heard and disallowed and the other has not yet been heard.

The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to February 28th.

Employment and Unemployment

Summary

IN the Employment and Unemployment section of the *LABOUR GAZETTE*, information regarding the employment situation in Canada is based upon reports from the following sources:

The employment situation at the beginning of February, as reported by employers.

—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the *trend* of employment in Canada over a period of years.

This month's article shows a further slackening in employment at the beginning of February, 1943, repeating the downward movement indicated in four of the last five years. The 13,470 establishments furnishing information to the Dominion Bureau of Statistics reported a personnel of 1,815,975. As compared with their staff of 1,840,501 at January 1, there was a reduction of 24,526 employees, or 1.3 per cent. The crude index number of employment (based on the 1926 average as 100), declined from 183.7 in the last report, to 181.2 at the date under review. This compared with 165.4 at February 1, 1942. At the outbreak of war, the index stood at 119.6.

The same employers also submit each month information regarding payrolls, which is incorporated in this article.

The per capita average wage in the Canadian industries submitting returns rose from \$27.91 a week in the last report to \$29.93 at February 1, 1943. The figure for February, 1942, had been \$27.65.

Employment conditions at the end of March as reported by Employment and Selective Service Offices.—Reports from the Employment and Selective Service Offices of the Unemployment Insurance Commission give a brief survey of the employment situation at the end of March. These reports describe employment conditions in the Mari-

times, Quebec, Ontario, the Prairie Provinces, and British Columbia.

Applications for employment, vacancies, and placements, February.—From the Employment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

Reports received from Employment and Selective Service Offices during the four week period January 29th to February 25th, showed a slight decline in the average daily placements in employment when a comparison was made with those of the preceding four week period, but a substantial gain from those of the month of February last year. The most marked changes under the first comparison were losses in construction, services and logging which were partly offset by a substantial increase in manufacturing. Under the second comparison all industrial groups made gains, the largest being in manufacturing with moderate increases in services, construction and trade. The marked increase over last year was due to National Selective Service Regulations under which employers seeking workers, and persons desiring employment, must notify Employment and Selective Service Offices. Vacancies during the four weeks numbered 205,605. There were 195,830 applications for employment and 136,842 placements were effected in regular and casual employment.

Unemployment in Trade Unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

At the beginning of March 1943, the percentage of unemployment among trade union members stood at 1.5, thus remaining unchanged from the preceding month. The percentage of unemployed members in March, a year ago, was 4.0. The March 1943 percentage was based on returns compiled from 2,245 labour organizations with a total membership of 403,475 persons.

It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the numbers of unorganized workers who were without employment during the period reviewed.

Unemployment Insurance Registration.—

The registration figures of the Unemployment Insurance Commission provide further data in regard to the employment situation in Canada.

During the 1942 registration conducted by the Commission, employers with insured persons in their employ registered their insured and non-insured employees. This nation-wide manpower inventory covered a large portion of Canadian wage-earners, but it did not for the most part include employees engaged in

employment in agriculture, horticulture, forestry, logging, lumbering, hunting and trapping and a number of other excepted occupations.

The number of persons registered during the period April 1, 1942, to April 1, 1943, was 3,862,876. However, the total of persons registered during this period is greater than the number of persons in registered employment at any one date. For instance, some of the registered persons may subsequently have joined the armed forces, or left their registered employment for other reasons.

Nevertheless, taking into consideration the occupations not covered in the registration, it may be assumed that the figure represents at least a minimum approximation of the number of persons employed in Canada.

The Employment Situation at the Beginning of February, 1943, as Reported by Employers

THERE was a further slackening in industrial activity at the beginning of February, repeating the downward movement indicated in four of the last five years; previous to 1938, however, employment had usually, though not invariably, shown recovery at February 1 from the year-end recession, so that, on the average, there has been a small advance between January 1 and February 1 in the period, 1921-1942. The Dominion Bureau of Statistics tabulated data from 13,470 employers, whose staffs aggregated 1,815,975, as compared with 1,840,501 at January 1. Reflecting this reduction of 24,526 persons, or 1.3 per cent, the index number of employment (1926=100), declined from 183.7 at January 1, to 181.2 at the date under review, when it was 9.6 per cent higher than the February 1, 1942, figure of 165.4. Since the contraction was contra-seasonal according to the experience of the period, 1929-37, used in calculating the factors of seasonal variation, the seasonally-adjusted index also showed a loss, falling from its previous maximum of 190.9 at January 1, to 188.2 at the beginning of February.

With the resumption of normal operations, interrupted in many establishments over the holiday season, the payrolls disbursed at the date under review showed an important gain, rising from \$51,386,339 at January 1, to \$54,346,903 paid on or about February 1 for services rendered in the week preceding. This was a gain of 5.8 per cent. The per capita average, which had declined from \$30.06 at December 1 to \$27.92 at January 1, rose to \$29.93 at the latest date, when it was affected to some extent by industrial disputes, and also by unfavourable weather. It was nevertheless

decidedly higher than the February 1, 1942, average of \$27.65. In the 12 months since then, the index of aggregate payrolls has increased 17.7 per cent, accompanying the gain of 9.6 per cent in the index of employment.

Considerable improvement was indicated in manufacturing at the beginning of February, resulting in the establishment of a new all-time maximum index. The largest advances were in iron and steel plants; there were also important gains in leather, textile and non-ferrous metal factories, together with smaller increases in a number of other industries. On the other hand, the food, tobacco, lumber and chemical industries released employees. In some cases, the changes were seasonal in character.

The non-manufacturing divisions, on the whole, were seasonally quieter at the date under review. There were moderate losses in employment in mining, communications and services, together with larger declines in logging, transportation, construction and trade; in the last-named, over 21,000 persons were laid off by the co-operating establishments, following the intense activity over the holiday season reflected in the data for January 1. The shrinkage in trade was unusually pronounced.

Payrolls

The salaries and wages distributed at February 1 by the co-operating employers totalled \$54,346,903, exceeding by \$2,960,564, or 5.8 per cent, the weekly payroll of \$51,386,339 disbursed on or about January 1. As already indicated, the rise was seasonal. The weekly per capita average earnings advanced from \$27.91 at January 1, to \$29.93 at the first of

February, as compared with \$27.65 at February 1, 1942.

The latest survey shows that, when the statistics for financial institutions are included, the number of persons in recorded employment was 1,879,112, as compared with 1,904,166 at January 1. The sums received as weekly payrolls by these persons amounted to \$56,317,268, while those employed at January 1 were paid \$53,340,274 for services rendered in the last week in December. The per capita average for the nine main industries, including finance, was \$29.97, as compared with \$28.01 at the beginning of January, and \$27.73 at February 1, 1942. These averages were slightly higher than those given in the preceding paragraph for the eight leading industries, for

which records of employment are available for a lengthy period, so that they are used in the general comparisons of this report.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. The report indicates that in the period for which data are available, there has been a general increase of 18.5 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these persons are higher by 39½ per cent. Including finance, the gain in employment from June 1, 1941, to February 1, 1943,

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

amounted to 17.9 per cent, and that in payrolls, to 38.4 per cent.

Between February 1, 1942, and February 1, 1943, there was an increase in employment in the eight industries, amounting to 9.6 per cent, accompanied by that of 17.7 per cent in the weekly payrolls. The explanation previously given for the much greater rise in the latter than in employment may again be stated:—

(1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there is a considerable amount of overtime work, (2) the extension of the system of paying a cost-of-living bonus to the majority of workers; the rates at which this allowance has been calculated have been increased on more than one occasion since its institution, and (3) the progressive up-grading of employees as they gain experience in their work. In certain cases, higher wage-rates have also been granted. In spite of these main factors reacting favourably upon the earnings of the typical wage-earner, the average weekly pay envelope, as a result of the continued dilution of labour and other reasons, has not shown advances commensurate with those in the index of aggregate payrolls. Thus, the latter has risen by 39.5 per cent from June 1, 1941, while the index of per capita earnings has increased by 18.5 per cent.

Mainly as a result of wartime conditions, the expansion in employment and payrolls in manufacturing in the period of observation has been much greater than that in the non-manufacturing industries; where the index of employment in the former has risen by 32.2 per cent from June 1, 1941, that of payrolls has advanced by 57.4 per cent. The weekly earnings of the typical individual engaged in factory work have increased by 19.7 per cent, while the all-industries' average has risen by 18.5 per cent. The factors given above as influencing the all-industries' trends operate with greater force in the case of manufacturing.

Even more noteworthy than the expansion in the number of workers and the payrolls in manufacturing as a whole in recent months, is that which has taken place in plants producing durable goods, in which the index of employment has risen by 50.1 per cent, and that of payrolls by 79.4 per cent from June 1, 1941, to February 1, 1943. Despite considerable curtailment in the non-durable goods division, the index number of employment in this group was 16.6 per cent above that indicated at June 1, 1941, while the increases in the payrolls amounted to 34.9 per cent.

In regard to the marked variations shown in the average earnings of workers in the different industrial classes, it must be borne in mind

that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or over-time may also considerably influence the reported aggregates and averages.

Employment and Payrolls by Industries

Manufacturing.—Employment in manufacturing resumed its upward movement at the beginning of February, when the gain rather

exceeded the decline indicated at January 1. The rise was, however, on a smaller scale than at February 1 in either 1942 or 1941, and was also below-average according to the experience of earlier years of the record. In being of less-than-normal proportions, the increase at the date under review was like the year-end contraction from which it was recovery.

The 7,540 establishments furnishing data at the beginning of February reported a combined working force of 1,157,459 men and women, an increase of 12,879, or 1.1 per cent, over their staffs at January 1. The index, at 222.1, was slightly above the previous all-time

* Revised.

¹ This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

maximum of 221.7 at December 1, 1942, and was 16.2 per cent higher than the February 1, 1942, figure of 191.2. The latest increase was not equal to that usually indicated at the beginning of February, however, so that there was a decline in the seasonally-adjusted index, which fell from 234.3 at January 1, to 230.5 at the date under review.

There was a substantial increase at February 1 in the payroll disbursements which aggregated \$35,439,995, as compared with \$32,176,629 at January 1; this increase of 10.1 per cent was due in the main to the resumption of normal operations, following the year-end holidays. The per capita average, which had declined from \$31.17 at December 1, to \$28.11¹ at January 1, rose to \$30.62 at February 1. The latest figure was affected to some extent by industrial disputes. It was, however, considerably higher than the average of \$28.39 paid at February 1, 1942. In the intervening 12 months, the index of aggregate payrolls has risen by 24.6 per cent, while that of employment, as already stated, was 16.2 per cent higher.

¹ Revised.

The greater growth in the wages distributed by the co-operating establishments in the twelve months has been dealt with briefly in an earlier paragraph.

Further important expansion was shown at February 1 in iron and steel plants, which reported the addition of almost 9,800 persons to their working forces. Within this division, there were especially large increases in ship-building, aircraft and other vehicle and fire-arm plants. Considerable gains were also indicated in textile, leather, non-ferrous metal, miscellaneous manufactured product and electrical apparatus and supply works. On the other hand, food, lumber, tobacco and chemical factories released employees; in some cases, the losses were seasonal in character.

In recent monthly reports on employment and payrolls, it has been pointed out that, largely due to wartime developments, the employment afforded by an increasingly large number of factories turning out consumers' goods has declined from the unprecedentedly high levels established before the shortage of labour became acute; where

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

11 manufacturing industries or groups at July 1, 1942, had reported a slackening as compared with a year earlier, 18 divisions at February 1 showed a reduction from the same date in 1942. Notable among these were the vegetable food, boot and shoe, lumber, pulp and paper and rubber classes, and several branches of textiles; in these groups, how-

ever, employment was still in greater volume than in the period prior to the outbreak of hostilities. The recent falling-off in many of these divisions merits more attention for the reason that, in a great many cases, they are engaged in manufacturing commodities or parts directly required in the war effort. On the other hand, employment in an im-

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Feb. 1 1943	Jan. 1 1943	Feb. 1 1942

*The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

*Revised.

portant number of industries has reached new all-time highs in recent months; especially noteworthy among those in this category are the chemical, beverage and the various metal-using industries.

Based on the weekly salaries and wages disbursed by the reporting employers at June 1, 1941, as 100, the index number of payrolls at February 1, 1943, was 157·4, as compared with 142·9 at the beginning of January, and 126·3 at February 1, 1942. There was thus an increase of 24·6 per cent in the reported payrolls during the 12 months, accompanying that of 16·2 per cent in the index number of employment. An explanation has been given earlier in this report for the disparity in the rates of increase in employment and payrolls; the upgrading of employees as they acquire experience is a factor of particular and increasing importance in the manufacturing industries, tending to counteract the effect of the large-scale dilution of labour resulting from the existing stringency. Another factor exercising unusual influence in the case of manufacturing is the changing industrial distribution of the wage-earners in recorded employment. The effect of this is clearly shown by a comparison of the figures for the durable and the non-durable goods groups. Thus, the payroll index in the former at February 1, was 34·5 per cent higher than at February 1, 1942, while that in the non-durable goods division was 12·7 per cent higher; over the same period, the index of employment in the durable goods has risen by 28 per cent, while that in the non-durable classes has gained by only 4·7 per cent.

Since the institution of the payroll statistics early in 1941, there have been especially pronounced increases in the salaries and wages paid in the chemical, iron and steel, non-ferrous metal, miscellaneous manufactured products, electrical apparatus and beverage industries. The gains in these industries have been accompanied by important though relatively smaller advances in employment. In practically every case, and notably in the industries just mentioned, the per capita averages in the various branches of manufacturing were considerably higher at February 1, 1943, than at the same date of 1942.

Many factors contribute to the differences found in these averages. Prominent among these is the sex distribution of workers in the various industries, a factor which is associated with that of age, the women workers in general, tending to belong in the younger age groups, where earnings normally are less than among more experienced em-

ployees. The presence or absence of overtime work also affects substantially the per capita average earnings.

Logging.—Repeating the movement indicated at February 1 in four of the last five years, employment in logging showed a falling-off at February 1; part of the reported loss of 4,731 workers was due to unfavourable weather. The 490 co-operating employers stated that they had a personnel of 69,970 persons at the date under review. The index of employment, at 233·8, was lower than at February 1 in 1941 or 1942, and also than in 1938 and 1937, but was otherwise the highest for that date in the record. As compared with 267·2 at February 1, 1942, there was a decline of 12½ per cent in the index of employment; this, however, was accompanied by a gain of 1·6 per cent in the index of payrolls over the 12 months. The salaries and wages reported at the latest date amounted to \$1,435,378, as compared with \$1,601,656 in the preceding report.

The per capita average earnings declined from \$21.44¹ at January 1, 1942, to \$20.51 at the date under review; this falling-off was partly caused by unfavourable weather conditions, which reduced the working time. The February 1, 1942, average had been \$17.54. It must be noted that the figures of aggregate and per capita earnings in logging do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations. The high labour turnover in many camps is also an important factor in lowering the reported earnings.

Mining.—The trend of employment was downward in the mining metallic ores and coal, and also in the extraction of other non-metallic minerals. Data were tabulated from 436 operators, with a combined working force of 75,505 persons, as compared with 75,928 at January 1. The index in the mining group declined from 162·4 in the preceding report, to 161·4 at the beginning of February, when it was 8·7 per cent lower than that of 176·8 at February 1, 1942. The index of payrolls was lower by 10·3 per cent over the 12 months. The payrolls distributed at the date under review aggregated \$2,703,644, as compared with \$2,505,198 in the preceding period of observation. Resumption of work over the holidays was chiefly responsible for the higher earnings. The per capita figure rose from \$32.99 at January 1 to \$35.81 at February 1, but was lower than that of \$36.13 at February 1, 1942.

Communications.—There was a slight slackening in employment in communications at February 1, when a staff of 27,528

¹ Revised.

was reported by the co-operating employers, whose employees at January 1 had numbered 27,575. The loss was smaller than usual for the season. The salaries and wages paid at the date under review aggregated \$795,736, as compared with \$813,866 in the preceding report. The per capita average declined from \$29.51 at January 1, to \$28.91 at the first of February, as compared with \$27.55 at February 1, 1942. The index of employment at the date under review stood at 103.1, slightly higher than that of 100.2 at the beginning of February of last year. The gain in the payroll index in the 12 months was 7.9 per cent.

Transportation.—A further contraction in employment was recorded in transportation at February 1, according to data furnished by 579 employers with 133,164 persons on their staffs, 2,915 fewer than in their last report. The loss approximated the decline ordinarily indicated at the time of year. Moderate improvement was noted in the local transportation group; steam railway operation was rather quieter, while there was a considerable reduction in shipping and stevedoring. The index, at 105.5, was several points higher than that of 98.2 at February 1, 1942.

The reported transportation employees were paid the sum of \$4,816,053 at the date under review for services rendered in the week preceding. At January 1, the reported payrolls had totalled \$4,912,517; the per capita average was then \$36.10, slightly lower than that of \$36.17 at February 1. At the same date in 1942, the average had been \$34.50. The latest index of payrolls was 12½ per cent higher than that at the beginning of February of last winter.

Construction and Maintenance.—There were important losses in building and highway construction at the date under review, but work on railway maintenance considerably increased, largely as a result of seasonal conditions. The 1,534 contractors from whom data were received had a working force of 158,586 persons, as compared with 166,648 at January 1. The weekly salaries and wages paid by these employers aggregated \$4,574,521, as compared with \$4,471,771 in the last report. The per capita average rose from \$26.83 at January 1, to \$28.85 at the beginning of February, as compared with \$24.82 at the same date in 1942. Standing at 125.7 at February 1, the index of employment was 6.4 per cent higher than that of 118.1 indicated at the same date of 1942. The gain in the payroll index in this comparison was 20.2 per cent.

Services.—A slight falling-off was indicated in employment in hotels and restaurants and laundries and dry-cleaning establishments; 612 of these released 108 workers, bringing their staffs to 40,042 at the beginning of February. The decline was seasonal, but was of less-than-average proportions. The persons in recorded employment were paid the sum of \$730,882 in weekly payrolls, as compared with \$726,623 at January 1. In the period from February 1, 1942, there has been a rise of 7.6 per cent in employment, accompanying that of 16.4 per cent in the index of payrolls. The per capita averages were \$18.10 at January 1 and \$18.25 at February 1, 1943, as compared with \$16.87 at February 1, 1942. Attention must again be drawn to the fact that in hotels and restaurants, as in logging, many of those employed receive board and lodging as part of their remuneration; the former division constituted some 61 per cent of the total reported in the service division as a whole at the beginning of February.

Trade.—Unusually pronounced curtailment in employment was noted in trade at the date under review, following the extremely large gains depicted in the preceding report. Data were compiled from 2,218 merchandising establishments with a staff of 153,721 persons, 21,119 fewer than at the beginning of January. The salaries and wages distributed by these firms amounted to \$3,850,694, as compared with \$4,178,079 at January 1. The loss in the payrolls was proportionately less than that in the number of employees, so that the per capita average considerably increased, rising from \$23.90 in the last report, to \$25.05 at the date under review, as compared with \$23.60 in the same period of last year.

The latest index number of employment in trade was 149.3; this was 4.8 per cent lower than the February 1, 1942, figure of 156.8. The index of payrolls, however, was fractionally higher at the date under review.

Financial Institutions.—The 753 co-operating financial institutions had a personnel of 63,137, as against 63,665 at January 1. The salaries and wages reported amounted to \$1,970,365, as compared with \$1,953,935 paid by the same establishments on or about January 1. The per capita weekly average was \$31.21, as compared with \$30.69 in the last report, and \$29.79 at February 1, 1942. The index of employment in financial institutions stood at 122.3, as compared with 121.5 at February 1, 1942, since when the index number of payrolls has risen by 5.5 per cent.

Employment Conditions at the End of March as Reported by Employment and Selective Service Offices

THE following abstract of regional summaries of reports from Local Employment and Selective Service Offices of the Unemployment Insurance Commission indicate that employment conditions across Canada at the end of March were as follows:

Maritime Region

Meetings of Provincial Committees were being held at a number of centres to formulate plans for overcoming the prospective shortage of farm labour. In some areas, increasing numbers of farm workers who had been employed in logging and mining during the winter months were returning to agricultural employment. These men were, for the most part, employed in cutting wood for fuel. Some farmers and farm workers were indicating their preference for continued employment in war industries. Land operations, it was expected, would commence late in April or early in May. In the meantime, the farm labour problem was not acute.

Fishing operations were being actively carried on in some areas. Good catches of herring, cod and haddock were exported. On the north shore of Prince Edward Island fishermen were repairing their fishing gear and traps preparatory to the opening of the lobster season. A shortage of labour for fish processing plants was proving a handicap. However, prices paid for fish were good and there appeared to be no serious shortage of fishermen. Efforts were being made to discourage the inclination of some fishermen, in one or two of the smaller centres, to sell their fishing gear with a view to obtaining employment in industrial plants.

Winter operations in the woods were nearing completion throughout the Region. Preparations were underway for the annual river drive and more sawmills were commencing to operate. River-drivers and sawmill workers were in demand as well as a comparatively few men for logging operations and for cutting cordwood. Many timber operators were planning to continue cutting throughout the summer.

Adverse factors affecting mining in Cape Breton were an acute shortage of miners and the reported prevalence of absenteeism among coal miners. Limestone quarrying and manganese mines, while active, suffered from a lack of sufficient workers. Iron mines were working at capacity, but gypsum mines were inactive.

Industrial activity was fairly general throughout the Region. About the only note-

worthy exceptions were the fruit dehydration plants which were closing at the end of March and a large wood-working establishment which was closed to permit of the installation of new machinery, preparatory to undertaking a new type of wartime work. Pulp and paper mills were handicapped by a lack of sufficient water. Textiles were working steadily with a normal supply of workers. All steel mills were working at capacity, some of the larger ones showing a substantial increase in production over the corresponding period of 1942. Several fertilizer plants had commenced operations. The need for almost all types of skilled tradesmen in the ship-building and aircraft industries was very urgent and could not be fully supplied in the Maritime Region. Steps were being taken to obtain them through clearance.

Although there were surpluses of carpenters in a few centres, the scarcity of construction workers, both skilled and unskilled was becoming more acute, as new building projects were getting underway. In some instances there was insufficient housing accommodation for workers and there were definite indications of an overall shortage of construction labour.

The securing of workers for hotels, restaurants and private homes was becoming more difficult. Many girls were being transferred to Ontario for work in munitions plants.

Quebec Region

Farm workers who had been employed in the woods and mines during the winter months were returning to farm work. This, and the fact that the spring season was late, tended to relieve the current demand for farm workers. However, many farmers were fearful that there would be a shortage of farm labour during the summer months and were showing reluctance to prepare for increased production while the labour supply problem remained obscure. The production of maple syrup and sugar had commenced in the southern portions of the province and a successful season was in prospect.

Except in the Quebec city area, where over 500 bushmen were needed, logging operations were slowing down throughout the province. Many bushmen were securing employment in sawmills or were standing by until river driving could get underway. It was expected that a number of large camps in the north-eastern portion of the Region will be operated throughout the summer.

Gold mining was being curtailed as farm workers, employed under winter permits, were returning to farms. Other underground miners were urging that they be given surface work during the summer months.

Manufacturing industries, including food, wood products, boots and shoes, rubber, leather, optical goods and hosiery were working at full capacity. Some of these plants were practically doubling their normal weekly output. In general, their labour requirements, especially for unskilled workers, were being met locally. Textile mills (cotton, woollens, silk and clothing lines) were all very active. In some instances shortages of materials were apparent as serious temporary layoffs were becoming necessary. However, skilled workers were in general demand. The Montreal clothing trades were suffering from labour shortages of considerable proportions. War-time industries in the Montreal and Quebec City areas were experiencing difficulty in obtaining sufficient unskilled labour. About 800 women were required for the Quebec Arsenals. The shortage of workers in the aluminum industry was likely to be corrected by the employment of men released from power construction projects. Some difficulty was being encountered in supplying 500 potmen for a war industry near Montreal. Changes in war production were continuing and workers who had had to be laid off were being employed by other establishments. Radio tradesmen and machinists were especially in demand. The tramway strike caused a serious drop in the production of industrial plants as well as a two-day lay-off of over 500 wartime workers.

Except for several National Defence projects, building construction was confined largely to general repairs. No shortage of construction labour was reported.

Restaurants, hotels, institutions and private homes were in urgent need of workers, especially in two or three of the larger centres. The shortage was emphasized by the seasonal requirements of steamship lines and social clubs. Draughtsmen, bilingual stenographers, typists, bookkeepers and competent office clerks were in great demand.

Ontario Region

The shortage of farm labour was being felt increasingly throughout the older portions of Ontario. Great difficulty was being met with in obtaining share croppers for sugar-beet, tobacco and tomato farms, and some stock farmers were thinking seriously of disposing of portions of their herds, if more workers were not made available. Farm workers employed in industry under permit for the

winter months were commencing to return to farms, but not in sufficient numbers to make any notable impression. Many of these workers were applying for extensions of their permits so that they could remain in industrial employment for "reasons of health". Maple syrup making was in progress in some areas, but production was lighter than had been anticipated.

Winter logging operations were practically completed until the ice had moved out of the streams and river-driving could get underway. Several hundred men will be required for this work. Some timber operators were planning to keep their camps open throughout the summer, if sufficient loggers could be obtained.

Underground beginners were urgently needed for the miners in the Sudbury and Kirkland Lake areas. Mine operators in the Timmins gold area were willing to employ inexperienced workers who could provide satisfactory health certificates. Labourers were needed for chromium mining and smelting.

Industrial workers in many categories were in demand in most of the larger centres. Bakers and biscuit makers, tannery workers, shoe and glove makers were wanted. Skilled and unskilled men and women, as well as girls to train as wood-workers were required for aircraft production. Sawmill workers were being sought in a number of lumbering centres. Textile mills needed male and female help. In some cases there was an increase in the tendency to have women replace men, not only in light factory work, but in some branches of the heavier metal trades. Skilled artisans and labourers alike were in demand in the iron and steel industries. There were shortages of labour for shipbuilding and the manufacture of war weapons and munitions. A similar condition existed in the rubber industry. In a number of instances these shortages were being felt acutely. In general, industrial labour requirements appeared to be decidedly on the increase.

Although unfavourable weather conditions and shortage of materials were holding up construction work in a number of centres, there was considerable activity in building construction. Wartime Housing and National Defence projects especially were progressing rapidly. Other than these, little more than repair work was being undertaken. Relatively small temporary lay-offs occurred at a few points. There were therefore, occasional small surpluses of carpenters and other tradesmen. On the other hand, there were shortages of such labour from time to time at centres where building was active.

Both operating and maintenance-of-way men were in demand for work for the rail-

ways. At a few points men were wanted for repair shops and in one instance women were being employed for this work. The bus companies required drivers and auto mechanics and staffs were being assembled for the summer trade by the water transportation companies.

In several of the larger centres competent office workers were wanted, especially accountants, clerks and stenographers. The number available was generally quite inadequate.

Graduate nurses, as well as girls and women for cooks, waitresses and domestic service in institutions and private homes were in demand. In most instances the supply fell far short of the requirements.

Prairie Region

Farm labour shortages would no doubt be relieved somewhat by the return to the farm about the middle of April of workers who had been working under permit in other industries during the winter months. In addition, much was hoped for from the canvass being conducted by the "Win-the-War Committee" under the direction of the Department of Agriculture in Saskatchewan. It seemed probable that the unfinished threshing operations of 1942 would not be completed until the 1943 crop had been planted.

Fishermen in Northwestern Ontario were preparing for a busy season owing to the increasing demand for fish. Every available fisherman would be employed.

Logging operations were decreasing and many men were going back to farms. However, additional bushmen were wanted at a few points. Some timber operators were planning to continue cutting throughout the summer.

Experienced coal miners and labourers were urgently needed and special efforts were being made to provide them. Hard rock miners for gold and base metal mines were also wanted and could not be obtained in sufficient numbers. Labourers were required for work in the oil fields.

Skilled tradesmen were needed for wartime industries. Attempts to obtain them through clearance had been only partly successful. Many girls were being employed for factory work and for operating bakery machinery.

Construction work on airport and National Defence projects was being held up somewhat by shortages of materials. In spite of this, there was a fair demand for carpenters and builders' labourers. Requests for carpenters and labourers to work on the Alaska Highway were being deferred because of un-

favourable weather conditions in the Northwest Territories. Workers in these classes were being sought for transference to Eastern Canada and the Pacific coast.

Several more teachers were wanted in Saskatchewan. Experienced stenographers, bookkeepers, clerks, saleswomen and photographic workers were required. The demand for girls and women to work in cafés, restaurants and as domestics in institutions and in urban and rural homes was insistent and continuous.

Pacific Region

Agricultural labour requirements were increasing in the lower mainland area of British Columbia. On Vancouver Island and in the Okanagan district unfavourable weather was retarding farm operations considerably. In spite of that, there was insufficient farm help. Plans for the formation of a Provincial land army were proceeding rapidly.

Despite intensive efforts to obtain them, there was an acute shortage of loggers in the coastal areas, in the Airplane Spruce camps on the Queen Charlotte Islands and, to a lesser extent, in the Prince George district. At Prince George, some operators were commencing to close down because of the spring break-up. About 500 men will be required in this area when the camps re-open. Many operators in the southern interior were employing Japanese labour.

All mines in the Region needed both skilled and unskilled men. The shortage in both coal and base metal mines was on the increase. Absenteeism, especially on the night shifts in the coal mines, was proving a serious handicap. Inter-regional clearance was being considered as a possible means of solving the mine-labour problem.

Sawmill workers were needed in spite of reductions in the season's production of logs and unfavourable weather on the mainland. Skilled and unskilled tradesmen were urgently needed in the metals industries and several hundred men and women were required to assist in the manufacture of aircraft. Efforts were being made to have them transferred in from other Regions. Skilled, semi-skilled and unskilled workers were needed by the ship-building industry, in a few instances to replace men who were returning to farms.

There was an acute shortage of construction labourers for National Defence projects on Vancouver Island and in the northern interior. The efforts to obtain road construction labourers through clearance had met with only indifferent success. Wage-rate differentials, as well as the revocation of the seven-day notice rule were causing a serious labour

turnover. To some extent too, weather conditions were delaying the completion of road construction.

Experienced office help was in demand in a number of the larger centres, although a measure of progress was being made in meeting these requirements. Competent help for hotels, restaurants, camp kitchens and private

homes was scarce in all the larger communities.

The general labour situation throughout the Pacific Region was reported to be "definitely worse in all essential industries" and in most of the National Defence projects. Enlistments and calls for service in the Armed Forces were aggravating the situation.

Applications for Employment; Vacancies and Placements; February, 1943

THE volume of business transacted by the Employment and Selective Service Offices of the Unemployment Insurance Commission for the four-week period January 29, to February 25, as indicated by the average daily placements effected, showed a decline of 5.2 per cent in the average daily placements when compared with those of the preceding four week period, but an increase of 510.5 per cent over those of the month of February a year ago. Under the first comparison, except for a marked gain in manufacturing and slight inclines in trade and agriculture, all industrial divisions registered declines, the most noteworthy being in construction, services and logging. When compared with the month of February, 1942, all groups showed increases, the most pronounced being in manufacturing with fairly substantial gains in services, construction and trade.

The accompanying chart shows the trend of employment since January, 1941, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the Employment and Selective Service Offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications took upward courses. The ratio of vacancies to each 100 applications being 105.0 during the four weeks ending February 25, in contrast to 94.0 during the previous four week period and 61.5 during the month of February, 1942. The ratio of placements to each 100 applications during the period under review was 69.9 compared with 64.9 for the first four weeks of January, 1943, and 49.7 during February last year.

The average number of vacancies reported daily by employers to the offices throughout Canada during four weeks ending February 25, was 8,567, as compared with 8,701 during the previous four weeks ending January 28, and with 1,148 during February, 1942. The average number of applications for employment received daily by the offices during the period under review was 8,160, in comparison with

9,255 during the previous period and 1,879 in February last year. The average number of placements made daily by the offices during the period January 29, to February 25, was 5,702, of which 5,515 were in regular employment and 187 in work of one week's duration or less, as compared with a total daily average of 6,016 during the preceding four weeks. Placements during February a year ago averaged 934 daily, consisting of 615 in regular and 319 in casual employment.

During the period ending February 25, the Employment and Selective Service Offices referred 193,798 persons to vacancies and effected a total of 136,842 placements. Of these the placements in regular employment were 132,363, of which 88,444 were of men and 43,919 of women, while placements in casual work totalled 4,479. The number of vacancies reported by employers was 135,406 for men and 70,199 for women, a total of 205,605, while applications for work numbered 195,830 of which 128,211 were from men and 67,619 from women. Reports for the four weeks January 1, to 28, 1943, showed 200,122 positions available, 219,849 applications made and 138,351 placements effected, while in February, 1942, there were recorded 27,546 vacancies, 45,075 applications for work and 22,410 placements in regular and casual employment.

The following table gives the placements effected by the offices, each year, from January, 1933, to date:—

Year	Placements		
	Regular	Casual	Totals
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935.....	226,345	127,457	353,802
1936.....	217,931	113,519	331,450
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	809,983	85,638	895,621
1943 (8 weeks).....	263,432	11,761	275,193

NOVA SCOTIA AND PRINCE EDWARD ISLAND

During the four weeks ending February 25, 1943, the daily average of positions offered through Employment and Selective Service Offices in Nova Scotia and Prince Edward Island was 351, compared with 390 during the period ending January 28, and 136 in February, 1942. During the period under review, the average number of placements recorded daily was 247, in comparison with 263 in the preceding four weeks and 129 in February of last year. A fairly large increase in the manufacturing industries was mainly responsible for the gain in placements over February, 1942, although all other industrial groups

showed a small decrease when compared with the preceding four weeks, but an increase over February, 1942. The daily average being 210 during the period under review, 280 in the first four weeks in January, 1943, and 30 in February, 1942. The average number of placements effected daily was 172 during the four weeks under review, compared with 198 in the preceding four weeks and 26 during February of last year. Except for a nominal decline in fishing and hunting, all industrial groups indicated improvement over February of last year, the largest gain being in construction with somewhat smaller increases in manufacturing, services, logging, trade and transportation. Placements by industrial divisions included:

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

except services, showed improvement under this comparison, the most important of which were in construction, trade, transportation, mining and logging. Placements by industrial divisions during the four weeks ending February 25, were: manufacturing 1,837; construction 1,464; services 1,209; trade 482; transportation 338; logging 249 and mining 226. There were 4,296 men and 1,474 women placed in regular employment.

NEW BRUNSWICK

Employment opportunities, as indicated by orders received at Offices in New Brunswick during the period ending February 25,

construction 1,098; services 953; manufacturing 806; logging 472; trade 367 and transportation 222. Placements in regular employment numbered 3,004 of men and 932 of women.

QUEBEC

The demand for workers on a daily average as indicated by orders listed at Employment Offices in the Province of Quebec during the four weeks ending February 25 was 2,686, as compared with 2,717 during the preceding four weeks and with 162 in February of last year. An increase was reported in placements during the four weeks under review, the daily average being 1,473 compared with 1,327 in the pre-

ceeding period and with 84 in February, 1942. A substantial increase in the manufacturing industries was mainly responsible for the gain in placements over February, 1942, although services, construction, trade, logging and transportation were considerably higher with smaller increases in mining and finance. Industries in which employment was found for the largest number of workers included: manufacturing 20,399; services 4,830; construction 3,617; trade 1,984; logging 1,916; transportation 1,583 and mining 530. During the four weeks ending February 25, there were 23,973 men and 10,889 women placed in regular employment.

ONTARIO

Orders received at Employment Offices in Ontario during the period ending February 25, called for an average of 3,320 workers daily compared with 3,303 in the preceding four weeks and with 471 during February, 1942. There was a daily average of 2,359 placements compared with 2,550 during the four weeks ending January 28, and 410 in February of last year. All industrial groups participated in the increase in placements over February of last year, the most outstanding being in the manufacturing industries, although services, trade, transportation, construction and logging recorded noteworthy advances. A more moderate improvement was shown in finance and mining. Industrial divisions in which the majority of placements were effected included: manufacturing 29,646; services 10,101; trade 5,075; construction 4,116; transportation 3,145; logging 2,644; finance 736; mining 693 and agriculture 263. Placements in regular employment numbered 35,416 of men and 19,762 of women.

MANITOBA

Orders listed at Employment Offices in Manitoba during the period ending February 25, called for a daily average of 380 workers compared with 352 during the first four weeks in January and with 98 in February of last year. Placements showed a higher average during the period under review, 326 daily in comparison with 275 in the preceding four weeks and with 82 during the corresponding month of last year. With the exception of a moderate decline in logging, all industrial groups showed improvement when comparing the four weeks under review with February, 1942, the most pronounced gains being in manufacturing and services while smaller increases were reported in trade, transportation and construction. Placements by industrial divisions included: manufacturing 2,317; services 1,885; trade 1,070; transportation 850; construction 685; logging 476; mining 210 and agriculture 171.

During the period ending February 25, there were 4,359 men and 2,846 women placed in regular employment.

SASKATCHEWAN

Positions offered through Employment Offices in Saskatchewan during the four weeks ending February 25, averaged 172 daily compared with 183 during the period ending January 28, and with 38 in February, 1942. The average number of placements effected daily was 143 during the four weeks under review, in comparison with 160 in the preceding period and 31 in February of last year. Except for a nominal decline in logging, all industrial groups showed gains over the corresponding month of last year, the most important of which were in services, trade, manufacturing and transportation. Industrial divisions in which most of the placements were effected included: services 1,408; trade 660; manufacturing 617; transportation 316 and construction 133. There were 1,659 men and 1,459 women placed in regular employment.

ALBERTA

There was an increase in the average number of positions available daily at Employment Offices in Alberta during the period ending February 25, there being 408 compared with 396 in the preceding four weeks and with 69 in the corresponding month of 1942. During the period under review the average number of placements registered daily was 305, in comparison with 332 during the first four weeks in January and 60 in February, 1942. Fairly large increases in services, construction and manufacturing and smaller gains in trade and transportation accounted for the improvement in placements over February of last year, while a moderate gain was recorded in mining. Industries in which employment was found for more than 100 workers included: services 1,980; construction 1,397; manufacturing 1,194; trade 972; transportation 810; logging 397; mining 276 and agriculture 173. Placements in regular employment numbered 4,544 of men and 2,312 of women.

BRITISH COLUMBIA

Opportunities for employment at Employment Offices in British Columbia during the four weeks ending February 25, numbered 1,039 daily compared with 1,081 in the preceding period and with 143 in February of last year. There was a daily average of 676 placements compared with 911 during the first four weeks in January, and 111 in February, 1942. Except for agriculture in which a minor

decline occurred, all industrial divisions recorded increases in placements over February, 1942, the most pronounced gain being in manufacturing, although fairly large increases were reported in construction, services, trade, logging and transportation. In addition, improvement of more moderate proportions was

shown in mining and finance. Placements by industrial divisions included: manufacturing 5,421; services 3,284; construction 2,865; logging 1,394; trade 1,294; transportation 1,050; mining 448 and finance 297. During the four weeks under review, there were 11,193 men and 4,245 women placed in regular employment.

Unemployment in Trade Unions at the close of February, 1943

UNEMPLOYMENT in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Reports were tabulated at the end of February from 2,245 labour organizations having a total membership of 403,475 persons. Of these 6,202, or a percentage of 1.5 were without work; this percentage was identical with that shown in January, while in February a year ago, the percentage of unemployed union members was 4.0. Although the general situation in February remained unchanged fluctuations occurred within the various trades. Among the union members in the manufacturing group the

unemployment percentage declined from .9 to .6. The slightly higher employment level shown for these workers was sufficient to offset other employment contractions; these included the rather noteworthy seasonal recession in available work, as indicated by union members in the building and construction trades, as well as the employment declines, on a much smaller scale which took place among fishermen and lumber workers and loggers. As will be seen in Table II, the percentage of unemployment among the workers in building and construction was up from 6.2 to 8.4. As in other monthly comparisons made in previous issues, employment conditions in February were better than

percentage was up from 1.4 to 3.2. In comparison with the situation at the close of February a year ago, much higher employment levels were observed in Ontario and Saskatchewan, as the unemployment percentage in both cases, declined from 4.6 to 1.1; decided improvement was apparent, likewise in Quebec, Manitoba, Nova Scotia and British Columbia. Minor employment increases only were in evidence in Alberta, while in New Brunswick there was a slight contraction in work.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

for any corresponding month in trade union records, since these articles appeared on a monthly basis, for the first time, for January, 1919. From December, 1915 to the end of 1918 the return was made at the close of each quarter, only.

In table I, the unemployment percentage is shown for each province. In February, these percentages ranged from .5 in Nova Scotia to 3.2 in Alberta. The percentage of unemployment in Manitoba was 1.9 in comparison with 2.7 in January. In British Columbia and Quebec the percentages of those without work were 1.1 and 2.0 respectively; these reflected slight improvements. In Nova Scotia, New Brunswick and Saskatchewan employment was very slightly reduced, while in Alberta, due to seasonal conditions, there was a noteworthy employment contraction, as the unemployment

percentages of unemployment ranged from 1.1 in Regina to 5.5 in Edmonton. In comparison with the preceding month a moderate improvement was reflected in Winnipeg reports, as the percentage of those without work declined from 3.0 to 1.9. Slightly lower employment levels were observed in Halifax, Saint John, Montreal, Toronto, Regina and Vancouver, while in Edmonton there was a pronounced contraction in available work, as the unemployment percentage in that city was up from .8 to 5.5; this was due mainly to seasonal influences. In comparison with the situation in February, 1942, marked employment expansion was apparent in Montreal, Toronto and Regina. The percentages of unemployed members in these cities were 1.2, 1.4 and 1.1, respectively, as compared with percentages of 4.3, 5.9 and 4.7, a year ago. Substantially better con-

ditions prevailed in Winnipeg and Vancouver, likewise, although the expansions were not quite as marked; union members in Halifax, Saint John and Edmonton indicated slight betterment, only.

The accompanying chart shows the trend of unemployment from January, 1938, to date. The point of the curve in February, 1943, rested at the same level as in the preceding month, thus indicating an unchanged situation. The level of the curve was at a substantially lower point than in February a year ago, thus reflecting a much higher employment level for the period under review.

For the manufacturing industries 762 reports were tabulated. These had a total membership of 222,825 persons, of whom, 1,427, or a percentage of .6 were without work, in comparison with percentages of .9 in January, 1943, rested at the same level as in the preceding month unions of woodworkers indicated a marked expansion in available work, as the unemployment percentage for these workers declined from 6.2 to .6. Slightly higher employment levels were observed for papermakers and for union members in the printing and publishing trades, as the unemployment percentages declined from 2.0 to 1.0 and from 1.6 to 1.1, respectively; among chemical workers, also, there was a minor increase in work. Fractional improvement was in evidence among bakers and confectioners, and fur workers; little or no unemployment was indicated for these members. The percentage of those without work in the garment group which includes both men's and women's clothing workers was .2, in comparison with .6, while for union members in the iron and steel and clay, glass and stone trades the percentages of unemployment remained unchanged at .2 and .1, respectively. Among the organizations in which the members were employed at both dates were soft drink workers, cigar and tobacco workers, electric current employees, etc., jewellery, aluminum, rubber and mineral products workers. On the other hand, among hat, cap and glove workers and textile and carpet workers there were very slight contractions in work; there was very little unemployment in either of these groups. Among unclassified manufacturing workers, leather workers and butchers, meat and fish packers the percentages of unemployed members were 18.9, 6.1 and 6.0, respectively; each of these was appreciably higher, thus reflecting rather substantial employment recessions. In comparison with the situation in February, 1942, as will be seen in Table II, pronounced expansion in

work was apparent among union members in the iron and steel trades, as the unemployment percentages dropped from 2.1 to .2. Among the smaller memberships, such as fur workers there was, likewise, an impressive increase in work afforded. Considerably higher employment levels were in evidence, likewise, for clay, glass and stone and woodworkers. Among unions of rubber, jewellery and mineral products workers, there was no unemployment at either date. On the other hand, a substantial decline in activity was observed for butchers, meat and fish packers, as the percentage of those without work increased from 0; or full employment, to 6.0.

Returns were compiled from 56 unions of coal miners having a combined membership of 20,579 persons. As in the preceding month, there was no unemployment reported; in February, a year ago the percentage of those without work was 1.6. In comparison with the situation, in February, 1942, Nova Scotia, Alberta and British Columbia union members were fully employed while the corresponding

unemployment percentages at that date were 1.5, 2.1 and 1.3. In New Brunswick, there was no unemployment reported at either date.

Reports were tabulated from 8 unions of non-metallic mineral workers. The total membership was 4,085 persons, of whom 186, or a percentage of 4.6 were without work, in comparison with percentages of 5.1 in January, and 7.6 in February, a year ago.

Unions in the building and construction trades returned 224 reports, having a total membership of 34,511 persons, of whom 2,889 or a percentage of 8.4, were unemployed in comparison with percentages of 6.2 in January and 15.5 in February a year ago. As compared with the preceding month unions of granite and stonecutters, hod carriers and unclassified building workers, wood, wire and metal lathers and painters, decorators and paperhangers all reported minor employment increases, although for the two first named organizations, the percentages of unemployed members remained rather high at 6.7 and 6.1 respectively; very slight betterment was observed for electrical workers and plumbers and steamfitters, although very little unemployment prevailed among these members. On the other hand bridge and structural iron workers indicated an unemployment percentage of .8 and steamshovelmen, of 2.5; no unemployment was reported by either of these groups, in the previous month. Substantial seasonal reductions in available work were reflected in returns received from unions of bricklayers, masons and plasterers and carpenters and joiners, in which groups the unemployment percentages were 21.8 and 10.0, respectively; the corresponding percentages in January were 15.8 and 6.3. In comparison with conditions in February, 1942, pronounced expansion in work afforded was apparent among bricklayers, masons and plasterers and carpenters and joiners. Among the organizations having smaller memberships decidedly better conditions were noted for granite and stonecutters, painters, decorators and paperhangers, plumbers and steamfitters, and hod carriers and unclassified building workers.

In the transportation industries there were 878 reports tabulated having an aggregate membership of 81,028 persons, of whom, 1,054, or a percentage of 1.3 were without work. This percentage was identical with that shown in January; in February, a year ago, the unemployment percentage was 2.9. Over 79 per cent of the reporting membership, were in the steam railway division. As will be seen in Table II, the percentage of those without work in this group was 1.5; this

was the same percentage as that recorded in the previous month. Among navigation workers there was a fractional employment increase, while among street and electric railway employees percentage of unemployment remained unchanged, at .0; a very slight advance to full employment was observed for unions of teamsters and chauffeurs. In comparison with the situation in February a year ago, noteworthy expansion was apparent for steam railway employees, while an appreciable increase was in evidence, also, for navigation workers. As in the previous comparison, no change was indicated by street and electric railway employees, while teamsters and chauffeurs were fully employed at both dates.

From unions in the retail and wholesale trade 10 reports were received, having an aggregate membership of 2,400 persons; as in the previous month and in February, a year ago, there was no unemployment among these workers.

From unions of civic employees 108 reports were received having 11,012 members. Of these, 21, or a percentage of .2 were without work, in comparison with .0 in January and 2.0 in February, 1942.

In the miscellaneous group of occupations reports were received from 139 unions with an aggregate membership of 12,137 persons, of whom, 167, or a percentage of 1.4 were unemployed in comparison with .8 per cent in January and 1.5 per cent in February, 1942. In comparison with the preceding month the percentages of unemployment among barbers, stationary engineers and firemen remained unchanged at .5 and .7, respectively; a fractional employment recession was noted among unclassified workers, while the percentages of those out of work among hotel and restaurant and theatre and stage employees were 2.9 and 4.1, respectively; these levels were considerably higher, thus reflecting substantial contractions in activity. In comparison with conditions in February, 1942, considerably higher employment levels were apparent among theatre and stage employees and stationary engineers and firemen, while unclassified workers did not record any change; there was a fractional employment recession for barbers. Among hotel and restaurant employees there was slight contraction in work afforded.

Returns were secured from 3 unions of fishermen with a total membership of 2,421 persons, of whom, 225 or a percentage of 9.3 were unemployed in comparison with percentages of 4.0 in January and 8.4 in February, 1942.

Reports were tabulated from 2 unions of lumber workers and loggers. The combined membership was given as 2,969 persons, of whom, 59, or a percentage of 2.0 were without work in comparison with a fully employed situation in January. In February, a year ago, the percentage of unemployed members was 5.6.

Table I shows by provinces the average percentage of union members, who were unemployed each year from 1932 to 1942, inclusive, and also, the percentage of unemployment for February of each year from 1932 to 1941, inclusive and from February, 1942, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Employment and Unemployment in Great Britain and the United States

Great Britain

THE British *Ministry of Labour Gazette*, February, 1943, summarizes the December-January employment situation in Great Britain as follows:—

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at January 18 (exclusive of 21,982 men who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 58,334; those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,291; and those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 2,084. As compared with December 14, the numbers wholly unemployed showed an increase of 143, and unemployed casual workers showed a decrease of 615.

The corresponding figures for women and girls at January 18 were 35,374 wholly unemployed (exclusive of those, numbering 833, who had been classified by interviewing panels as unsuitable for normal full-time employment), 1,823 temporarily stopped, and 111 unemployed casual workers. Of the 35,374 wholly unemployed, 1,608 had been classified as unable for good cause to transfer to another area. As compared with December 14, the numbers wholly unemployed showed an increase of 6,637, those temporarily stopped showed an increase of 948, and unemployed casual workers showed a decrease of 48.

There were increases in the number of boys and girls recorded as unemployed, largely owing to the registration of school leavers, in many areas, at the end of the Christmas term.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for January 18 was 67,859, as compared with 61,362 at December 14, and 107,975 at January 1, 1942.

United States

The total number of employees in non-agricultural establishments in January, 1943,

was 37,906,000, about 3 million more than were employed in January, 1942, 6 million more than in January, 1941, and 8 million more than in January, 1940, according to an official report issued by the United States Department of Labour. These figures do not include proprietors of unincorporated businesses, self-employed persons, domestics employed in private homes, public emergency employees, and personnel in the armed forces.

Two-thirds of the gain in employment over the year was in the manufacturing industries, which accounted for an increase of 2,251,000. Chief employment decreases were noted in trade (364,000), contract and Federal force-account construction (204,000), and mining (91,000).

Between mid-December and mid-January there was a decrease of about a million workers due almost entirely to seasonal declines in trade and in construction. This decline is somewhat less than the average December-to-January change which has occurred in recent years.

Manufacturing employment was 15,719,000—slightly more than in December. This is the first time since 1935 that manufacturing employment has not been lower in January than in December. Usually there is a decline of more than 100,000 over this period. All other industry divisions showed seasonal declines—about the same amount as in recent years. These ranged from 11,000 in mining to 216,000 in construction and 715,000 in trade.

The momentum of the war effort has been most strongly felt in those industries largely engaged in production for war use. Industries of the durable-goods group employing 7,886,000 wage earners in January gained 1,779,000 workers since January, 1942. This increase was largely confined to the metal and metal-working groups, which are now engaged almost entirely in war work; while such groups as lumber and timber products, furniture and finished lumber products, and stone, clay, and glass products reported decreases.

Labour Law

Recent Regulations Under Dominion and Provincial Legislation

Selective Service Civilian and Mobilization Regulations—Wages Order—Merchant Seamen—Wage Deductions for Income Tax—Old Age Pensions—Workmen's Compensation in British Columbia and Ontario—Minimum Wages in Quebec.

A MENDMENTS in the National Selective Service Civilian Regulations simplify the procedure whereby men subject to military call may be directed into more essential employment and preserve the insurance and medical services benefits of persons who are transferred into new employment. The provisions of the National Selective Service Mobilization Regulations relating to Doukhobors, Mennonites and conscientious objectors have been re-cast. Orders have been issued under the Civilian Regulations relating to women in canneries and part-time workers in hospitals.

A change has been made in the provisions of the Wartime Wages Control Order regarding the determination of cost-of-living bonuses. The regulations governing the compensation payable to merchant seamen for war damage to effects and those relating to special wartime safety measures have been amended, and the eyesight standard has been lowered for candidates for masters' and mates' certificates for home trade, inland and minor waters vessels. Amendments have also been made in regulations under the Income War Tax and Old Age Pension Acts.

The classification of industries for assessment purposes under the Ontario Workmen's Compensation Act has been altered somewhat and additions have been made to the list of compensatable diseases in British Columbia. Quebec has renewed three minimum wage orders.

National Selective Service Civilian Regulations

Four amendments have been made in these Regulations (L. G., Jan., 1943, p. 19) by Orders in Council passed under the War Measures and National Resources Mobilization Acts. Orders under the Regulations have also been issued relating to women in canneries and part-time workers in hospitals.

Direction into More Essential Employment.—Order in Council P.C. 2665 of April 2 simplifies the procedure whereby workers liable to be called up under the National Selective Service Mobilization Regulations

(L. G., Jan., 1943, p. 153) may be directed into more essential employment. Under the original Regulations the Minister of Labour could require an employer to give a worker two weeks' notice if the worker belonged to an age-group designated for call-up and if the Minister considered that he would "contribute more effectively to the prosecution of the war" in some other employment. At the end of two weeks, a Selective Service Officer could direct the worker into suitable employment in the same way as he may direct unemployed persons into employment.

Under the Regulations as now amended the Minister or any senior officer designated by him may forbid any employer or group or class of employers to retain in their employment after a specified period without a permit any person or group or class of persons subject to call. He may also issue orders requiring employers to terminate the employment of any such person or group of persons.

Selective Service Officers may direct such persons into suitable employment. The factors to be considered in determining the suitability of the employment are set forth in a section of the original Regulations which is still in effect. They include the worker's physical condition, training, experience, previous earnings, personal responsibilities, and the distance of the new place of employment from his home. The section stipulating that workers directed into employment may not leave that employment within six months of the direction without a permit from the Selective Service Officer is also still in effect. A new provision prohibits the direction of persons into employment which is available because of a strike.

The section setting forth the advances for transportation, etc., which may be made to a worker who has been directed or requested to take employment has also been amended to authorize advances to cover the cost of work-clothes.

By a second amendment passed April 12 (P.C. 2907) persons who refuse to comply with an order of a Selective Service Officer to transfer to more essential employment become

liable for alternative service of the same type as is required of conscientious objectors under the National Selective Service Mobilization Regulations (see below). The section concerning the wages to be paid to conscientious objectors does not apply to such persons.

Employers' Group Insurance and Medical Service Plans. Another amendment authorized by Order in Council P.C. 2586 of April 1, is designed to preserve as far as possible the benefits under group insurance and medical aid plans enjoyed by persons who are requested or directed to change their employment. The provisions relating to group insurance do not apply to persons in the employment of a municipality or of His Majesty in right of Canada or a province.

Insurance under a group plan and the right to benefits under a medical services plan will be continued if the transferred person signifies that he wishes them continued by depositing notice on a prescribed form in a local Employment and Selective Service Office. The transferred person must normally deposit this notice before the termination of his original employment. He may file it subsequently, however, if the insurance company consents. Moreover, if he applies within 30 days of the termination of employment for a ruling by the Minister that he is a transferred person and the Minister makes such a ruling, he may deposit the necessary notice within seven days of being informed of the ruling. Persons who changed their employment on request or direction before April 1 may also have their insurance and benefits continued, with the consent of the Minister, if they file the required notice before a date fixed by the Minister but not later than July 1.

Insurance or the right to medical benefits under these Regulations is terminated: (1) if a person's employment is terminated under direction or request to take new employment and he does not take it within seven days; (2) if his employment is terminated without any direction or request; (3) if a transferred person gives notice in writing to his new employer that he wishes to cancel his insurance or right to benefit; (4) if he reaches the age when the insurance or right to benefit would have been cancelled under the original plan; or (5) if the Minister exercises a right, given him by this amendment to order, with the concurrence of the National Selective Service Advisory Board, the cancellation of all insurance or benefits which are continued.

Where a transferred person continues to be insured he will be covered by the company which issued the original group plan. The company is to maintain the insurance either under the original group plan with appropriate

amendments or under a new contract. With certain specified exceptions, the rights and obligations of the transferred person will be determined *mutatis mutandis* by the terms of the original plan. If he returns to his original employment, he will, for the purpose of determining his benefits, be considered to have been in continuous employment with the original employer for the aggregate of his period of insurance under these Regulations and his periods of employment with his original employer before and after transfer.

For the purpose of administering the sections relating to group insurance, a Central Group Insurance Office has been established by the Canadian Life Insurance Officers Association. The operations of this office are at all times subject to review by the Superintendent of Insurance for Canada. The new employer of a transferred person will pay the premiums for group insurance to this office while contributions for medical services will be paid to the Minister of Labour. The new employer may deduct from the wages of a transferred person an amount for insurance or medical services which does not exceed the amount deducted by the original employer, but if the benefits payable under the insurance plan are reduced the deductions which may be made must also be reduced proportionately.

An insurance company which insures a transferred person must keep an account of all insurance on such a person, calculate on a monthly basis the premium rate for the insurance maintained under these Regulations and adopt a method based on experience for ascertaining and apportioning divisible surpluses or adjusting premiums. By the tenth day of each month it must forward to the Central Group Insurance Office a statement containing all information required by the office regarding persons whose premiums are payable to it. The executive committee of each medical services plan must keep a separate account of the cost of benefits provided to transferred persons and must furnish the Minister each month with such information as he may require. The Central Group Insurance Office and the Minister will determine the amounts payable by new employers on account of insurance and medical benefits and will render accounts to these employers. The money collected will be forwarded to the appropriate insurance companies or executive committees as the case may be.

Any person who is aggrieved by a decision of the Minister or the Central Group Insurance Office regarding insurance, or by a decision of the Minister regarding medical services, has a right of appeal to the Minister of Finance. The latter's decision is final.

A fourth amendment (P.C. 3208) passed April 19, declares that any person appointed under the Regulations and designated by the Minister shall have the powers of a Commissioner for taking affidavits.

Selective Service Orders. By Order 3 issued February 27 under the Regulations, the temporary seasonal employment of women in canneries has been exempted from the provisions of the Regulations relating to separation from employment, permits to seek employment, agricultural employment and advertisements. The Order applies only to employment which will not exceed 10 weeks. By Order 4 of March 31 part-time employment in hospitals is exempted from the same provisions of the Regulations, provided it does not exceed 24 hours a week.

National Selective Service Mobilization Regulations

These Regulations (L.G., Jan., 1943, p. 153) govern compulsory military service. New provisions regarding Doukhobors, Mennonites and conscientious objectors have been inserted in them by Order in Council P.C. 2821 of April 7, 1943, under the War Measures and National Resources Mobilization Acts. Order in Council P.C. 3097 of April 15 declared this amendment in effect on May 1, 1943.

The original Regulations provided that such persons could be required to carry out alternative service prescribed by the Minister instead of military training. In practice this alternative service has so far consisted chiefly of work in the National Parks and fire prevention work in British Columbia, though in some cases the persons involved have been permitted to accept private employment at prevailing rates in lumbering and logging. The purpose of the present amendment is "to make such persons available for work in agriculture and industry under conditions which provide for uniform treatment of such persons and at the same time will not induce applications for postponement on grounds of conscientious objection."

In order that their services might be used to the best advantage, the responsibility for directing them to alternative service of the former type or to employment in agriculture or industry is vested in the employment service operated under the National Selective Service Civilian Regulations. A Selective Service Officer in any area may be designated by the Minister of Labour to act as Alternative Service Officer for that area. This Officer may order a person to whom these provisions apply either to report at a given time and place to perform alternative service or to apply forthwith for designated employment in agriculture, industry or elsewhere.

The Minister may make arrangements with any Government department or enter into agreements with the provinces for the organization and operation of places where persons may be required to report and perform alternative service, and he may prescribe rules for the regulation of such places and of the performance of alternative service. A person who fails to report when ordered, leaves without permission, violates a rule made by the Minister or otherwise contravenes the provisions of these sections is subject to a penalty. Persons performing alternative service will be paid at least 50 cents per day and if they are appointed sub-foremen or foremen they may be paid up to 75 cents or \$1 respectively. They are entitled to receive benefits under the Government Employees Compensation Act but otherwise the Crown is not liable in respect of any claim arising out of disability, illness or death.

If a person is ordered to report for employment in agriculture, his employer will provide him with board and lodging and in addition will pay in respect of the employment such wages as the Minister may prescribe. If the employment is outside agriculture, the employer will pay in respect of it such wages as are fixed by collective agreement, or, if there is no agreement, as are paid by good employers, and out of these wages the employer will provide the person with board and lodging. Whether the employment is in agriculture or elsewhere, the person performing the work will receive, in addition to board and lodging, not more than \$25 per month of the wages payable in respect of his employment. The remainder must be paid to the Canadian Red Cross Society after payment of any amount which the worker is required by law to pay to other persons.

An Alternative Service Officer may defray the necessary travelling expenses of any person he has ordered to report for alternative service or for employment.

Wartime Wages Control Order

By an amendment in the Wartime Wages Control Order (P.C. 5963, L. G., 1942, p. 778) passed March 23 (P.C. 2370) under the War Measures Act, the National War Labour Board has been authorized to make adjustments in cost-of-living bonuses to eliminate unequal and unfair combinations of wage rates and cost-of-living bonuses. Under the provisions of P.C. 5963 relating to the determination of cost-of-living bonuses, the Board can require any employer to pay a bonus calculated on the rise in the cost-of-living index number

above the index number for any month designated by the Board between August, 1939 and October, 1941. However, if the employer had granted a general wage increase in this period, the base month must be between the month in which the increase was granted and October, 1941. Because of variations in the dates and amounts of such increases, inequitable combinations of wage rates and bonuses resulted even after the Board had exercised its power to raise depressed wage rates. The amendment permits the Board to correct such inequities by designating as the base month on which a cost-of-living bonus is to be calculated, any month after August, 1939, which it considers appropriate, regardless of when the last general wage increase was granted.

Seamen

Loss of Personal Effects. The Compensation to Seamen (War Damage to Effects) Regulations, 1942 (L. G., 1942, p. 1173) have been amended by an Order in Council (P.C. 123/2590) passed March 31 under the War Measures Act in answer to representations from the Committee on War Risks Insurance and Bombardment Compensation and other responsible authorities. The amendment authorizes the payment of compensation for loss of personal effects to widows, or in their absence to next-of-kin, of merchant seamen or salt-water fishermen who are killed or presumed killed by enemy action at any time after September 3, 1939, and whose personal effects are lost in such action. In addition the schedule of maximum compensation payable to different classes of seamen has been revised. Wireless and radio officers, formerly classified as uncertified officers are now classified as certified officers and are therefore eligible for higher compensation. The maximum allowance for loss of effects payable to carpenters and joiners has been raised from \$90 to \$100 but their additional allowance for loss of tools has not been increased beyond the \$100 maximum set in the former schedule. The maximum rates for other classes have not been altered but the schedule has been clarified by minor changes in wording.

Wartime Safety Measures. Four sets of special wartime regulations relating to the safety of seamen were issued by the Minister of Transport under authority of an Order in Council of May 4 (L. G., 1942, pp. 925, 1936). The coverage of all four sets has been extended by an amendment issued on March 11. Formerly, they applied to vessels of Canadian registry of more than 500 tons gross tonnage engaged in foreign or home-trade voyages except coastal voyages. There is now no lower

limit on the tonnage of the ships and vessels engaged in most coastal trade are also included. It is now specified in all cases, however, that the voyages must be made in "dangerous waters".

Masters' and Mates' Certificates. To overcome a shortage of qualified masters and mates for vessels engaged on home trade, inland or minor waters voyages, an Order in Council (P.C. 2378) issued March 26 under the War Measures Act authorized the Minister of Transport to lower the eyesight standard required of candidates for such certificates by the Canadian Rules and Regulations Relating to the Examination of Masters and Mates of Home Trade, Inland and Minor Waters Vessels (L. G., 1936, p. 1134) issued under the Canada Shipping Act. Candidates, 50 years of age or over, may now qualify for such certificates on passing the lower standard of letter test which was formerly permitted only in the case of candidates in possession of certificates obtained before January 1, 1914. The object of the letter test, is, in the words of the regulations "to ensure that the candidate's eyesight is sufficiently good to enable him to pick up and identify correctly the lights of distant ships at sea."

Income War Tax Act

Under this Act, regulations were gazetted March 27 requiring employers to furnish their employees with a statement showing the amount of wages and salary paid to the worker and the amount of tax deducted or withheld by the employer during the preceding calendar year. The statement must be issued on or before May 31 of this year and in subsequent years by the last day of February. Employers are also required to furnish, at the request of any worker leaving the employer's service, a statement of the wages paid and taxes deducted or withheld up to the date of the cessation of employment.

Old Age Pensions Act

An amendment of last April in the regulations under the Dominion Old Age Pensions Act (L.G., 1938, p. 286; 1939, p. 1230; 1942, p. 583) declared that cost-of-living bonuses and supplemental allowances paid by the British Columbia and Alberta Governments to old age pensioners were to be disregarded in calculating a pensioner's income. Two subsequent amendments gazetted December 26 and March 13 have extended this provision to include such payments by the governments of Ontario and Manitoba.

British Columbia Workmen's Compensation Act

The British Columbia Workmen's Compensation Board has added several diseases to

the list of industrial diseases for which compensation is payable under the Act by a regulation gazetted March 11. They include silicosis contracted from any work in the mining industry where there is exposure to dust containing silica, including the grinding, repairing or handling of tools, equipment or machinery in any ore-crushing, rock-crushing or other mining operation; pulmonary tuberculosis arising out of employment in hospitals or sanatoria under the Act provided the workers were free from evidence of tuberculosis prior to employment; pneumoconiosis from sewer-construction, road-construction or tunnelling, or from grinding or polishing of stone, or from grinding, polishing or moulding in iron, steel or metal foundries; dermatitis due to any process in the canning or packing of fruit or vegetables; and tooth-erosion from exposure to acid mist in any process in electrolytic zinc-refining.

Ontario Workmen's Compensation Act

Regulations 116-121, gazetted March 6, make certain changes in the classes into which industries covered by the accident fund provisions of the Act are grouped for purposes of assessment. The manufacture of foundry facings, not previously mentioned in schedule 1 which enumerates the industries contributing to the accident fund and arranges them in classes, has been added to class 6 which contains such industries as stone-work, gravel pits, quarries, and the manufacture of tile, brick, cement, glass, pottery, porcelain, etc. All the industries in class 5 except mining, reduction, smelting or treatment of ores or minerals, diamond drilling and shaft sinking in or for mines have been transferred to

other classes. The manufacture of abrasives, carborundum, alundum, calcium carbide, formerly in class 5, and the manufacture of cyanamid, carbon electrodes, electrolytic ferrosilicon and graphite, not previously mentioned, have been added to class 7 which covers rolling mills, steel works and the manufacture of heavy forgings. Sinking, including boring and drilling of artesian wells, and the manufacture of gunpowder, nitro-glycerine, dynamite, gun-cotton, cordite or other high explosives, fireworks, torpedoes, fuses or cartridges have both been moved from class 5 to class 12. Cordite was not previously mentioned. Class 12 includes the manufacture of such materials as paint, varnish, turpentine, chemicals, drugs, petroleum, tar, etc., and the production and distribution of natural and artificial gas and ice. Transport of passengers, goods or materials by air was transferred from class 5 to class 20 which covers teaming and cartage, warehousing, storage, scavenging, snow and ice removal, creosoting of timbers, and coal, wood, and lumber yard and builders' supply businesses, etc.

Quebec Minimum Wage Act

Renewals of three Orders were gazetted March 27. Order 10 governing workers engaged in the pasteurization, manufacture and distribution of dairy products in Montreal and district (L. G., 1938, p. 1097; 1939, p. 910) is to remain in force until April 1, 1944. Order 16 relating to butter and cheese wholesale and export establishments in Montreal City and Island (L. G., 1938, p. 1350; 1939, p. 475), and Order 42 concerning peat-bog exploitations (L. G., 1941, p. 1110) were renewed to May 1, 1944.

Recent Legal Decisions Affecting Labour

Owner of Railway Car Held Liable in Alberta for Injury to Workman Employed by Railway Company

THE Alberta Supreme Court on February 5 awarded \$15,169.46 damages to an employee of the Canadian National Railways who fell from the roof of a box car owned by a company which operated midway shows at exhibitions. The accident was caused by a handhold on the roof of the car breaking away when the workman gripped it. His injuries resulted in permanent disability.

The defendant company challenged the right of the worker to sue for damages either under the Railway Act of Canada or under the Alberta Workmen's Compensation Act after

he received compensation under the latter Act.

Sec. 388 of the Railway Act declares that employees of a railway company may sue for damages if injured as a result of the company's failure to comply with the Act or regulations under it. The Board of Transport Commissioners had issued regulations regarding the installation of handholds and the evidence showed that the handhold which had caused the accident was installed contrary to these regulations. While holding that the cars of the defendant company became subject to the rules of the Board of Transport Commissioners as soon as they were brought on to a Canadian railway, the Court considered

that sec. 388 did not apply to the plaintiff because he was not an employee of the company which had failed to comply with the regulations.

Sec. 24 (3), (5) and (7) of the Alberta Workmen's Compensation Act declare that a worker may either claim compensation or bring action if injured through the negligence of a person who is neither his own employer nor an employer under the Act. If the worker claims compensation, the Workmen's Compensation Board is subrogated to his right of action, and no payment or settlement may be made to the worker or his dependents without the Board's consent. In such cases the Board's usual policy is to subtract the compensation paid to the worker from the proceeds of any judgment secured by the worker in any action, and remit the remainder to the worker if he releases the Board from all further claims in connection with the accident in question. Basing its decision on two earlier judgments, the Court held that by virtue of the Workmen's Compensation Act, the worker had a right of action in the case but the proceeds of the judgment must be paid into Court and were not to be paid out to the plaintiff without the consent of the Board.

On the question of the company's negligence, the Court considered that the evidence indicated that the handhold was not reasonably safe and constituted a "trap" since "there was an appearance of safety . . . cloaking a reality of danger." The Court held further that the defendant had failed to arrange for a proper inspection of its equipment. While inspectors of railway companies had inspected it on several occasions, such inspection was purely voluntary. The defendant company should have arranged for these inspectors to report potentially dangerous equipment to it.

In reply to the company's contention that it could not be held responsible for the accident because it did not employ the plaintiff and he was on its property in the position of an "invitee", the Court cited numerous cases, in one of which it was declared that

....a man who intends that others shall come upon property of which he is the occupier for purposes of work or business in which he is interested owes a duty to those who do so come to use reasonable care to see that the property, and the appliances upon it, which it is intended shall be used in the work are fit for the purpose to which they are to be put....

For these reasons the Court found the company negligent and assessed damages covering medical and hospital expenses, loss of present and future earnings and compensation for pain, suffering and loss of future enjoyment of life. *Smith v. Conklin and Garrett Limited* (No. 2) (1943) 1 Western Weekly Reports 332.

A separate hearing had been held to determine whether the plaintiff was obliged to answer questions regarding his belief that the car had been inspected, as to whether he had claimed workmen's compensation and whether the defect in the handhold was discernible and might have been discovered on inspection. The Court held that he must answer all these questions but declined to rule on the question of whether the plaintiff, by claiming compensation, had lost his right of action under sec. 24 of the Alberta Workmen's Compensation Act. *Smith v. Conklin and Garrett Limited* (No. 1) (1942) 3 Western Weekly Reports 612.

Injunction Suspended against Ladies' Garment Workers' Union in Montreal

An interlocutory injunction restraining picketing and other interference with its business, which was granted to the Ideal Dress Company on December 31, 1938, and modified on June 26, 1942 (L.G. 1939, p. 236; 1942, p. 873), was ordered suspended by a Montreal Superior Court on March 8. The restraining order was directed against officers and members of the International Ladies' Garment Workers' Union. Its suspension is to be effective until March 16, 1943, when the case is to be heard, or until such later date as the judge hearing the case fixes.

The original injunction was granted as a result of a strike called by the union on November 25, 1937, to protest the dismissal of certain employees allegedly for union activities and the company's refusal to negotiate a collective agreement with the union. The order forbade picketing, watching, besetting, soliciting persons to leave the company's employ and any interference whatever with the company's business.

On appeal, the injunction was modified on June 26, 1942, to permit peaceful picketing and assembly, the Appeal Court holding that the injunction was too comprehensive.

The union then petitioned for a suspension of the injunction and the petition was granted by Mr. Justice Fabre-Surveyer in the Superior Court. He pointed out that interlocutory injunctions are usually intended to continue in effect until the hearing of the case upon its merits. In the present case, however, leave to appeal against the original injunction had been granted and the order modified by the Court of King's Bench. Moreover, under the Code of Civil Procedure an injunction may be suspended for such period and under such conditions as the judge deems reasonable. The Appeal Court had considered that the company no longer needed protection since the

strike had been settled. Further, the case was to be heard on March 16 next. "It has been retarded for years by reason of the appeal taken (and by reasons out of control of the parties)" and "another appeal might produce similar results." *Lupovitch et al v. Shane et al*, Montreal Superior Court, March 8, 1943.

Contract for Instruction in a Trade Valid Even if School not Operating under Quebec Trade-schools Act

The proprietor of an "aircraft and technical school" won with costs an action he brought against a former student for the recovery of unpaid fees amounting to \$200. The case was heard by Mr. Justice Loranger of the Montreal Superior Court and judgment was delivered on December 2, 1942.

Under a contract of November 17, 1941, the defendant had agreed to pay the plaintiff the requisite fees in return for a machinist's course. He had taken the course for from seven to eight weeks but had ceased attending just as he was about to complete it. The plaintiff had repeatedly asked him to return but without success.

The defendant submitted that the contract was invalid because (1) the school was not operated in accordance with the provisions of the Trade-schools Act, 1941, and the regulations under it, and (2) the plaintiff had violated the regulations by guaranteeing him employment on completion of the course. The Trade-schools Act provides that "every person wishing to establish or operate a trade-school must make application to the Minister for a permit . . ." and regulations of October 9, 1941, declare that the Act applies to "all trades such as building, printing, mechanic."

The school in question did not have a permit and the Court held that it was therefore not a trade school which was subject to the provisions of the Act but an independent school. There was nothing in the law to prevent a person from teaching a trade to another person for a fee. The proprietor of a school which operated as a "trade school" without a permit was subject to a penalty under the Trade-schools Act, but that did not affect any contractual obligations which a student in the school might have entered into. *Marquis v. Montigny* (1943) *Rapports Judiciaires de Québec*, Cour Supérieure 60.

Labourers' Action for Wages Dismissed Because Prescribed Under Quebec Civil Code

Actions for the wages of day labourers engaged by the hour were held to be prescribed by one year in a judgment handed down on

December 30, 1942, by Chief Magistrate Roy in Quebec Superior Court. The point arose in connection with a suit by a labourer who had been employed at 25 cents per hour between December, 1938, and April, 1939, and who sought to recover unpaid wages amounting to \$85.75. Since the action was not instituted until November, 1942, it was dismissed with costs.

The decision hinged on the interpretation of arts. 2260-62 of the Civil Code. Art. 2260 provides that actions "for the hire of labour, or for the price of manual, professional and intellectual work," except as stated below, are prescribed by five years. Actions "for wages of workmen not reputed domestics and who are hired for a year or more" are prescribed by two years under art. 2261, while those "for wages of domestic or farm servants, merchants' clerks and other employees who are hired by the day, week or month" are prescribed by one year under art. 2262. It was pointed out that the only difference between arts. 2261 and 2262 which was relevant to the present case related to the term of engagement, and that the plaintiff, not being hired for a year, obviously did not come under 2261. The point at issue, therefore, was which of arts. 2260 and 2262 applied.

It was held that the distinction between these two articles was not based on the term of the engagement. "A contract for the hire of services at so much per year, per month, etc., is not a contract for a year or a month, i.e., for a fixed term, but it is considered to be a contract by the year or month, i.e., for an indefinite period." The true distinction, therefore, depended on the type of work. Prescription was for five years if the person engaged was not an employee, e.g., if he was a person hired by the job. In the present case the plaintiff was clearly an employee and thus his action came under art. 2262. *L'Hereault v. Mathieu* (1943) *Rapports Judiciaires de Québec*, Cour Supérieure 12.

English Courts Hold Employers Responsible for Accidents due to Workers' Carelessness if Machinery not Securely Fenced

Two cases in which an employer was prosecuted for violation of the provision of the British Factories Act requiring the fencing of dangerous machinery were reported in the British Ministry of Labour Gazette for December, 1942, and February, 1943. In both instances a Divisional Court reversed the decision of a Magistrate's Court and found the employer guilty of failing to fence securely a machine which had injured a worker.

The first case arose out of the injury of a girl whose hair had been caught in a revolving wheel when she crawled under a drying oven to recover a fallen tube. A second girl suffered a similar accident 16 days later. In addition to being charged with failing to fence the machine, the employer was prosecuted under the section of the Act which stipulates that if any person is killed or injured as a consequence of an occupier's failure to comply with the Act, the occupier may be required to pay a fine which can be applied to the benefit of the injured person or his family. In his defence, the employer pointed to the section of the Act which declares an occupier not guilty of an offence when an employee has violated the Act unless it is proved that the occupier failed to take all reasonable steps to prevent the contravention. The employer contended that in this case the workers had violated the section forbidding employees wilfully and without cause doing anything likely to endanger themselves or others and that he had expressly forbidden the workers going under the oven when the machinery was in motion.

It was admitted, however, that a guard could have been fixed on the oven which would have provided complete protection. The Divisional Court held, therefore, that the injury was due to the occupier's failure to fence securely, and the fact that the girls had acted recklessly was immaterial. The Lord Chief Justice pointed out that it was impossible to guarantee that workers will not be both foolish

and reckless, and, in his opinion, the object of the Factories Act was to protect the workers against their own folly and carelessness. *Wraith v. Flexible Metal Co., Ltd.*, Divisional Court, October 15, 1942.

In the second case the Magistrate had held that a heavy metal-cutting machine which caused injury to a 17-year-old boy was not dangerous and therefore need not be fenced. The boy, contrary to instructions and in the absence of an older workman, had set the blade of the machine in motion and suffered the loss of several fingers.

The Lord Chief Justice in the Divisional Court held that the blade was undoubtedly dangerous if it could cut metal when in motion, and therefore should have been securely fenced. The fact that the boy was disobeying orders and had no right to tamper with the machine was not material, in his opinion. He did not agree with the claim that the machine was doing what it was not designed to do when the accident occurred. It was doing what it was designed to do but at the wrong time. Tucker J. elaborated this point by stating that there would have been no offence if the machine was ordinarily safe and only became dangerous when changed to something different than it was intended to be by some deliberate act of mischief. Such an alteration had not occurred when the boy merely used the machine contrary to instructions. *Hoyles v. H. Bates and Son*, Divisional Court, November 6, 1942.

Prices and Price Control

Explanation and Description of the Dominion Bureau of Statistics Cost-of-Living Index

THE Dominion Bureau of Statistics cost-of-living index measures the influence of changes in retail prices of commodities and services upon the cost of a representative urban wage-earner family budget. The index is specified by the Wartime Wages Control Order (P.C. 5963, July 10, 1942) as the basis for cost-of-living bonus adjustments authorized under the terms of this order.

How the Index Budget was Established

In order to establish a representative urban wage-earner family budget from which to calculate changes in the cost of living, the Dominion Bureau of Statistics in 1938 made a study of some 45,000 homes in 12 cities across Canada. From this survey the Bureau picked out 1,439 typical families with earnings between \$600 a year and \$2,500 a year. Each of these families was helped to keep a careful record of their living expenses for one year, from October 1, 1937, to September 30, 1938.

Each family unit consisting of a husband and wife and from one to five children, was self-supporting, lived in a self-contained house or apartment, and did not share either its kitchen or its bathroom with any other family. When the check-up was completed, it was found that the average of these families contained 4.6 people, and that their average family income was \$1,453. Of this income \$1,414 was spent on things which could be included in the cost-of-living index, the rest of it going on such things as gifts and donations to charities. Approximately 31 per cent of the \$1,414 was spent on food, 19 per cent on housing, 6 per cent on fuel and light, 12 per cent on clothing, 9 per cent on home furnishings and services, and 23 per cent on other items which included health, transportation, recreation and insurance as shown in table I.

When the survey had been made, the Dominion Bureau of Statistics could decide what items to include and what importance to give them if the cost-of-living index was to tell the story of an average Canadian wage-earner family. The Bureau then made arrangements to get regular reports on the prices of these items from different parts of the country.

As shown in tables I and II the index budget is divided into six expenditure groups, including foods, fuel and light, rent, clothing, home furnishings and services, and miscellaneous items. For each group the list includes a number of representative staple articles in common use for which reliable and comparative prices can be obtained regularly.

Items excluded from the Index—Goods which are not available every month cannot be included in a calculation designed to show monthly changes, and some lines of seasonal goods, especially in fruits and vegetables, are therefore excluded. However the list, in as far as is possible, includes articles which show at least the general trend of the prices of the goods not included. It would be comparatively easy to construct a budget of family expenditure representing all varieties of goods available at any particular date or season in the year and to compare the cost with that on the same date in a previous year; but such an extensive budget, including seasonal goods, could not be made comparable from month to month or even at quarterly or half-yearly intervals.

How the Index is Made

When the prices are all collected, the Bureau of Statistics makes them into an index number. The index number records the change in the cost of living of the average Canadian wage-earner, but instead of showing it in dollars and cents it shows it in percentage points. To do this, however, there has to be a starting point from which to measure the changes. This starting point can be the cost of living at any particular date, and it is usually called the "base period". One is then able to say that the cost of living is 110 per cent of what it was in the base period, or 90 per cent of what it was in the base period, or whatever the actual figure is.

To take a concrete example, if the cost of living of an average family was \$1,414 a year during the base period, \$1,414 would be represented in the index as 100. Then if the living expenses of this family rose to \$1,555 a year, which is a 10 per cent increase, the index would be raised to 110, and if the

living expenses of this family later fell to \$1,273 a year, which is a 10 per cent decrease from \$1,414, the index would decline to 90.

Any period could be used as a base period; and when the Canadian cost-of-living index was made up the average of the years 1935 to 1939 was picked as the base. It is, however, a straightforward piece of arithmetic to change the base of the index from one date to another; and in order to measure the change in the cost of living that has taken place from the beginning of the war, the last month before the war, August, 1939, can be used as the base period. It is the August, 1939, base that is used by the National War Labour Board when calculating the cost-of-living bonus. (See table on page 540.)

How Prices are Collected

The manner of compilation of the prices of items in the six groups is as follows:

Foods.—The index for the food group is calculated from the prices of 45 items secured in reports for the beginning of each month from about 1,600 grocers and butchers in 69 cities, both chain and independent stores being represented. It is known that the business of the independent stores aggregates twice that of the chain stores and the food index is weighted accordingly. As previously mentioned, the items included represent staple commodities, but a number of fresh fruits and vegetables are omitted, as not being available at all seasons, or as not being marketed in comparable qualities or quantities from time to time and place to place.

The accompanying table (Table II) lists the 45 food items from which the index is construed. The table also shows the average quantity of each item consumed by the typical urban wage-earner family in a week. The total prices of the given quantities of the 45 items are added each month, and compared on a percentage basis with the corresponding total in the base period. The result measures the fluctuations of the food index. This food index represents 31 per cent of the entire cost-of-living index. As of March 1 the food index has risen by 28.4 points since the beginning of the war, from 99.3 to 127.7. (See page 538.) This was the largest rise of any group in the cost-of-living index.

Fuel and Light.—The fuel and light index is based upon changes in prices for coal and domestic rates for electricity and gas. Coke prices, which were formerly included for Quebec and Ontario cities, have been dropped since January, 1943, since coke is not now available in quantity to the general public. Wood is not included, as it is impossible to

price comparable qualities of wood across the country at any given time, or even in one place at different times. Account is taken of the different kinds of coal in different areas. Account is also taken of the amount of fuel and electricity which is typical of consumption in each area. The index for coal is made from data from 58 cities; the gas index from 16 cities in all parts of the Dominion; and the index for electricity from 109 urban communities in Canada. The fuel and light index represents 6 per cent of the entire cost-of-living index. As of March 1, it had risen by 13.7 points since the outbreak of war.

Rents.—There are two tenant wage-earner families for every home-owning wage-earner family in Canada, and the cost-of-living index is calculated on the assumption that housing costs generally are reflected in rental trends. Rental surveys are made by the Bureau at the May and October leasing periods. Rental agents are asked to report upon the current position of rents relative to those at the preceding lease date, as indicated by their list of rental properties. In the workmen's group of dwellings, upon which the rental index is based, records are collected for houses, flats and apartments. Very complete weighting data have been used, recognizing the different numbers of each type of dwelling in various centres. Approximately 200 reports from 61 cities are used in making rental indexes. The rental index, which is weighted at 19 per cent of the entire cost-of-living index, had by March 1 risen 7.5 points since the outbreak of war.

Clothing.—Certain difficulties are encountered in measuring changes in the price of clothing, due to variations in style and to seasonal changes. Accordingly, the Bureau has reduced the number of items on its clothing list to 31 carefully selected standard articles on the assumption that 31 accurate price series will measure the trend of clothing prices better than a large list including items which fluctuate widely in price due to style and seasonal factors. The items selected represent the basic materials entering into clothing, mainly cotton, wool, artificial silk, leather and rubber. Some of the items chosen form a comparatively small portion of the average budget, but are useful in measuring clothing price trends because of their standard construction. Women's woollen hose afford an example of such items.

Department stores are the source of Bureau clothing prices. These distributors handle approximately one-third of the Dominion's clothing trade, and make monthly price returns to the Bureau, especially designed for the cost-of-living index. Weighted at 11.7 per

cent of the cost-of-living index, the clothing index had by March 1 risen 20 points since the outbreak of war.

Home Furnishing and Services.—The home furnishings and services index is composed from eight sub-groups. The eight sub-groups are: furniture, floor coverings, textile furnishings, hardware, dishes and glassware, cleaning supplies, laundry and telephone. The complete group accounted for 9 per cent of the base period index budget cost, placing it next to clothing in importance. The data for furniture, floor coverings, textile furnishings, hardware, dishes and glassware are obtained from department stores; and a comparatively small number of items is selected whose price changes would represent those of all the commodities in this category. There are 7 items of furniture, 3 of floor coverings, 4 of textile furnishings, 4 of hardware, 2 of dishes and glassware, 4 of cleaning supplies, 3 laundry rates and one type of telephone service. This index was 16.9 points higher on March 1 than at the outbreak of war.

Miscellaneous.—Five sub-groups, health maintenance, personal care, transportation, recreation and life insurance comprise the miscellaneous index. This list does not exhaust all remaining family living expenditures; but most of those which are left such as church contributions, the support of dependents, bank savings, etc., cannot be treated in the same way as items which are bought and sold. The index takes no account of these items, which amounted to only 3 per cent of the expenditures of the average wage-earner family, reported in the Bureau's 1938 survey.

The health section is based upon prices for 6 items of household medical supplies, 2 kinds of hospital service, 3 types of doctors' fees, and rates for 6 types of dental service. In view of the stability of fees for doctors, dentists and hospitals, these records are collected only at annual intervals, while medical supplies are priced quarterly. Records for practically all miscellaneous sub-indexes are collected from 23 of the larger cities, chosen to give adequate regional representation.

Personal care costs are represented by 7 items of toilet requirements plus fees for men's haircuts and shaves.

Three kinds of transportation are represented in the transportation sub-group: motor car, street car and railway. The two latter present no special problems, but motor car operating costs are more difficult to measure. The Bureau's record is based upon service station prices of gasoline, licence fees, and wage rates for garage mechanics. It is assumed that depreciation is 37 per cent of operating costs, and that for car owners as a group it remains constant from year to

year. (Automobile tires and tubes have been removed from the index.)

The recreation section includes records of motion picture theatre admissions, and newspaper, magazine and tobacco costs.

The life insurance index is based upon premiums for ordinary non-participating life policies, since these appear to give the closest possible approximation to the cost of pure risk. Averages of premiums for ages 20, 35 and 50 years have been used covering the records of 11 large companies. Miscellaneous items, comprising 23 per cent of the cost-of-living index, had risen only 6.2 points by March 1 since the outbreak of war.

The Cost-of-Living Index Weighting System

There are two stages in the calculation of each of the six principal group indexes from which the composite number is calculated. In the first stage, the general procedure is to multiply current price averages by budget quantities. These products are added together and the resultant aggregate divided by a corresponding base period aggregate. The resultant number is multiplied by 100.0 to secure a sub-group index for the current period. This index is then multiplied by a sub-group weight indicative of the cost in the base period of all goods belonging in this sub-group, (not merely those representative ones which were priced), relative to the base period costs of all goods in the whole group. When all sub-groups have been weighted similarly, the group index is found by adding up this second set of products and dividing by 100.0. This routine is repeated to secure the final composite cost-of-living index. The second and third stages of weighting are made necessary by the fact that it is not feasible to include all items in the family budget.

The complete list of items and weights is shown in Table II.

TABLE I.—URBAN WAGE-EARNER FAMILY ANNUAL LIVING EXPENDITURES

(Year ending September 30, 1938)

Budget Group	Expenditure Averages	Percentage Distribution
Food.....	\$ 443.0	31.3
Shelter.....	269.5	19.1
Fuel and Light.....	90.5	6.4
Clothing.....	165.8	11.7
Home Furnishings.....	125.7	8.9
Miscellaneous.....	319.4	22.6
Health.....	60.8	4.3
Personal Care.....	23.9	1.7
Transportation.....	79.3	5.6
Recreation.....	82.1	5.8
Life Insurance.....	73.3	5.2
Total.....	1,413.9*	100.0

* Directly represented in the index. Other miscellaneous outlay brought total family living expenditure to \$1,453.8.

Prices, Retail and Wholesale, in Canada, March, 1943

Cost of Living, Prices of Staple Articles and Index Numbers

NOTE: Owing to misunderstandings which have arisen regarding retail prices published in this section of the LABOUR GAZETTE, the following explanation has been thought necessary:—

1. *The Cost of Living Index is calculated by the Dominion Bureau of Statistics and is used in the determination of the Cost-of-living Bonus. This Index is not calculated from the data as to prices, etc. shown in Tables 2 and 3 below.*

2. *Tables 2 and 3 include certain data collected by the Dominion Bureau of Statistics and certain other data gathered by official correspondents of the LABOUR GAZETTE, as indicated below.*

3. *Tables of prices have been printed in the LABOUR GAZETTE along the same lines as at present since 1910—long before the cost-of-living bonus system came into effect.*

4. *As to Tables 2 and 3, it should be pointed out that the prices of certain commodities, especially meats and food products, vary substantially even within a single locality. In most cases the figures given are average figures for each locality.*

A slight advance in the official index of the cost of living was recorded at the beginning of March, thus recovering part of the decline of the two preceding months. The index on the base period 1935 to 1939 as 100 was 117.2 at March 1, as compared with 118.8 at December 1, 1942, which was the high point during recent years. In March, 1942, the index was 115.9 and in August, 1939, the last pre-war month, it was 100.8. The advance during the month under review was due entirely to higher prices for certain foods particularly, beef, potatoes, and oranges. A further seasonal decline was recorded in the price of eggs. All other principal groups were unchanged.

The advance in the cost of living since the outbreak of war was 16.3 per cent compared with an increase of 43.3 per cent between July, 1914, and February, 1918, the comparable period during the last war. Since the establishment of the ceiling on prices in the autumn of 1941, the advance in the index was 1.5 per cent, the official figures at the beginning of October, 1941, being 115.5. For the comparable period during the last war, that is between

October, 1916, and March, 1918, the advance was 24.3 per cent, the index being 91.4 and 113.6 respectively.

Between August, 1939, and March, 1943, foods advanced 28.6 per cent, clothing 20.0 per cent; home furnishings and services 16.7 per cent; fuel and light 13.8 per cent; rent 7.2 per cent; and the miscellaneous group 6.1 per cent.

In compliance with Order in Council P.C. 6219, as amended, the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the special War Revenue Act.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the LABOUR GAZETTE the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, farm-made cheese, and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between \$450 and \$2,500 in 1938. The average expenditure was \$1,453.90, divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.50; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index was \$40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939,

100.0; September, 100.0; October, 103.8; November, 104.3; December, 104.3; January, 1940, 104.2; February, 104.3; March, 105.5; April, 105.5; May, 105.3; June, 105.3; July, 106.4; August, 106.8; September, 107.9; October, 108.4; November, 109.7; December, 110.0; January, 1941, 110.4; February, 110.1; March, 110.2; April, 110.7; May, 110.9; June, 112.7; July, 114.9; August, 117.7; September, 119.4; October, 120.1; November, 121.4; December, 120.6; January, 1942, 119.9; February, 120.3; March, 120.6; April, 120.6; May, 120.9; June, 121.8; July, 123.9; August, 123.5; September, 123.0; October, 123.7; November, 125.0; December, 125.2; January, 1943, 122.5; February, 122.2.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The movement of wholesale prices as revealed by the Dominion Bureau of Statistics index number continued upward during March. This index on the base of average prices during 1926 as 100 was about one per cent higher than in February and 1.4 per cent higher than in January. Comparative figures for the index at certain dates are 98.5 for March; 97.3 for

February; 95.1 for March, 1942, and 72.3 for August 1939. The increase during the last year therefore was 3.6 per cent and since the outbreak of war was 36.2 per cent. During the month under review four of the eight principal groups advanced and four were unchanged. The wood and wood products group recorded an advance of 2.4 per cent and the vegetable products group 2.1 per cent. Changes in the animal products group and in the chemical products group were slight. Between August, 1939, and March, 1943, consumers' goods advanced 33.6 per cent and producers' goods 38.8 per cent. The increase in the general index between July, 1914, and February, 1918, the equal period during the last war was 90.8 per cent.

Explanatory Note as to Retail Prices

Table III on retail prices and rentals shows the prices at the beginning of March of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wages rate of less than twenty-five dollars per week.

a. Rolled.

b. Blade.

c. Lamb.

d. Grade A.

f. Grade B.

h. Kind most sold.

be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers. The exceptions are milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the *LABOUR GAZETTE*. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the *LABOUR GAZETTE*.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965 (L.G., 1941, page 1462), the price ceiling established by P.C. 8527 (L.G., 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003

TABLE III.—RETAIL PRICES OF STAPLE FOODS, GROCERIES, FUEL AND LIGHTING.

LOCALITY	Beef				Veal				Pork				Bacon	
	Sirloin steak, per lb.	Round steak, per lb.	Rib roast, prime, rolled, per lb.	Blade roast, per lb.	Stewing, per lb.	Boneless ribs, per lb.	Shoulder roast per lb.	Lamb, leg roast per lb.	Fresh loin, per lb.	Fresh leg roast, from ham, per lb.	Fresh shoulder, per lb.	Salt, regular meat, per lb.	Breakfast, not sliced, per lb.	Medium, sliced, per lb.

(a) For prices of Welsh coal see text. (b) Not comparable with previous averages as high volatile coals have been gas used extensively. (c) Including lignite. (d) Six roomed houses not extensively occupied by working men but some month, semi modern, \$10—\$15. (e) Delivered from mines. (f) Workingmen's houses are mostly of four and five rooms: are not included in the fuel prices. † Workingmen's houses. x Including the price of bushwood at \$12—\$13 per cord.

AND RENTALS IN CANADA AT THE BEGINNING OF MARCH, 1943

Coke, per ton	Wood					Coal oil, per gallon	Matches, per box (300)	Rent

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—Monthly, Prices and Price Indexes (Canada); annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(L.G., 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 104. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect of January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Albert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Beef prices were again slightly higher, sirloin steak advancing from 38.4 cents per pound at February 1, to 39.2 cents at March 1. In line with policy of the Wartime Prices and Trade Board of allowing seasonal variations in beef prices, maximum wholesale prices for carcasses, sides and quarters of beef were advanced 50 cents per cwt. for the period February 11 to March 25. Egg prices have averaged lower each month since December. The price at March 1 was 42.9 cents per dozen as compared with 56.3 cents at the beginning of December, 1942. The production of creamery butter during January and February was about 25 per cent greater than during the corresponding period of 1942, but the production of cheese declined 56 per cent. The prices of both were unchanged at March 1, the former at 40 cents per pound and the latter at 34 cents. The price of potatoes was again higher at 44.1 cents for 15 pounds as compared with 42.7 cents at February 1. The price in March, 1942, was 39.7 cents. Oranges averaged slightly higher at 38.8 cents per dozen.

(h) Average for twelve months ending June.

Prices in Great Britain and Other Countries

THE tables on pages 549 and 550 which appear quarterly give the official and certain other index numbers of the cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries.

As these tables are compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the *LABOUR GAZETTE*.

Since the outbreak of war, control of prices, production and trade has been extended in many countries, resulting in much less movement in prices than occurred in the inflationary period during the last war.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100 was 161·7 for February, as compared with 161·9 for January, a decrease of 0·1 per cent for the month. As compared with January, the various groups showed only a fraction of one per cent or no change in February, with the exception of cotton, prices for which were 3·9 per cent lower. Comparing the February price level with that of February, 1942, a rise of two per cent is recorded.

The *Statist* index number, on the base 1867-1877=100, was 153·3 at the end of January, an increase of 0·7 per cent for the month. Some increases were noted in all groups except textiles which were slightly lower than the previous month.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 199 at February 1, showing no change

from the previous month's level; clothing was between one and two per cent below the January 1 level, but all other groups showed no change.

New Zealand

WHOLESALE PRICES.—The Census and Statistics Department index number, on the base 1926-1930=1000, was 1474 for November, an increase of 1·2 per cent for the month. Increases were recorded in vegetable foods, textiles, animal products and metals and their products, while the other groups were unchanged.

COST OF LIVING.—The official index number of retail prices on the base 1926-1930=1000, was 1137 for November, an increase of 0·7 per cent for the month. Increases were recorded in all groups except rent which was not calculated.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics on the base 1935-1939=100, was 102·5 for February, an increase of 0·6 per cent for the month. Farm products increased 1·8 per cent; six other groups showed increases of less than one per cent, while the other three groups were unchanged.

COST OF LIVING.—The index number of the Bureau of Labour Statistics, on the base 1935-1939=100, was 120·9 at February 15, an increase of 0·2 per cent for the month; food increased 0·5 per cent, house furnishings 0·2 per cent, the miscellaneous group 0·4 per cent, while clothing was unchanged and the "fuel, electricity and ice" group declined 0·2 per cent.

Price Control in Canada During March, 1943

Wartime Prices and Trade Board Outlines Price Policy Regarding New Goods and Rising Costs—Price Orders Relating to Beef, Pork and Other Products—Measures to Promote Salvage—Conservation Orders

Pricing of Consumer Goods

THE procedure to be followed by the Wartime Prices and Trade Board in dealing with pricing problems has been outlined in the Consumer Goods Order No. 214 which went into effect on February 15, 1943. The new order makes no basic change in the policy of the price ceiling, but consolidates a number of previous orders, revising the regulations in the light of the experience of the past year in

order to provide a basis for closer administrative control and for dealing with pricing problems in a uniform, and therefore more effective, manner.

The various shortages resulting from the steadily widening influence of the war necessitate substitution of different materials or methods of manufacture and tend to increase unavoidably the cost of production of many goods. It is necessary, therefore, to provide

machinery for dealing consistently with problems arising from these factors and to guard against the reflection of these increased costs in the consumer prices of essential commodities required for day to day consumption.

Measures of relief to manufacturers or importers because of increased costs, will not be considered until the possibility of economies through standardization and simplification have been exhausted. Each situation will be examined upon its merits and with regard to developing conditions. Carefully controlled subsidies may be recommended to maintain the ceiling prices of consumer goods that are in every day use and form part of the real cost of living.

In the field of durable goods the major problem to be met is that of goods so changed in character as to be essentially different from those sold during the basic period. The values of the basic period will, however, continue to be taken as the criterion in fixing the prices of new goods. Price determination will take into consideration the life of the article in question, and price adjustments may be granted in the case of durable goods to cover the actual increase in the cost of the substitute materials and perhaps necessary changes in manufacturing or distributing processes. The payment of subsidies on durable goods will not be recommended.

Price Orders—Animal Products

Pork.—Maximum wholesale and retail prices for dressed hogs and cuts of pork sold in all parts of Canada were established by an order of the Board which went into effect at the end of March. Wholesale prices are specified in each of the 15 zones across Canada, the zones corresponding to those set out in the beef and lamb orders. The retailer is permitted to add to his lawful delivered cost the same markup which he obtained on similar products during the basic period, not exceeding, however, the markup specified for each particular kind of pork product; and he is required to regulate his selling price for the various cuts so that the aggregate price for the whole cut or portion does not exceed this delivered cost plus markup. (Board Order No. 247, Mar. 25.)

Beef.—An increase in the wholesale price of beef carcasses (of from $\frac{1}{2}$ to 1 cent per lb.) has been permitted, to compensate for the removal from carcasses of internal fats and kidneys required under an order (No. 231), which went into effect on March 25, designed to achieve maximum conservation of these fats. The revision of the price schedule for carcasses, sides and quarters of beef provided at the same time for a seasonal advance of 50

cents per cwt. in accordance with the policy announced last October.

Under the new order (Board Order No. 252, Mar. 23) any person selling beef at wholesale is required to distribute his supplies of beef equitably among his customers and to furnish each buyer with an invoice showing details of the sale, copies of which must be retained by both buyer and seller for 90 days for inspection purposes. (A similar requirement respecting invoices was made in the order on pork products.) For cuts of beef, maximum wholesale prices were fixed for the period March 25 to April 28, inclusive, reflecting both the seasonal advance in price and the increase because of the removal of carcass fats. (A-650, Mar. 23.)

The system of fixed maximum retail prices for beef cuts which was inaugurated on March 1, 1943, in the Toronto and Winnipeg areas is to be continued and a new order has been issued with revised prices in line with the seasonal advance in wholesale beef prices, applying during the period March 25 to April 28, inclusive. Retail prices for special quality beef will also be affected by the new definition of "special" quality which now includes all beef weighing 375 lbs. in the carcass and over and otherwise conforming to the requirements for "choice" beef. (Board Order No. 253, Mar. 24.)

Eggs.—The order setting specific maximum wholesale prices for the different grades of eggs at designated selling points across Canada has been continued in effect; the maximum price for Grades B and C was increased by 3 cents a dozen at all delivery points. (Board Order No. 248, Mar. 16, amending No. 212). During the month, maximum prices were also fixed at which processors can sell frozen eggs at the principal Canadian markets. Prices per pound were specified for "mixed eggs" and for yolks and whites processed separately, replacing an earlier order, which set maximum prices only for "mixed eggs". (A-659, Mar. 26.)

Price Orders—Other Food Products

Maple Products.—Regulation of prices of maple products—maple syrup, maple sugar and maple butter—was provided by an order specifying maximum prices at which processors may sell their products and limiting wholesalers' and retailers' markups. Prices are on a more uniform basis this year and are generally in line with those prevailing in recent years for products in this industry. The order, in addition, limits the quantity of maple products which may be purchased for use in the manufacturing of food and other products to the

amount purchased for such purpose in 1941. (Board Order No. 250, Mar. 16.)

Oranges.—A change has been made in Canadian Government subsidy arrangements covering importation of Florida oranges in order to avoid conflict with U.S. price ceiling regulations. In future, the subsidy will be payable only on the excess of the legal Florida f.o.b. price over \$3.25 (U.S.), and the formula for computing wholesalers' maximum prices has been adjusted to give effect to this change. Subsidy payments are not to be included in the cost on which the wholesaler bases his markup. (Board Order No. 259, Mar. 30, amending No. 239.)

Coffee Substitutes.—A new ruling of the Board applies the December reduction of 4 cents per pound in coffee prices to the prices of concentrates, mixtures, or compounds in so far as they contain coffee, by requiring that their prices be reduced in proportion to the amount of coffee contained in them. (Board Order No. 256, Mar. 30, amending No. 217.)

Imported Rice.—The maximum prices of round grain rice sold in one hundred pound lots at certain mills have been increased to the level of prices for long grain rice established last June, in order to reduce subsidy payments. Prices for long grain, Chinese and mill type rice remain the same. Canada is now obtaining rice from the United States and Mexico. Since there has not been a price ceiling in effect on rice in United States for as long a period as the Canadian price ceiling a Canadian subsidy on imported rice became necessary to equalize prices. (A-639, Mar. 10, amending A-201.)

Canned Goods.—An additional incentive subsidy to cover unavoidable increases in costs is to be paid to canners to encourage the packing of tomatoes and tomato juice in 1943. The additional payment will be 3 cents per dozen for tomatoes in 28 oz. cans and two cents per dozen for the same size cans for tomato juice. The ceiling on prices to consumers will be maintained at the old level. (Also during March the Department of Agriculture announced the subsidy assistance which would be paid to growers of the four main vegetable crops, tomatoes, peas, corn and beans.) During the month the allocation division of the Foods Administration authorized the release of a portion of the canned goods held by wholesalers, canners, and processors under A-498 issued last November.

Price Orders—Feeds and Fertilizers

Wheat Millfeed.—An order was passed regarding the pricing of wheat millfeed, de-

signed to provide a uniform and well defined basis upon which maximum selling prices may readily be calculated. The excess of demand over supply has tended to bring about certain undesirable practices within the intermediate channels, and some confusion has arisen as to what should be paid at any buying point as a result of government freight assistance in some areas. In the order, maximum prices for millfeeds as established during the basic period were used as a basis for the price structure, and the markups provided for intermediate and retail sale are in line with those at which the great volume of millfeeds was normally sold. It is specifically required that prices be reduced by the amount of any government freight assistance subsidy and by any reduction in the cost of bags. (A-651, Mar. 22.)

Alfalfa Meal.—The Board has revised the method of determining the processor's maximum prices of alfalfa meal in line with the \$3 per ton subsidy to be paid by the Department of Agriculture to encourage production. The order ensures that the increased return to processors will not affect the cost of meal to consumers. (A-648, Mar. 20, replacing A-365.)

Fertilizer.—The Board has announced an adjustment of the prices of fertilizer in British Columbia which will result in a considerable saving to the farmers. It had been felt that with the recent general reduction in the Eastern Provinces, the differential between Eastern and Western Provinces was too wide. Therefore, the industry at the request of the Administrator of Fertilizers and Pesticides, reviewed its price structure and agreed to reduce prices in British Columbia. (A-635, Mar. 9.)

Price Orders—Services; Tax Changes

Dyeing and Dressing of Furs.—The services of fur dyeing and fur dressing were specifically designated during the month as "services" for the purposes of the Wartime Prices and Trade Regulations, since there was some legal question as to whether they came under the category of "manufacturing services performed on a custom or commission basis". Such services were brought under the Wartime Prices and Trade Regulations in November, 1941. (Board Order No. 235, February 16.) Also during the month an administrator's order authorized a 10 per cent increase over basic period fees charged for dressing or dyeing furs. The order provides that customers must be furnished with an invoice showing separately the charge of the service during the basic period and the increase permitted by the new order. (A-652, Mar. 20.)

Gas Supplied by Certain Companies.—An order has been passed allowing a special war-time surcharge to be charged by certain gas companies on gas sold or supplied to industrial consumers. The revenues of these companies have been adversely affected because they have been required by the Power Controller to discontinue sales of gas for heating purposes to certain domestic and commercial users in order to ensure an uninterrupted supply to industrial users. Previously the supply of gas to industrial users had, in general, been on an interruptible basis at rates substantially below the rates applicable to domestic consumers. (Board Order No. 246, Mar. 2.)

Goods and Services affected by 1943 Federal Tax Changes.—Provision has been made for passing on to consumers the amount of the new or increased taxes in the 1943 Federal Budget. Only the actual amount is to be passed on, no profit or markup is to be allowed on these taxes to manufacturers, distributors or others. The taxes concerned are those on spirits, cigars, cigarettes, and tobacco, and the charges of night clubs, dance halls and similar places of entertainment. (Board Order No. 245, Mar. 2.)

Price Orders—Miscellaneous

Jar Rings.—Maximum manufacturers' prices for jar rings have been specified and limits placed on wholesalers' and retailers' markups in an order intended to standardize the prices of jar rings across the country and provide for wider and more even distribution. Zinc fruit jar rings were formerly subject to the regulations of Order No. 116 which required manufacturers to reduce their maximum prices to the level of June, 1941. (A-667, Mar. 30.)

Swiss Watch Movements.—Wholesalers may increase their prices of Swiss watch movements to retailers by 5 per cent over basic period prices to offset partly an increase of 28.3 per cent in laid-down cost since the basic period. Retailers are not permitted to pass on the increase in price. (A-643, Mar. 12.)

Fuelwood.—Orders were issued respecting prices of sawdust and millwood in the Vancouver and Victoria areas in British Columbia, to replace previous orders, fuelwood orders Nos. 36, 50 and 61, which have been made orders of the Coal Controller and are being revoked. (F-67 and F-68, March 31.) Maximum prices for fuelwood were specified for a northern portion of the Province of Alberta. (F-66, Mar. 23.)

General Price Rulings

Contingent Sales.—The Board has now withdrawn permission to merchants to make contingent sales. During the shortage of butter

immediately prior to its rationing the Board issued the ruling that "although retailers should not make the sale of one commodity conditional upon the purchase of another commodity, they could make the sale of items in short supply conditional upon the purchase of \$1 worth of other merchandise". There has been so much abuse of this ruling in recent weeks that the Board has now withdrawn this exception and no longer permits contingent sales of any kind.

Maintenance of Price Differentials.—In a statement on March 27, the Board emphasized that discounts allowed by sellers of goods and services in the basic period or as a matter of established trade practice must be continued, even though ceiling prices other than those charged in the basic period may have been fixed subsequently under authority of the Board.

Salvage and Used Goods

Fats.—Various forms of edible fats are obtained from beef which may be used either directly in the manufacture of war materials or in the form of substitutes for different vegetable oils which are in short supply. With a view to achieving the maximum conservation of these fats an order has been passed requiring the removal at the time of slaughter of kidneys and certain internal fats from cattle slaughtered for sale as beef. (Board Order 231, Feb. 2, effective Mar. 25.)

Facilities have been provided for the collection of these fats and other household and scrap fats. Prices have been specified which householders, operators of hotels and restaurants, butchers, slaughterers, and salvage committees are entitled to receive for rendered and un-rendered fats and for bones. Bulk collections of fats and bones amounting to 100 pounds or more may be sent transportation charges collect, to renderers or packers who in turn will be able to collect from Wartime Salvage Limited all transportation charges paid by them in excess of 50 cents per 100 pounds. The order is expected to reclaim a large portion of the 150,000,000 pounds of various household and scrap fats estimated to be wasted annually in Canada. (A-642, Mar. 11.)

Non-ferrous Metal Scrap.—Price adjustments have been made to encourage better channelling of non-ferrous metal scrap and terms of sale have been tightened. The dual price system previously adopted in October for dealings in non-ferrous scrap is retained with adjustments being made between prices for licensed dealers and for others dealing in scrap. (A-660, Mar. 27.)

Baskets, Hampers and Boxes.—To aid in the prompt distribution of used fruit and vegetable

baskets and hampers critically needed in the coming season, revisions to existing regulations have been approved, permitting their purchase from other than authorized dealers. This will be of assistance particularly to vegetable growers. Prices for lettuce and berry crates have been added to the schedule to the revised order. (A-663, Mar. 27.)

Stoves.—In line with the policy of getting all re-usable articles into use without delay, two orders have been issued governing the prices and terms of sale of used gas stoves and used coal and wood stoves and ranges. Condition of the stove must be guaranteed by a written warranty, with the provision that, if within 90 days after being delivered it becomes defective, the dealer will repair it or replace the parts, if they are procurable. Maximum prices are determined in relation to basic period prices and prices for similar new stoves. (A-640 and A-641, Mar. 11.)

Rentals and Housing Accommodation

The city of Sydney and the town of Yarmouth and a certain area surrounding each were designated as areas to which A-488 regarding maximum rentals of rooming accommodation applies. In both cases the forms were prescribed, which must be completed in registering rooms rented to boarders, roomers and paying guests and housekeeping rooms, and also the rate cards which must subsequently be posted when rates have been approved. (A-627, March 1, and A-645, March 17.) The town of Aylmer, Ontario, was added to the list of areas which have been designated as congested areas by Order No. 200 and in which barriers to subletting accommodation have been suspended. (A-664, Mar. 29.)

Conservation and Simplification

Small Arms Ammunition.—Since small arms ammunition is in short supply for civilian purposes, the Board has issued a rationing order to ensure, as far as possible, an adequate amount to those rated as essential users. In this category are placed persons who depend on hunting for food, trappers, prospectors, members of the R.C.M.P. and other police forces, plant guards, etc., and persons requiring such ammunition for pest control. Only authorized purchasers may acquire small arms ammunition for use. Authorized purchasers residing in settled areas are required to complete and surrender to the merchant a certificate of essentiality which in the case of certain groups must be approved by the local Ration Board. An order issued last August

by the Controller of Supplies, Department of Munitions and Supply, curtailed the civilian use of small arms ammunition. Jurisdiction was transferred in January of this year to the Wartime Prices and Trade Board. (Board Order No. 251, Mar. 16.)

Metal Products.—As an additional means of conserving metals, an order has been issued freezing electric sump pumps and cellar drainers to types made or imported during 1942, cutting out metal covers and prohibiting manufacture of certain parts in other than ferrous metal. (A-657, March 26.) Amendments were made in the restrictions which had been placed on the manufacture of food choppers, wiring and signalling devices, and circulating and other pumps in order that types and models to meet essential needs would be ensured. (Circulating pumps, A-653, March 26, amending A-484; wiring and signalling devices, A-665, March 29, replacing A-241.) The manufacture of a certain number of styles and sizes of hand operated food choppers for household use is to be allowed, subject to the production restriction that the total weight of iron and steel which may be used in making these choppers must not exceed that used in the 12 months' period ending June 30, 1941. (A-661, March 27, replacing A-171.) The present restriction limiting production of portable lamps in each class to 12½ per cent and lampshades to 25 per cent of the number manufactured during 1941 has been extended to the period April 1 to June 30, 1943, and to succeeding quarterly periods. (A-656, Mar. 26, replacing Section 5 of A-413 as amended by A-537.)

Umbrellas.—Ninety per cent of available supplies of umbrella frames are to be used in women's umbrellas as the result of an order which defines the proportions in which manufacturers must distribute their total quantity of frames between the different types and price ranges allowed. One type of men's and three types of women's umbrellas are specified. (A-634, Mar. 9.)

Small Leather Goods.—The manufacture of certain types of small leather goods such as brush cases, card cases, etc., has been prohibited and the number of kinds of materials, sizes and patterns in which certain other small leather goods may be manufactured, has been restricted. The types and styles of all small leather goods which the manufacturer proposes to make must be submitted to the Administrator for his approval. (A-656, Mar. 26.)

Textiles and Clothing.—An order which was issued in September, 1942, severely restricting the amount of raw wool which could be put into process for various civilian purposes on

the basis of 1941 processing, has been extended to cover an additional 6 months' period, up to the end of September, 1943. (A-658, Mar. 26, amending A-402.)

Styles of knitted outerwear for the 1943 fall range and for following seasons are to be limited in number to 60 per cent of those manufactured during the corresponding season of 1942, and only 4 body colours in addition to Allied Navy, Air Force Blue, and Khaki may be used in any one line or style. The new order also limits patterns, styles and fabrics to the 1942 range, eliminate wasteful features on knitted garments and prohibits manufacture of certain garments—twin sweater sets and flare skirt bathing suits. (A-633, Mar. 9, replacing A-315). Further simplification was also applied to the manufacture of circular knit hosiery by an order which reduces the number of shades, in any one style, and freezes patterns. A schedule specifies the choice of body colours which will be permitted for each type of hosiery. (A-632, Mar. 9, replacing A-244 and A-383.)

Mixed Feeds.—Further action has been taken to conserve high-protein ingredients of commercial mixed livestock feeds by prohibiting the use of certain scarce ingredients such as powdered skim milk, meat scrap, etc., in all but the most essential feed mixtures and reducing the protein content to a generally lower standardized level for all complete feeds

and for many feed concentrate mixtures. The new order, in schedule form, specifies a range within which the minimum protein level must fall. This provides for a reduced level in most cases, but still within the limit that animal nutritionists consider the safe minimum for protein content. As in an earlier order the kinds of commercial mixed feeds and the maximum number of brands which may be manufactured are specified. (A-636, Mar. 9, replacing A-414.)

Paper Products.—A new order drawn up for the manufacture of envelopes sets out a more rigid standardization schedule regarding styles, sizes, and packaging for commercial envelopes with a view to more efficient production with the smaller labour force now available. (A-649, Mar. 22, replacing A-274.) More restrictive specifications have also been applied to the packaging of social stationery. (A-662, Mar. 27, replacing A-15 as amended by A-242.)

Deliveries.—The order regulating the deliveries of building and construction supplies and materials has been amended to allow a uniform maximum credit or refund of 90 per cent of invoice value on any building material ordered and delivered in excess of actual requirements. Formerly the maximum credit on certain materials was only 75 per cent. (A-644, Mar. 12, replacing A-460.)

Notes of Current Interest

Appointment of Parliamentary Assistant to Minister of Labour

The appointment has been announced of Paul Joseph Martin of Windsor, Ontario, Member of Parliament for Essex East, as Parliamentary Assistant to the Minister of Labour.

Mr. Martin's duties, as outlined by Order in Council, will be to "assist the Minister within and without Parliament in such manner and to such extent as the Minister may determine."

Born at Ottawa in 1903, Mr. Martin was educated at Pembroke Separate School; St. Alexander College, Ironside; St. Michael's College; Osgoode Hall Law School, University of Toronto; Harvard Law School, Harvard University; Trinity College, Cambridge (where he was a member of the Union Society of Oxford and Cambridge); and the Geneva School of International Studies. He holds the degrees of B.A., M.A., and LL.M. A barrister-at-law, he became a King's Counsel in 1937. He has been active in League of Nations activities, and was a Canadian delegate to the Assembly at Geneva in 1938. He has held his seat in the House of Commons since 1935.

Reduction in numbers on direct relief

Figures compiled by the Department of Labour show that 47,168 persons were on direct relief throughout Canada during

the month of December, 1942. The compilation is based on figures secured from the provinces and municipalities across the country.

At the peak of direct relief in April, 1933, figures reported to the Department of Labour showed that 1,517,000 persons were on direct relief at that time. It is considered that due to the high level of employment, relief rolls are now reduced virtually to the unemployables.

The total number of persons on direct relief during December last was made up of 9,171 heads of families, 25,577 dependents of families and 12,420 individual persons.

Compulsory collective bargaining in certain provinces

As described in detail elsewhere in this issue, the legislature of Ontario during April passed a bill making collective bargaining mandatory between an employer and an employees' union which has been accredited by a "labour court" set up under the terms of the Act.

In British Columbia the sections of the Industrial Conciliation and Arbitration Act relating to collective bargaining and freedom of association have been amended. Minor amendments have also been made in the comparable sections of the Alberta Act.

In Manitoba and Saskatchewan bills relating to collective bargaining were introduced but failed to pass.

The British Columbia, Manitoba and Ontario bills are described under the *Labour Law* section of this issue (p. 691). In next month's issue will appear accounts of legislation on this subject passed by the province of Alberta and of the Saskatchewan bill.

Employment and industrial statistics

In the table below are shown the latest statistics available reflecting industrial conditions in Canada.

The index of employment at March 1 was slightly higher than for the previous month and 9·8 per cent higher than at March 1, 1942. It was 2·7 per cent lower, however, than at December 1, when

the index was at the highest point in the record. The increase during the month under review occurred in manufacturing, mining and in transportation. Per capita weekly earnings at March 1 more than recovered the decline at the Christmas holiday season due to reduced operations and were at the highest point since this record was commenced in June, 1941.

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

† Week ended April 29, 1943.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base June 1951=100. (4) Base, 1935-1930=100. (5) Adjusted, where necessary, for seasonal variation. (6) Notes in the hands of the public. (7) Figures for four weeks ended May 1, 1943, and corresponding previous periods. (8) MacLean's Building Review.

The index of the physical volume of business reflecting activity in mining, manufacturing, construction, output of electric power and in the distribution of goods was about 2 per cent higher for March than for February and 18 per cent higher than for March, 1942. Greater volume was indicated for the mining industry in March as compared with the previous month, there being considerable advance in coal production. Manufacturing also recorded advance in this comparison as increases occurred in the production of iron and steel, butter, cheese and in the textile industry. The output of electric power was about three per cent higher.

Comparing the first quarter of 1943 with the corresponding period of 1942, the cumulative figures show the index of the physical volume of business to be 19.2 per cent higher and manufacturing 30.6 per cent higher, while mining declined about four per cent. The production of flour was in 20 per cent greater volume, creamery butter 27.9 per cent greater, boots and shoes 3.2 per cent, and cigarettes released 24.4 per cent greater. The production of factory cheese was 54.4 per cent lower than in the corresponding quarter of 1942, cattle slaughtering 18.7 per cent lower, newsprint production 20.7 per cent, and pig iron production 12.6 per cent lower.

Industrial Accident Prevention Associations hold convention

The annual convention of the Industrial Accident Prevention Associations of Ontario was held in Toronto early in April. A record attendance of 4,053 delegates from six provinces of Canada and from nine states of the Union gathered to discuss all phases of accident prevention, with emphasis on the special importance in wartime of safeguarding the nation's manpower.

As in the past, the exhibit of industrial safeguards was one of the important features of the convention. This year the Associations provided another interesting and instructive feature—a "style show", which demonstrated protective clothing worn by workers in industry.

The retiring president of the Associations, T. A. Rice, International Harvester Company Limited, Hamilton, reviewed the work done by the organization at the opening session of the convention. At the annual banquet he emphasized the importance of keeping barriers against accidental injury in place. "There is no time for accident now", Mr. Rice said.

A prominent speaker at the convention was the noted expert on international labour—

Right Hon. Margaret Bondfield. In discussing the need for unity and co-operation, she said that due to the co-operation of government, management and labour, accidents in Britain had been reduced. "Without placing community welfare above individual good and without the most extensive form of co-operation throughout the world, future peace is impossible," Miss Bondfield pointed out.

The officers elected at the annual meeting of the Associations were: W. H. Munro, Ottawa Light Heat and Power Company Limited, president; E. O. Morgan, Canadian National Carbon Company Limited, first vice-president; A. L. Bennett, P. W. Gardiner & Sons Limited, Galt, second vice-president; C. H. Kercher, Canadian General Electric Company Limited, Toronto, honorary treasurer, R. B. Morley and J. L. Dodington were re-elected general manager and assistant general manager, respectively.

Association of Administrators of Labour Legislation holds conference

The Canadian Association of Administrators of Labour Legislation, an organization of all Dominion and provincial departments, boards and commissions administering labour laws, met

for its sixth annual conference in Ottawa on May 3-5. All the provinces were represented, except Alberta, by their deputy ministers of labour or other chief labour officers and in most cases by the chief factory inspector or officials responsible for the administration of minimum wage legislation.

The sessions were opened with an address by Arthur MacNamara, Deputy Minister of Labour for Canada, speaking on behalf of the Honourable Humphrey Mitchell.

Special features of the conference were the address given at the annual dinner by Mr. Gerard D. Reilly, member of the U.S. National Labour Relations Board, on the administration of the National Labour Relations Act, and the contribution made by Mrs. Clara Beyer, Assistant Director of the Division of Labour Standards of the U.S. Department of Labour, who spoke on factory inspection and accident prevention. Mr. Reilly took part also in the discussion on collective bargaining and Mrs. Beyer was able to give valuable information at several sessions of the conference. Other items on the agenda were: provincial minimum wage regulation in relation to the wages stabilization policy; women in industry; and hours of labour, with particular reference to the hours worked by men.

Mr. S. B. Chambers, Assistant Census Officer of Jamaica, who was in Ottawa on Government business, also attended the conference.

The following are the officers of the Association for the coming year: Past president, H. S. Johnstone, Dominion Industrial Relations Officer at Winnipeg; president, H. R. Pettigrove, Dominion Industrial Relations Officer at Moncton; 1st vice-president, T. D. A. Purves, Deputy Minister of Labour of Nova Scotia; 2nd vice-president, J. F. Marsh, Deputy Minister of Labour of Ontario; secretary-treasurer, Margaret Mackintosh, Dominion Department of Labour.

The following representatives from the provinces attended the meeting: British Columbia: Adam Bell, Deputy Minister of Labour; Robert Morrison, Chief Executive Officer, Regional War Labour Board; Manitoba: R. A. Stewart, Deputy Minister of Labour; James Leslie, Chief Wage and Conciliation Officer; W. Elliot Wilson, Chief Executive Officer, Regional War Labour Board; New Brunswick: N. D. Cochrane, Director of Labour; John S. MacKinnon, Secretary, Fair Wage Board; Charles J. A. Hughes, Chief Executive Officer, Regional War Labour Board; Nova Scotia: T. D. A. Purves, Deputy Minister of Labour; Ontario: J. F. Marsh, Deputy Minister of Labour; J. R. Prain, Chief Inspector, Department of Labour; D. N. Campbell, J. A. Larocque, J. R. Johnson, Factory Inspectors; F. J. Hawes, Director of Apprenticeship, Department of Labour; Prince Edward Island: Hon. Horace Wright, President of the Executive Council; Quebec: J. O'Connell-Maher, Associate Deputy Minister of Labour; Wilfrid Beaulac, Factory Inspector for Quebec District; Gus. Francq, Vice-Chairman, Minimum Wage Board; Brunay Brais, Minimum Wage Board; O. E. Sharpe, Workmen's Compensation Commission; Saskatchewan: C. A. Scott, Commissioner of Labour and Public Welfare; A. J. Smith, Chief Executive Officer, Regional War Labour Board.

**Cost of living
bonus remains
unchanged**

The cost of living index at April 1 was 117.6, three-tenths of a point lower than on July 2, 1942, the date of the last general order of the National War Labour Board requiring a change in the amount of the cost of living bonus. As the decline was less than a full point, no change in the amount of the bonus was ordered.

An order of the National War Labour Board dealing with the cost of living bonus for workers in industry was made public on May 4. Such an order is issued every three months. The present order reads:

"The Dominion Bureau of Statistics has found that the cost of living index number for April 1, 1943, is 117.6 (adjusted index 116.7) as compared with the cost of living

index number for July 2, 1942, of 117.9 (adjusted index 117).

"The Wartime Wages Control Order, P.C. 5963, provides in Section 48 (iv):

'the amount of the bonus shall not be changed unless the cost of living index number has changed one whole point or more since the last general order of the Board requiring an increase or decrease in the amount thereof.'

"The index number not having changed by one whole point or more since July 2, 1942, pursuant to the provisions of P.C. 5963 as stated, the National War Labour Board orders that the terms of its General Order dated August 4, 1942, shall continue to apply for the period May 15, 1943, to August 15, 1943, subject to the right of employers and employees to apply to a War Labour Board for authorization of payment of such an amount of cost of living bonus as a Board may determine to be 'fair and reasonable,' under the provisions of the Order."

As is indicated in the order, no change in the amount of the bonus was made as from May 15, 1943.

**Cost of living
index advances
fractionally**

The Dominion Bureau of Statistics index number of the cost of living (on the base period 1935 to 1939 as 100) again advanced slightly to 117.6 at the beginning of April from 117.2 at the beginning of March and 116.9 at February 1. The increase at April 1 was due mainly to a further increase for foods of one full point, but fractional advances were recorded also for the clothing and miscellaneous groups. Important changes in the food group were advances in the prices of meats, potatoes, cheese, and oranges, and an appreciable decline in eggs. The increase in the clothing group was due to advances in the prices of women's wear while the miscellaneous group advanced because of increases for newspapers and for barbers' charges.

The cost of living index, has advanced 16.7 per cent between August, 1939, and April, 1943. For the equal period during the last war, that is, between July, 1914, and March, 1918, the advance was 44.3 per cent.

**Industrial
Disputes
Investigation
Act**

Twenty-two applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received during the month of April. Four boards submitted their reports; six boards were established and the constitution

of ten boards was completed during the month. Twenty-one disputes were referred to Industrial Disputes Inquiry Commissioners and reports were received from commissioners in ten cases. Two applications were withdrawn during the month and four applications rejected.

U.S. War Labour Board approves all increases to 40 cents an hour Employers in the United States may increase wages up to 40 cents an hour without applying to the War Labour Board for approval, according to a recent order by the U.S. Board.

It was stated that many thousands of cases will be handled without delay as a result of this new order which streamlines procedure and which will cut heavily into the backlog of cases pending before the National and Regional Boards. The increases granted under the new order cannot be used as "a basis either to increase price ceilings of the commodity or service involved or to resist otherwise justified reductions in such price ceilings."

The *Labour Information Bulletin* published by the U.S. Department of Labour commented that the new ruling "is important to thousands of workers in laundries, restaurants, stores, and many other small service industries that do not have the protection of either the Federal Wage and Hour Law or State minimum wage laws. The Department of Labour still receives hundreds of letters from such workers complaining of sweatshop wages—17, 20, and 25 cents an hour.

"Often they have said, 'My employer tells me that wages are frozen and so he can't give me a raise.' Until the Board issued this recent order these employers would have had to go through the usual War Labour Board procedure for granting an increase."

Increase in collective bargaining in U.S.A. On April 12, the sixth anniversary of the United States Supreme Court's decision upholding the constitutionality of the National Labour Relations

(Wagner) Act, the National Labour Relations Board issued a memorandum summarizing the results of the operation of the Act since that date.

The National Labour Relations Act (L.G., Apr., 1935, p. 343) guarantees workers the right to organize and bargain collectively with their employers through representatives of their own choosing. It forbids employers to interfere with, restrain or coerce employees in the exercise of that right. Employers also are forbidden to dominate any labour organization or contribute financial or other support to it. The Act further states that

it shall be unfair for an employer to encourage or discourage union membership by any condition of employment, or to discharge or otherwise discriminate against an employee because he files charges or gives testimony under the Act.

The National Labour Relations Board, established by the Act, is empowered to conduct elections among employees when a dispute arises as to which of two or more labour organizations represents a majority of the employees.

Among the points brought out in the board's summary of the operation of the Act were the following:

1. Unions in the United States now have a total membership of approximately 12,000,000, compared with only about 5,500,000 in 1937, when the Act was upheld, and have collective bargaining agreements covering more than 13,000,000 workers, of whom some 6,000,000 are covered by union shop agreements.

2. During the six-year period the board handed down approximately 8,000 decisions, secured the reinstatement of more than 300,000 discharged workers and brought about the dis-establishment of more than 1,000 company unions.

3. The board's litigation record has been unexcelled by the record of any other government agency. Out of forty-nine Supreme Court cases the board lost only two, and out of 411 orders taken to the circuit courts enforcement was denied in only fifty-eight cases. In addition, the board won 100 injunction suits.

4. The work of the board has shifted from being preponderantly the prevention of unfair labour practices to the duty of designating bargaining agents. In 1937, 67 per cent of all cases handled were unfair labour practice cases, while now election cases account for 67 per cent of the total.

Three of the principles laid down in its decisions are held by the board to have been largely responsible for the rapid increase in collective bargaining. These principles are:

1. The employer must maintain strict neutrality, both in action and in speech, with respect to the collective activities and desires of his employees;

2. When an agreement has been reached between an employer and representatives of his employees the employer may not refuse to embody the terms of the agreement in a written and signed contract;

3. Employees who engage in unlawful violence for the purpose of winning concessions from their employers automatically remove

themselves from the protection of the Wagner Act.

The statement says that last year saw a greater number of cases docketed with the board than any previous year. As in other recent years, eight out of every ten cases were settled informally, without the necessity of hearings and orders.

U.S. court rejects charge of unfair labour practice

The Second Circuit Court in the United States ruled on April 5 that an employer who had expressed anti-union views to his employees just prior to an election ordered by the National Labour Relations Board had not thereby committed an unfair labour practice, as held by the board. The decision was based on that of the Supreme Court in the case of the Virginia Electric and Power Company.

The case at issue was that of the American Tube Bending Company, whose president had argued in a letter and in a speech to employees that a union would be against their interest as well as that of the company and that the continued prosperity of the company depended on things going along as they had been. The election resulted in a majority vote against representation by any union, which, in turn, led to the filing of charges of unfair labour practices against the company by the defeated A.F. of L. union.

In reversing the board's order the court pointed out the similarities between the statements complained of in the case at issue and in the case of the Virginia Power Company and then said, "If there was a basis for finding that such a presentation of the employer's side might be a covert threat to recalcitrants, there was as much basis in the Virginia Case. If on the other hand the employer's interest in free speech in the Virginia Case was thought to outweigh an actual prejudice to the employees' right of collective bargaining, the employer's interest is the same in the case at bar and the employees' prejudice no greater. We can find no tenable distinction between the two."

United States policy on employment of young persons

Children's Bureau of the U.S. Department of Labour has followed it up with a pamphlet entitled "Protecting the Health of Young Workers in Wartime". The policy is based on the principles laid down by the U.S. Commission on Children in Wartime (L.G., 1942, p. 1117) appointed by the Children's Bureau.

In the opinion of the War Manpower Commission,

Youth under 18 can best contribute to the war program by continuing in school and, when their services are required, accepting vacation and part-time employment. . . Their services must be used in such ways as to bring about their maximum contribution to manpower needs consistent with the protection of their health and welfare and the fullest utilization and development of their aptitudes, abilities and interests.

The Commission is opposed to the employment of children under 14 and to any relaxation of school-attendance or child-labour laws. It believes that young persons of 14 and 15 should only be employed when older workers are not available and should not work in manufacturing or mining occupations.

Employers of young persons from 14 to 18 should obtain proof of age, provide adequate sanitary facilities, lunch-rooms and other safeguards of health and safety, and pay wages not less than those paid to adult workers for similar work. Young persons should not be employed at occupations that are hazardous or detrimental to health and welfare, and should have one day's rest in seven, adequate lunch and rest periods and hours not exceeding eight a day. In emergencies, longer hours might be permitted for young persons living on farms and engaged in continuing farm work of a non-seasonal character and for those of 16 and 17 authorized to work longer hours under existing laws. If necessary, safe and adequate transport to work should be provided, but work and travelling time should not exceed 10 hours a day.

Children attending school should not be employed during school hours nor should combined school and work hours exceed eight a day. School programs should be adjusted for pupils who must work during school hours so that educational progress and opportunities will not be curtailed. Employers should certify to school authorities that they are complying with child labour laws and the principles in this statement of policy. School authorities should see that children take jobs which contribute to their educational and vocational welfare.

Young persons seeking work away from home should obtain parental consent and be placed through the U.S. Employment Service which should ascertain whether suitable housing arrangements are available before authorizing a transfer. If young persons are employed in agriculture away from home, their living conditions, health and recreation should be carefully supervised.

The Children's Bureau publication "Protecting the Health of Young Workers in Wartime"

states that the number of employed boys and girls increased from slightly less than a million in April, 1940, to about two million in October, 1942, and that three million worked during the 1942 summer vacation. Attention is drawn to young workers' greater susceptibility to accidents, industrial poisons and over-fatigue. Pre-employment physical examinations, health and safety education and healthful working conditions are urged. The importance of providing nutritious meals and suitable recreation for young workers is stressed. The role which each individual or group in the community from employment officer to parent-teacher association can play in protecting young workers is also outlined in the pamphlet.

**Dispensations
from labour
laws granted
to war plants
in N. Y. State**

A growing number of applications from industrial plants in New York State for exemptions from labour laws is reported in the *Industrial Bulletin* of the State Department of La-

bour. This trend reflects the dispersion of war contracts and the increasing employment of women.

During the 14-month period since Pearl Harbour, 2,900 plants in New York State have applied to the State Industrial Commissioner under the War Emergency Dispensation Act of January 29, 1943, which authorized the Commissioner to grant six-month dispensations from labour laws to individual plants engaged on war production if they can prove the need for relaxing standards in the interests of production and if the health and welfare of the workers are safeguarded.

Only 12 per cent of the applications have been refused by the Industrial Commissioner or by the State Board of Standards and Appeals which hears appeals from decisions of the Commissioner. About half the plants receiving dispensations have been authorized to employ women at night or beyond statutory hours. Over 1,000 plants received permission to operate on a seven-day work-week, though this privilege was usually restricted to a specified number of weeks. Over 1,300 plants were authorized to finger-print employees. Other dispensations related to the employment of women in grinding operations, the length of the lunch period, the age of male and female messengers and hours of minors.

In September, 1942, about 50 per cent of the applications were for permission to employ women more than 48 hours a week. By January, 1943, this proportion had risen to 68 per cent. In 95 per cent of such cases in January the maximum work-week allowed was 54 hours and in many cases the longer hours were for

limited periods only. For example, a company preparing ration books was allowed a number of 11-hour days over a two-month period to complete the job.

Authority to employ women on three-shift systems was requested by about one-quarter of the 242 plants receiving dispensations from hours provisions of the labour laws during January. Requests of this nature came more frequently from upstate plants than from those in metropolitan areas. A seven-day work-week was authorized for men in 101 plants and for women in eight plants in January, but in most cases the seventh day was permitted only for a limited number of weeks in the six-month period of dispensation. Twenty-minute lunch periods were sanctioned for 24 plants.

A report on the experience of a number of plants receiving dispensations indicated that many found that long hours, night work and seven-day weeks were responsible for decreased production, mistakes and increased absenteeism. For example, an aircraft plant reported that six 10-hour days a week for men and a 54-hour week for women impaired morale and efficiency and caused a 15 per cent rise in absences. Another reported a rise in absenteeism from 4 to 17 per cent in the week following a seven-day week. After three weeks of seven-day operation in a plant manufacturing instruments, production fell below that of the six-day week and the girl employees became irritable. A canvas goods manufacturer reported that night work in his plant was not conducive to maximum production and an instrument manufacturer was of the opinion that night shifts should be less than nine hours to be of value.

It was generally recognized that workers could not hold out for long under the strain of long hours, but temporary dispensations were necessary to enable employers "to improve their organization and train additional workers so that they could shorten the hours of work, go on multiple shifts where space and equipment were limited, have a seven-day production week with six days of work per man and employ individual workers seven days a week only in emergency".

**Organization of
Latin-American
workers into
single body**

The organization of nearly 4,000,000 Latin - American workers into a single international central body as the Latin-American Labour Federation (C. T. A. L.)

has been achieved after an extended tour by its President, Vicente Lombardo Toledano, Mexican labour leader. The countries visited

were Cuba, Colombia, Ecuador, Peru, Chile, Bolivia, Costa Rica, Nicaragua, Honduras, Salvador, and Guatemala.

An article in the *Manchester Guardian* refers to the achievement of unity by the C. T. A. L. as a big step forward towards the triumph of the democratic cause. It states that the C. T. A. L. has grouped the majority of the organized workers in all countries where unions are permitted and has been instrumental in gaining greater liberties in countries that hitherto looked upon organization of labour with hostile suspicion. The C. T. A. L. has taken a stand on international issues and has been forthright in opposing the Axis fifth column in Latin America.

Axis propaganda, the article states, has for years traded on a prejudice against what is called "British and Yankee Imperialism". This prejudice has taken the form of latent or open hostility towards foreign ownership of industries, communications, mines and oil fields, the companies concerned being regarded as absentee landlords with no interest in the welfare of their workers. The C. T. A. L. headquarters in Mexico has been issuing a steady stream of information showing that Hitler does not give up control of industry in conquered countries "even to the devoutest Quislings", and that the best working conditions under Nazism are worse than the worst existing in Latin America.

The interchange of reports on conditions in each country and of suggestions for improvement is resulting in a volume of statistical information that is being crystallized into a post-war plan for the whole of Latin America.

The main business of the C. T. A. L. now, Lombardo says, is to become integrated with the surviving international labour movement. The union of the British, Russian, American, and Latin-American workers and, after the war perhaps, the Indian and reconstructed European unions must, he believes, be an important factor in planning the post-war world. Thus he is now urging the unions in the United States to join the Anglo-Soviet Trade Union Committee.

Training of welfare and personnel officers in Australia

Courses to train welfare and personnel officers for industry have been carried on in Sydney and Melbourne since September, 1941. They have been organized by the Commonwealth Department of Labour and National Service in consultation with industrialists, trade unions and the University Departments of Social Studies. They last for six months and to date about

75 officers have been trained. Twenty students are still in training, having commenced their courses on February 8.

As far as possible the courses are modelled on similar courses in Great Britain but have had to be modified because of the pioneering nature of this type of work in Australia. The student, during his first three months of training, is given a background of knowledge of general social conditions in the belief that this is essential if he is to understand the problems of industrial life. The next three months are devoted to specialized work, including a study of the Australian arbitration system, the interpretation of awards and questions of industrial health and safety, fatigue, housing and transport.

Selection of candidates is made in each State by a committee consisting of representatives of the Australian Council of Trade Unions, employers' organizations, the local University, and the Department of Labour and National Service. In order that a uniform standard may be attained, the officer responsible for training is present at all final interviews. There are sometimes as many as 600 applicants of whom about one-fifth are interviewed and a substantially smaller proportion selected.

Of the students who have graduated, the majority are working in Government factories, others in private industry, while a few are engaged in Department surveys. That the courses have met a genuine need is indicated by the fact that after eighteen months' operation the demand for graduates is still heavy.

New Zealand registers groups for direction to essential work

On February 18, 1943, New Zealand issued an Order which called on women 18 and 19 years of age to register in order that they might be directed into essential industry. Seven previous Registration for Employment Orders issued during the past year applied to women from 20 to 31 and men from 46 to 60. These Orders were made under the National Service Emergency Regulations of June 18, 1940, and the Industrial Manpower Emergency Regulations which replaced on October 14, 1942, the provisions of the National Service Regulations relating to civilian employment (L.G., 1942, pp. 953, 1373).

Persons who had been employed within the last fifteen years in the metal trades or in the building and allied trades have also been registered for employment under Orders of March 18, 1942. In addition an Order of October 8, 1942, required men in New Zealand from 18 to 46 who are not British subjects by birth or naturalization to register. All other

men in this age group are already registered for military purposes. Exempted from the registration Orders are such groups as miners, farm workers, hospital employees, doctors, dentists, pharmacists, opticians, clergymen, judges, magistrates, firemen, policemen, seamen, gas or electricity supply workers, members of the General Assembly, the Armed Forces, employees of the Government Railways Department or of the Navy, Army or Air Force, persons in hospitals, prisons or the Institute for the Blind, persons receiving invalids' benefits or disablement pensions, insane persons and persons outside New Zealand.

The Industrial Manpower Emergency Regulations provide that persons who have registered for employment may be directed into essential employment by a District Manpower Officer. Such persons are also covered by the regulations providing for reinstatement in employment at the conclusion of national service and suspending apprenticeship contracts during war service. They must be paid at rates not less favourable than those prescribed in any pertinent Act, award or agreement, or in the absence of such, at rates fixed by the Minister of Labour. Workers in essential employment are guaranteed a minimum weekly wage and may not leave their jobs or be dismissed except for serious misconduct without the consent of a District Manpower Officer. Membership in a trade union connected with their occupation is compulsory for persons in essential employment.

I.L.O. issues Year Book of labour statistics

The International Labour Office has published its annual summary of labour statistics for 1942. The statistics presented cover sixty countries in all parts of the world, and, with a few exceptions, have been taken from official publications or have been communicated to the Office by the Governments concerned. As far as possible the tables have been brought up to date though this could not be done in all cases, especially in the case of belligerent or occupied countries where many statistical series are no longer published.

The tables are arranged in the following main groups: Total and gainfully occupied population, employment and unemployment, hours of work, wages, cost of living and retail prices, family living studies, migration and industrial accidents. Two new tables have been added this year, one on the distribution of food expenditures on the chief food groups as shown in family living studies and the other showing differences in the percentage of expenditures on the chief groups of items at

different income levels. Moreover, the table on cost-of-living indexes has been expanded by the inclusion of trends of the group indexes of fuel and light, clothing and rent.

Conditions of Soviet workers in Reich described by I.L.O.

One of the great problems confronting Germany to-day is that of compelling workers recruited in the occupied part of the Soviet Union to increase their output while keeping them in a status resembling slavery, it is declared in

an article appearing in the May issue of the *International Labour Review*.

Recent public statements of Nazi leaders emphasize Germany's determination to exploit to the full the labour reserves still available in conquered territory, particularly in the Soviet Union, the article points out.

But, the article says, "while exploiting these reserves, National Socialist Germany is determined, as is proved by the legislative provisions introduced in 1942, to maintain its discriminatory racial policy against the millions of Soviet workers placed in German industry and agriculture.

"To carry out this mobilization and raise the workers' output while keeping them in a special employment status characterized by low earnings, rough lodgings, complete lack of contact with the outside world, and limited medical aid, is one of the greatest problems with which, as a result of over three years of war and all the losses in men and materials they have involved, the German Government is now confronted."

Prepared by the International Labour Office on the basis of information derived from official German sources, the article describes the regulations governing the recruiting and employment of Soviet workers in Germany. It emphasizes, however, that the picture must remain incomplete in the absence of data concerning the practical effect of the regulations.

In some respects, the article says, Soviet workers are worse off even than the Poles who have been recruited for labour in Germany. Beginning in 1941, the report says, Soviet workers were sent to the Reich at the rate of 15,000 to 20,000 a day, and in 1942 a total of 2,000,000 were transported.

A Soviet worker in Germany must wear a badge bearing the word "Ost," and every German who has to have dealings with a Soviet worker is thus warned that he must treat him with "the greatest reserve". Moreover, the article says, the Soviet workers are housed in special barracks to reduce contact between them and the German population to a minimum.

Manpower

Selective Service Begins Transfer of Workers

First Order Issued Applying to Workers in Certain Specified Non-Essential Industries and Occupations

NATIONAL Selective Service has begun the compulsory transfer of men in age groups designated under Mobilization Regulations from non-essential employment to work in agriculture and industries of high essentiality.

This action was taken under Section 210 of National Selective Service Civilian Regulations¹, whereby the Minister of Labour was given power to issue an Order forbidding employers in specified industries to continue the employment of men in such age groups after a specified date unless a special permit in prescribed form is obtained.

Industries and Occupations Covered by the Order

The first of such Orders was announced by the Minister on May 4. It covers men employed in the following industries or establishments:

- (1) taverns or liquor, wine and beer stores;
- (2) retail sale of candy, confectionery, tobacco, books, stationery, news;
- (3) barber shops and beauty parlours;
- (4) retail and wholesale florists;
- (5) service stations (i.e., gasoline-filling stations);
- (6) retail sale of motor vehicles or accessories; and
- (7) retail sale of sporting goods or musical instruments.

In addition, all men designated under Mobilization Regulations are covered by the Order if in any of the following occupations, regardless of whether the occupation is one in those industries listed as covered or not:

- (1) waiter, taxi-driver, elevator operator, hotel bell boy, domestic servant;
- (2) any occupation in or directly associated with entertainment, including but not restricted to theatres, film agencies, motion picture companies, clubs, bowling alleys, pool rooms; and

- (3) any occupation in or directly associated with dyeing and dry cleaning (but not including laundries); baths; guide service; shoe shining.

Procedure to be Followed

The procedure under the Order was officially outlined as follows:

It now becomes obligatory for every man in an age and marital class designated under Mobilization Regulations, engaged in one of the industries or occupations specified in the Minister's Order, to make application to the nearest Employment and Selective Service Office not later than May 19. If there is no higher priority work available for the man, he will be given a special permit to entitle him to continue on a temporary basis in his old employment. On the other hand, if it appears necessary in the interest of the war effort that the man be moved to more essential employment, he will be given a direction to some such employment.

Each man who can call personally at an Employment and Selective Service Office, must do so. A man so far removed from an Office that he can not call, will be required to write the Office and await further direction.

The Order refers specifically to every man engaged in these restricted employments, who was born in any year from 1917 to 1924 and who has reached age 19, regardless of whether married or single; and to every man born from 1902 to 1916 who on July 15, 1940, was unmarried, divorced or judicially separated, or was then a widower without children, even if such a man has since married; and it also refers to a man who has become a widower since July 15, 1940, and has no children now living; as well as to men who since that date have been divorced or judicially separated. All men in the groups mentioned, regardless of their medical classifications, are required to report.

The Minister announced that for the present it is not proposed to compulsorily direct to alternative employment any men who have their discharge from the Armed Forces after

¹P.C. 246, January 19 (L. G., January, 1943, p. 16), as amended by P.C. 2665 April 2 (L. G., April, 1943, p. 449).

active service in the present war. However, this does not mean that such men are not expected to register by May 19. Ex-servicemen where now engaged in the specified low priority industries must register, and they will be encouraged to accept employment at high priority work. Also, for the present it is not proposed to require a married man, regardless of when he married, or a single person who is maintaining a dependent, to accept alternative employment which would involve a change of residence. But married men must register with an employment office, if in a class designated under Mobilization Regulations, and they may be required to accept alternative employment in the district where they now live.

Measures will be taken to ensure fair minimum earnings for those who are directed to alternative work. For example, a single person will not be directed to employment in agriculture unless the prospective employer is prepared to pay at least \$40 a month and board. In all cases, if the current rate of wages for a job is above any minimum rates fixed, the employer will have to pay the going rate.

Men will not be directed to employment where the vacancies arise out of an industrial dispute.

The health and physical condition of a man will be taken into account at the time that a transfer is decided upon.

As it is so necessary to secure the workers required by the agricultural industry, a good many of those directed to employment will be sent to farms, but transfers will not be restricted to that line of work. Some workers will be directed to other essential industries where their services are needed.

Workers objecting to transfers will have a right to appeal to a Court of Referees, whose decision shall be final. Any workers who re-

fuse or neglect to accept employment to which they are directed, and who are not supported in their contention by a Court of Referees, are guilty of an offence, and upon conviction are liable to penalties, and also to compulsory labour service in an Alternative Service Work Camp, on the same basis as conscientious objectors. (See L.G., April, 1943, p. 451.)

Obligations on Employers and Employees

"The Order in regard to compulsory labour transfers," the Minister of Labour stated, "imposes obligations both on employers and on employees. After May 19, it will be illegal for any employer in the industries or occupations covered by the Order, to retain in his employ any employee in a category designated under Mobilization Regulations, unless a special permit in the prescribed form entitling the employer to retain the man's services, has been secured from a Selective Service Officer. Also, of course, it will be illegal for men in the defined classes to remain in such employment without the special permit. Definite check-ups will be made, in order that penalties may be applied against any who commit infractions of the Regulations."

The Minister added that this first Order on compulsory labour transfers will be followed by subsequent orders, dealing with other non-essential employments. "The public will realize, I am sure," the Minister continued, "that the administrative features of compulsory labour transfers subject the Employment and Selective Service Offices to a considerable strain. This has been true in all countries, where the system has been applied. Therefore, from the administrative viewpoint it is necessary that the transfers be made by stages, rather than all at once. We expect that this readjustment within agriculture and industry will go a long way to assist where labour shortages now threaten vital production."

Proclamation Regarding Military Call-up

A PROCLAMATION was issued on April 27 in regard to the calling up of men for military service. It states in consolidated form the age classes and parts of age classes previously designated under the Mobilization Regulations, and makes one minor addition in respect of men born between 1902 and 1916 and who on July 15 were judicially separated.

The proclamation designates every man born in any year from 1917 to 1924 inclusive and who has reached the age of nineteen, regardless of whether married or single; and

every man born from 1902 to 1916 who on July 15, 1940, was unmarried, divorced or judicially separated, or was then a widower without children, even if such a man has since married; it also refers to every man who has become a widower since July 15, 1940, and has no children now living; as well as to men who since that date have been divorced or judicially separated.

All such men are required to submit themselves for medical examination and to report

at a military training centre or district depot to "undergo and perform such military training, service or duty within Canada or the territorial waters thereof during the state of war now existing as the Minister of National Defence (Army) may from time to time require under the Reserve Army (Special

Regulations, 1941, or such other regulations as may be applicable and to report at such places and times and in such manner and to such authorities or persons as they may be required by a Registrar appointed under the National Selective Service Mobilization Regulations."

Progress of Farm Labour Program

Farm Labour Agreements Effected Between Dominion and All Provinces To Recruit Workers for Agriculture—Action Taken Under Program.

A NUMBER of further steps have been taken to augment the farm labour program described by the Minister of Labour to the House of Commons on February 26. This eleven-point plan re-emphasized the Government's policy of keeping essential labour on the farms. It also provided for the release of men and women suitable for farm work from non-essential industry, looked to the direction of military rejects to agriculture, and contained schemes for Dominion-provincial co-operation and the organization of local committees. (This program was outlined in the *LABOUR GAZETTE* for February on page 185. In the January issue, on page 40, appeared an account of the operation of Ontario's "Farm Service Force" scheme, under the program).

The following article describes some of the steps which have been taken in carrying out the program.

Dominion-Provincial Farm Labour Agreements

Farm labour agreements between the federal and provincial governments have been approved by all of the provinces. These agreements provide financial assistance to the provinces, on a dollar for dollar basis, for organizing more effectively manpower now engaged in agriculture, and to recruit, transport and place on farms during 1943-44 workers, whether male or female, suitable for farm work. Last year the agreements were designed to meet the extra demands for seasonal workers for fruit, vegetable and grain harvesting. This year the aim is to meet not only the farm labour requirements for seasonal peaks but also to help meet the more urgent and more difficult problem of supplying steady experienced help for the expanding dairy and livestock production.

An Order in Council, P.C.3620, passed on May 4, provides for a maximum expenditure on the part of the Dominion under these agreements of \$510,000. This federal commitment has been increased from a total of

\$164,000 last year, when similar agreements were made with six of the nine provinces. In addition, the Order in Council provides for a total expenditure by the Dominion of \$300,000 for transporting harvest and other farm workers from one province to another, which cost as set forth in the agreements is to be borne entirely by the Dominion. The corresponding item last year was \$250,000.

Organization of Dominion-Provincial Farm Labour Committees

Special Dominion-Provincial Farm Labour Committees provided for under these agreements are now operating in each province. These committees are determining the kind of program to be followed in each province. Provincial directors of farm labour have also been named to devote their full time to the farm labour program under the direction of these committees. These provincial directors of farm labour include: Cecil Miller, Department of Labour, Charlottetown, P.E.I.; William Milligan, Department of Agriculture, Truro, N.S.; E. M. Taylor, Department of Agriculture, Fredericton, N.B.; Alex. J. Rioux, Department of Agriculture, Quebec, P.Q.; Alex MacLaren, Department of Agriculture, Toronto, Ont.; E. M. MacLean, Department of Agriculture, Winnipeg, Man.; W. W. Dawson, Department of Municipal Affairs, Regina, Sask.; R. M. Putnam, Department of Agriculture, Edmonton, Alta.; Wm. MacGillivray, Department of Agriculture, Vancouver, B.C.

These men are working closely with the field staffs of the appropriate provincial departments, and with the local committees actively engaged on the agricultural production program. Reports are being received from these Provincial Farm Labour Directors regarding the organization and activities of the local committees. Over eight hundred of these local committees have been organized in Quebec with somewhat smaller numbers in the other provinces. These committees, together with the provincial fieldmen, are surveying farm

labour needs, encouraging the best use of existing labour, assisting in placing other available workers on the most productive farms and supplying valuable information, when requested, to the mobilization boards.

Seven National Selective Service agricultural advisors have recently been named to work closely with these provincial directors of farm labour. They are working under the direction of the regional superintendents and are responsible for seeing that the farm labour activities of local employment and selective service offices are properly co-ordinated with the work of the provincial fieldmen and the farm committees.

The National Selective Service agricultural advisors appointed are: R. D. Gilbert, Maritime Regional Office, Moncton; G. Michaud, Quebec Regional Office, Montreal; William Davison, Ontario Regional Office, Toronto; J. F. Christianson, Prairie Regional Office, Winnipeg; F. J. Jarvis, Prairie Regional Office, Regina; J. K. MacKenzie, Prairie Regional Office, Edmonton; J. E. Wood, B.C. Regional Office, Vancouver.

Return of Farm Workers from Winter Employment in Other Industries

Statistics recently compiled for the Ontario offices indicate that 14,323 temporary permits were issued to farm workers to engage in other industries during the winter months. Of this number, 8,162 were cancelled by the middle of April; 3,034, it is estimated, returned to agriculture on their own account, leaving another 3,027 still employed in other industries. The regional superintendent for Ontario sent instructions to the Employment and Selective Service offices to cancel the remainder of these permits at once, wherever there are unfilled orders for farm help in the offices, and where necessary to follow up individual cases to make sure that they return to agriculture.

Through ten representative Employment and Selective Service offices in the Maritimes, 5,299 temporary permits were issued to farm workers during the winter months. In all of the offices, with the exception of those in northern New Brunswick, the large majority of these permits were cancelled by April 30. Because of the late season in agriculture, and also in river driving, most of the farm workers engaged in logging in northern New Brunswick remained another few weeks.

Similar data are being secured in other provinces. Wherever possible persons returning to agriculture from winter employment

elsewhere are being directed to productive farms. The local community committees and the provincial fieldmen are assisting the local Selective Service offices in this placement work. Besides those who worked in other industries on permits there were many who left agriculture for shorter periods without permits. Most of these persons have already returned.

At the end of April there were 4,666 unfilled orders for farm help in the local Employment and Selective Service offices throughout Canada. This does not represent the total farm labour requirements since in some cases orders have been sent directly to the provincial offices. Many farmers it might be added are sometimes reluctant to send in their orders for help, partly because they have not been accustomed to doing so in the past, and partly because they are not too hopeful of obtaining experienced workers for the wages they can offer. To help overcome this reluctance the provincial and federal officers are actively encouraging farmers to send in their orders for help at the earliest possible date.

Spring Harvest in the Prairie Provinces

In the prairie provinces early in May several hundred men and boys had been placed on farms to help with the threshing left over from last fall. There were over 2,000,000 acres of grain to be threshed. This spring harvesting work was well advanced, and it appeared clear that sufficient help was available to complete the job. It might be added that about 75 per cent of this crop had been saved, and in some cases the quality was actually superior to that of the grain threshed last fall.

Other Recent Developments in the Prairies

There are two other observations which might be added concerning farm labour in the prairie provinces.

In Alberta, a plan of paying supplementary living allowances to the families of farm operators moving from low to high productive farms has been approved. In Saskatchewan, it is reported that about ten per cent of the postponement cases recently investigated are of men found to be non-essential on the farms on which they are at present located. As a condition to receive initial or further postponement many of these persons are moving to productive farms where their services are needed.

Farm Labour Conferences

A series of four conferences has recently been held throughout Ontario, at St. Thomas, Guelph, Peterborough and Kemptville. These

conferences were attended by the managers of the local Employment and Selective Service offices in the area, the provincial agricultural representatives for each county, the field staff of the Ontario Farm Service Force, and the chairman of the County Agricultural War Committees. Also in attendance, at one or all of the conferences were: W. R. Reek, Deputy Minister of Agriculture, Ontario; R. S. Duncan, Director of Agricultural Representative Service; A. T. Martin, Assistant Director of Agricultural Representative Service, Dept. of Agriculture, Ontario; A. Maclaren, Director of the Farm Service Force, Ontario; B. Sullivan, Regional Superintendent, E. & S.S. Offices, Ontario; T. Heatherington, Asst. Regional Superintendent, E. & S.S. Offices, Ontario; Wm. Davison, N.S.S. Agricultural Advisor, Ontario; H. R. Hare, Agricultural Advisor, Employment Service and Unemployment Insurance Branch, Ottawa; T. B. Pickersgill, G. V. Haythorne, Agricultural Division, Labour Supply Branch, Ottawa.

These conferences provided an excellent opportunity to discuss the farm labour program in the light of local conditions. They also helped greatly to clarify the respective roles of those co-operating in the program. With a fuller understanding of the farm labour program and a greater appreciation of the work being done by those participating a more effective united attack will be made on farm labour problems. Similar conferences are being planned in Ontario, Quebec and in some of the other provinces.

Radio Broadcasts and Educational Films

Publicity in connection with the farm labour program is being handled mainly by the

provinces through the Dominion-Provincial Farm Labour Committees. Some steps, however, have also been taken by the Dominion. A national farm labour forum was presented by the Canadian Broadcasting Corporation on April 26. At this time, discussions with the provincial authorities were reviewed, and the broad terms of the farm labour program outlined. Following this national broadcast, regular fifteen-minute farm labour broadcasts were started in the Maritimes, the Prairie Provinces and British Columbia. Similar series were begun earlier in Ontario and Quebec.

Arrangements are being completed with the National Film Board for the preparation of a short newsreel on student help on farms, for release to the Canadian theatres early in June. A second one designed to encourage townspeople to help in haying and harvesting will be released late in June or early in July.

Return of Farm Workers from Less-Essential Industries

The machinery is now in motion to direct workers with farm experience in less-essential industries to employment in agriculture and certain other essential industries. Persons in the designated age categories must report to their nearest Employment and Selective Service office by May 19. Those who are suitable for farm work will be directed by local Employment and Selective Service officers to productive farms. As far as possible this direction will be made on the advice of the provincial fieldmen and the local agricultural committees. No person will be directed to farm work unless the prospective employer is prepared to pay at least \$40 per month and provide board and lodging.

Use of Conscientious Objectors in Forest Work Camps in British Columbia

AN agreement has been entered into between the Dominion and the province of British Columbia with respect to the use of conscientious objectors in forest work camps. The men will be available to fight forest fires, and also to help relieve the shortage of wood fuel in the province.

The camps will be organized and operated by the province, with the Dominion sharing in the cost. The federal Minister of Labour

will assign not more than 600 men, pursuant to Section 251 of National Selective Service Civilian Regulations, to report at such camps as an alternative to military training.

Regulations permitting the employment of conscientious objectors on farms or in essential industry were described on page 451 of the April LABOUR GAZETTE. The present agreement was authorized by Order-in-Council P.C. 2/3314.

Manpower Administration in Canada

**Text of Paper by Mr. Arthur MacNamara, Deputy Minister of Labour,
Before Academy of Political Science in New York.**

THE following paper on manpower administration in Canada, by Mr. Arthur MacNamara, Deputy Minister of Labour and Director of National Selective Service, was presented before the Academy of Political Science in New York on April 7:

While time will not permit a detailed analysis of the differences and similarities between Canada and the United States, it seems advisable to mention some of the more significant items in any such comparison, as a background against which to consider Canada's manpower policy.

Like the United States, Canada is a federal union but, because there are only nine provinces as against forty-eight states, the opinion of each province probably carries a greater weight in determining federal policy than does that of any single state. As in the United States, there is a constitutional division of legislative authority between the dominion and the provincial governments but not, as in the United States, separation of powers between the legislative and the executive branch of government.

In normal times, jurisdiction over matters of property and civil rights, which includes jurisdiction over employment conditions and related fields, belongs primarily to the provinces. Normally, the Dominion government has less jurisdiction in this field than the federal government of the United States now enjoys in the light of recent interpretations of the Constitution. This may be one of the reasons why Canada has less national labour legislation than the United States. It has no wages and hours act, no national labour relations act and until recently had no unemployment insurance act. The Dominion government therefore had probably less administrative experience than the United States government in these fields which are so closely allied to manpower administration.

Jurisdictional Background

In time of national emergency the Dominion has overriding power to take any measures necessary for the defence of Canada, and there is therefore little practical restriction on the wartime jurisdiction of the Dominion Parliament. By the War Measures Act, Parliament has delegated very broad authority to exercise its wartime powers to the Governor in Council or Cabinet. Most of Canada's wartime policies are therefore expressed in orders in council,

comparable to the President's executive orders in the United States, passed by the Cabinet under this authority and simply tabled in Parliament. Power is therefore somewhat more centralized in Canada than in the United States. This power is exercised, however, subject to democratic consent, since the members of the Cabinet, with one or two exceptions, are elected members of the House of Commons and must be prepared at any time to answer any question which any member cares to ask about government policy or administration. Unlike the President and his appointed Cabinet, the Prime Minister and his Cabinet have no fixed term of office; they retain office only as long as they can command a majority in the House of Commons. All government policy, therefore, has to run the gauntlet of democratic review, in that disapproval of any major policy would necessitate the resignation of the Government and, unless the opposition could command a sure majority in the House, an appeal to the country in the form of a general election.

Although Canada, like the United States, is a land of many peoples the fact that there are two main stocks, French and British, somewhat complicates, although it also enriches, Canadian political and social life. French Canadians, who constitute about one-third of the population, differ in language and in many social and political attitudes from the majority of the population and carefully guard the minority rights which have been guaranteed them by the Constitution. Every government policy must be framed with due regard to their special rights and their convictions.

Canada is less highly industrialized than the United States. Its economy depends more on agricultural and other primary products of its forests and mines. Whereas the United States war program called largely for industrial conversion and expansion, the Canadian war program called in greater degree for industrial establishment and development.

Finally Canada's population is only about one-twelfth of that of the United States and is spread rather sparsely over a strip about 100 miles wide along a 3,000-mile border.

Conditional Factors

All these factors have conditioned the development of manpower policy in Canada, which can be roughly divided into two periods, prior to and after the centralization of authority in

National Selective Service in the Department of Labour.

At the outbreak of the war the problem was that of unutilized manpower. During every month of 1939, although Canadian statistics of unemployment are not satisfactory, about 400,000 workers were unemployed, and from 500,000 to slightly more than 1,000,000 men, women and children were on direct relief. The first problem was to absorb this idle manpower in productive work. The recruiting of volunteers for the armed forces, and government expenditures for war materials and war construction began to take up this slack, but in the early months of the war it appeared that Canada's contribution would take the form of chiefly food supplies and munitions rather than of armed forces and that both men and supplies would be required in numbers that would not strain the country's resources.

It was not until after the fall of France that Canada began to realize the desperate character of the war and the sacrifice it would demand. Without reviewing all the policies that began to develop shortly thereafter in the effort effectively to mobilize Canadian resources, only two major developments will be mentioned: the introduction of conscription, and war emergency training, both dating from the summer of 1940.

In June, 1940, the National Resources Mobilization Act was passed authorizing the Governor in Council to require all Canadians to put their persons and property at the disposal of the state. A new Department of National War Services was established. Every person over sixteen years of age was required to register for National Service, and keep the registrar-general notified of any change of address. In October, men began to be called up at first for military training for limited periods, subsequently for military service for the duration.

Canada's armed forces consist of volunteers, but the method of voluntary recruiting is supplemented by conscription for service in Canada. Since a very large proportion of the draftees enlist for active service anywhere, either before or after their induction into the service, the net effect of the Canadian draft is not very different from the United States draft.

Call-up Procedure

Until December, 1942, when it was transferred to the Department of Labour, the draft was administered by the Department of National War Services. Requisitions for given numbers of men are made by the Department of National Defence. These are distributed to thirteen divisional registrars, who proceed to call men from the national

registration records, by designated age classes for medical examination. Every physically fit man is then ordered to military service unless granted a deferment for occupational reasons. Applications for deferment are denied or granted by thirteen boards, each consisting of a senior judge and two other responsible citizens of the community. Each application for deferment must be supported by the employer and, with the major exception of agriculture which will be referred to later, each is handled on an individual basis. The boards have lists of essential industries and are assisted by special representatives of agriculture, labour and industry who are free to support or not support each application, but each case is handled on the basis of whether the man in question is in an essential war occupation and, if so, whether or how soon he can be replaced. With the one exception mentioned, there are no blanket exemptions either by industry or occupation. Employers have from almost the very beginning been free to submit plans for the orderly call-up and deferment of their employees and individual applications from employees of employers who have done so are considered in the light of such plans. These plans are currently being developed into a program very closely resembling that of the manning and replacement schedules in the United States.

Toward the end of 1940, the first overall estimates of the country's manpower requirements for the armed services, war production and essential civilian production were developed, and of course they are being revised continually in the light of changing conditions. These showed not only the obvious shortage of skilled workers but a threatening shortage of semi-skilled workers. This led to the development of the war emergency training program which was grafted on the existing administration for the training of unemployed youth. Under this program the dominion, in co-operation with the provinces, made use of all the facilities of vocational and technical schools for the pre-employment training of semi-skilled workers. Trainees are paid subsistence allowances while attending classes, which run from two weeks to six months but generally last about six weeks. Most of them are trained at the specific request of employers who agree to employ them at the satisfactory completion of the course. Under the program, training in vocational school classes is given also for tradesmen in the armed services, part-time training is given for employed workers, training within industry in plant schools or otherwise is promoted and a start has been made in the

training of foremen. Nearly 200,000 trainees have been enrolled since the program started, proportionately equivalent to about 2,400,000 in the United States. In 1942, Parliament passed the Vocational Training Co-ordination Act which, puts the dominion-provincial program on a permanent basis, which may make it a powerful instrument of post-war rehabilitation and reconstruction. Already nearly 1,200 discharged soldiers are enrolled in rehabilitation classes.

Phases of the Program

At the cost of interrupting the chronological sequence it may be advisable here to mention related phases of the Canadian program. As a contribution to better utilization of labour and improved personnel policies, early in 1942 the government in co-operation with seven universities sponsored short, practical courses in personnel management. Ten such courses of four weeks' duration have been given with over 500 students. Most of the instructors and substantially all the students are actually engaged in employment and personnel work, and the courses have helped to broaden the understanding and application of sound principles in this field.

To help to maintain the supply of doctors and dentists for military and civilian purposes and of engineers and scientists for the armed forces and the war industries, the dominion, in co-operation with most of the provinces, makes loans or grants to promising university students who might otherwise find it impossible to complete their courses because the acceleration of courses leaves them little opportunity to work their way through. Nearly 2,000 students received such assistance last year.

By the end of 1940 the reserve of unemployed labour had almost dwindled away. As men left industry and agriculture for the armed services and war contracts expanded and multiplied jobs, a great shifting of labour began. Employers began to complain of their difficulty in securing skilled workers and began to compete with one another by offers of constantly increased wages. Many mistakes, of course, were made. Expanding employers often tried to recruit and train young workers, only to find after a few months that they would be called or would volunteer for the armed services. All of us had our sights set too low. Most employers at this stage, for example, refused to believe that they would ever find it necessary to replace men by women. But Canada's war effort continued to expand without any serious dislocation of other activities by the natural and almost automatic turnover of labour in search of better jobs.

There was no central authority directing the movement, no master plan, although conscription and training for war industry had begun.

This process continued through 1941, which was marked chiefly by a crystallization of the wartime economic policy of wage and price control supplemented by increasingly heavy taxation, an increased drive for savings and the beginning of consumer rationing to check inflation. During this year there were, however, two important developments relating to manpower. The first was the establishment of the Wartime Bureau of Technical Personnel, a specialized employment service for engineers, scientists and other professional technicians, set up to avert shortages in and contribute to the better allocation of such essential personnel. Administered by the Department of Labour in co-operation with the professional societies, it was at first simply a facility offered to those who wished to use its services. Gradually it developed into an agency for the control of such personnel under regulations which set the pattern in some degree for general manpower policy.

The second was the establishment under the Unemployment Insurance Act, which was passed after the necessary constitutional amendment in 1940, of a national employment service. This constitutes the indispensable agency for the administration of any manpower policy and it would have been useless to formulate policy until there was a reasonable prospect that it could be administered successfully. A special effort was made therefore to develop the employment service. In 1940 there had been only seventy-five such offices with a staff of about 425, operated by the provinces with a dominion subsidy. By March, 1942, the offices numbered 111 with a staff of nearly 1,500. To-day the staff is nearly 4,500. On the work of these offices the whole success of Canadian manpower policy depends.

Advent of Selective Service

In March, 1942, following a series of special studies in the summer and fall of 1941, the manpower or National Selective Service policy was first announced and began to be applied in a series of gradual steps roughly in pace with the development of the employment offices. These intermediate steps will be passed over in this account and attention given to a summary of the program as it now operates.

There has been a considerable centralization of administrative authority. Previously the armed services conducted their recruiting campaigns, the Department of National War Services called up men for compulsory military

service, the autonomous Unemployment Insurance Commission did a certain amount of civilian placement through its employment offices, employers and employees were free to hire and fire and quit as they liked, and the Department of Labour handled war emergency training, industrial relations and other related aspects of the problem. The employment offices and draft boards have been transferred to the Department of Labour, and, except for voluntary recruiting, in some phases of which particularly as to women and technical officers the Department helps, all authority is centralized in the Director of National Selective Service, supervised by the Minister of Labour.

The regulations which embody policy are enacted by the Governor in Council or Cabinet on the advice of its subcommittee on manpower, generally on recommendation of the Minister of Labour. He in turn is advised both as to policy and administration by the National Selective Service Advisory Board, without the approval of which no major step has yet been taken. This board consists of senior civil servants representing the departments most directly interested in manpower, defence, munitions and supply, agriculture, labour, finance, and the Wartime Prices and Trade Board, five representatives of organized employers and five of organized labour, and a representative of organized farmers. This board serves as a two-way channel. It brings to bear on questions of policy the viewpoints and interests of those most directly affected and conveys back to them the requisite explanations of policy for co-ordinated application.

Under the Director of National Selective Service there are five main branches. The employment service branch, operating through five regional superintendents and 211 local offices, administers the major civilian regulations. The armed services branch, operating through thirteen mobilization or draft boards, administers call-up for compulsory military service. Together the research and labour supply branches prepare estimates of manpower requirements and develop special subsidiary programs as required. Finally, the welfare and related services branch promotes the establishment of day nurseries for the children of working mothers and deals with other welfare problems growing out of the increased employment of women.

The heart of the policy is a schedule of labour priorities with steadily increasing control over the movement and allocation of labour. In co-operation with the Department of Munitions and Supply, which is responsible for war production, and the Wartime Prices

and Trade Board, which is concerned with civilian supply, every industry was first classified as having very high, high, low or no labour priority. The classification has just been extended to every employer or establishment, with some further refinements such as differing priorities for male and female labour. Every employment office therefore knows the labour priority of every employer in its area and uses it to determine where labour should be referred.

With few exceptions, all industrial and commercial employers and employees are required to use the employment offices. No employee can quit or be fired without giving or receiving seven days' notice of separation, a copy of which goes to the employment office. Provision is made, of course, for a reduced period of notice by permission of the local employment manager or selective service officer in special circumstances.

No employer may interview or engage any worker and no worker may seek or accept work unless he has a permit from the local employment office. This permit is given to a worker only if he presents his copy of the notice of separation or shows that he was not previously employed or was employed in one of the few occupations to which the regulations are not applicable. Permits to seek employment may be restricted as to duration, locality, industry, occupation or even to specified employers. Except anonymously in the name of selective service, employers cannot advertise for help and must requisition all their required labour from the employment offices.

These controls, it should be noted, are flexible. At the outset a very large proportion of permits to seek employment were open or unrestricted. As employers began to report their vacancies more adequately and as the employment officers began to understand the employers' requirements and their place in the scale of labour priorities, the controls were tightened and the permits increasingly are assignments to specific employers.

Application to Agriculture

Special arrangements apply to agriculture which amount to a block allocation to agriculture of all workers normally employed there in March, 1942. Since that date, although agricultural workers could move freely from farm to farm, none, except for short-term employment in related seasonal industries, could seek or accept employment outside agriculture without a permit from a selective service officer. Such permits are issued only in special circumstances, except for long-term seasonal employment when farm work is slack. This

was coupled with the provision that all workers employed in agriculture or related seasonal industries in March, 1942, would be entitled to indefinite postponement from compulsory military service, unless it could be shown that they were not essential to agriculture. These agricultural workers are presumed to be essential unless they are proved otherwise. Workers who returned to agriculture after March, 1942, are entitled to claim postponement on the basis of their essentiality but the burden of proof rests on them.

The steady drain of agricultural manpower to the forces and the war industries has thus been checked. Through the operation of the permit and priorities system the employment offices are steadily redirecting all other labour to its most essential uses. In this redirection major reliance is placed on voluntary compliance but the possibility of compulsion remains always in the background.

Any unemployed person may be ordered to accept suitable employment and any partially employed person may be ordered to accept suitable full-time employment. For a period of six months after acceptance of such compulsory employment the employee may not quit or be laid off without official permission. Further, any employed person whose age class has been called for military service but who has been found physically unfit, may be compelled to accept any other employment. The Minister of Labour may order any employer or group or class of employers to terminate the employment of any such person or group or class of such persons or forbid an employer to retain them in employment without a special permit. These powers have been exercised only in special cases so far, but it is contemplated to use them more extensively in the near future.

Manpower Allocation

Here is the general Canadian situation. Since 1939 the armed forces have grown from about 10,000 to about 700,000, the American equivalent of about 8,000,000. Employment in the munitions industry has expanded from practically nothing to well over 1,000,000 of whom a quarter, a steadily increasing proportion, are women. Despite a loss of manpower, perhaps as high as 400,000, agricultural production has been tremendously increased and diversified. The shifts implied in this are evident since the total number in the armed services or at work has increased since 1938 by only slightly more than 1,000,000.

One-third of all male Canadians aged nineteen to forty-five have enlisted in the armed services; slightly over two-thirds of

the total population aged sixteen to sixty-five are in the armed services or at work. Canada begins therefore to approach the peak of its war effort and has begun to exhaust its last manpower reserves.

The present plans through March 31, 1944, call for a net increase of over 160,000 men for the armed services, agriculture and war production. Of these only a small number can be obtained from those now temporarily unemployed. Ten thousands will come from a decrease in male students, another 45,000 from the natural increase in the population of military or working age. For the balance there is no other possible source than the curtailment of less essential industries and services. A net increase of 87,000 women is also required for the armed services and war production. A reduction of female students and the natural increase of population of working age in urban centres will probably furnish about 42,000. That means 45,000 women will have to enter the armed services and essential employments from homemakers and other women not now at work in urban centres. The figures given are net figures. To take one man into the armed forces may now necessitate replacing him with a man not eligible for military service, replacing him in turn with a woman, replacing her with another woman and so on through a series of shifts till we reach a point at which replacement is not needed.

Canada is confident that it can meet its requirements for female labour with little difficulty, since last year the number of women in war production increased by about 200,000, and there are many centres in Canada with a surplus of women known to be willing to work.

The serious shortage is now of able-bodied men for the armed services, agriculture, logging, mining and other heavy work. To meet the requirements of agriculture both for year-round workers and seasonal workers the government is co-operating with provincial departments of labour, education and agriculture. Through a series of local committees estimates are being made of the demand for labour, and the best distribution of existing farm labour is being encouraged. To increase the supply of year-round labour it will be necessary to use compulsion, although it is expected that the seasonal demands will be met by special programs which will organize students and others in seasonal farm services forces.

Apart from the day-to-day operations of the employment service which is diverting the normal turnover of labour to more essential uses, it is planned to meet the most pressing needs for heavy labour by a

compulsory squeeze. If the supply of labour is thought of as represented by a pile ranging from those in the most essential occupations at the top to the least essential at the bottom, it will be squeezed at both ends.

Recruitment of Labour

In the essential industries, plans for the orderly release of men for the armed services and for their replacement, reviewed and approved where necessary by local or industrial committees, will force the release of available men. At the other end, in the less essential occupations, not only will men be called for military service in the regular routine, but substantial numbers of those found unfit or who have previously been found unfit will have to be released by their employers and required to take available essential work. If this proves to be in agriculture, as is expected in many cases, the difficulty arising from the fact that agricultural wages are so much lower than industrial wages will be met by pointing out that each such man will earn at least as much as in the army. If this is not sufficiently persuasive, resort will be had not only to the regular penalties of fine or imprisonment for recalcitrants, but on the authority to assign them, as may be done with conscientious objectors, to alternative service work camps for forestry and similar projects at a nominal wage of 50 cents per day.

Many of the details of the regulations have been ignored in this account—the inevitable exceptions, the provision of travelling expenses, separation allowances and other special allowances to encourage workers to accept distant jobs, the right given to

workers who are transferred to more essential jobs to claim reinstatement without loss of seniority in their old jobs when the more essential work is finished, the establishment of day nurseries, special provisions applicable to engineering and science students and to technical personnel, and the control of emigration by labour exit permits. But the broad outlines of policy and program have been indicated. These may be summed up in the following phrases: democratic formulation of policy in consultation with the interests affected, centralization of authority in one department but increasing decentralization of day-to-day administration in the field, the establishment and refinement of a schedule of labour priorities, an effort to balance the requirements of the armed forces, agriculture, war industry and civilian industry, the control of employment through employment offices which divert the movement of labour in accordance with the schedule of labour priorities so far as possible on the basis of voluntary compliance, special effort to recruit women and to train both men and women toward higher skills, all supplemented as necessary by the exercise of compulsion with special reference to coming men unfit for military service but otherwise reasonably able-bodied out of less essential industries and their compulsory transfers to more essential employments.

In this whole program Canada has felt its way slowly and is still feeling its way. The routine operations are always being supplemented by special programs to meet special situations. To date Canada has met and surpassed all objectives and will continue to do so at the cost of increasing strain.

Registration of Graduate Nurses

THE result of the registration of graduate nurses, carried out by Selective Service at the middle of March (L.G., March, 1943, p. 317), has been announced. A total of 50,455 nurses registered.

Registration figures by Provinces are as follows:

Prince Edward Island and Nova Scotia, 3,364; New Brunswick, 1,948; Quebec, 7,758; Ontario, 23,497; Manitoba, 2,033; Saskatche-

wan, 2,740; Alberta, 3,369; British Columbia, 5,744; Yukon, 2.

The registration somewhat exceeds the number of graduate nurses which had been thought to be available in Canada. The results have been made available by Selective Service to the Canadian Nurses Association at whose request the registration was taken, and also to the Medical Procurement and Assignment Board, who are making a survey of available health services.

National War Labour Board

Change in Membership of National Board

IT was announced on April 29 by the Minister of Labour that Senator J. J. Bench, K.C., had resigned from the National War Labour Board and that Mr. Leon Lalande of Montreal had been appointed to succeed him. The Minister said that Senator Bench had accepted appointment as a member of the National Board in February only because of the necessity of a prompt reconstitution of the Board for the purpose of dealing with urgent matters which were then pending. There was an understanding then that, after the disposition of these matters and the choice of a successor, the Senator would be permitted to resign.

Mr. Mitchell pointed out that the work of the National War Labour Board is now a full-time undertaking for its members and that it was recognized at the time of the appointment that it would not be possible for Senator Bench to continue on the Board indefinitely and, at the same time, discharge his public duties as a member of the Senate as well as maintain his law practice which is very closely

associated with many essential war industries. The Minister added that the Government was particularly grateful to Senator Bench for his services during the early stages of the new Board's development, especially in view of the fact that Senator Bench served without remuneration.

Mr. Leon Lalande is a graduate in law of the University of Montreal and was a student at the School of Commerce and Finance at the University of Detroit. He is a member of the Bars of both Quebec and Ontario and has practised both in Windsor and in Montreal. His interest in problems of industrial relations is evidenced by his address to the Canadian Bar Association at its annual meeting in September, 1941, on "The Status of Organized Labour" which was subsequently published in the *Canadian Bar Review*. Mr. Lalande has also been closely connected with the over-all policy of wage and price control through his work as solicitor to the Ration Administration of the Wartime Prices and Trade Board.

First Sessions of Public Inquiry

Chairman Outlines Scope and Objectives—Organizations Submitting Briefs

THE National War Labour Board convened the preliminary session of the public inquiry into labour relations and wage conditions on April 15 (L.G., April, 1943, p. 437). The chairman, the Hon. Mr. Justice C. P. McTague, outlined the purpose of the inquiry in the following paragraphs:

"In the Order in Council which reconstituted the Board and appointed us, passed on the 11th day of February, 1943, as P.C. 1141, The Wartime Wages Control Order (P.C. 5963) was amended so as to grant the necessary authorization to conduct such an inquiry as we now propose to hold.

"The matters which the Board was thus given power to enquire into and report upon, generally speaking, fall into two main categories:

"1. The question of labour relations, as to which the Order in Council directs the Board's attention to the provisions of P.C. 2685, and

"2. The question of wages, cost of living bonus and associated questions, with particular regard to the provisions of the Wartime Wages Control Order itself and the administration of that Order.

"It appears to us that the enquiry which we now institute, similarly falls into these two main categories, that is labour relations and wages, with their associated questions. These two main categories, in turn, may divide themselves into two further classifications, namely, those which have an immediate impact on the problem of complete mobilization of the forces of industry and labour in the furtherance of the war effort and those which have an effect or influence, or which may extend, beyond the immediate war period.

"When these extensive powers of enquiry and report were conferred on the Board we were of the opinion that the effective

discharge of our responsibilities would be assisted, and indeed might only be possible, if the matters over which we were to exercise jurisdiction, and the legislative provisions and administrative policy relating thereto, were made the subject of the widest possible public enquiry and discussion. It was our view that by this means the public would more completely understand, accept and co-operate with those responsibilities and provisions which are necessary and advisable in times of war, and at the same time bring before the Board's attention, so that we could in our report bring them to the attention of the proper authorities, any additional matters which should be provided for in the interests of curing industrial unrest and assisting harmony in industrial relations and uninterrupted industrial production.

"Quite naturally, the Board considered it necessary to deal first with the current accumulated cases which then required hearing and decision. We have followed that course and at the same time we have reasonably acquainted ourselves with the provisions of the Orders we administer and some of the questions involved in them. Having done so we have now instituted the enquiry which was provided for when we were appointed and which we then regarded, and no less now regard, as necessary in the public interest.

"We need hardly state that the Board enters into this enquiry without bias or prejudice in favour or against any man, class or group whether in industry or labour. While we deplore, with all others, incidents or occurrences which disturb labour relations, to say nothing of retarding production efforts, we are mindful of the fact that there may be conditions, either in respect to existing relations between industry and labour, or in respect to the effect of some of the provisions of existing legislation, or even the administration of such legislation, which contribute to, and which at times may even create, the uneasiness and unrest which results in strike action. Our purpose in this enquiry is to get to the root of these matters so far as it is humanly possible to do so and to institute a process whereby, as a result of co-ordinated thinking and public discussion on these questions, appropriate remedies may be devised and recommended.

"Our announcement of this enquiry indicated four headings:

"1. Examination of the existing provisions of The Wartime Wages Control Order and associated legislation.

"2. The functioning of the War Labour Boards.

"3. Labour relations generally, with a view particularly to making effective the principles enunciated in P.C. 2685.

"4. Any other matters, specific or general, relating to the above and to the furtherance of the war effort.

"These general headings enable the fullest enquiry into all matters bearing upon the labour situation in Canada and we have no desire, either now or at any time during the course of the enquiry, to limit or confine the representations which any person or organization desires to make to us. It does seem to us to be proper, however, to indicate to you, and by this means to those who will later participate in the enquiry, that some specific questions present themselves to the Board in respect to which we would appreciate argument and opinion from those who will appear before us. Treating the matters again as falling within the two main categories of labour relations, on the one hand, and wage and associated questions, on the other hand, these specific topics appear to us to be as follows:

"I. *In the field of labour relations—*

- (a) In what way should existing legislation or administrative practice be revised, amended or implemented with a view to promoting harmonious labour relations and uninterrupted production?
- (b) Should any such legislative action be adopted as a war measure only under the authority of the War Measures Act, or should it be implemented in any way by legislative action with a view to extending any of these principles and policies into the postwar period?
- (c) What are the underlying causes of strikes or lockouts in war time and what steps should be taken to avoid or deal with strikes or lockouts during the war?

"II. *As to wages, cost of living bonus and associated questions:*

- (a) Generally as to the existing provisions of P.C. 5963 and the administration thereof.
- (b) What, if anything, should be provided with respect to bringing about more uniformity in respect to cost of living bonus?
- (c) To what extent, and under what circumstances, should new conditions of work be ordered or authorized which involve increased cost of production?
- (d) Should there be a floor below which The Wartime Wages Control Order need not be operative?
- (e) To what extent should local, zone or national standards govern conclusions as to wages?
- (f) To what extent should a "living wage" govern policies and decisions and what are the data and considerations relevant thereto?

"These may not, probably do not, exhaust the matters which the Board should enquire into and deal with, but we suggest them to indicate the main considerations which seem to us to be involved and to illustrate the matters upon which we desire to receive representations...."

Continuation of Hearings

The preliminary hearing, which was intended as a general canvass of the methods and program to be adopted, continued for two days. During that period the Board heard suggestions from a number of organizations and individuals as to the scope and course of the inquiry.

The formal sessions of the inquiry opened on May 4 and will continue into June. On the opening day, reports were presented by the Dominion Department of Labour on the administration of the Conciliation Service, and by the Dominion Bureau of Statistics on the composition and compilation of the cost of living index. Subsequently the Board heard briefs submitted by various provincial Departments of Labour and Regional Boards, and organizations of workers and employers, as well as public bodies and individuals.

Parties Submitting Briefs

Among the parties to submit briefs at the hearings of the Board were the following:

EMPLOYEES

Trades and Labour Congress of Canada;
Canadian Congress of Labour;
Canadian and Catholic Confederation of Labour;
Standard Railway Labour Organizations;
International Association of Machinists, Victoria, Lodge 111.
International Association of Machinists;
International Association of Machinists, Lodge 712;
International Brotherhood of Electrical Workers, Local 1028 B;
Winnipeg Central Labour Council, One Big Union;

United Textile Workers of America;
Dominion Communist Labour Total War Committee;
United Automobile Workers, C.I.O., Region 7;
Quebec Federation of Labour;
Montreal Trades and Labour Council;
United Electrical Radio and Machine Workers of America;
National Association of Technical Employees;
Toronto Fur Workers Union;
Port Arthur Trades and Labour Council;
International Union of Mine Mill and Smelter Workers, District 8.

EMPLOYERS

Canadian Manufacturers' Association;
Chamber of Commerce;
Canadian Construction Association;
International Nickel Company of Canada, Ltd.;
Chambre de Commerce du district de Montréal;
Ontario Mining Association;
Niagara Industrial Relations Institute;
Montreal Board of Trade;
Consolidated Mining & Smelting Co. of Canada;
Midwest Mining Association.

OTHER INTERESTED PARTIES

Co-operative Commonwealth Federation of Canada;
Canadian Tribune;
R. J. Deachman;
C. E. Rice;
James Somerville;
Toronto City Council;
Regional War Labour Boards;
Provincial Departments of Labour;

The limits of space preclude any extensive summary being made of the various submissions. However, the Board is publishing the complete text of the proceedings and copies will be available to the public from the King's Printer, Ottawa.

Applications to War Labour Boards

Statistical Summary of Applications Considered by National and Regional Boards, as to Wage Increases, Cost of Living Bonus, Etc.

THE following statement was presented at the public inquiry by the National War Labour Board into labour relations and wage conditions, by Mr. D. G. Pyle, Secretary of the Board. It covers all applications as to wage increases, cost of living bonus, determination of rank, incentive plans, etc., considered by the National and Regional Boards

from their inception in November, 1941, up to February 28, 1943, as follows:—

As to the applications made to the National War Labour Board and to the nine Regional War Labour Boards, the more important facts may be summarized as follows:—

(a) To February 28, 1943, a total of 21,451 applications were considered by the ten

Boards and if an employee covered by more than one application is counted as a single employee in each such application an estimated 1,567,063 employees were affected.

- (b) Of the applications, 82.6 per cent were submitted by employers, 5.9 per cent by employees, and 11.5 per cent jointly. The employee-applications for cost of living bonus and increases in basic wage rates, however, although they amounted to only a small percentage of the applications, nevertheless covered about 35 per cent of the workers involved in applications of those types.
- (c) 77.2 per cent of the applications covering 51.3 per cent of the employees were direct requests for increased remuneration, that is, applications for cost of living bonus and increases in basic wage rates.
- (d) Of the applications, 89.1 per cent were granted in full or in part.
- (e) From various sources of information it has been estimated that the applications granted in full or in part authorized or directed increases in payroll disbursements by about \$79,237,104 per year.

Taking each of these in turn and first the total applications, more than one-half of the cases were decided by the Regional War Labour Boards for Ontario and Quebec and more than two-thirds by these two Boards and the British Columbia Board. Another 20.9 per cent were handled by the three Boards of the Prairie Provinces and the remaining cases were decided by the Maritime Boards and the National Board. In order that this statement may not become too enmeshed in figures, tables setting forth the statistical information in greater detail have been appended, and more detail relative to the number of cases handled by the Boards may be found in Table I.

Figures as to the number of employees, however, probably throw more light upon the relevant importance of these applications insofar as one application may involve but one employee or a number of employees running into several thousands. It has been estimated that a total of 1,567,063 employees have been covered by applications of the various types. Complete details are given in Table II appended and it is sufficient to note that 39.5 per cent of the employees were covered by decisions of the Quebec Board, 33.1 per cent by the Ontario Board, and 14.1 per cent by the National Board, and to note that there is little relationship between the number of

cases handled and the number of employees covered.

Applications from Employers, Employees and Joint Petition

As to the origin of these applications the predominant number (82.6 per cent) were submitted by employers and only small fractions were submitted by employees (5.9 per cent) and by joint petition (11.5 per cent). Such percentages moreover cannot be said to be representative of all Boards. Indeed in most cases the number submitted by the employers is even greater. In substantiation of this statement, attention is drawn to Table III which indicates that of the total of 2,463 cases made by joint applications, 1,893 or 76.8 per cent were handled by the Regional War Labour Boards for Manitoba and Quebec. Complete figures are given in the accompanying Table III. With reference to the number of employees covered by these applications some indication was sought as to whether or not employers were submitting applications affecting the greater majority of employees. It was not found possible to obtain complete figures in all cases but with respect to those applications involved for the payment of cost of living bonus and increase in wages, of a total of 806,720 employees, 21.9 per cent were covered by those joint applications, 35.0 per cent by the employee petitions, and 43.1 per cent by the employer submissions.

Types of Cases

With respect to the nature of the applications, 10.5 per cent were for the payment of cost of living bonus (either based on the rise in the adjusted cost of living index number from a month prior to October, 1941, or based on the rise in the adjusted cost of living index number from a month prior to October, 1941, prior to a date from which a cost of living bonus then being paid had been computed). More than two-thirds of the cases (66.7 per cent) were for increases in wage rates. The remainder were for the establishment of new positions, deferment of cost of living bonus, determination of rank, the establishment of welfare plans, the establishment of wage incentive plans and other items which have been included as miscellaneous. Tables with respect to these applications are appended (Tables V to XII).

Decisions Rendered by the Boards

Now with respect to the decisions rendered (Table IV). Of all applications only 10.9 per cent were denied, and 6 per cent were granted

in part, the remainder being granted in full. A breakdown by provinces indicates that no Board denied any large proportion. Only Alberta denied more than 20 per cent.

Cost of Living Bonus.—With respect to applications for payment of cost of living bonus 2,250 applications were made and these involved an estimated 324,897 employees (an average of 144 employees per application). 30.9 per cent of the cases covering 56.6 per cent of the employees were handled by the Quebec Board, and 30.0 per cent involving 23.73 per cent of the workers by the Ontario Board; but in contrast the cases handled by the Boards of Alberta and British Columbia, although constituting 20.8 per cent of the total applications, involved only 5.02 per cent of the employees. As to the parties submitting these cases, the majority were submitted by the employers and roughly speaking, one-half of the remainder were by joint application and one-half by employees. However, of the 324,897 employees involved less than half were covered by these applications submitted by the employers (an average of 93 employees per application), and the employee applications covered on the average a larger number of employees per application (an average of 367 employees per application).

As to the decisions more than 85 per cent of the applications involving about 80 per cent of the employees were granted in full. Of possible assistance in appraising figures is an estimate as to the amount of money authorized or directed in monthly figures. Roughly \$2,351,057 per month has been granted in such applications, the amounts by each Board as set forth in an appended table. It is sufficient to mention here that of the total applications more than half were granted by the Regional War Labour Board for Quebec and slightly less than one-third by the Ontario Board.

Wage Increases.—Finally, with respect to applications for wage increases, 66.7 per cent

of all applications were of this type and they covered 30.7 per cent of the employees involved in all applications which were made to the Board on such grounds. Nearly one-half of the cases (47.81 per cent) were handled by the Quebec and Ontario Boards. These Boards covered, roughly speaking, more than half of the employees. Complete figures are given in Tables VII and VII-A.

With reference to the party or parties introducing these applications 11.1 per cent were by joint application and covered 26.8 per cent of the employees as compared with 4.7 per cent involving 28.3 per cent submitted by the employees and 84.2 per cent of the cases and 43.3 per cent of the workers submitted by the employers. Decisions with respect to such applications show more than 80 per cent, involving more than two-thirds of the employees, were granted in full.

Estimates as to the amounts of money involved, while subject to the reservations referred to earlier, indicate that a total of \$4,252,035 per month has been authorized or directed of which a third (33.41 per cent) was granted by the Quebec Board, one-quarter (25.85 per cent) by the Ontario Board, one-fifth (19.77 per cent) by the National Board and one-tenth (9.25 per cent) by the British Columbia Board.

Other Cases.—As stated earlier, the remainder of the cases were divided among applications for deferment of cost of living bonus, establishment of new positions, determination of rank, establishment of group insurance plans, of wage incentive plans, payment of war risk bonus and for other matters which may be regarded as miscellaneous. Details as far as it has been possible to obtain have been compiled and are appended in the form of additional tables (Tables VIII to XII).

Decisions of National War Labour Board

**In the matter of an application by Ford Motor Company of Canada, Limited;
and in the matter of a reference by The Regional War Labour Board
for Ontario.**

THE National War Labour Board on April 19 announced its decision in regard to an application from the Ford Motor Company of Canada, Limited, which had been referred to the National Board by the Regional Board for Ontario. The application was for a premium wage for employees whose work shifts commence between 1.00 p.m. and 5 a.m.

The Board announced its decision in the "Reasons for Judgment" quoted in full below.

Reasons for Judgment

On or about December 31st, 1942, the Ford Motor Company of Canada Limited entered into an understanding with Local 200, United Automobile Workers of America-C.I.O., pursuant to which it is proposed to amend the existing collective agreement between the Company and the Union by incorporating therein a clause reading as follows:—

"The Company will pay all hourly rated employees, when commencing their work between the hours of 1.00 p.m. and the following 5.00 a.m., an extra five cents (5c.) per hour for time worked. For the purpose of implementing this provision the Company will at once make application to the Ontario Regional War Labour Board for any approval which the Board may be required to furnish with respect to such payment."

As there has been heretofore no established practice in the plant of the Ford Motor Company of Canada pursuant to which any such premium payment is made, the inauguration of such a plan would undoubtedly appear to constitute a change in working conditions falling within the prohibition contained in section 23(2) of the Wartime Wages Control Order, P.C. 5963, and as such requires the approval of the Regional War Labour Board. Application for such approval was duly made by the Company supported by the Union. As the Regional Board were divided in their opinion as to the proper disposition to be made of the application, they have referred the matter to the National Board for its advice and direction. A public hearing on the application was held by the National Board at Ottawa on March 24th, 1943. Because of the circumstances that he had been associated with the matter in a private professional capacity prior to his appointment to the National War Labour Board, Mr. J. L. Cohen, K.C., requested that he should be excused from taking any part in

the deliberations in respect of the application, and accordingly, the matter has been dealt with by the remaining two members of the Board.

On the hearing before the National Board, the Company was represented by Mr. W. H. Clark, the Union being represented by Messrs. Thomas McLean, Roy England and W. A. Muir.

It appears that certain of the operations of the Ford Motor Company of Canada are continuously conducted, the work day, in respect of such operations, being divided into three shifts of eight hours each. About one third of the total working force is involved. The first shift works from 12.01 a.m. to 8.00 a.m.; the second shift from 8.00 a.m. to 4.00 p.m. and the third shift from 4.00 p.m. until midnight. The shifts rotate monthly so that each employee engaged in these operations works on three shifts in sequence once in each three months. It is probably also necessary to add that, while the shifts are nominally divided on the basis of the aforementioned hours, all shift workers do not commence their work or finish their work at these respective times. It is said, for instance, that some employees commence their work at two o'clock in the afternoon and there are other various starting times. Apparently, such an arrangement is necessary to meet the problems arising out of the transportation of workers to and from the plant. It is because of these staggered starting times that the Company and the Union have proposed that the five cents per hour premium should be paid to all employees who commence their work between the hours of 1.00 p.m. and 5.00 a.m. of the succeeding day.

It has been argued before us that the payment of the differential for afternoon, evening and night work is merited on the ground that work at these hours imposes upon the employee a comparative hardship for which he should be compensated. It is said that the physical strain of night work is even greater where the shifts rotate than in the case of the worker who is permanently employed on night operations for the reason that the person concerned has no opportunity to adjust himself to a definite routine of living. This irregularity in hours of work is said to result in dislocation of the normal family routine with consequent additions to the normal cost of living. There is also put

forward the feature that the men working on rotating shifts have difficulty in obtaining and retaining places of residence because of their irregular hours of work and the consequent disturbance which this brings about in the routine of the homes where they find their living quarters. For all of these reasons, the Company is experiencing a growing disinclination on the part of the employees to become engaged on night shifts. It is contended both by the Company and by the Union that the payment of the proposed premium would overcome this difficulty since it would offer a measure of compensation for the added comparative disadvantages to the worker on night employment.

It appears to have been a recognized principle for a great many years that men working on night shift are entitled to a premium on their hourly wage. It has been the case in the shipbuilding industry and to a degree in the construction industry. The amount of the differential paid in these industries would seem to suggest that the hazardous nature of night work has been a factor taken into consideration. Production demands in war work are such that extra shifts become necessary and what would be workers' free time in the ordinary nature of things is required for war production. Generally speaking the question of the off shift work being more hazardous is not a factor. Where men remain steadily on night work the differential is recognized. In fact in the automotive industry, Chrysler Corporation of Canada, Limited, appears to have adopted it in 1937. The fact that shifts are made to rotate fundamentally we think should make no difference. It may be said that workers should sacrifice in time of war by spreading the inconvenience over all. No one doubts that. The real question is whether in a war economy, workers should not receive a premium recognized as payment for submitting to what would ordinarily be recognized as an unusual working condition.

It is our view that the true basis for payment of a premium as applied for here

should be rested on the principle that it should represent some compensation to the worker for the time worked outside of normal working hours. In the average case we do not think there can be much error in classifying for this purpose normal working hours as the hours between 7 a.m. and 7 p.m. In other words the premium applied for should be allowed the worker for the hours worked between 7 p.m. and the following 7 a.m.

Having regard to the Government's War-time Economic Control Policy, the Board considers that the approval of proposals for the payment of night work premium is warranted chiefly by reason of the necessity of maintaining the highest possible production of munitions and supplies for war purposes. The inauguration of such plans particularly those made after the effective date of P.C. 5963 should be scrutinized with care. The present application should not be taken as any precedent except as to the cases of employers engaged in the production of munitions and supplies. It does not seem to the Board in cases of companies in ordinary war production that there is good reason for payment of more than the premium involved here—namely 5c. per hour.

While each application, of course, must be dealt with on its individual merits, the National Board considers that what we are dealing with primarily is industries engaged in war production. Industry other than that engaged in war production may have a more difficult case to make out although we think it unsound to engage in too much prognostication.

Accordingly we should advise the Ontario Regional Board that we deem it fair and reasonable that the application should be granted to the extent that the workers concerned should receive a premium of 5c. per hour for the time worked between the hours of 7 p.m. and the following 7 a.m. This might well be made retroactive to the date of the agreement between the parties.

Reconstruction

New Orders Benefit Discharged Members of Armed Forces

Increase in Scale of Payments to Discharged Men and Dependents— Opportunities for Training and Education—Improvements in Provisions for Treatment of Disabilities

THREE Orders in Council have been announced by the Minister of Pensions and National Health affecting men discharged from the armed forces. They are as follows:

1. An amendment to the Post-Discharge Re-establishment Order, raising the scale of out-of-work benefits for those awaiting re-establishment in civilian life; and increasing allowances for those who take vocational training, attend a university, or otherwise continue their education.

2. An amendment broadening the scope of the Treatment Regulations in respect of men with non-pensionable disabilities, providing free hospital treatment, cash allowances, and allowances for dependents.

3. An amendment to the War Veterans' Allowance Act to do away with deductions because of casual earnings from the allowance paid to a veteran who on account of age or disability is unable to provide maintenance for himself and dependents.

An article on Canada's post-discharge plan of rehabilitation, which is brought up to date by the present Orders, appeared in the October, 1941, *LABOUR GAZETTE* on page 1235.

Post-Discharge Re-establishment Order

The Post-Discharge Re-establishment Order, which has just been amended, was originally passed on October 1, 1941, and was subsequently amended on April 1, 1942. It provided that persons discharged from the armed forces subsequent to July 1, 1941, may receive for a period not exceeding their length of service, with a maximum period of 12 months:

1. Benefits similar to Unemployment Insurance benefits to those capable of employment but for whom no work is immediately available;

2. Similar benefits to those temporarily incapacitated; those engaged in farming or other enterprise on their own account while awaiting returns from their enterprise;

3. Similar benefits to those who are eligible under the Order to receive vocational training or to complete interrupted education.

Any such persons who have been in insurable employment for 15 weeks in any 12-month period after discharge will have their military service subsequent to July 1, 1941, counted as insured employment, with the Government making the necessary employer's and employee's contributions to the Fund.

The original Order as amended has now been entirely replaced, apart from the preamble and paragraph 1, by an amending Order in Council of April 20, (P.C. 2/3241) which came into effect on May 1. This new Order in Council, however, does not alter the basic provisions of the original Order, its purposes being to raise the scale of benefits, to make some other adjustments and to consolidate these new amendments as well as the amendments effected by the Order in Council of April 1, 1942, with the provisions of the original Order.

The benefits and grants payable under the Order originally amounted to \$9 per week in the case of single persons and \$13 for married persons. These sums are now considered to be inadequate and they have been raised to \$10.20 and \$14.40 per week or \$44.20 and \$62.40 per month. In addition the following monthly allowances may now also be paid on behalf of dependents: \$12 for each of the first two children, \$10 for a third child, \$8 for each additional child not in excess of three; and \$15 for a parent or parents.

A person who is pursuing technical training may also be paid an additional allowance of \$5 per week while he is necessarily living away from his usual place of residence, if he is married or a person in respect of whom an additional allowance for dependents is being paid. Transportation and other travelling expenses may also be paid under certain circumstances.

The original Order empowered the Minister of Pensions and National Health to diminish grants in cases where a pension was being

paid. In the Order as now amended more specific provisions are made on this matter so that "a pensioner shall not be deprived of the entire grant, but shall, by the allowance to him of a portion of the grant, be encouraged and enabled to pursue a course under the said Order." In the case of persons who are pursuing vocational, technical or other educational training or who resume interrupted university courses including post-graduate courses, the grant will not be reduced on account of a pension if the discharged person's pensionable disability has been assessed below 15 per cent. Where the disability has been assessed at 15 per cent or more, the grant may be reduced but not below a point where the grant and the pension together equal certain specified amounts.

It is now also stated that this Order applies to persons discharged from the Women's Royal Canadian Naval Service. This Service had not been established when the original Order and the amendment of April 1, 1942, were passed.

In announcing the Order, the Minister pointed out that, in addition to making more generous cash provision for the immediate needs of discharged members of the forces the Order is of a significance in Canada's post-war planning in its provisions for vocational training and education. He expressed the hope that discharged men would take a long range view and undertake such courses. Vocational training is available to veterans free of charge, together with the cash allowances outlined above.

Treatment Regulations

The treatment regulations of the Department of Pensions and National Health have been amended (by P.C. 3/3241, April 20, 1943) to extend the provisions under which persons discharged after active service during the present war may be afforded free treatment as a further means of re-establishment. Any person now applying within one year of discharge may be given free treatment for any non-pensionable disability either in hospital or as an out patient, irrespective of his financial circumstances. Formerly his assets and income were taken into account in determining his eligibility. Earlier limitations against providing treatment in the case of tuberculosis, mental diseases and certain chronic and long-range illnesses have also been removed.

In addition to such treatment (which may

be continued until discharge from hospital is indicated) hospital allowances, including additional allowances for his dependents, may be paid for a period equal to the length of service in the forces or up to a limit of 12 months within the first 18 months after military discharge. The rates of hospital allowance correspond with those authorized under the Post Discharge Re-establishment Order and are subject to a deduction equal to any income from pension or from other source.

The Minister also announced a plan for creating special reconditioning centres for men suffering from psychological ailments. "Such a centre will not be a hospital but there will be a doctor on the premises," he said. "It will not be an industry but the men will be asked to work.

"They will do the chores about the premises. They will in some cases, be encouraged to undertake some simple handicraft. There will be a garden, a workshop and perhaps a small farm attached to the work together.

"The psychological theory is that through any activity, developing into useful occupation and graduating into real work, these men can be rehabilitated and become useful citizens once more.

"This will afford us an opportunity of observing the men under out-door healthful conditions and at the same time give him an opportunity of finding himself."

Amendment to War Veterans' Allowance Act

The War Veterans' Allowance Act provides that an allowance may be paid to a veteran who on account of "age, physical or mental disability or insufficiency and limited income", is unable to provide maintenance for himself and his dependents. The stipulated amounts to be paid (not in excess of \$20 a month for a single man or of \$40 for a man with a dependent) were deemed insufficient in view of the rise in the cost of living, and an Order in Council of December 3, 1941, provided for the payment of a supplementary allowance of \$5 a month for a single man and \$10 for a man with a dependent. The latest Order (P.C. 1/3241, April 20, 1943) provides that such supplementary allowance shall not be reduced by the amount of income the veteran may receive through casual earnings up to \$125 a year or interest calculated on the value of his owned home up to a capital value of \$2,000.

Reconstruction Plans in British Columbia

Interim Report of the Post-war Rehabilitation Council Deals with Long-term and Immediate Post-war Problems—Employment, Development of Resources, New Industries, Public Works, Etc.

THE British Columbia Post-war Rehabilitation Council presented an Interim Report in January, containing recommendations on the following among other subjects: the preservation and development of natural resources, the development of new industries, the decentralization of industry, public works, housing, apprenticeship, vocational training and education. This Council was set up under the Post-war Rehabilitation Act, 1942 (L.G., Apr., 1942, p. 433). As originally constituted in March, 1942, it consisted of seven members of the Provincial Legislative Assembly under the chairmanship of the Minister of Education. Three additional members were appointed in July, 1942. With the consent of the Executive Council, four advisory sub-committees composed of senior officials from the provincial government departments have been set up to deal with agriculture and land settlement, parks and forests, industrial development and public works.

Statement of Problem

The Council expresses the conviction that

... it would be idle to adopt the comforting assumption that, without special forethought, British Columbia will be able to avoid the grave repercussions of post-war readjustment, which can be reasonably expected to arise out of the dislocations of the present war. . . . Victory will bring the opportunity to reorganize our civilian way of life upon a more efficient basis, but solutions to the unsolved problems of the 'thirties and the new problems of the 'forties must first be found, if the institutions we now seek to preserve are not once again to be exposed to the ravaging effects of the depression.

A higher level of employment than ever before is now being experienced, but it does not rest on a permanent foundation, and when the abnormal wartime demand disappears the problem of taking up the slack will be intensified by the fact that the peace-time economy has been seriously disturbed. British Columbia, like the rest of Canada, is normally dependent on foreign markets. These markets have steadily declined in importance as a result of the war, while at the same time the productive capacity of the province has been greatly increased for purely temporary purposes. The necessary re-adjustments after the war will be difficult to make and the difficulty will be increased by the situation in the employment market. Men and women have left

their pre-war employment to join the armed services or engage in war work, and they will return to the labour market. Moreover, workers from the Prairie Provinces are now employed in British Columbia and many may prefer to remain there. Finally, British Columbia faces a special problem in that an entire racial minority—the Japanese—has been temporarily uprooted.

The short-term and long-term problems are distinguished and it is pointed out that each requires appropriate measures. In the first instance the effect of dislocations will be alleviated by the expenditures which have been deferred during the war, and there may even be a boom which will require the continuation of existing economic controls. It is improbable, however, that private investment and expenditure will be sufficient in quantity or variety to overcome all the dislocations which may take place. Considerable expenditures by the federal, provincial and municipal governments, it is considered by the committee, will be necessary, and it is important that these expenditures should be undertaken early enough and that they should be of sufficient volume. The long-term problem relates to the basic industries of the province, agriculture, forestry, mining and fishing, with which the prosperity of the entire province is bound up.

Co-operation with Other Governments and Private Citizens

The Council considers that the provincial government alone cannot satisfactorily deal with these problems. To an important extent the question is an international one and thus not under the direct control of even the federal government; and within Canada itself the Dominion will of necessity play the leading role. Thus, every effort has been made to avoid duplication of the inquiries and actions taken or proposed by the federal government and close relations have been maintained with the federal authorities.

At the same time, the responsibility of the province is not less real because of its restricted scope:

... the Dominion Government has already assumed leadership in this field, establishing advisory committees and preparing legislation on a wide variety of post-war topics. But, as the largest custodians of national resources,

and the constitutionally responsible authorities for considerable economic and social policies, the Provincial Governments will be implicated voluntarily or involuntarily in these Federal post-war measures.

That other provinces are taking the same view is indicated by the fact that four of them—Alberta, Ontario, Quebec and Saskatchewan—have passed or are considering bills for the establishment of advisory councils to deal with the problems of post-war reconstruction.

The British Columbia Council has also taken the view that in addition to the co-operation of governments, "the intelligent co-operation of workers, farmers, industrialists and all citizens" is required. Letters were therefore sent to all public bodies in the province, including cities, district and village municipalities, boards of trade, chambers of commerce, and organizations of veterans, farmers, labour, manufacturers, as well as service organizations, women's institutes and others. In addition, visits were made to as many centres as possible and public hearings held. Much of the information received from these sources is published in the Appendix to the Interim Report.

Findings of the Council

As the first step in its investigations, the Council has attempted to estimate, as far as is possible at present, the number or returned men and displaced war workers who will be seeking employment in British Columbia after the war. Consideration is then given to the present vocational training program and it is recommended that training centres should be established in appropriate centres in the interior of the province, that the entire system should be under one organization throughout the province and that special attention should be given to training persons for farming. The first part of the Report concludes with a summary of the measures which have so far been taken by the Dominion in the field of post-war reconstruction.

With these preliminary matters disposed of, the Council proceeds to devote the bulk of its Report to a consideration of the four basic industries and other industrial developments, particularly the possibility of developing new industries. It is recommended that detailed surveys of the agricultural, mineral, forest and fishing resources of the province be made and that steps be taken for the preservation of these resources. It is urged that particular care

be taken to ensure that men settled under the Veterans' Land Act should be placed on land which can be expected to be productive within a reasonable period and that the Dominion Government should give early consideration to a national policy of planned production and controlled marketing which will give the farmer a stable market and guaranteed fair prices. It is suggested that the provincial government should actively promote a steel industry in the province and that plans should be considered for the orderly development, conservation and production of petroleum resources. In regard to new industries, fibre flax and the production of medicinal herbs are considered to have particular possibilities. It is felt that encouragement should be given to the establishment of secondary industries in the smaller towns of the province in order that employment might be created, markets and marketing facilities provided for farmers and the development of latent resources encouraged.

The last part of the Report is devoted to a variety of matters, notably public works, regional planning, housing, apprenticeship and education. It is recommended that complete programs of public works, including alternative projects, should be prepared by the federal, provincial and municipal governments. The provincial government, it is felt, should establish a Department of Planning and Reconstruction and regional areas should be established in the province for the purpose of planning. A provincial Planning and Housing Authority should be established, the federal government should be requested to grant subsidies or loans to municipalities undertaking housing projects and an interprovincial conference should be held at an early date to consider necessary revision of the National Housing and Home Improvement Acts.

Apprenticeship policy should be planned in accordance with a long-term scheme of providing skilled artisans and technicians to fit into the industrial future of the province, a reasonable minimum apprenticeship subsistence allowance should be established by regulation, and educational aid should be given to learners. An immediate survey should be made of the needs of post-war education in the province and the school-leaving age should be set at 16 with a system introduced for compulsory part-time education up to the age of 18. A Dominion-provincial conference should be arranged to consider social security.

"Hold-the-Line" Order Issued in United States to Check Inflation

Presidential Order Establishes Further Control Over Prices, Wages, and Change of Employment

ON April 8 President Roosevelt issued an executive order designed to prevent further increases in the cost of living in the United States.

The order forbids further increases in prices affecting the cost of living and further rises in general wage or salary rates "except where clearly necessary to correct substandards of living." It also bars workers from changing jobs for the purpose of securing higher pay unless the change will aid in the prosecution of the war.

In announcing this action, President Roosevelt made a statement describing the order as a "hold-the-line" order.

"To hold the line", he declared, "we cannot tolerate further increases in prices affecting the cost of living or further increases in general wage or salary rates except where clearly necessary to correct substandard living conditions. The only way to hold the line is to stop trying to find justifications for not holding it here or not holding it there."

The President also stated: "Some groups have been urging increased prices for farmers on the ground that wage earners have unduly profited. Other groups have been urging increased wages on the ground that farmers have unduly profited. Any continuance of this conflict will not only cause inflation but will breed disunity at a time when unity is essential."

The order is described as intended to "safeguard the stabilization of prices, wages and salaries, affecting the cost of living on the basis of levels existing on Sept. 15, 1942", as authorized and directed by an act of Congress of Oct. 2, 1942, and an Executive Order of Oct. 3, 1942. (L.G., Oct. 1942, p. 1140). It is further designed to prevent increases in wages, salaries, prices and profits, which, "however justifiable if viewed apart from their effect upon the economy tend to undermine the basis of stabilization."

Control of Prices

The President said that some prices affecting the cost of living had risen above the levels of September 15, 1942. "All these", he declared, "cannot be rolled back. But some of these can and should be rolled back."

Under the order the Price Administrator and the Food Administrator are directed to take immediate steps to place ceiling prices on all commodities affecting the cost of liv-

ing; to authorize no further increases; to use their powers to prevent indirect increases and profiteering; and to reduce prices which are "excessively" high, unfair or inequitable." Seasonal and certain other variations are, however, to be allowed for, also such subsidies or other inducements as may be authorized by law to maintain or increase production; provided that such action does not increase the cost of living.

Wage Stabilization

The Order limits the United States War Labour Board's discretionary power over wages by removing the power to grant increases to remove inequalities or gross inequities. Specifically, the order directs the Board and the Commissioner of Internal Revenue "to authorize no further increases in wages or salaries" beyond the Little Steel formula (L.G., Mar. 1943, p. 303), "except such as are clearly necessary to correct substandards of living."

The only other exception to the ban on wage and salary increases is that the Board and the Commissioner are permitted, "subject to the general policies and directives of the Economic Stabilization Director," to "authorize reasonable adjustments of wages and salaries in cases of promotions, reclassifications, merit increases, incentive wages or the like, provided that such adjustments do not increase the level of production costs appreciably or furnish the basis either to increase prices or to resist otherwise justifiable reductions in prices."

Control of Employment

The new restrictions on job changing are stated as follows: "The chairman of the War Manpower Commission is authorized to forbid the employment by any employer of any new employee or the acceptance of employment by a new employee except as authorized in accordance with regulations which may be issued by the chairman of the War Manpower Commission, with the approval of the Economic Stabilization Director, for the purpose of preventing such employment at a wage or salary higher than that received by such new employee in his last employment unless the change of employment would aid in the effective prosecution of the war."

Other Terms of the Order

Agencies of federal, state and municipal governments controlling common carriers or other public utilities are directed to disprove further rate increases.

The Economic Stabilization Director, James F. Byrnes, is authorized, under the terms of the Act of October 2 and of the executive orders, to continue such action as he deems necessary to "stabilize the national economy, to maintain and increase production, and to aid in the effective prosecution of the war."

In concluding his statement the President referred to the necessity for increased taxation as part of the stabilization program. He declared: "We cannot stop inflation solely by wage and price ceilings. We cannot stop it solely by rationing. To complete the job, Congress must act to reduce and hold in check the excess purchasing powers. We must be prepared to tax ourselves more, to spend less and save more."

Repeal of \$25,000 Salary Limitation

President Roosevelt announced early in April that he had allowed to become law without his signature the public debt extension bill including a rider repealing his order limiting salaries after taxes to \$25,000 a year (part of the economic stabilization order of October 3, 1942). He said that he took this course only to avoid embarrassment to the Treasury's war financing program, and that had circumstances been different, he would have vetoed the bill because of the rider, which he termed "irrelevant and unwarranted."

The President asserted that the rider struck a blow at the stabilization program because "the essence of stabilization is that each should sacrifice for the benefit of all," and called on Congress to remedy the situation by "imposing a special war super-tax on net income, from whatever source derived, which after the payment of all taxes, exceeds \$25,000."

Stabilization of Wages and Prices in New Zealand

THE New Zealand Government on December 15, 1942, introduced an over-all program of wage, salary, rent and price stabilization, replacing a system of partial price control that had been in effect since 1941.

In explaining the necessity for the stabilization measures, the Prime Minister, Mr. Peter Fraser, said: "Since 1939 the national income has increased by about £50,000,000, but the supply of goods people can buy has decreased by more than £40,000,000. That is, the gap between the supply of goods and purchasing power is of the order of £100,000,000. This excess of purchasing power has begun to swamp our price controls."

Referring to the advances his country had made in the field of social security (L.G., Jan. 1943, p. 50), the Prime Minister declared: "It should be unnecessary to say that if social security is not built on a stable currency it is built on sand. If the wage earner is not sure that his wages will buy approximately the same amount of goods a month or a year hence as they buy to-day, there is no real social security. The Social Security Act and the minimum wage are only one side of social security in this country. The other side is the measures we have taken . . . to control the cost of living."

The Prime Minister announced that price control now applies to a list of 110 items, mainly in the field of living essentials, including "a wide range of groceries, dairy products, meat, some fresh fruit and vegetables, fuel and lighting, clothing, footwear,

drapery, furniture and a large number of miscellaneous articles. . . .

"There are no luxuries in it," he said, "but it is not the business of our Government to make it easier for people to buy luxuries in wartime."

Wage stabilization, the Prime Minister announced, applies to all rates of remuneration, including time and piece wages and overtime, allowances fees, commissions, travelling expenses and directors' fees. These are frozen at the rates prevailing on November 15, 1942.

General changes in rates of remuneration may be made, however, in conformity with movements in the price level. December 15, 1942, is taken as the base date for calculating a "wartime price index". The Government Statistician is to publish quarterly statements of this index, and the Court of Arbitration will make a general order increasing or reducing rates of remuneration whenever the price level as shown by the index rises or falls by not less than 5 per cent, provided that the first general order increasing rates of remuneration will be made when there is an increase of not less than 2½ per cent in the basic level of prices. Any such general order, however, will apply only to the first £6 per week earned by a worker, provided that the Court of Arbitration may reduce this figure to such amount as it thinks fit in the case of female workers, junior workers, and apprentices.

Rents are frozen at the level of September 1, 1942.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Recent Proceedings under the Industrial Disputes Investigation Act, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Industrial Disputes Investigation Act.—This article gives an account of all applications for Boards of Conciliation and Investigation, and the disposition of these applications. In cases where Boards are established, the *LABOUR GAZETTE* publishes in due course the full text of their reports, as submitted to the Minister of Labour.

Since the outbreak of war and the extension of the Industrial Disputes Investigation Act to cover disputes in war industries, the number of applications for Boards of Conciliation and Investigation has greatly increased. In recent months the majority of applications for Boards have been referred to Industrial Disputes Inquiry Commissioners for preliminary investigation, to determine whether the circumstances warrant the establishment of a Board. Reports of Commissioners appointed under the Act are summarized in this article.

Disputes which concern wage demands come under the jurisdiction of the National and Regional War Labour Boards.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published month by month in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1941 appeared in the *LABOUR GAZETTE* for May, 1942.

The latest available information as to strikes and lockouts in Great Britain and other countries appear from month to month.

Recent Proceedings under the Industrial Disputes Investigation Act

IN the month of April, five Boards of Conciliation and Investigation submitted their reports in connection with the following disputes:

(1) Between Shawinigan Chemicals Limited, Shawinigan Falls, P.Q., and its employees, members of Local 357, International Moulders and Foundry Workers' Union of North America.

(2) Between the Levis Ferry Limited, Quebec, P.Q., and its employees, members of the Canadian Brotherhood of Railway Employees and Other Transport Workers.

(3) Between the Schultz Die Casting Company Limited, Wallaceburg, Ontario, and its employees, members of Local 251, United Automobile Workers of America.

(4) Between The F. X. Drolet Company, Quebec, P.Q., and its employees, members of Local 74, International Moulders and Foundry Workers' Union of North America.

(5) Between the George W. Reed Company, Limited, Montreal, P.Q., and its employees, members of Local 2735, United Steelworkers of America.

The text of the reports of the Boards will be found at the conclusion of this statement.

Applications Received

Twenty-two applications* for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of April. These were:

1. From employees of the Lake St. John Power and Paper Company, Limited, Dolbeau, P.Q., members of the National Catholic Syndicate of Pulp and Paper Makers of Dolbeau Inc. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, was said by the applicants to affect 210 employees directly and 290 indirectly.

2. From the employees of Sawyer Massey Limited, Hamilton, Ontario, members of Local 520, United Electrical, Radio and Machine Workers of America. The dispute, which involves 280 employees directly and 380 indirectly, concerns union recognition and the negotiation of a collective labour agreement. On April 13, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner, having satisfied himself that the union represented a majority of the employees concerned, which fact was previously confirmed by a representation vote, recommended that a board be established. On April 22 the Minister of Labour established a Board of Conciliation and Investigation.

3. From the employees of the Canadian National Railways, Work Equipment Department, Winnipeg, Manitoba, members of Division 142 and 226, Canadian Brotherhood of Railway Employees and other Transport Workers. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect 61 employees directly.

4. From employees of the Breithaupt Leather Company, Limited, Kitchener, Ontario, members of Local 300, International Fur and Leather Workers Union of United States and Canada. The dispute, which was said by the applicants to affect 75 employees, concerned union recognition and the negotiation of a collective labour agreement. On April 14, Mr. J. P. Nicol, Industrial Relations Officer,

Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute and also charges of discriminatory dismissals as charged by the union. The Commissioner reported that he was successful in having the parties concerned reach an amicable settlement in the dismissal cases and that the investigation into the board application would be proceeded with at a later date.

5. From the employees of the Sorel Industries Limited, Sorel, P.Q., members of the Metal Trades Council of Sorel. The dispute, which concerns union recognition, is said by the applicants to affect 2,800 employees. Mr. Bernard Rose, K.C., was authorized as Industrial Disputes Inquiry Commissioner on April 20 to investigate that dispute.

6. From employees of the Commonwealth Electric Corporation Limited, Welland, Ontario, members of the Commonwealth Electric Shop Union. The dispute, which concerns union recognition and the negotiation of a labour agreement, is said by the applicants to affect 43 employees directly and 53 indirectly. On April 15 Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

7. From employees of Machinery Services Limited, Ville la Salle, P.Q., members of Local 631, International Association of Machinists. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect 65 employees.

8. From employees of the Morrow Screw and Nut Company, Limited, and Ingersoll Machine and Tool Company, Limited, Ingersoll, Ontario, members of Local 2918, United Steelworkers of America. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect 1,400 employees. On April 13, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

9. From employees of the Canadian Marconi Company, Montreal, P.Q., members of the Metal Trades Council, Marconi Union. The dispute, which concerns the failure of the Company to carry out its undertaking to have a representation vote taken to determine the employees' bargaining agency, is said by the applicants to affect 1,400 employees. On April 15 Mr. Bernard Rose, K.C., was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

* By P.C. 5963, the National and Regional War Labour Boards are specifically charged with the duty of adjudicating wage demands. Therefore all applications for the establishment of Boards of Conciliation and Investigation in which wages are the sole cause of the dispute are removed from the ambit of the Industrial Disputes Investigation Act and the applicants are referred to their respective War Labour Board.

10. From employees of Price Bros. and Company, Limited, Kenogami, Jonquiere and Riverbend, P.Q., members of the National Catholic Union of Pulp and Paper Workers. The three disputes, which were said by the applicants to affect 849 employees directly and 1,288 indirectly, concern union recognition and the negotiation of a collective labour agreement. As the applications were lacking in certain details they were returned to the applicants for revision and have not yet been re-submitted. On April 6, a strike occurred affecting approximately 1,400 employees engaged in the company's mills at Riverbend, Jonquiere and Kenogami. This strike was terminated on April 16. A further strike occurred on April 20 and terminated on April 27. Further reference to these strikes will be found in the section of this issue of the Labour Gazette entitled "Strikes and Lockouts in Canada".

11. From employees of the George T. Davie and Sons Limited, Quebec, P.Q., members of Local 7, Boilermakers and Iron Shipbuilders' Union of Canada (C.C.L.). The dispute which concerns the negotiation of a collective labour agreement, is said by the applicants to affect 1,500 employees. On April 19, the Minister of Labour authorized that this dispute be referred to the Board of Conciliation and Investigation established to deal with the dispute between the Davie Shipbuilding and Repairing Company, Limited, Lauzon, P.Q., and its employees (L.G. April 1943, p. 470).

12. From employees of the Morton Engineering and Dry Dock Company, Limited, Quebec, P.Q., members of Local 6, Boilermakers and Iron Shipbuilders' Union of Canada (C.C.L.). The dispute, which is said by the applicants to affect 2,000 employees, concerns the negotiation of a collective labour agreement. The Minister of Labour, on April 19, authorized that this dispute be referred to the Board of Conciliation and Investigation established to deal with the dispute between the Davie Shipbuilding and Repairing Company, Limited, Lauzon, P.Q., and its employees (L.G. April, 1943, p. 470).

13. From the employees of John Palmer, Company, Limited, and Palmer McLellan Shoepack Company, Limited, Fredericton, N.B., members of Local 23, Shoe and Leather Workers' Organizing Committee. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect 106 employees directly and 159 indirectly. On April 20, Mr. H. R. Pettigrove, Industrial Relations Officer, Dominion Department of Labour, Fredericton, N.B., was authorized

as Industrial Disputes Inquiry Commissioner to investigate the dispute.

14. From employees of the York Township Hydro System, Toronto, Ontario, members of Branch No. 1, Canadian Electrical Trades Union. The dispute, which concerns the renewal of the corporation's agreement with the union, is said by the applicants to affect 37 employees directly and 28 indirectly. On April 30, Mr. J. Douglas McNish, K.C., was appointed as Industrial Disputes Inquiry Commissioner to investigate the dispute.

15. From employees of the Dominion Oilcloth and Linoleum Company, Limited, Montreal, P.Q., members of Aircraft Lodge 712, International Association of Machinists. The dispute, which is said by the applicants to affect 256 employees directly and 1,002 indirectly, concerns union recognition and the negotiation of a collective labour agreement. Mr. B. Rose, K.C., was authorized on April 28 as Industrial Disputes Inquiry Commissioner to investigate the dispute.

16. From the employees of the Massey Harris Company, Limited (Verity Works), Brantford, Ontario, members of the United Automobile Workers of America. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect some 1,230 employees.

17. From the employees of the Cockshutt Plow Company, Limited, Brantford, Ontario, members of the United Automobile Workers of America. The dispute, which concerns the negotiation of a collective bargaining agreement, is said by the applicants to affect 2,300 employees. The Minister of Labour on April 29 authorized Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ontario, as Industrial Disputes Inquiry Commissioner to investigate the dispute.

18. From the employees of the Briethaupt Leather Company, Limited (Leather Tannery), Penetanguishene, Ontario, members of Local 24, Shoe and Leather Workers' Organizing Committee. The dispute, which is said by the applicants to affect 75 employees, concerns union recognition and the negotiation of a collective labour agreement.

19. From employees of the Canadian Car and Foundry Company, Limited, (Aircraft Division), Fort William, Ontario, members of Lodge 719, International Association of Machinists. The dispute, which concerns the dismissal of an employee allegedly for union membership and activity, was said by the applicants to affect 4,000 employees.

20. From employees of the James Pender Company, Limited, Saint John, N.B., members of Local 2957, United Steelworkers of America. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, is said by the applicants to affect 90 employees directly and 25 indirectly.

Boards Established

On April 14, a Board of Conciliation and Investigation was established to deal with a dispute between the Canada Paper Company, Limited, Windsor Mills, P.Q., and its employees, members of the International Brotherhood of Paper Makers and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers. (L.G., January 1943, page 69). Mr. Bernard Rose, K.C., who had been authorized as Industrial Disputes Inquiry Commissioner being unable to bring about an amicable settlement of the dispute recommended the establishment of a Board of Conciliation and Investigation, and on April 14 the Minister of Labour established a Board. The Board was fully constituted on May 1, the personnel being as follows: Honourable Mr. Justice Lucien Cannon, Superior Court of Quebec, P.Q., chairman, appointed on the joint recommendation of the other two members of the Board, Mr. E. M. Moisan, Montreal, P.Q., appointed on the recommendation of the employer; and Mr. J. E. Beaudoin, Montreal, P.Q., appointed on the nomination of the employees.

On April 12, a Board of Conciliation and Investigation was established to deal with a dispute between the Galt Brass Company, Limited, Galt, Ontario, and its employees, members of Local 2903, United Steelworkers of America (L.G., March 1943, p. 324). Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized on April 7 as Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner ascertained that the Union represented a majority of the employees concerned, but was unable to bring about a settlement, and consequently recommended that a Board of Conciliation and Investigation be established. The Commissioner's recommendation was concurred in and a Board established on April 12. The personnel of the fully constituted Board was as follows: His Honour Judge James Parker, Toronto, chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette, Toronto, appointed on the recommendation of the employer; and Mr. F. Andrew Brewin, Toronto, Ontario,

appointed on the recommendation of the employees.

On April 16 a Board of Conciliation and Investigation was established to deal with a dispute between Canada Packers Limited, St. Boniface, Manitoba, and its employees, members of Local 216, United Packinghouse Workers of America (L.G., April 1943, p. 470). Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Winnipeg, who had been authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute, recommended the establishment of a Board of Conciliation and Investigation as he was unable to bring about an amicable settlement of the dispute. The Board was established on April 16, the personnel of which was as follows: Professor William Loughheed, Winnipeg, Manitoba, chairman, appointed on the joint recommendation of the other two members; Mr. E. K. Williams, K.C., Winnipeg, Manitoba, appointed on the recommendation of the employer; and Mr. George Brown, Winnipeg, nominated on the recommendation of the employees.

On April 21, a Board of Conciliation and Investigation was established to deal with a dispute between Defence Industries, Limited, and its employees, members of Munitions Workers Federal Union (T. & L.C.), (L.G., April 1943, p. 470). Mr. Frank LaFortune, Industrial Relations Officer, Dominion Department of Labour, Ottawa, Ontario, was appointed on April 13 as Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner reported that he was unable to effect a mutually satisfactory settlement of the dispute, and as the applicant union represented a majority of the employees of Defence Industries, Limited, he recommended that a Board of Conciliation and Investigation be established. This recommendation was concurred in by the Minister who on April 21 established a Board. At the end of the month Mr. A. Feiner, Montreal, P.Q., was appointed on the recommendation of the employees and Mr. D. A. Paterson, Montreal, appointed on the recommendation of the employer, and the two members were conferring with a view to making a joint recommendation of a person to act as third member and chairman of the Board.

On April 9, a Board of Conciliation and Investigation was established to deal with a dispute between the Whitehall Machine and Tools Limited, Galt, Ontario, and its employees, members of Local 2871, United Steelworkers of America (L.G., April, 1943, p. 470). On April 2, a report was received from Mr. F. J. Ainsborough, Industrial Relations

Officer, Dominion Department of Labour, Toronto, recommending the establishment of a Board of Conciliation and Investigation in view of the fact that a mutually satisfactory settlement could not be reached. Accordingly, the Minister of Labour on April 19, established a Board, the personnel of which was as follows: His Honour Judge James Parker, chairman, appointed on the joint recommendation of the other two members: Mr. J. J. Robinette appointed on the recommendation of the employer; and Mr. F. Andrew Brewin, appointed on the recommendation of the employees. All three reside in Toronto.

The constitution of the Board of Conciliation and Investigation established on March 23, to deal with a dispute between the Davie Shipbuilding and Repairing Company, Limited, Lauzon, P.Q., and its employees, members of Local No. 3, Canadian Union of Boilermakers and Iron Shipbuilders (C.C.L.) (LABOUR GAZETTE, April 1943, p. 470), was completed on April 14. The personnel of the Board was as follows: Mr. Ernest Godbout, Quebec, P.Q., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Walter A. Merrill, K.C., Montreal, P.Q., appointed on the recommendation of the employer; and Mr. Guy M. Desaulniers, Montréal, P.Q., appointed on the recommendation of the employees.

The Board of Conciliation and Investigation established on March 22, to deal with a dispute between the J. A. M. Taylor Tool Company, Limited, Galt, Ontario, and its employees, members of Local 2903, United Steelworkers of America (LABOUR GAZETTE, April 1943, p. 471) was fully constituted on April 6. The personnel of the Board was as follows: His Honour Judge James Parker, chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette appointed on the recommendation of the employer; and Mr. F. Andrew Brewin, appointed on the recommendation of the employees. All three members reside in Toronto.

The constitution of the Board of Conciliation and Investigation established on March 22 to deal with a dispute between the R. McDougall Company, Limited, Galt, Ontario, and its employees, members of Local 2890, United Steelworkers of America (LABOUR GAZETTE, April 1943, p. 471), was completed on April 7. The personnel of the Board was as follows: His Honour Judge James Parker, Toronto, Chairman, appointed on the joint recommendation of the other two members; Messrs. J. J. Robinette and F. Andrew Brewin, both of Toronto, appointed on the recommendation of the employer and employees respectively.

Reference was made in the April issue of the LABOUR GAZETTE, page 472, to the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Galt Metal Industries, Galt, Ontario, and its employees, members of Local 2894, United Steelworkers of America. During the month the personnel of the Board was completed, and was as follows: His Honour Judge James Parker, Toronto, Ont., chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette, Toronto, Ont., appointed on the recommendation of the employer; and Mr. F. Andrew Brewin, Toronto, Ont., appointed on the recommendation of the employees.

The constitution of the Board of Conciliation and Investigation established on March 22, to deal with a dispute between the Galt Malleable Iron Company, Limited, Galt, Ont., and its employees, members of Local 2899, United Steelworkers of America (LABOUR GAZETTE, April 1943, p. 468), was completed on April 7. The personnel of the Board was as follows: His Honour Judge James Parker, Toronto, Ont., chairman, appointed on the joint recommendation of the other two members; Messrs. J. J. Robinette and F. Andrew Brewin, both of Toronto, Ont., appointed on the recommendation of the employer and employees respectively.

The constitution of the Board of Conciliation and Investigation established on March 22, to deal with a dispute between the Canada Machinery Corporation, Galt, Ontario, and its employees, members of Local 2905, United Steelworkers of America (LABOUR GAZETTE, April, 1943, p. 468), was completed on April 7. The personnel was as follows: His Honour Judge James Parker, chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette appointed on the recommendation of the employer; and Mr. F. Andrew Brewin, appointed on the recommendation of the employees. All three members reside in Toronto.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

An application for the establishment of a Board of Conciliation and Investigation was received in March from employees of the Toronto Terminals Railway Company, Toronto, Ontario, members of the Canadian Association of Railwaymen (LABOUR GAZETTE, April 1943, page 469). On April 15, Mr. J. Douglas McNish, K.C., Toronto, Ontario, was appointed as Industrial Disputes Inquiry Commissioner to make an investigation of the dispute.

An April 9, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour,

Toronto, Ontario, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute between the Office Specialty Manufacturing Company, Limited, Newmarket, Ontario, and its employees, members of Local 7, National Union of Furniture Workers (C.C.L.).

Mr. Bernard Rose, K.C., was authorized as Industrial Disputes Inquiry Commissioner to investigate a dispute between the Canadian Pacific Railway Company, Montreal, P.Q., and its dining-car employees, members of the Brotherhood of Railroad Trainmen (LABOUR GAZETTE, April 1943, page 469).

On April 8, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ontario was authorized as Industrial Disputes Inquiry Commissioner to investigate a dispute between Welland Chemical Works, Niagara Falls, Ontario, and its employees, members of Local 165, United Gas, Coke and Chemical Workers of America. (LABOUR GAZETTE, April 1943, p. 470)

An application for the establishment of a Board of Conciliation and Investigation was received in March from the employees of the Canadian Furnace Limited, Port Colborne, Ontario, members of Local 1177, United Steelworkers of America (LABOUR GAZETTE, April, 1943, p. 470). On April 15, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

On March 25 an application for the establishment of a Board of Conciliation and Investigation was received from the employees of B. Greening Wire Company, Limited, Hamilton, Ontario, members of Local 2950, United Steelworkers of America (LABOUR GAZETTE, April 1943, p. 470). On April 16 Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ontario, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

On April 21, Mr. Harold Perkins, Industrial Relations Officer, Dominion Department of Labour, Ottawa, Ontario, was appointed as Industrial Disputes Inquiry Commissioner, to investigate the dispute between the Anacanda American Brass Limited, New Toronto, Ontario, and its employees, members of Local No. 1, Industrial Union of Copper and Brass Workers (C. C. L.) (LABOUR GAZETTE, April 1943, p. 470)

Other Reports of Industrial Disputes Inquiry Commissioners

In a dispute between the Underwood Elliott Fisher, Limited, Toronto, Ontario, and its

employees, members of Local 518, United Electrical, Radio and Machine Workers of America (LABOUR GAZETTE, April 1943, p. 469), a report was received from His Honour Judge Ian M. Macdonell, Toronto, Ontario, who had been appointed as Industrial Disputes Inquiry Commissioner to investigate the dispute as well as charges of discrimination against three employees because of their alleged union membership and activity. In regard to the charge of discrimination, the Commissioner reported that in one case the dismissal was for cause other than for union membership and activity and in the other two cases, the company, acting on his suggestion, agreed to take the parties back. In the matter of the main dispute which resulted in the application for a Board of Conciliation and Investigation the Commissioner reported that he had been successful in having the company and the union agree to the taking of a representation vote under the supervision of the Department of Labour. The vote was held on April 7 and resulted in favour of the shop union. In view of the result of the vote the Commissioner expressed the opinion that there was no necessity for the establishment of a Board. The opinion of the Commissioner was concurred in by the Minister of Labour and the parties concerned were advised that a board would not be established.

In the dispute between Clark Ruse Aircraft Limited, Lakeburn, N.B., and its employees, members of Local 2889, United Steelworkers of America (LABOUR GAZETTE, April 1943, p. 472), a report was received from Mr. H. R. Pettigrove, Industrial Relations Officer, Dominion Department of Labour, Fredericton, N.B., who had been appointed as Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner reported that from an examination of union records it was found that the applicant union represented a majority of the employees. Subsequently, the company expressed its intention of negotiating a collective labour agreement with the Industrial Union of Aircraft Workers at Dartmouth, N.S., but not until an agreement in similar terms was negotiated with Local 2889, United Steelworkers of America at Lakeburn, N.B.

Applications Rejected

On January 15 an application was received from employees of the Wallaceburg Brass Company, Limited, Wallaceburg, Ontario, members of Local 251, United Automobile Workers of America (LABOUR GAZETTE Feb. 1943, p. 194). The dispute was referred to Mr. J. P. Nicol, Industrial Relations Officer,

Dominion Department of Labour, Toronto, Ontario, who had been appointed as Industrial Disputes Inquiry Commissioner. Subsequently a representation vote was arranged to determine the agency which the employees wished to have represent them in negotiations with their employer. The result of the vote indicated that a majority of the employees desired to be represented by an organization other than the applicant union. The application therefore, was rejected and the interested parties were informed.

In connection with the disputes between Silverwood Dairies Limited, and Purity Dairies Limited, Windsor, Ontario, and their employees, members of the Windsor Milk Drivers and Dairy Workers Union (C.C.L.) (LABOUR GAZETTE, April 1943, p. 470), Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ontario, was authorized as Industrial Disputes Inquiry Commissioner to make an investigation. The Commissioner reported that the small amount of war work undertaken by these companies did not bring them within the scope of the Industrial Disputes Inquiry Act as amended and therefore recom-

mended against the establishment of Boards of Conciliation and Investigation. The recommendation of the Commissioner was concurred in, and the interested parties in each case were advised that a board would not be established.

Applications Withdrawn

On April 28, on the request of the applicant employees the application for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, March 1943, p. 326) to deal with a dispute between Yarrows Limited, Victoria, B.C., and its employees, members of Local 324, United Association of Journeymen Plumbers and Steamfitters of the United States and Canada was withdrawn.

The application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between Weston's Bread and Cake (Canada) Limited, Winnipeg, Manitoba, and its employees, members of the Inside Bakery Employees United (O.B.U.), Weston section, and the Weston's Salesmen's Unit (O.B.U.) (LABOUR GAZETTE, April 1943, p. 470), was withdrawn by the applicants on April 16.

Report of Board in Dispute between the Shawinigan Chemicals Limited, Shawinigan Falls, P.Q., and its Employees

On April 9, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Shawinigan Chemicals Limited, Shawinigan Falls, P.Q. and its employees, members of Local 357, International Moulders and Foundry Workers' Union of North America (L. G., Jan., 1943, P. 69).

The personnel of the Board was as follows: Mr. Walter F. Johnson, K.C., chairman appointed on the joint recommendation of the other two members; Mr. Gerald M. Almond, appointed on the nomination of the employees; and Mr. D. A. Paterson, appointed on the nomination of the employer. All three reside in Montreal.

The report of the Board is signed by the chairman and Mr. Paterson; Mr. Gerald M. Almond submitted a minority report.

The texts of the report of the Board and the minority report follow.

Majority Report

Montreal,
March 26, 1943.

To the Honourable
Humphrey Mitchell,
Minister of Labour,
Ottawa.

Re: Industrial Disputes Investigation Act and Re: Dispute between Shawinigan Chemicals, Limited, Shawinigan Falls, and certain employees, Members of Local 357, International Moulders' & Foundry Workers' Union of North America.

Sir:

The Board of Conciliation and Investigation composed of Mr. D. A. Paterson, nominated by the employer, Mr. Gerald Almond, nominated by the employees, and Mr. Walter S. Johnson, K.C., Chairman of the Board and appointed by you, has completed its investigation and now presents its report, as follows:

MATTER IN DISPUTE

The application for this Board, dated October 17, 1942, filed with you by or on behalf of the employees, states the "nature and cause of dispute" as being:

"Refusal on the part of the Company to recognize Union as the negotiating agent for its employees, members of the Union, in the matter of working conditions, classifications, adjustments of grievances, making joint representations to the Regional War Board re wages and overtime; dis-

crimination against members because of membership in the organization."

The application outlines efforts made by the parties concerned to adjust the dispute:

"Several interviews with management with a view to securing recognition of the Union as negotiating agent for employees, members of the organization, without effect. Company refusing to recognize or deal with the Union in connection with disputes, grievances and adjustments."

The application gives an "approximate estimate of the number of employees affected or likely to be affected—

<i>Directly</i>	<i>Indirectly</i>
175	2000

The application was authorized by a meeting of the Union on Friday, October 9, 1942, and is accompanied by a statutory declaration by Louis Brindisi, styled president of the Union, asserting that failing an adjustment of the dispute, or reference thereof to a Board, "a strike will be declared".

The nature and importance of the dispute are, therefore quite apparent.

This board's duty, under your instructions, was, first, to endeavour to bring about a settlement of the dispute, and failing that, to report to you with such recommendation as in good conscience it feels constrained to make.

SITTINGS OF THE BOARD

The board has had four sittings with representatives of both parties. On January 18, 1943, Mr. H. S. Reid, vice-president, and Mr. J. A. Fuller, its secretary, represented the Company; while the employees' representatives were Louis Brindisi, president of the Local Lodge, No. 357, of the International Moulders' Union, Mr. Adrien Duchesne, a core maker, both employees of the Stainless Steel Division of the Company's plant at Shawinigan Falls, and Mr. Robert Y. Menary, International Representative of the International Moulders' and Foundry Workers' Union. At the second, third and fourth general meetings, the above were present, and, as well Mr. Joseph S. Guilbault and G. A. Massicotte, also employees of the Stainless Steel Division. All four workmen were, we understand, members of the union in question.

The board has had other necessary private sittings, as elsewhere reported.

At the first general meeting, on January 18, the employees presented no written brief, and the board insisted, despite protests, that such a brief must be presented. A few days later, Mr. Menary sent the board a written

brief, and a copy is filed herewith. A copy of the Company's brief is also attached.

At the second general meeting of February 2, the two briefs were discussed.

DISTRIBUTION OF EMPLOYEES

In the Stainless Steel Division, which alone comes into this dispute, there were 185 employees when this investigation began. A communication to the board from Mr. Menary, dated March 15, 1943, states that on that date there were 165 employees, of whom 146 "are members in good standing of our organization".

The total number on the payroll of the division, was as follows, on December 31 of the following years:

1938	37 men
1939	43 "
1940	67 "
1941	103 "
1942	185 "

The effect of the war is obvious. The cessation of the war will also doubtless have its effect on the enrolment.

Of the 185, it was claimed by the Union representative when this investigation began, that 80% were members of the Union. At the meeting of Union members in October, 1942, called to authorize the application for this board, there was an indication that approximately 80 members were present—constituting less than 4% of the total employees of the plant who number over 2000; and less than one-half of the employees of the steel division. At our meeting of February 2, Mr. Massicotte said that at the last meeting of the Union 67 members were present.

It seems clear, then, that, when this investigation began, there were some men who did not belong to the Union.

DISPUTE

According to the application for this board, and as our investigation established, this entire dispute arises because of the Company's refusal:

"to recognize the union as the negotiating agent for its employees, *members of the union*" (Stainless Steel Division).

The plant at large is not unionized. There is an employees' association, to which we shall now refer.

THE EMPLOYEES' ASSOCIATION

The Shawinigan Chemicals Employees' Association was incorporated, under the Quebec Professional Syndicates Act, on or about

May 24, 1937. Several competing unions had sought the adherence of the employees who refused to recognize any of them, and chose to group themselves as an employees' association and to deal directly with the Company. The Association, comprised, we understand, at first and for several years, the entire personnel, each department or division sending freely chosen representatives as members of a Works Council. It still consists of some 2000 employees—all the employees, except the Union members of the Steel Division.

How successfully and harmoniously, on the whole, this association and the council have collaborated with the management ever since, is fully explained in the letter of January 19, 1943, addressed by the association's president, Mr. Georges Bergeron, to the Company's Works Manager. A copy of this letter is Exhibit No. 1 of the Company's brief. After enumerating the many advantages and progressive results of this collaboration over several years, the letter concludes:

"I trust the foregoing statement will tend to show that the Company and our Association have worked together in harmony and in a constructive manner, and it is our sincere hope and belief that our two bodies can and will continue to maintain such satisfactory relations."

The employees' association or Syndicate, after its formation, entered into a collective labour agreement, on July 27, 1938, with the Company, which was renewed from year to year, subject to agreed upon changes.

The last such agreement was made on August 3, 1942, and was in force when this dispute arose in October, 1942. It was to remain in force for six months from its date—to February 3, 1943, and to be renewed automatically, subject to 30 days' notice prior to the end of any six-month period. The 175 employees mentioned in the application for this board were among those mentioned at page 10 of that collective agreement. They are less than 9% of the total employees of the plant.

After the incorporation of the employees association in May, 1937, the Steel Division, by ballot in July, 1937, elected as its representative upon the council, Mr. Rosaire Jacques. At the next election, on May 19, 1938, Mr. Louis Brindisi was elected representative. He resigned later in the summer. Since his resignation, no other representative was regularly elected, but in 1940 a group of Steel Division employees requested one of their number, Mr. Adam Guillemette, to ask for admission on the council to care for their interests. He was admitted, and acted until after April 20, 1942, when he withdrew; since then that division has had no formal representative.

On November 9, 1942, Mr. H. S. Reid, vice-president of the Company, wrote the Regional Labour Board as follows (Company's brief, Exhibit "D"):

"On Saturday morning (7th Nov.) I had the three representatives from the Stainless Steel, (who were present at the meeting on November 2nd) for a talk in my office; and I again invited them to have representatives from the Stainless Steel Division elected as members of the Works Committee of the Shawinigan Chemicals Employees' Association. I again told them that I would be only too glad to discuss wage rates at the Foundry Division, and if investigations showed that any rates were too low, I would be glad to sign a joint petition with representatives of the works council, petitioning the Regional War Labour Board for increases in such rates.

Personally, I really believe that, without any outside influence, we could make an amicable arrangement with our employees at the Stainless Steel Division; and I am hopeful that we will get together."

EFFORTS OF THE BOARD TO CONCILIATE

At all general meetings with the parties, the board explored patiently and consistently the possibility of an agreement between the parties.

The precise point of difference, as we have said, was whether the Union should be the recognized bargaining agent of its members. In his brief, Mr. Menary says this:

"Our organization is made up entirely of those employed in the Stainless Steel Division The members of the Works Council cannot properly represent the Company's employees working in the foundry. At no time were representations made by the Foundry workers given any consideration by the Works' Council. The employees in the Foundry were not a party to the agreement entered into between the Company and the Works' Council which was organized."

As for the last statement—it has already been shown that these employees did form part of the Association at its foundation, and elected and sent representatives for several years to the works' council. Nor was there evidence before the Board that representations of the foundry workers were given no consideration.

Mr. Menary continues:

"The moulders learned by experience that it was useless to seek the aid of the Works' Council to obtain redress of grievances or substantial increases in rates to which they were entitled upon a comparable basis. You will thus understand the reason why our organization refuses to in any way submit proposals to the Company through the Works' Council or be bound by any of its decisions in connection with matters which it may discuss with the Company."

As to the above, the Company explains that, as above shown, the employees rose suddenly from 67 in 1940, to 103 in 1941,

and to 185 in 1942. Many of the new employees were inexperienced, in a greater or lesser degree, and wages had to be graded. In the Company's brief, Exhibit No. 4, dated October 12, 1942, the Company tells the Regional Board that:

"We admitted to Mr. Menary (on August 11, 1942), that in the press of work and changing personnel at our Steel Division, a considerable number of employees should have been raised to higher classifications sooner and that we were in the process of rectifying this error on our part. Our belief was that we could make the necessary changes under our present Collective Agreement, so that our employees would be just as well paid as those of the Canada Iron Foundries; and asked for a few more weeks' time to get this ironed out. Mr. Menary agreed to this and said he would be back in a few weeks' time for further discussion.

In the interval between this first visit and the visit (of Mr. Menary) of Saturday last, 10 October, we made the necessary changes . . . and again asked our employees at the Steel Division to elect their representative to the Works Committee. They, however, did not do this. We could not, therefore, submit any joint petition as suggested by you. . . ."

And again Mr. Menary's brief continues:

"Let me repeat what I said at the session of the Commission which I attended, that our Union will insist upon being given recognition as the body entitled to discuss with the Company grievances that arise in the Stainless Steel Division.

We shall accept nothing less and should your Board not see fit to urge upon the Company giving the recognition demanded, we shall govern ourselves accordingly."

This brief, which was presented subsequent to the meeting of January 18, 1943, is a statement of what Mr. Menary orally indicated at that meeting. The Company was asked, at that meeting, to write the Board expressing its point of view, and at the meeting of February 2 the Company tabled a letter, dated February 2, which has since been slightly modified and which in its final form reads as follows:

February 2, 1943.

"Walter S. Johnson, Esq., K.C.,
Chairman of Board of
Conciliation and Investigation,
437 St. James Street W.,
Montreal, Que.

Re: Industrial Disputes Investigation Act and re dispute between Shawinigan Chemicals Limited, Shawinigan Falls, P.Q., and its employees, members of Local 357 International Moulders' and Foundry Workers' Union of North America.

Dear Mr. Johnson:

At the meeting of the Conciliation Board to-day I was asked if our Company would be willing to meet representatives of our Stainless Steel Division to discuss any grievances or to make any adjustments, and to have

present at the discussion Mr. Menary, representing the International Moulders' Union. I promised to discuss this with my associates, which I have done. We feel that we cannot comply with this request.

We will be very glad, however, to meet with any group of our employees at the Stainless Steel Division, who may or may not be members of the International Moulders' Union.

We will also be quite glad to meet Mr. Menary at any time he wishes to see us to discuss matters affecting the employees of this Division who are members of the Moulders' Union.

When as a result of meetings with this committee of the Stainless Steel Division, and after consultation by us with other interested parties, agreement is reached as to redressing any grievances or making any adjustments in wages and bonuses, the Company will enter the same for inclusion in the collective agreement; and in default of a mutual agreement being arrived at, the committee of the Stainless Steel Division shall be free to apply directly to the Quebec War Regional Labour Board.

Yours very truly,

Shawinigan Chemicals Limited,
(Signed) H. S. Reid,
Vice-President."

Your Board has been unable to induce the Company to alter, or the Union representatives to accept, the position taken in that letter.

RECOMMENDATION OF THE BOARD

The plant of Shawinigan Chemicals Ltd. has about 2200 employees.

In May, 1937, the employees formed an Employees' Association, after having refused to join any of several unions seeking their adherence. Every department for several years sent representatives to a Works Council which negotiated all matters between the Company and the employees, and the result was periodically incorporated in a collective agreement, under Provincial law.

The President of the Association has recently testified to the spirit of harmony, goodwill and co-operation that has always existed, and still exists, between it and the Company. They co-operate to solve and iron out their mutual problems.

About 2000 employees recognize the Works Council as their bargaining agent. A group of Union members in the Steel Division refuse to do so. This Division has not more than 185, possibly not more than 165, employees, not all of whom are members of the Foundry Workers' Union.

The Union members insist that they are a class apart, and that as such they will ignore the Association and be represented only by a Union representative in all negotiations with the Company.

The Company declines to treat with the Union as sole bargaining agent.

What should your board recommend?

One question naturally occurs—though your board has not to answer it: If more than 2000 employees, who are not unionized, can work harmoniously in a free association with the Company, is the outside influence a helpful one which induces part of a group in one small section of the plant to refuse collaboration, in a spirit of fellowship and goodwill, with the great mass of their fellows, and with the employer of them all, for the sake of peace, and for the avoidance of rancour and hostility, in industry?

The ideal condition for the co-operation of labour and management, is that of an Association of Employees, such as that in this case, working harmoniously with the management, in a common adventure, without coercion, or taxation by dues, or shrewd stimulation of "grievances" for purposes of agitation.

Where that ideal condition exists, as it seems preponderantly to do here, the situation should not be disturbed on the demand of the men in one small department of a great plant, still less of a part only of them, when more than 2000 other workmen are satisfied with the essential justice which they obtain, or feel they can obtain, through the Association.

Your board has carefully studied P/C 2685 (June 20, 1940), in the light of the above. That P/C expresses a hope for the "establishment and maintenance of good relations" between employers and employees, in war industries; that "employees should be free to organize in trade unions"; and that "employees, through the officers of their trade union or through other representatives chosen by them, should be free to negotiate with employers—".

The core and centre of that appeal by the Government is, that labour and management should try to avoid disputes that common sense and the larger view may settle in the interest of the greater number, and in the interest of the war effort.

But the Company's difficulty, as indicated to the Board, is this—that the Employees' Association was formed as a positive indication that the employees definitely repudiated connection with any labour union, and chose the method of free association with the employer, under the protection of the Quebec Collective Labour Agreement Act and the Quebec Professional Syndicates Act.

If now the Company voluntarily enters into an agreement recognizing the A.F. of L. as sole bargaining agent for some only, or even for all, of the employees of the Steel Division, and thus against the principles strenuously

adhered to by some 2000 other employees in the Association, the Company only invites trouble and disorder throughout its plant. Its action would be regarded by the vast majority of its workmen as a breach of faith, and might well result in very serious disturbance of war work in hand.

The Company offers to negotiate all matters with a *committee* from the Steel Division—whether composed of Union or Non-Union members; that is, in the alternative words of P/C 2685, "through other representatives chosen by them"—other, that is, than the Union. There is every willingness to negotiate, and there always has been. The men can belong to a Union—but the Company will not recognize the Union as sole bargaining agent. It will at any time welcome a visit from a Union representative—but not as heading and with the Committee and as such representing the Union as bargaining agent.

Your Board, after most careful consideration, has concluded that nothing in P/C 2685 intends or directs that 165 employees, or a part of them, in one division of a great plant employing over 2000, are entitled to force a Union upon the employer as their sole bargaining agent, or to force upon it a separate agreement or a confusing multiplicity of agreements, and thus to trouble the harmonious relations existing now for several years between the Company and the overwhelming mass of its employees.

This country is still supposed to be a democracy, wherein the few bend to the majority, for the presumed greater good of all and for freedom within the law. If it is not, then one proof that it is not would be in this instance to let a very small minority disturb and possibly wreck those friendly and co-operative relations in what seems a genuine effort by all concerned to work out their mutual problems upon a democratic basis of reason, negotiation, and essential justice to all.

Your Board recommends, therefore, that, so far as it can see at this time, the peace and quiet of the Plant and of the undertaking, as a whole, of Shawinigan Chemicals Limited, and the welfare of all the employees, without exception, will best be conserved by declining to recognize the demand of the Union which led to this investigation, and by accepting as not unfair to the minority, the offer of the Company.

The whole respectfully submitted.

(Sgd.) Walter S. Johnson,
Chairman.

(Sgd.) D. A. Paterson,
Member.

Minority Report

Montreal,
April 5th, 1943.

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa.

Report of the employees' representative on the Board of Conciliation to inquire into the dispute between employees in the Stainless Steel Division of the Shawinigan Chemicals Limited and the said Company.

Sir:

The undersigned nominated by the employees on the said Board herewith submits his minority report.

I wish to take this occasion of expressing my appreciation for the courtesies at all times extended to me as a member of the Board by my colleagues, Mr. Walter S. Johnson, K.C., chairman, and Mr. D. A. Paterson, representing the employers. I regret that I cannot concur in their conclusions.

Reference is made in the report of the majority of harmonious relations existing between the Company and the majority of its employees. This is based upon a letter forming part of the exhibits and signed by Mr. Georges Bergeron, President of the employees' association.

These harmonious relations apparently do not apply to the employees of the Stainless Steel Division. It came out during the course of the investigation that the employees in this department of the Company's activities at no time wished to be represented by the employees' association, or in any way form part of it. Their contention is that being employees of the foundry, they could best discuss working conditions and other matters through their own organized group.

Throughout the course of the inquiry, the employees' representative, Mr. R. Y. Menary, said that all they sought was recognition of a committee of the employees of the Stainless Steel Division, members of the International

Moulders' and Foundry Workers' Union. This recognition was refused by the Company. Subsequently, the employees' representative stated that they were prepared to adjust the dispute upon the basis of an employees committee of which Mr. Menary would also be a member, and being allowed to meet the Company's officials to discuss and adjust grievances. No demand was made by the employees for a closed shop, or even that the Union be the sole bargaining agency for the Stainless Steel Division. It resolved itself, in the circumstances, to a fair request that organized employees of the Stainless Steel Division meet the company through a committee of their own choosing which would also include an officer of the organization. The request is one, in the opinion of the undersigned and particularly in view of Order in Council P.C. 2685 that merits the favourable consideration of the Company.

It is quite evident that the representatives of the Union have made all the concessions they possibly could. The right to collectively bargain is recognized as one to be exercised by the workers and is in line with Government Labour Policy as set out in P.C. 2685.

RECOMMENDATION

The undersigned therefore recommends that the Company be requested to accept the proposition of the organized employees of the Stainless Steel Division, to wit: that all differences and disputes between the said employees and the Company be discussed and adjusted through the medium of an employees' committee of the Stainless Steel Division members of the International Moulders' and Foundry Workers' Union of North America, which committee shall have the right to associate with itself an officer of the above organization.

The whole respectfully submitted.

(Sgd.) Gerald M. Almond,
Employees' Representative.

Report of Board in Dispute between the Lévis Ferry, Ltd., Quebec, P.Q., and its Employees

On April 26, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Lévis Ferry, Limited, Quebec, P.Q., and its employees, members of Division 229, Canadian Brotherhood of Railway Employees and other Transport Workers (L.G., Feb., 1943, p. 195).

The personnel of the Board was as follows: Mr. Andre Montpetit, Montreal, P.Q., chairman, appointed on the joint recommendation of the other two members; Messrs. Paul Lesage, K.C., Quebec, P.Q., and Guy M. Desaulniers, Montreal, P.Q., appointed on the nomination of the employer and employees respectively.

The report of the Board is signed by the chairman and Mr. Lesage; Mr. Desaulniers submitted a minority report.

The texts of the report of the Board and the minority report follows.

Majority Report

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between the Lévis Ferry Limited and its Employees, members of the Canadian Brotherhood of Railway Employees and Other Transport Workers.

Montreal, April 5, 1943.

The Hon. Humphrey Mitchell,
Minister of Labour,
Ottawa, Ont.

Mr. Minister,

On January 13, 1943, in your capacity as Minister of Labour and in conformity with the provisions of Section 7 of the Industrial Disputes Investigation Act (R.S.C., 1927, Sec. 112, as amended), you appointed a Board of Conciliation and Investigation to deal with a dispute between the Lévis Ferry Limited and its employees, members of the Canadian Brotherhood of Railway Employees and Other Transport Workers.

The members of the board were Messrs. Andre Montpetit and Guy Merrill Desaulniers, of Montreal, and Paul Lesage, of Quebec.

Your board held a preliminary meeting at Montreal on February 6, 1943, to determine the scope of its investigation, and on February 15 and 16, 1943, and March 5, 1943, met in the office of the Lévis Ferry Limited, at Quebec. During said three days of proceedings your board obtained information on all facts relating to the dispute and also heard a number of witnesses and, furthermore, received briefs from both the employees and the Lévis Ferry.

The official representatives of the Lévis Ferry Limited were Messrs. Stanislas Germain, attorney, J. E. Cote, President of the Company, and J. L. Roberge, vice-president and general manager of the Company; those of the employees were Messrs. J. E. McGuire, National secretary-treasurer of the Canadian Brotherhood of Railway Employees and Other Transport Workers, George Fortin, President of Division 229 of the Brotherhood, and E. Bolduc, Provincial Organizer of the Brotherhood.

Following the above sittings, your board took the whole matter under consideration with a view to the preparation and submission to you of its final report.

However, on March 26, 1943, the chairman of your board received as such, from the Lévis Ferry Limited, a written request for the re-opening of the investigation. On March 27, 1943, your board officially noted said request for the re-opening of the investigation and, after thorough examination of the matter, feeling that such was its duty, your board decided to agree to the request and to hold another sitting on April 2, 1943, at Quebec. At said special sitting, certain important events having occurred subsequent to March 5, 1943, and which will be referred to hereinafter, were submitted to your board. Your board wishes to mention at once that, in view of their exceptional importance to the mass of the employees concerned in this dispute and their future relations with the Company, consideration was given said subsequent facts in the board's report (Mr. Desaulniers dissenting).

The two questions before your board for decision were the following:

1. Must the Lévis Ferry Limited recognize and accept the Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 229, as exclusive bargaining agent for the purpose of concluding an agreement covering the working conditions of the Company's employees?

2. In case of an affirmative reply to the above question, must the draft agreement submitted by the Brotherhood be accepted by the Company as prepared?

1. MATTER OF THE RECOGNITION OF THE BROTHERHOOD BY THE LÉVIS FERRY LIMITED

On or about July 1, 1942, the employees of the Lévis Ferry Limited, in the proportion of one hundred and one (101) out of a total of one hundred and five (105) employees, joined the Canadian Brotherhood of Railway Employees and Other Transport Workers. From that date, they were recognized as Division 229 of the Brotherhood. Evidence was submitted to the board showing that all these employees, up to March 6, 1943, were members in good standing of the Brotherhood.

By communication dated March 6, 1943, and addressed to the Lévis Ferry Limited, eighty-three (83) employees, including the president and the secretary-treasurer of Division 229, advised the Company of their intention of forming a local union "free from any outside intervention". The request in question, duly signed by the employees concerned, further added that the main matter said local union wished to examine with the Company was the recognition of the new labour body as the sole agent and bargaining

agency between the employees and the Company; it even added that "the request to that effect signed by all the employees of the Lévis Ferry Limited would result in the maintenance of good relations with the management and the improvement of the employees' welfare generally".

No evidence whatever was submitted to your board in any attempt to show that the request had been signed by said employees through fear or under any threat.

To further add to the confusion, on March 12, 1943, at a meeting of the membership of Division 229 a ballot was held to determine whether the employees of the Lévis Ferry Limited wished to be represented by the Brotherhood or by the proposed local union as sole bargaining agent with the Company. Out of the eighty-three (83) members present at the meeting, forty-six (46) voted in favour of the Brotherhood, thirty-three (33) in favour of the proposed local union, while three (3) ballots were voided, and one ballot could not be found. As to said meeting, your board considers there is no reason to believe that said votes were not regularly registered or that there was any illegality whatever. The ballot, however, clearly showed that on March 12, 1943, the employees of the Lévis Ferry Limited, who a week previous had indicated their intention of breaking away from Division 229, were still divided. There was undoubtedly great confusion then in the mind of the employees, and the previous unanimity to belong to the Brotherhood was a thing of the past.

Following said meeting of March 12, 1943, certain employees of the Lévis Ferry Limited, and particularly Mr. C. A. Proulx, former secretary of Division 229, and a Mr. Demers continued their efforts to have their fellow-employees duly and properly organize in the form of a Syndicate the proposed local union.

In the Quebec Official Gazette of March 27, 1943, Mr. Jean Bruchesi, the Provincial Under-Secretary, gave notice that, in conformity with the provisions of the Professional Syndicates Act of Quebec, the Provincial Secretary had authorized on March 18, 1943, the creation of a body, under the name of "Le Syndicat des Employés de la Traverse de Lévis Limitée", to study, safeguard and promote the economic, social and moral interests of the trade. In conformity with the provisions of the Professional Syndicates Act of Quebec, the declaration of the creation of said new Syndicate was filed on March 29, 1943, with the Protonotary of the Superior Court, at the Court House, Quebec City.

It was established during the proceedings before your board on April 2, 1943, that the new Syndicate had sixty-six (66) members in good standing, with six (6) other applications not yet accepted by the executive; that at the same date the secretary-treasurer of Division 229, Mr. Belanger, had received sixty-eight (68) resignations from members in good standing of the Brotherhood; and that by letter dated March 19, 1943, the Lévis Ferry Limited had officially recognized the new Syndicate "as the sole body with which in future it would negotiate about working conditions for all the Company's employees".

In conclusion of this factual report, your board would point out that during its sitting of April 2, 1943, Mr. Bolduc, a representative of the Brotherhood, requested the holding of a secret ballot of the employees under the board's control and direction but, in view of the existing situation as shown at said sitting, and in consideration also of the probable effects of such a ballot on the employees, your board came to the conclusion not to grant Mr. Bolduc's request (Mr. Desaulniers dissenting).

Whereas it is your board's opinion that, both in the letter and the spirit, the Industrial Disputes Investigation Act requires the Board of Conciliation and Investigation to consider all the circumstances relating to the dispute and decide thereto in the manner best suited to give satisfaction and justice to the parties concerned, while at the same time endeavouring as much as possible to ensure to both the employer and the employees future equitable relations based on good order and mutual understanding;

And whereas your board, from the working class viewpoint, must place itself above associations or groups as such and endeavour honestly to find out where, in its opinion, lie the interests of the mass of the employees, without favouring one group to the detriment of another;

And whereas your board cannot recommend the recognition of a certain labour organization where the employees themselves, members of said organization, do not consider it advisable to remain members thereof and abandon it to join up with another trade organization;

And whereas it is clearly established in the present dispute—

(a) that since March 18, 1943, there existed among the employees of the Lévis Ferry Limited a professional syndicate duly and properly constituted under the provisions of the Professional Syndicates Act of Quebec;

(b) that said Syndicate, on April 2, 1943, had sixty-six (66) members in good standing and six (6) candidates for membership;

(c) that, on the other hand, by April 2, 1943, the secretary of the Brotherhood, Division 229, had received sixty-eight (68) resignations from employees until then members of the Brotherhood, so that at said date the Brotherhood only had thirty-three (33) declared members out of its previous membership of one hundred and one (101);

(d) that no evidence was adduced or found to the effect that the employees of the Lévis Ferry Limited had thus decided to change organization as a result of undue influence from the Company or its management or of unbecoming or dishonest dealings on their part;

(e) that the president of Division 229, Mr. Fortin, in a letter dated April 2, 1943, which he wrote in his official capacity to the chairman of your board, stated that having ascertained that a majority of the members of the Brotherhood had tendered to him their resignation, he had to acknowledge the accomplished fact;

(f) that the Lévis Ferry Limited had stated in writing its recognition of the new Syndicate as the sole agent and bargaining agency on behalf of its employees;

And whereas, should your board recommend the recognition of the Brotherhood by the Company, the danger of friction between employer and employees would be greater and aggravated, since the Company would be faced, on the one hand, with a Syndicate recognized by the Company and having the majority of the employees, and on the other hand, with a minority union which it was attempted to force upon the Company;

And considering the nature and effects of the above-mentioned events preceding the official creation of the new Syndicate:

Under the circumstances, and considering all the various aspects of the present dispute, your board (Mr. Guy Merrill Desaulniers dissenting) feels that the Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 229, should be denied the right to be recognized as the exclusive bargaining agency with the Lévis Ferry Limited.

2. MATTER OF DRAFT AGREEMENT SUBMITTED BY THE BROTHERHOOD

Your board, in view of its answer to the first question submitted for consideration, is not required to report on the second question as drafted.

All of which is respectfully submitted.

(Sgd.) ANDRE MONTPETIT.

(Sgd.) PAUL LESAGE.

Minority Report

On November 18, 1942, an application for a Board of Conciliation and Investigation was submitted by the members of the Brotherhood of Railway Employees and Other Transport Workers, Local 229, all employees of the Lévis Ferry Limited.

On January 13, 1943, I received from Mr. M. M. Maclean, Director of Industrial Relations and Registrar, my appointment as member of and employee representative on said board.

On January 18, 1943, I was informed of the appointment of Mr. Paul Lesage, K.C., as member of and employer representative on the said board.

On January 28, 1943, both members of the board having agreed on him as board chairman, Mr. Andre Montpetit was appointed by the Minister of Labour third member and Chairman of said board.

Therefore, exactly two months and ten days elapsed between the date of the application for the board and the full completion of said board's organization. Following discussion as to the date of the first session of the board, it was decided to hold a meeting at Quebec, Friday, February 12, 1943.

The meeting of Friday, February 12, however, had to be postponed until Monday, February 15, 1943, as some members could not be present on said date.

Therefore, from the date of the application to that of the board's first meeting, almost three months elapsed.

The first sitting was held Monday, February 15, 1943, and the board met again on February 16 to receive the brief submitted by the Brotherhood.

The two main problems submitted for our consideration, and concerning which we had to make recommendations, were the following:

1. Recognition of the Brotherhood of Railway Employees and Other Transport Workers, Local 229, by the Lévis Ferry Limited as the sole authorized agency of its employees, members of said Brotherhood, in any possible negotiations or labour agreement between said Company and its employees, and, as a corollary, that a labour agreement, in the form of a collective labour agreement, be made between the Lévis Ferry Limited and the Brotherhood, representing the employees.

2. Adjustment of certain working conditions.

Before examining the facts concerning which I propose making recommendations, I wish to make certain comments about our board, its justification, the objects it should have in view, its powers and duties under the Industrial Disputes Investigation Act (Chap.

112, R.S.C., 1927, as amended), and the attitude of the Lévis Ferry Limited before the Board.

ESTABLISHMENT

Our board was established in accordance with the regulations provided under the Act governing said board.

EXISTENCE

The Board's existence was the result of the inability of the parties before the board to settle the dispute between themselves. Notwithstanding the denial by one of the parties thereto of the existence of a dispute, the mere fact of the application to the Dominion Department of Labour by the other party, namely the employees of the Lévis Ferry Limited, for the establishment of a Board of Conciliation and Investigation, is sufficient proof of the existence of such a dispute.

OBJECTS

As to the objects to be attained by the board, I will give them by summarizing Sections 24, 25 and 26 of the Industrial Disputes Investigation Act.

A board to which is referred a dispute must firstly and before anything else try to obtain a settlement of the matter and, to that end, the board may, in the course of the investigation, make such suggestions and other things as it may consider reasonable and proper in inducing the parties concerned to settle their dispute in a fair and friendly way. The Board must even encourage the parties, should they be in agreement, to sign a binding agreement. In the event of the parties being unable to come to an understanding notwithstanding the board's endeavours to that effect, the latter must then submit to the Minister of Labour a report indicating the best methods to be followed and also making the necessary recommendations for the settlement of the dispute in accordance with the justice and merits of the case.

POWERS AND DUTIES

The board's powers may be summarized in a few words: all the necessary powers to have knowledge, through investigation, of the facts and circumstances relating to the dispute. The investigation completed, it is the board's duty to submit to the Minister of Labour a report covering said investigation and containing the board's recommendations.

It follows from the above that a board is not a tribunal required to make, following investigation, a finding legally binding upon the parties, but rather a body required to conciliate the parties, if possible, and, if not,

to ascertain the causes of the dispute and the remedies likely to improve the relations between the parties concerned.

I may say that when I accepted appointment to said board, I intended doing my utmost to bring the parties to an understanding and settlement of their dispute, but I soon realized that this was impossible, due to the uncompromising attitude taken from the very outset by the Lévis Ferry Limited. The Company not only refused to grant the smallest part of the employees' requests, but even denied the necessity of a board by insisting that there never existed, either then or in the past, any dispute between the Company and its employees, an attitude clearly indicating the Company's opposition to showing the facts as they were or a lack of observation on its part.

The evidence shows that in August, 1942, requests were submitted by the Brotherhood, on behalf of the employees of the Lévis Ferry Limited, not a single one of which was granted by the Company. It was as a result of this refusal that the employees made an application for a Board of conciliation. If the Company's refusal of the employees' requests does not constitute a dispute, then I certainly would like to know the meaning of the expression "dispute" between employer and employees.

It is clear that there existed a dispute between the Lévis Ferry Limited and its employees, represented by the Brotherhood, and that the present board was required to make recommendations as to the necessity of granting or refusing in whole or in part the employees' requests.

During the board's sessions of February 15 and 16 evidence was adduced before the board that of the one hundred and five (105) employees of the Lévis Ferry, one hundred and one (101) were members in good standing of the Brotherhood, Local 229, and such was the situation until March 6, 1943.

Following said two sessions, the board decided that a new session should be held to receive the memorandum submitted by the Lévis Ferry in reply to the Brotherhood's requests on behalf of its members.

The board was unable to meet again before March 3, 1943, so that a month elapsed between the board's first meeting of February 6, 1943, and March 5, 1943.

At the meeting in question, the board heard the Company's reply through its spokesman, Mr. Stanislas Germain, attorney.

It is to be noted from the Company's prepared memorandum that it objected strenuously to every request made by the Brotherhood on behalf of its members, employees of the Company.

The Company insisted upon its complete inability to grant even the smallest part of the requests in question, with the exception of that concerning the payment of semi-annual remuneration. Concerning the union question, the Company expressed the opinion (page 19 of the memorandum, par. "b") "that unionization of the employees is not essential for the employees to obtain fair working conditions", and its attitude towards the Brotherhood is clear and definite. It refuses categorically to recognize the Brotherhood as the official agent of its employees.

Following the session of March 5, it was decided that the board would meet again to deliberate and then make recommendations to be submitted in a report to the Minister of Labour. The date of said meeting was not set immediately, and it was only on March 17 that it was decided by Mr. Montpetit that it would be held on March 26 in his office, at Montreal.

Between March 5, date of the last session, and March 17, the date at which the meeting of the Board on March 26 was decided, a letter dated March 12 was addressed to Mr. Montpetit by Mr. Stanislas Germain informing him that the Lévis Ferry had received from its employees a request expressing their wish to organize into a local union. It is mentioned in said request: (1) that the main question to be considered by the management of the Lévis Ferry would be the recognition of the new local union; (2) that the Lévis Ferry would be the sole agent and negotiator with its employees, to be represented by a committee (this clause appears to be intentionally vague, and I am curious to know with what other agent or negotiator the employees' committee could have dealt or negotiated); (3) that this request signed by all the employees of the Lévis Ferry would result in maintaining good relations with the management and in improving the welfare of all employees.

Said request, dated March 6, 1943, was presumed, according to the copy adduced, to have been signed by eighty-three employees of the Lévis Ferry.

On March 12, 1943, a vote was taken at a meeting of the members of the Brotherhood, Local 229, for the purpose of deciding if the employees of the Lévis Ferry Limited wished to be represented by the Brotherhood or by the proposed local union as exclusive bargaining agent with the Company. Of the eighty-three members present at the meeting, forty-six voted in favour of the Brotherhood, thirty-three in favour of the proposed local union, three ballots were voided, and one ballot could not be traced.

On March 26, 1943, a deliberative meeting of the board was held at Montreal, in Mr. Montpetit's office. The chairman of the board then informed the two other board members that a request for the re-opening of the investigation had been received from the Lévis Ferry Limited, the reason being given by the Company that it had been informed by a majority of its employees of their desire to form a local union and break away from the Brotherhood.

The question of re-opening the investigation was renewed at the board's meeting of March 27. Following discussion, it was decided by two votes to one (I was the dissenting member) that the investigation would be re-opened and that another session would be held at Quebec on April 2, 1943.

My reasons for objecting to the re-opening of the investigation were as follows:

(a) Our board had been established to find out if the employees' requests were reasonable and whether they should be granted or rejected;

(b) The parties concerned had had every opportunity to support their claims;

(c) Evidence had been adduced by the employees' representatives that they wished to be represented by the Brotherhood, and that the Company had not proven that it was not so;

(d) If the employees were personally interested in a change of union, it was up to them to make the request, and not the Company, who had always opposed union recognition under any form;

(e) If the Company, who had so strongly objected to the board recommending improvements in working conditions requested by the employees, wished to bring about the dissolution of the Brotherhood and the establishment of a local union, it was because it was certain of having control over the new union and knew very well that it would be easier to run a local union controlled by people who would work in the Company's interests rather than those of the employees they were supposed to represent;

(f) Information I had obtained personally from representatives of the employees, and which were given in a memorandum dated March 16, 1943, addressed by Mr. McGuire to Mr. Montpetit and forming part of the evidence, showed the measures taken by Mr. C. A. Proulx, whom I consider an agent of the Company, to have the employees sign the notorious request of March 6, 1943;

(g) The new local union organized by agents of the Company to disorganize and divide the

employees certainly did not represent a majority of the employees, and those who joined did so only on the word of their own fellow-employee, Mr. Proulx, that they would never get anything from the Lévis Ferry as long as they remained members of the Brotherhood, whereas, on the contrary, if they joined the new local union the Company would grant them their requests.

Notwithstanding my objections, it was decided by a majority vote that the board would proceed back to Quebec on April 2, 1943. Thus, four months after the Brotherhood's application for a Board of Conciliation, the dispute between the employer and its employees still remained unsettled.

During the session of April 2, 1943, evidence was adduced to show that the new syndicate in question had sixty-six (66) members in good standing, that six (6) applications for membership had not yet been passed upon by the executive, and that on the same date Mr. Belanger, the secretary treasurer of Local 229, had received sixty-eight (68) resignations from members in good standing of the Brotherhood. Mr. Proulx was president of the syndicate, and Mr. Lionel Demers its secretary treasurer.

Mr. Germain, attorney for the Lévis Ferry, then submitted a letter dated March 19, 1943, and addressed to the new syndicate in which the Company gave official recognition to the new organization as "the sole body with which it would negotiate in future concerning the working conditions of all the Company's employees".

During the session, Mr. Bolduc, District Representative of the Brotherhood, requested the board to hold, under the board's own direction, a secret ballot among the employees. He insisted, and with reason, that only through a secret ballot could the employees express their wishes concerning the choice of union, without fear of repercussions on their working conditions by a majority vote (I was the dissenter) the request was rejected.

During the session of April 2, wishing to have all facts leading to the new situation, in order to be able to make proper recommendations in my report, I requested Messrs. Proulx and Demers to give me information on certain points by answering my questions. Mr. Germain objected frequently during my questioning, however Mr. Montpetit, the chairman of the board, allowed me to proceed.

Mr. C. A. Proulx, the president of the new syndicate, informed us that on March 5 or 6 he met Mr. Maurice Carrier, assistant manager of the Lévis Ferry, and that between March 5 and 10 he had also met Mr. Cote, the president of the Company. Mr.

Proulx at the time was secretary of Local 229 of the Brotherhood and, though an officer of said Local, he had meetings with Messrs. Carrier and Cote in the course of which he discussed matters of interest to all the members of the Brotherhood and, therefore, of the great majority of the Company's employees, without previously notifying the Brotherhood of the fact and without any authority from them to act as their spokesman. As secretary of the Local, Mr. Proulx had certain responsibilities, and I feel that before taking any steps he should have at least notified his fellow-employees.

Mr. Proulx admitted having met the employees of the Lévis Ferry and having encouraged them to resign from the Brotherhood and join the new local union. He also admitted that to induce his fellow-employees to break away from the Brotherhood he resorted to the following arguments: that the Lévis Ferry would never recognize the Brotherhood as its employees' agent, but would so recognize the local union; that with the local union he felt certain the employees would obtain acceptance of the requests made by the Brotherhood; that he was certain the Company would willingly advance a sum between four and five hundred dollars to establish a fund for the new local union, and that the employees would therefore not be required to pay their union a quarterly sum of \$1.00.

Now could Mr. Proulx make such promises, unless he had been advised by the Company officials? If the Company made such promises, how can these be reconciled with its uncompromising attitude and absolute refusal, as expressed in its memorandum, to grant even part of the employees' requests?

In explanation of his position, Mr. Proulx declared he knew absolutely nothing concerning the Brotherhood's requests for the Company's employees previous to February 15, 1943, that is the first day of the Board's proceedings. How can he make such a statement knowing full well that all requests were discussed before Mr. Bernard Rose, Industrial Disputes Commissioner, even before the establishment of the board, and that he was present at and took part in said discussion.

In a letter dated February 20, 1943, addressed to me, Mr. Proulx, as spokesman for the members of the Brotherhood, mentioned his satisfaction with what had been done to date and promised the full co-operation of the members. How then that two or three weeks later Mr. Proulx shows a complete change about? And why such a change after meeting with the Company's officials, since he well knew the latter's opposition to the requests made by the employees?

Mr. Lionel Demers was the second witness heard at the session of April 2. He is an accountant and, I believe, the only office employee, outside the officials. He admitted he was not a member of the Brotherhood and that he had been refused membership; he considered the local union a good thing and felt certain that, through it, the employees would be granted requests by the Company. On the other hand, however, he considers the employees' requests frankly 'excessive, and stated he had himself prepared data proving them so. I may say that a man, the secretary of a union (Mr. Demers is effectively the secretary of the new local union), is decidedly in bad faith in asserting that the employees exaggerate when they request a working day of ten hours instead of one of twelve, and a day or at least an afternoon off weekly to take a well-earned rest.

Concerning the organization of the local union, Mr. Demers admitted that, with printed forms of resignation from the Brotherhood and of application for membership in the new local union in hand, he had called upon the employees. He also admitted that he had done this during his working hours and with the approval of Company officials. I do not believe that the Company, having heard the above, could maintain that the change of unions was made without it having anything to do in the matter and resulted from a spontaneous move on the part of the employees.

During said session of April 2, while I was questioning witnesses and trying to find out just what had been done to have the employees resign from the Brotherhood and join the new local union, Mr. Stanislas Germain, attorney for the Lévis Ferry, objected to my method of procedure and insisted that my duties as arbitrator were not to defend a union, that is to say, in the case considered, the Brotherhood.

I will acknowledge with Mr. Germain that as arbitrator, my first duty is to try and conciliate the parties, but I believe that, when conciliation is impossible, it is then my duty to inform myself on everything I consider necessary to permit me to make fair and well-founded recommendations.

Furthermore, I firmly believe that, should a change in the condition of the parties concerned detrimental to either of them occur during the course of our proceedings, it is then my duty to inform myself about the causes of such a change and discuss its merits in my recommendations.

In the present case, after hearing the evidence and examining the facts leading to the establishment of the new local union, I have concluded that the instigators of said

new union most assuredly did not work for the best interests of their fellow-employees, but for those of the Company.

Never, and not even as member of an arbitration tribunal, could I recommend recognition of a local union established under circumstances such as those in the present case.

I wish to repeat that it is my duty, even as an arbitrator, to object to any action I sincerely consider prejudicial to one of the parties concerned.

Considering, in the light of the facts and evidence adduced, the methods employed in inducing the employees to join the new local union;

Considering that practically all the employees, due to the methods thus used, were not in a position to fully and freely appreciate the occasion offered of resigning from the Brotherhood to join the new local union;

Considering that, for the previously given reasons, the request for the re-opening of the investigation should not have been granted by the board;

Considering that even should such re-opening of the case have been required, which I deny, only a secret ballot among the employees, conducted under the board's direction and supervision, could have allowed us to really and definitely know the true wish and will of each of the employees of the Lévis Ferry;

Considering that a local union established under conditions such as those shown in the present case is not a protection for the employees;

Considering that the delay, wilful or not, on the part of the board in making its recommendations and final report is one of the factors that enabled certain persons to break down the solidarity previously existing among the employees and make them accept the principle of the local union, which is undeniably to their disadvantage;

Considering that the chairman of the board, Mr. Montpetit, admitted himself that he would have recommended recognition of the Brotherhood as sole bargaining agent of the Company's employees, had not the change, as above indicated here, occurred:

I cannot accept said fact of the change of unions as freely desired by the employees as an expression of their true will and wish, and I recommend to the Department of Labour to see, in so far as it may do so, that in future, three or four months are not allowed to elapse between the date of the application for a Board of Conciliation and Investigation and that of the report of the

board's members, especially where ten or twelve sessions were sufficient for the board to inform itself fully about the case. It is generally recognized in life that the time element often solves difficulties, but in the

case of the settlement of industrial disputes experience is there to show that such a factor is always unfavourable to the working class. Montreal, April 24, 1943.

(Sgd.) Guy Merrill Desaulniers.

Report of Board in Dispute between the Schultz Die Casting Company of Canada, Limited, Wallaceburg, Ont., and its Employees

On April 5, the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Schultz Die Casting Company of Canada, Limited, Wallaceburg, Ont., and its employees, members of Local 251, United Automobile Workers of America.

The personnel of the board was as follows: Honourable Mr. Justice J. G. Gillanders, Supreme Court of Ontario, Toronto, Ont., appointed on the joint recommendation of the other two members; Mr. J. A. McNevin, K.C., Chatham, Ont., appointed on the recommendation of the employer; and Mr. Drummond Wren, appointed on the recommendation of the employees.

The text of the board's report is printed below.

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between Schultz Die Casting Company Limited, Wallaceburg, Ontario, and its employees members of Local 251 U.A.W. C.I.O.

To:

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Canada.

The Board of Conciliation and Investigation appointed by you in this matter begs to submit its report.

The board held sittings in Wallaceburg to hear the representations made by the parties. The applicant Union was represented by Hans H. McIntyre, International Representative U.A.W. C.I.O., Ivan McCallum, Chairman of the Plant Committee of Local 251 U.A.W. C.I.O., and Harry Wilson, a member of the Publicity Committee of Local 251 U.A.W. C.I.O. The Company was represented by J. B. Aylesworth, K.C. counsel for the Company, the Honourable A. St. Clair Gordon, President and General Manager, and D. J. McGorman, Superintendent.

In view of the provisions of sec. 42 of the Act, it should be noted that the union representatives and the board consented to Mr.

Aylesworth appearing as counsel on behalf of the Company.

The dispute arose out of the demand by the applicant union to be recognized as the collective bargaining agency to negotiate a collective agreement with the Company on behalf of the employees. The Company claimed to have a current collective agreement with their hourly-rated employees. Representatives of the union presented and read a written brief to the board setting out their submissions. The board then suggested that the matters in question be settled by taking of a vote of the hourly-rated employees by secret ballot. After discussion both parties to the dispute agreed to this suggestion. Subsequently Mr. Douglas Yates, President of the Employees Association with which the Company now has a collective agreement, stated to the board on behalf of the Association that he was willing that the rights of all parties, including the Association of which he was president, should be decided in the manner suggested, that is, by a secret ballot. Thereupon the parties settled the form of ballot desired to be submitted as follows.

"In the Matter of the Industrial Disputes Investigation Act and In the Matter of a Dispute between Schultz Die Casting Company Limited, Wallaceburg, Ontario, and its Employees Members of Local 251 U.A.W. C.I.O.

(Mark "X" opposite your choice)

I want to bargain collectively with my employer through Schultz Employees Union _____

—or—

I want to bargain collectively with my employer through Local 251 U.A.W. C.I.O. _____

It is suggested that a vote be taken by secret ballot under the supervision of the Department of Labour at as early a date as possible. The parties have undertaken to be bound by the result of this vote, and that the employees' organization obtaining the majority

of votes shall be recognized as the bargaining agent on behalf of the hourly-rated employees of the Company.

The board desires to express its appreciation to all parties for the very conciliatory and reasonable attitude adopted and for their co-operation with the board in having the question in dispute determined in a practical and conclusive manner.

All of which is respectfully submitted.
Dated this 1st day of April, 1943.

(Sgd.) J. G. Gillanders,
Chairman.

(Sgd.) Drummond Wren,
Member.

(Sgd.) J. A. McNevin,
Member.

Report of Board in Dispute between the F. X. Drolet Company, Quebec, P.Q., and its Employees

On April 24, a unanimous report was received by the Minister of Labour from the Board of Conciliation and Investigation established to deal with a dispute between the F. X. Drolet Company, Quebec, P.Q., and its employees, members of Local 74, International Moulders' and Foundry Workers' Union of North America (L.G. April, 1943, p. 472).

The personnel of the Board was as follows: The Honourable Mr. Justice Oscar L. Boulanger, chairman, appointed on the joint recommendation of the other two members; Messrs. Guy Hudon and Joseph Matte, appointed on the nomination of the employer and employees respectively.

The Board's report follows:—

Report of Board

Department of Labour
of Canada

Re Industrial Disputes Investigation Act; and re dispute between The F. X Drolet Company, (Employer), and its employees, members of Local 74, International Moulders and Foundry Workers' Union of North America, (Employees).

The board was established in conformity with the Industrial Disputes Investigation Act (R.S.C., 1927, Chap. 112) by Order of the Honourable Humphrey Mitchell, Minister of Labour of Canada, dated February 27, 1943. (Exhibit "A" attached). The board was made up of Mr. Guy Hudon, barrister, appointed on the recommendation of the employer, of Mr. Joseph Matte, Alderman for the City of Quebec, appointed on the recommendation of the employees, and of the Honourable Justice J. Oscar L. Boulanger, of the Superior Court of the Province of Quebec, appointed on the joint recommendation of the other two members of the board. The members of the board took the oath provided under the Act before undertaking their duties. (Exhibits "B" and "C" attached). Seven sessions were held by the board, attended by all three members, at which

sessions twelve witnesses were heard for the employees and fourteen for the employer. (List "E" attached). These witnesses testified under oath, and their statements were translated from French into English by Mr. Paul Miquelon, barrister, whose services as interpreter were retained by the board at the request of Mr. R. Y. Menary, District Representative and Organizer of the International Moulders and Foundry Workers' Union of North America. Messrs. Menary and J. Arthur Boulanger, vice-president of Local 74, represented the employees at the inquiry, while Mr. Emile Drolet, president of the F. X Drolet Company, represented the employer. Mr. Joseph Senechal, sworn process-server, was employed to serve subpoenas on the employer's witnesses. Mr. Menary submitted a brief, hereto annexed.

NATURE OF THE DISPUTE

On January 8, 1943, at a meeting of Local 74, a resolution was adopted requesting the establishment of a Board of Conciliation and Investigation appointing the employees' representatives in connection with the investigation, recommending the employee representative for the board, and declaring in favour of strike action should the request be refused. The application for the establishment of a board is dated January 9, 1943, (Exhibit "F" attached) and is supported by solemn declaration by Messrs. Menary and Boulanger dated January 12, 1943. The employees' grievances against their employer as expressed in said application may be summarized as follows:

1. Employer's refusal to recognize Local 74 as agent and representative of his employees and negotiate with it concerning working conditions, wage adjustments, classifications of labour, cost-of-living bonus and overtime; employer's refusal to join with Local 74 in a submission to the Regional War Labour Board of matters concerning wages, cost-of-living bonus, classification of labour and overtime work. Many meetings were held with the employer, but without any satisfactory results;

2. Discrimination by the employer against those of his employees, members of Local 74.

On January 23, 1943, the employer replied to his employees' application for a Board of Conciliation and Investigation, and he not only definitely opposed said application, but also opposed the holding of a vote to determine the labour union desired by a majority of employees, (Exhibit "G" attached), the reasons given by him being as follows:

"1. Our Company has already formally recognized another labour organization, namely the National Catholic Syndicate of the Metal Trades of Quebec;

"2. Said syndicate's membership includes two-thirds of our employees, and the membership control is easy as the result of our agreement to collect union dues from the employee's pay;

"3. Our Company signed a collective labour agreement with the Syndicate on December 24, 1942, recognizing said Syndicate as the sole agent for all employees (Copy of said agreement is attached to the present letter);

"4. We do not propose to recognize two labour unions, considering the practical difficulties in connection therewith, and considering further that such a situation would be such as to affect production unfavourably and retard Canada's war effort;

"5. Nothing in the Dominion legislation or in the wartime Orders in Council compels any employer to recognize two labour unions."

The employer's reply to the charge of discrimination is as follows:

"Finally, the International Union speaks of discrimination against its members. We consider that, as the employer, we may give a greater preference to the syndicate, which represents the majority of our employees. We might add, however, that to date the members of the International Union have received the same wage increases as those of the Catholic Syndicate, in accordance with a general finding of the Regional War Labour Board."

The employer also submits that matters concerning wages, cost of living bonus and overtime work are within the exclusive jurisdiction of the Regional War Labour Board.

The Minister of Labour of Canada decided that, under Paragraph 2, Section 7, of the Act, the establishment of a Board of Conciliation and Investigation in connection with the above mentioned dispute was justified.

REASONS FOR THE DISPUTE

In 1938 or 1939, the plant's employees wished to organize a National Catholic Syndicate, under the Professional Syndicates Act of Quebec (R.S.Q., 1941, Chap. 162). The employer objected, and nothing more was done. The employer stated that the main reason for his objection was that the proposed Syndicate would have covered his foundry only, leaving out the two other foundries at Quebec and one at Levis.

In late August, 1942, the foundry workers of the district took steps towards the creation in Quebec of a local of the International Moulders and Foundry Workers' Union of North America.

On August 29, 1942, Mr. J. M. Landriault, Organizer for the American Federation of Labour at Quebec, wrote a certain Mr. Smith, in Cincinnati, to the effect that the foundry workers wished to establish a Local Union in Quebec City affiliated with the international organization. (Exhibit P-1 attached).

Francois Julien, corresponding secretary of Local 74, a fitter at the foundry of the James Hazel & Sons at Quebec, met Mr. J. M. Walsh, organizer of the Federation of Labour, and Mr. Landriault in late August, 1942, for the purpose of establishing a local union. He was advised to get in touch with Montreal, and the Montreal officers sent Mr. Menary to Quebec to make necessary arrangements. There were meetings of foundry workers in early September. On September 15, 1942, the local union was established at Hudon Hall, 110 du Pont Street, Quebec. The officers of the new local were elected and a charter obtained from the central organization early in November.

About November 20 a meeting of the new local was held, at which the charter was read, the members initiated and officers installed. It was decided to request an interview with the employer to start negotiations.

According to Mr. Julien, of the 85 employees of the Drolet plant, 40 have joined Local 74, namely 22 out of 23 in the foundry department, and 18 out of 62 in the machine shop. At first, only foundry workers were accepted, but after October, 18 machine shop employees were also taken in. It was noted after November 20 that the shop employees favoured the Catholic Syndicate rather than Local 74, and it was then decided not to enroll them any longer and, after the date given, notices of meetings were sent to foundry employees only.

On November 25, 1942, Mr. Menary, on behalf of Local 74, requested an interview with the employer to discuss the making of a collective agreement. (Exhibit P-7 attached). Mr. Menary's letter closes by stating that unless a reply is received before December 7, it would be considered that the employer had refused to meet his employees, and the establishment of a Board of Conciliation and Investigation would be sought.

On December 17, 1942, the shop committee appointed by Local 74 submitted to the employer a draft agreement similar to Exhibit P-8 hereto attached. It was stated therein that the parties agreed to meet for the pur-

poses of discussion, remedying abuses, making adjustments, and the formulation of a joint submission to the Regional War Labour Board concerning wages, cost of living bonus and working hours.

On December 22, the shop committee had another meeting with the employer to receive his reply. The employer refused to accept the draft agreement, his main reason given being that there was nothing concrete, definite or specific in said draft. In the meantime, the organization of a Catholic syndicate to displace Local 74 in the plant was proceeding, and the collective agreement with said syndicate, which was signed on December 24, was under preparation.

The employer, being unable to effectively oppose the organization of his employees into a union, favoured the establishment of a National Catholic Syndicate. A syndicate was organized at a meeting held at the plant between the hours of 5 and 6 on November 20, 1942, by the Rev. Father Dionne and other Catholic syndicate organizers. Such a meeting was possible only with the employer's benevolent permission; the men were paid by the employer for the working hour lost while attending said meeting. Furthermore, the employer did not disguise his preference for the syndicate. He prefers dealing with an organization controlled in the Province of Quebec, rather than with an international body, and also prefers dealing with people of his own creed, nationality and language. These are understandable reasons. No official of the F. X. Drolet Company attended the meeting in order not to be exposed to the charge of having tried to influence the employees by their presence. The syndicate was established at said meeting.

A certain number of the members of Local 74 joined the syndicate; not one of them was forced to do so against his will, and there was no intimidation, that is to say, no action that could be called compulsion or intimidation. Nevertheless, it is evident that those people gave in to pressure and incitement. The syndicate propagandists stressed the religious angle; they insisted on the non-denominational character of the International Union, in which no prayers are recited (Albert Cloutier's testimony), gave prospects of wage increases, and proffered threats of dismissal. Mr. Georges Bedard, an accountant in the plant, was a propagandist for the syndicate, but apparently the management of the Company did not participate actively in the campaign. Romeo Paradis, recording secretary of Local 74, declared he joined the syndicate because the pressure he had been subjected to had made him nervous and caused him loss of

sleep and appetite (Exhibit P-3 attached). Another, Euclide Hince, gave in to a promise of a daily wage increase of one dollar (Exhibit P-4 attached). J. Arthur Paquet, another member of Local 74, joined the syndicate because he was threatened with losing his job. Paradis, Hince and Paquet repeated under oath before the Board their statements in Exhibits P-3, P-4, and P-5. Georges Vidal, member of Local 74, signed up with the syndicate for the sake of peace and not to be pestered any longer. Laurent Roy signed in favour of the syndicate to keep his job, having been told that members of the International Union would be the first to go. On the other hand, the thirteen witnesses, testifying for the employer, declared they joined the syndicate of their own free will. Others who testified on behalf of Local 74, Lucien Petillot for instance, stated they had done so to be agreeable with the employer, but without formal request on his part.

On December 24, 1942, an exclusive labour agreement was signed between the syndicate and the employer (Exhibit "H" attached). It was effective from its signing and remains in force until April 30, 1944. The agreement was prepared by Mr. Gerard Picard, president of the Central Council of the National Catholic Syndicates and secretary of the Canadian and Catholic Confederation of Labour, who also signed it together with Mr. Georges Bedard as witnesses. According to the following quoted clauses, the agreement is a closed shop one:

"1. The National Catholic Syndicate of the Metal Trades of Quebec is the sole labour organization recognized by the employer.

"2. The syndicate will fully co-operate with the employer for the maintenance of good discipline in the plant and in everything bearing on trade relations, and to insure the greatest production possible.

"3. The syndicate will be granted union preference by the employer and, to that end, the employer shall employ only members in good standing of the syndicate in all operations and occupations covered by the present agreement. It is understood, however, that every new employee will be allowed a month to join the syndicate. If at a meeting of the syndicate a majority of the members should decide in favour of the check off of syndicate membership dues once monthly, the employer agrees to make such dues collection.

"By the agreement the employer grants the employee an hourly wage increase of five cents."

Following the signature of the agreement, on January 20, 1943, a letter signed on behalf of the syndicate by Marcel Vidal (formerly an organizer for Local 74) was distributed among the employees inviting them to join the syndicate (Exhibit P-10 attached).

Together with said letter, another of the same date and under the employer's signature was distributed informing the employees that they had to join the syndicate to keep their jobs, as the employer had signed a closed shop agreement with the syndicate (Exhibit P-2 attached).

On January 29, 1943, the employees who had not joined the syndicate received from National Selective Service, a Notice of Separation identical to Exhibit P-9 hereto attached.

FINDINGS

It follows from the investigation:

That the employer refused to recognize Local 74 as representative and agent for his employees. He refused to deal with Local 74 and to enter into an agreement with that organization. The employer does not deny the fact, but maintains Local 74 was not authorized to speak on behalf of his employees, since it did not represent a majority of them. The employer dealt with the National Catholic Syndicate and made an agreement with it because, he maintained, two-thirds of his employees belong to that syndicate. Such was not the situation at the start, that is in August, September, October and November, 1942, since it is established that Local 74 had organized the employees before the syndicate. The syndicate entered the situation on November 20, 1942, if not at the employer's formal invitation, at least with his indulgence.

As to the charge of discrimination against members of Local 74, according to the evidence it may be summed up as follows: The action charged was not carried out, but was attempted. As threatened, the employer did not discharge the employees who refused to join the syndicate and did not follow up the separation notices he had had addressed to his objecting employees, because Section 502a of the Criminal Code prevented him from doing so. Compulsion to join the syndicate, to the detriment of Local 74, was not enforced.

ATTEMPT AT SETTLEMENT

The investigation completed, appreciating that there is not room for two Unions in a plant of 85 employees and that the continuation of the existing difficulty retarded production, the Board attempted to obtain a friendly settlement of the dispute (Section 24 of the Act). We suggested a conference of the officers of both unions concerned, without interference from the employer. At such a conference each party would have had to give definite proof in order to determine which had a majority in the plant, the minor-

ity union having then to give way to the other. Both parties turned down the suggestion.

It was then suggested to hold a secret ballot in the whole plant, under supervision of the Department of Labour of Canada, to determine which union was authorized to speak on behalf of all the employees. At first, Local 74 insisted that the balloting be restricted to the foundry employees, originally 99 per cent under its control, but finally agreed without reservation, with the suggestion that all of the plant's employees should vote, and pledged to leave the field to its rival union and competitor should the vote go against it. Mr. Picard did not accept the suggestion. At first he rejected it categorically; then he amended his statement by saying that the body of which he was the president would only participate in an advisory capacity, and that the matter would have to be dealt with at a meeting of the Metal Trades syndicate, an autonomous body, which was solely competent to decide on the point. However, Mr. Picard gave the impression that were his organization consulted, he would advise against accepting the suggestion.

RECOMMENDATIONS

The board, following its investigation, considers it should make the recommendations which follow for the settlement of the dispute in accordance with the justice and the merits of the case:

1. A secret ballot, under the direction and control of the Department of Labour of Canada, but with the assistance of the officers of the syndicate and of Local 74, should be held throughout the plant, in order that all employees may indicate freely, without coercion or undue influence, whether they wish to belong to the International Moulders and Foundry Workers' Union of North America or to the National Catholic Syndicate of the Metal Trades of Quebec. Said vote should be taken within thirty days of the issuing of the report.

2. The employer should accept the results of the voting without further objection and recognize as spokesman of its employees the successful union in said voting. The employees should also abide by the results of the voting and discontinue all agitation thereafter, as division among themselves is contrary to their best interests. However, consideration should be given the present collective Agreement, concerning which it is not within our power to express an opinion. Quebec, April 20, 1943.

Report of Board in Dispute between the Geo. W. Reed & Company, Ltd., Montreal, P.Q., and its Employees

The Minister of Labour recently received a report from the Board of Conciliation and Investigation established to deal with a dispute between the Geo. W. Reed & Company, Ltd., Montreal, P.Q., and its employees, members of Local 2735, United Steelworkers of America (L.G. Feb. 1943, p. 196).

The personnel of the board was as follows: Mr. Ayne Lafontaine, K.C., Montreal, P.Q., Chairman, appointed by the Minister of Labour in the absence of a joint recommendation of the other two members; Mr. D. A. Paterson, Montreal, P.Q., and Mr. R. L. Calder, K.C., Montreal, P.Q., appointed on the nomination of the employer and employees respectively.

The report of the board is signed by the Chairman and Mr. D. A. Paterson; Mr. R. L. Calder, K.C., submitted a minority report.

The texts of the report of the Board and the minority report follow:

Report of Board

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Geo. W. Reed & Company, Limited, Montreal, P.Q., and its employees, members of Local 2735, United Steelworkers of America.

This Board of Conciliation and Investigation, composed of Mr. R. L. Calder, K.C., nominated by the employees, Mr. D. A. Paterson, nominated by the employer, and Mr. Ayne LaFontaine, K.C., chairman, appointed by you, has concluded its numerous sittings, terminated its lengthy investigation, and has the honour to submit respectfully the following report:

The application for the establishment of a Board of Conciliation and Investigation, dated November 4, 1942, states the nature and cause of dispute as follows: "Refusal of the Geo. W. Reed & Company, Limited, to negotiate a contract with Local 2735, U.S. of A., covering sole bargaining rights, hours of work, grievance procedure, seniority, reclassification of wages and occupations. They also request that the Government hold a vote in the Geo. W. Reed Richelieu St. Plant to determine who the employees wish to have represent them".

The board held all its sittings in the City of Montreal, on the following dates: January 26, 1943, February 1, 1943, February 8,

1943, February 10, 1943, February 15, 1943, February 16, 1943, February 18, 1943, February 19, 1943, and February 23, 1943. Messrs. Ivan J. Campbell, R. J. Lamoureux, Ulric Renaud and Maurice Brisebois represented the United Steelworkers of America at most of the meetings. Mr. J. Hastie Holden, Manager, and Jos. Nairn, Superintendent, represented the employer. At the second meeting of the board, Mr. I. J. Campbell, on behalf of the United Steelworkers of America, stated that the whole issue should be limited to the sole bargaining rights being vested with the United Steelworkers of America to represent the employees to deal with the Company. This was agreed by the board.

At the sitting of February 1, 1943, Mr. I. J. Campbell filed a short brief of even date summarizing the dispute as follows:

On or about October 22, 1942, we met by pre-arrangement Mr. J. H. Holden, Manager of the Geo. W. Reed & Company, Limited, to discuss with his Company the possibility of securing for Local 2735, United Steelworkers of America, a collective agreement. Mr. Holden inquired as to the number of his employees who are paid-up members of our organization, and, when told that we had secured well over the majority of his employees, he stated that he did not believe this to be true, and requested that we furnish him with the membership list. This we refused. Mr. Holden stated that he thought collective bargaining was a good thing, but that he had already been in negotiations with the Sheet Metal Workers International Association's representative. We thus suggested that both the Company and the involved Union should agree to a vote being taken, and in the event of the United Steelworkers of America losing such a vote we would retire from the picture. Mr. Holden would not agree to this, but required ten days to think it over. On November 2, 1942, Mr. Holden wrote the Honourable Humphrey Mitchell stating his objections to dealing with the United Steelworkers of America, and stated that he preferred to deal with the Sheet Metal Workers (A.F. of L.). On November 3, 1942, Mr. M. MacLean, Director of Industrial Relations, answered Mr. Holden's letter for the Honourable Humphrey Mitchell, quoting the following excerpt: "It is our view that the desire of the employees themselves should be given paramount consideration". After two meetings in Mr. Bernard Rose's office (Industrial Disputes Inquiry Commissioner) Mr. Holden refused to negoti-

ate further. Mr. Rose advised a vote be taken in the plant. The vote was taken on December 3, 1942, with the result that over 53 per cent favoured the United Steelworkers of America as the bargaining agency for the employees. In view of this result, we again wrote to Mr. Holden on December 4, 1942, requesting the resumption of negotiations and, on December 7, 1942, Mr. Holden replied that he did not believe the result of the ballot to be conclusive and therefore was not free to negotiate with us. The result of this attitude was the setting up of the board. Having secured the majority of the vote, the United Steelworkers of America should be recognized as the sole bargaining agency for the employees of the Geo. W. Reed & Company, Limited. Mr. Campbell filed, as Exhibits P.1 and 5, the correspondence and telegrams with the Director of Industrial Relations and Registrar, in Ottawa, and with the Minister of Labour, in Quebec, and others, and as Exhibit P.9, a draft of Memorandum of Agreement between the United Steelworkers of America and the Geo. W. Reed & Company, Limited, and, as Exhibit P.10, fourteen affidavits signed by employees of the Geo. W. Reed & Company, Limited, alleging that they had been requested to sign the petition against the United Steelworkers of America.

At the sitting of February 8, 1943, Mr. I. J. Campbell and Mr. J. H. Holden produced a summary of the ballot held on December 3, 1942, at the plant of Geo. W. Reed & Company, Limited, which gave the following result to the said question: "Are you in favour of Geo. W. Reed & Company, Limited, negotiating an agreement with the United Steelworkers of America, Local 2735?"

Number of Voters	Voted	Spoiled		
		Yes	No	ballots
679	579	364	209	6

100 employees did not register their vote, and the result indicated that slightly over 53 per cent of the eligible voters had cast their votes in favour of the United Steelworkers of America. Mr. Campbell contended, as a result of the above ballot, and by inference to letters of Mr. M. Maclean, Director of Industrial Relations and Registrar, addressed to Mr. J. H. Holden, Manager of the Geo. W. Reed & Company, Limited, dated November 3, 1942, and of Honourable Edgar Rochette, Minister of Labour for the Province of Quebec, addressed to Mr. R. J. Lamoureux, dated December 31, 1942, that the United Steelworkers of America, representing the majority of the employees, had the right to enter into a bargaining agreement with the Geo. W. Reed & Company, Limited, and this concluded Mr. I. J. Campbell's evidence.

On behalf of the employer, Mr. J. H. Holden, Manager, produced a brief, dated February 5, 1943, and requested the privilege of having certain witnesses appear before the board to substantiate certain statements contained therein. After discussion, it was unanimously agreed that the testimonial evidence be limited to a maximum of four witnesses for each side.

Mr. J. H. Holden's brief could be summed up as follows:—

(a) Certain of the employees have been operating under an agreement signed with the International Union (A.F. of L.) and the Syndicat Catholique, since 1934;

(b) During July and August, 1935, the Company, together with certain of the Sheet Metal firms in the City of Montreal, commenced negotiations towards an agreement covering shop work, but it was never consummated;

(c) During the summer of 1937, eight Sheet Metal Companies in Montreal again commenced negotiations for an agreement between themselves and the Sheet Metal Workers International Association, Local 116 (A.F. of L.). In March, 1938, this agreement was completed and signed by the Companies and the Sheet Metal Workers International Association. It was forwarded to Quebec to be published, but the Department of Labour refused to give province-wide jurisdiction to the agreement;

(d) Early in September, 1942, Mr. J. H. Holden had various conversations and meetings, in his office, with Mr. O. Renaud, of the Sheet Metal Workers International Association, Local 116, discussing the possibilities of an agreement covering all the employees and the International Association. On October 8, 1942, Geo. W. Reed & Company, Limited, received a letter from the Sheet Metal Workers International Association, Local 116, suggesting an agreement with the Company and/or the formation of a collective labour agreement for the Sheet Metal industry;

(e) On October 19, 1942, the Geo. W. Reed & Company, Limited, received a letter from the United Steelworkers of America (C.I.O.) in which they claimed a majority of the employees and asked that the Company negotiate an agreement with their organization;

(f) Since early in the Fall, 1942, a number of sheet metal companies had been discussing together towards working at a collective labour agreement covering the Sheet Metal industry in this territory. Finally, an agreement was consummated and sent to Quebec pursuant to provisions of the Collective Labour Agreement Act (R.S.Q. 1941, Chap. 163) and published in the *Quebec Official Gazette*, under date of December 5, 1942. The

following eleven companies were signatories to the agreement: Cresswell-Pomeroy Limited, Eastern Steel Products Limited, Michel A. Chouinard Limitee, Forget-Powell Company, Henderson Barwick Company Limited, Liquid Carbonic Canadian Corporation Limited, McGruer, Fortier, Meyers Limited, Douglas Bros., Norman & Collie Limited, Geo. W. Reed & Company Limited, Ventilating & Blow Pipe Company Limited;

(g) Mr. J. H. Holden contended that the situation in the factory had materially changed since the time of the voting. There is a substantial group of employees who do not wish to have the Company negotiate any agreement with the United Steelworkers of America (C.I.O.) and still another large group who belonged to the Sheet Metal Workers International Association, Local 116, and this preponderant number of the employees all desired to be covered only by the collective labour agreement embracing all sheet metal firms in this district;

(h) The Employer feels that the collective labour agreement which has been signed and forwarded to the Department of Labour, at Quebec, is adequate and comprehensive and that nothing can be gained by attempting to negotiate any further agreement with the second group.

The first witness called by Mr. J. H. Holden was Mr. Henri Guay, who has been in the employ of the Geo. W. Reed & Company Limited for 27 years and 8 months. Mr. Guay declared that he had been a member of the International Union (A.F. of L.) for 6 or 7 years, and that, since the ballot, there had been a change of opinion and sentiment. Cross-examined at length by Mr. I. J. Campbell, the witness stated that he was aware of the different negotiations which had taken place, since 1934, with reference to certain agreements and contracts. He further reiterated that, in his opinion, many of those who had voted "yes" would now vote "no", because they had not then understood the meaning of the vote.

The next witness called by Mr. J. H. Holden was Mr. James Wilson, sheet metal worker, employee of the Company for 14 years, who declared that he was a member of the International Union (A.F. of L.) and that, since the vote, a change of heart took place and the sentiment of the employees was against negotiating with the United Steelworkers of America (C.I.O.). Four or five days after the vote, 4 or 5 leading men approached him in his capacity of Chairman of the Shop Committee and asserted that they did not wish the Company to deal with the United Steelworkers of America and had asked him to

pass a petition to that effect. The witness then filed a petition signed by 392 employees of the Geo. W. Reed & Company, Limited, and the heading, both in English and French, of the petition, dated September 7, 1942, was worded as follows: "To Whom It May Concern: This is to advise that, if the Company has any dealings or makes any arrangements with the 'C.I.O.', we, the undersigned absolutely refuse to work under these conditions."

The witness James Wilson was closely cross-examined by Mr. I. J. Campbell. He reaffirmed his previous statement to the effect that many had changed their mind and the evidence is in the number of United Steelworkers of America (C.I.O.) who signed the petition. He declared that there was no foreman on the Shop Committee and that no foremen handled the petition. He further contended that promises had been made by the United Steelworkers of America to influence the vote, such as an increase of 20 cents an hour, for night shifts, and one week holiday.

Miss Mary Murphy is an electric welder, employed by the Geo. W. Reed & Company, Limited, and is not a member of any union. She declared that there was a disinclination against the United Steelworkers of America before and after the vote, but that this disinclination was worse now. She was elected on the Shop Committee. Cross-examined by Mr. I. J. Campbell, she stated that the majority of the girls (about 95 girls in the plant) did not favour the United Steelworkers of America, but she did not know the reasons why.

Mr. Rolland Pelletier, a machine operator, has been 20 years with the Employer. He is a member of the International Union, Local 116, and he declared, under oath, that he was aware of the result of the ballot of last Fall, but that a change of sentiment was noticeable, and that a petition had been circulated against the United Steelworkers of America and there are some who had voted "yes" who would now vote "no". The cross-examination of Mr. Rolland Pelletier by Mr. I. J. Campbell brought no additional evidence.

Mr. Onesime Renaud, business agent for the Sheet Metal Workers International Association, Local 116 (A.F. of L.) referred to the agreement signed jointly with the International Union and the Syndicat Catholique, in 1934. He also mentioned the existence of the collective agreement, which he had signed on behalf of his union, and the decree which was in force with the different Sheet Metal Companies and the International Union. He believed that the International Union had a preponderant vote in the plant. Upon cross-examination by Mr. I. J. Campbell, Mr. Renaud declared that there were approximately 2,000

employees in the eleven plants who were signatories to the collective agreement, and the International Union, with the exception of the Geo. W. Reed & Company, Limited, had a 99 per cent majority in the other plants.

Mr. Ernest Lavoie, who had received his dismissal notice from the Company, appeared voluntarily before the board and made a lengthy statement with reference to his trade as a blacksmith. An affidavit signed by Mr. Lavoie had been previously filed by Mr. I. J. Campbell, together with thirteen other affidavits. His evidence did not bring any additional light on the question.

Mr. I. J. Campbell wished to call three additional witnesses: Mr. Harry Ralph, Sheet Metal Worker, Mr. A. Pare, Tinsmith, and Mr. Alfred Richard, Tinsmith mechanic, all employees of the Geo. W. Reed & Company, Limited.

Mr. Harry Ralph was examined by Mr. I. J. Campbell and said that he was a member of the International Union, but that he had a membership card with the United Steelworkers of America (C.I.O.), dated November, 1942. He stated that he was one of the four or five who had started the petition and that he heard of a change of sentiment and that the employees would favour a collective agreement. Mr. Ralph was also cross-examined by Mr. Holden and Mr. Nairn.

Mr. A. Pare, Tinsmith, who had been with the Company for 18 years, declared that he had signed the petition and that he was not a member of any union at the present time, but that he had been in the International Union previously. He believed that it was good policy to sign the petition. He gave his opinion that the men originating the petition did so because they did not want a union. He further emphasized that he could not state whether there was a change of sentiment as a result of this petition.

Mr. Alfred Richard, Tinsmith mechanic, 6 years' service with the Company, asserted that he believed there had been a change of opinion since the ballot and he was one of the four or five who circulated the petition in the plant. He was a member of the International Union about 5 years ago and felt that, if a vote were taken, it would certainly favour the International Union.

Mr. I. J. Campbell, in his brief of February 1, 1943, summarized the negotiations which had taken place between the Geo. W. Reed & Company, Limited, and the United Steelworkers of America, and concluded by the result of the ballot of December 3, 1942, favouring the United Steelworkers of America, and these facts are not being contested. On the other hand, Mr. J. H. Holden, on behalf of the employer, in his brief of February 5,

1943, also gave a history of the dealings of his Company with organized labour, since 1934, and the testimonial evidence corroborated these dealings and these were not contested by the other side.

It was alleged by Mr. Holden that, since the ballot was held on December 3, 1942, the situation had materially changed and this board feels that all the witnesses called by both parties (with the exception of Mr. A. Pare, called by Mr. I. J. Campbell, who favoured the petition, but could not say whether a change of mind had taken place or not) have corroborated, under oath, the above allegation. This change of sentiment did not favour the United Steelworkers of America. The second witness, Wilson, called by the Employer, substantiated his verbal evidence by producing a petition signed by 392 employees, dated December 7, 1942, four days after the ballot was held. The evidence demonstrated that the originators of the petition were mechanics at the plant who acted solely of their own accord. Mr. Holden produced the following documents: copy of letter, dated February 1, 1943, addressed by the Secretary of the Regional War Labour Board, to the Minister of Labour, Quebec, referring to the collective labour agreement with the sheet metal industry of Montreal for presentation to the Lieutenant-Governor-in-Council, in order that the decree may be extended. A printed extract from the *Quebec Official Gazette* of December 5, 1942, was also produced, requesting the Honourable Edgar Richette, Minister of Labour, to render obligatory the collective labour agreement entered into between the eleven above-mentioned firms, represented by the Builders Exchange Inc. on the one part and, on the other part, by the Sheet Metal Workers International Association, Local 116. The decree establishing the approval of the petition came into force from the date of its publication in the *Quebec Official Gazette*, to wit: on February 20, 1943.

The board has come to the following conclusions:

1. The result of the ballot held on December 3, 1942, does not represent the true desire of the majority of the employees to negotiate an agreement with the United Steelworkers of America, Local 2735, the vote showing that slightly over 53 per cent of the total number of eligible voters had voted "yes", and it does not indicate that the United Steelworkers of America composes a majority of the employees of the Geo. W. Reed & Company, Limited;

2. The petition, dated December 7, 1942, signed by 392 employees of the Company, out

of a total of 656, at that time, which is close to 60 per cent, offsets the result of the ballot of December 3, 1942, and the non-equivocal wording of the petition can leave no doubt in one's mind;

3. The testimonial evidence bore the fact that the change of sentiment of the employees had not favoured the United Steelworkers of America since the ballot of December 3, 1942;

4. The decree rendering obligatory the collective labour agreement between the Sheet Metal Manufacturing Companies (including the Geo. W. Reed & Company, Limited) and the Sheet Metal Workers International Association, Local 116, became effective February 20, 1943, and will remain in force until January 1, 1944; its provisions should apply to the employees of the Geo. W. Reed & Company, Limited, for the duration of the decree. The Regional War Labour Board has approved of the remuneration mentioned in the collective labour agreement which is now binding to the Geo. W. Reed & Company, Limited, together with the ten other companies, until January 1, 1944;

5. It is a known fact that an election or a ballot is always a cause or source of disturbance and agitation and means a loss of time, much more so in a war industry, at the present time, and its results are not always satisfactory or conclusive, as has been illustrated. Whatever the outcome of a new ballot might be, it could not interfere with the above recited facts or alter the existing situation.

RECOMMENDATION

The recommendation of this board is that the application of the United Steelworkers of America, Local 2735, to negotiate a contract or agreement, on behalf of the employees, with the Geo. W. Reed & Company, Limited, should be disallowed.

Respectfully submitted.

(Sgd.) Ayme Lafontaine,
Chairman of the Board.
(Sgd.) D. A. Paterson,
Member.

Dated at Montreal, this sixth day of March, 1943.

Minority Report

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Geo. W. Reed & Company, Limited, Montreal, P.Q., and its employees, members of Local 2735, United Steelworkers of America.

This Board of Conciliation and Investigation, composed of Mr. R. L. Calder, K.C.,

nominated by the employees, Mr. D. A. Paterson, nominated by the employer, and Mr. Ayme Lafontaine, K.C., Chairman, appointed by you, has concluded its numerous sittings, terminated its lengthy investigation, and has submitted a majority report, from which the undersigned begs to differ for the following reasons:

The dispute referred to this board arises out of the refusal of Geo. W. Reed & Company, Limited, to negotiate a contract with Local 2735, U.S. of A., covering among other things, but principally, the concession to the Local of sole bargaining rights for the employees of the Company.

Local 2735, U.S. of A., bases its claim to recognition upon a vote taken in the plant on December 5, 1942. The sole question upon the ballot was whether the voter wished to be represented by the U.S. of A., Local 2735. 364 employees voted "Yes"; 209 voted "No"; 6 ballots were spoiled; and 100 did not vote. The Local's majority was 155. Their supporters nearly doubled the vote of their dissenters. As for those who did not vote, I suggest that no account should be taken of them.

It is nowhere enacted that the Union proposing itself as sole bargaining agency should register a certain proportion of support in the voting. Technically, a mere majority suffices, as it does in every electoral decision, in any democracy. This is particularly true where no other Union offers itself, alternatively, as the bargaining agency.

In this case there was no other candidate. At a conference in Mr. Rose's office, it was suggested by him that the Local of Sheet Metal Workers, A.F. of L., should go upon the ballot, but the shadowy representatives of that body turned the suggestion down.

There has been a controversy between the representatives of the disputants, over the date to which the Board should refer its decision. Should it be found upon circumstances at the time the vote was taken, or upon circumstances existing immediately prior or contemporaneous with, its own sittings? The representative of Local 2735, U.S. of A., strongly contends that only those facts are material which were in being when the vote was taken and when the refusal to negotiate was formulated—which followed close upon. Otherwise the setting up of a Conciliation Board, with its inevitable delays, would constitute an irresistible temptation to create later circumstances, apparently contradictory of the vote; this vote I submit, being the only expression of the employees' choice which can be taken under consideration. I am going to submit that the temptation operated in this instance.

In urging that the vote be disregarded, and the present situation only be taken into consideration, the Company argues along two lines.

1

Hitherto, it sets forth, the Company has, since 1934, been dealing with the employees through other bargaining agencies, namely, Local 116 of the Sheet Metal Workers International Association (A.F. of L.) and, in one instance, the Catholic Syndicate in the same trade. It instances the contacts as follows:

(a) In 1934 it negotiated and concluded a contract (covering the outside, or structural, workers in its employ), with the A.F. of L. and the Catholic Syndicate.

(b) In July and August, 1935, the Company, with other companies in the same line, commenced negotiations towards an agreement covering its shop-workers, but it did not materialize.

(c) In 1937 the same companies and the same Union reached an agreement to cover the trade throughout the Province, but the Provincial authorities disallowed it.

(d) In September, 1942, Mr. Holden, for the Company, discussed the matter with Mr. Renaud, for the A.F. of L.

(e) On October 8, 1942, the Company got a letter from Local 116 of the Sheet Metal Workers, International Association (A.F. of L.), "suggesting an agreement with the Company and for a collective labour agreement for the Sheet Metal Industry".

In September and October, 1942, the U.S. of A. had been occupied busily in organizing the plant, and felt confident it had a majority of the employees behind it. Any suggestion that the Company was not aware of this, and that the conversation with Mr. Renaud, culminating in the letter of Local 116, was not the result of this awareness, puts a strain upon belief. The subject of the conversation and of the letter had been in abeyance for 5 years, and the resurrection of it in October, 1942, is more than merely coincidental.

On October 19, 1942, Geo. W. Reed & Company, Limited, received a letter from the United Steelworkers of America (C.I.O.), claiming a majority of the employees, and asking that the Company negotiate an agreement with their organization.

But the recollection of the contacts and negotiations above set forth prompted Mr. J. H. Holden, Manager of the Company, to write to the Minister of Labour, objecting to dealing with the U.S. of A., and expressing a preference for the Sheet Metal Workers International Association (A.F. of L.). He was sharply reminded by the Department

that "the desire of the employees themselves should be given paramount consideration". And, after some discussion, which is irrelevant, the vote was taken.

Meanwhile, the collective bargain, which had been unpromoted since 1937, was pushed through with vigour, and, at an early session of the Board of Conciliation, the Company was able to present to the Board a "fait accompli"—an agreement consummated and sent to Quebec pursuant to the Collective Agreement Act (R.S.Q. 1941, Chap. 163) and published in the *Quebec Official Gazette* under the date of December 5, 1942. It became effective on February 20, 1943, and will remain in force until January 1, 1944.

The undersigned submits that, whatever merits this collective agreement may possess, intrinsically, the circumstances in which it was put through raise a presumption that its main object was to create what is believed to be an insurmountable bar to contracting with Local 2735 of the U.S. of A.

2

Until it was revived and galvanized into a rival of the U.S. of A., Local 116 of the Sheet Metal Workers International Association seems to have been dormant or comatose for some time in the Geo. W. Reed & Company's plant. Witnesses called have testified to having been members of it, but are indefinite as to their present standing. Their knowledge of negotiations on their behalf by Local 116 of the Sheet Metal Workers International Association (A.F. of L.) is limited to their taking place, but there is ignorance as to their nature. The inaction of the Local 116 (A.F. of L.) is best established by the related experience of one Ralph, called as a witness. He had always belonged to the A.F. of L. and was an active proponent of it. Yet he joined the U.S. of A. Local 2735, at Geo. W. Reed & Company's plant. Pressed for a reason he stated that he did not know that the A.F. of L. had an existence in the plant. As he had been in that plant since June, 1942, the degree of activity of Local 116 may be deduced, as well as the cause of its remarkable revival in the early winter of 1942-1943, after the vote had been taken.

3

We come now to the petition, round-robin or declaration of intention, signed by 392 employees of the plant, and conveying to the management the rather truculent threat; "This is to advise that, if the Company has any dealings or makes any arrangements with the 'C.I.O.', we, the undersigned absolutely

refuse to work under these conditions." This threat the Company took smiling, and gladly had it produced, as evidence of a change of heart on the part of a large number of the "Yes" voters of December 3, 1942.

The petition was initiated, we are told by two witnesses—one of whom, however, retracted his statement—by the older men in the plant, who didn't want any union. Other witnesses who spoke to their signatures said, practically, "It was brought to me and I signed it". The signatures were collected during working hours, but "surreptitiously". None of the signers testifying realized that they were threatening a walk-out.

It seems to me that the worst method of consulting employees, in respect of their relations with their employers, is the open petition. Every one in the plant realized that the Company was against the C.I.O. If the petition has any use at all, it is because of its presentation to the employer. And, if the individual worker's name is not on it, may not its absence be a matter of comment by the "boss" or somebody in his immediate employ? Under these circumstances it is a matter of wonderment to me that it was not unanimous.

On the other hand, in a secret balloting, properly conducted, the employee can look the employer in the face and say "Thou canst not say I did it".

That is why, coming personally to the conclusion that there has been pressure on the part of the Company, and the creation of circumstances posterior to the vote, to nullify its effect, I cannot concur in the majority report.

The pivotal issue is—Do the employees of Geo. W. Reed & Company, Limited, wish to bargain with that Company through Local 2735, U.S. of A. or through Local 116 Sheet Metal Workers International Association (A.F. of L.), or individually and personally? There is only one way to find out, and it is by taking another vote.

And this is my sole and minority recommendation.

Respectfully submitted.

(Sgd.) R. L. CALDER,
Representative of Local 2735,
United Steelworkers of America
(C.I.O.)

Montreal, March 8, 1943.

Special Commissioner Named on Steel Plant Adjustments

THE following statement was issued on April 30 by Hon. Humphrey Mitchell, Minister of Labour:—

It will be recalled that, at the time of the settlement of the steel workers' strike in January last, it was agreed by the Government that certain requests of the employees in regard to wages and working conditions would be followed up by the Minister of Labour and the National War Labour Board.

On March 31st last, after having considered in its entirety the "Memorandum of Understanding with respect to the settlement of the dispute in the steel industry of Canada", the Memorandum which provided a basis of settlement for the January strike, the National War Labour Board gave its judgment thereon.¹ While the Board dealt specifically with some points, in reference to four items in the Memorandum, it stated as follows:—

... we have adopted the view that those matters set out in the "Memorandum of Understanding" which involve administrative or conciliatory treatment are intended to be implemented by the Minister of Labour. This would seem to us to involve the conclusions that all of the items 1, 2, 3, and 4, set out in Section 1 of the "Memorandum of Understanding" referring to negotiations with

respect to maintenance men, payment of time and a half for the seventh consecutive working day, the making of a "careful study having in view the reclassification and evaluation of jobs" and "that management-union employee committees be appointed in the different departments of each company" are matters which in the first instance fall within the administrative purview of the Minister of Labour and that, unless it should later become necessary to render a decision on some question arising from the application of any of these matters, they do not now require any intervention by this Board (i.e., the National War Labour Board).

Recently a delegation from the United Steel Workers of America met the undersigned, and requested that a special Commissioner be appointed in pursuance of the Industrial Disputes Investigation Act, to bring together the employers affected by this recommendation of the Board, and their respective employees, for discussion and agreement on the points which the National War Labour Board regards as requiring the initiative of the Minister of Labour. The employers interested are the Algoma Steel Corporation, Sault Ste. Marie, and the Dominion Steel and Coal Corporation, Sydney.

Therefore, as Minister of Labour, I have appointed Mr. J. P. Nicol, an Industrial

¹ L.G., April, 1943, p. 439.

Relations Officer of the Dominion Department of Labour at Toronto, as a special Commissioner under P.C. 4020, to endeavour to effect an adjustment between the managements of the steel plants mentioned and their employees in regard to 3 of the points above referred to, which are stated in full as follows:

1. That the management and the maintenance men enter into negotiations and that an application be made to the National War Labour Board for such increased wage rates or range of wage rates with respect to such maintenance men as pipe fitters, steamfitters, millwrights, electricians and carpenters as will bring their wage rates on a level with prevailing wage rates paid to maintenance men in such classifications.
2. That time and a half be paid for the seventh consecutive day worked by any employee.
3. That arrangements be made for the making of a careful study having in view reclassification and an evaluation of jobs.

Mr. Nicol will immediately undertake the necessary investigations, in an effort to bring about agreement between the employers and their employees.

The fourth point in the Memorandum of last January, which the National War Labour Board felt should be dealt with by the Minister of Labour, reads: "That management-union-employee committees be appointed in the different departments of each company". This matter I have referred to the Interdepartmental Committee on Labour Management Production Committees, who will deal with it.

It might be pointed out that the four points above referred to, which were incorporated into the Memorandum of Understanding at the time the January strike was settled, were all recommendations made in the majority report of the Barlow Commission when reporting on affairs of the steel industry early in January.

Conciliation Work of the Department of Labour During March and April, 1943

NINETY-THREE industrial disputes came to the attention of the Industrial Relations Branch of the Department during March and April, and were dealt with by Industrial Relations Officers and, in Ontario, by the additional services of the Conciliation Officers of the province working in co-operation with the Federal Department. In nearly every instance an amicable adjustment of the matters in dispute was secured by the investigating officer. The disputes of peculiar interest or importance are summarized in the statement below which represents a partial review of the activities of the Branch during the two months.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Fredericton. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and North Western Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the Province of Quebec and one officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

AUTOMOTIVE WORKERS, WINDSOR, ONTARIO— About 15,000 workers were idle at plants of the Ford Motor Company at Windsor, On-

tario, from April 22 to 25 inclusive because of disputes over two different sets of circumstances. On April 20, nine workers employed in Plant No. 2 on the operation of Sun-Strand machines were asked to run two machines instead of one. They did this on their respective shifts that day but on April 21 they refused to operate two machines, claiming that the work entailed so much lifting of heavy hub drums that the work was physically impossible. In Plant No. 4 certain employees demanded that the foreman on the final assembly line be relieved of his position or severely disciplined because he would not co-operate with the stewards in dealing with grievances and was generally gruff and abusive. On April 21, certain employees resorted to continued booing of the foreman in question and the workers involved were suspended for the day. On April 22 the men were requested by the Management to discontinue the booing but refused to do so. The line was then shut off and approximately 5,000 employees ceased work in various departments. All were instructed to vacate the premises but a large proportion remained in the plant. By the time all shifts became involved, some 15,000 workers were idle. Five other "feeder" plants in the area laid off large numbers of men in anticipation of storage problems. The Minister of Labour notified the parties that the services of the Honourable Peter Heenan, Minister of Labour for Ontario, and the joint staff of Conciliation Officers of the Dominion and Province were at their disposal. Joint

conferences were held at which it was agreed that Mr. Louis Fine, Chief Conciliation Officer for Ontario, would arbitrate the matters in dispute and that his decisions would be final and binding. Mr. Fine decided that inasmuch as the Company had installed electrical hoisting equipment to remove the lifting operation, each Sun-Strand operator should in future operate two machines. With regard to the dispute involving employees on the final assembly line, Mr. Fine refused to support the employees' contention that the foreman in question should be either dismissed or severely disciplined. To eliminate the cause of the dispute, he directed the Company to make certain changes in regard to its grievance procedure. Work was resumed on the night shift April 25.

STEELWORKERS, TRENTON, N.S.—A strike of 35 boiler firemen, members of Local 1231, United Steelworkers of America, employed by Trenton Industries, Limited, Trenton, Nova Scotia, occurred on April 27 in connection with demands for punitive overtime pay and time and one half for Sundays and holidays. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, New Brunswick, investigated the situation. After conferences with the parties, he reported that an application for the desired adjustments in wages would be made to the National War Labour Board. The strike ended on April 27.

METAL WORKERS, WINDSOR, ONT.—Following a representation vote (referred to below under "Union Representation Votes") 24 employees of the De Vilbiss Manufacturing Company, Limited, Windsor, Ontario, staged a walk-out on March 31, reportedly because they were denied the privilege of smoking at their machines. Mr. J. P. Nicol, Industrial Relations Officer, Toronto, investigated. A committee of workers refused the Company's proposal to reinstate the striking employees as quickly as they could be reabsorbed. Nothing further could be done by way of mediation and the employees either resumed their work on April 8 or sought employment elsewhere.

PAPER WORKERS, PORTNEUF, P.Q.—Failure of the management of Bishop and Sons, Ltd., Portneuf, P.Q., to dismiss a non-union employee who refused to operate a certain machine, as had been done in the case of five members of the National Catholic Union of Paper Workers resulted in a strike by 48 workers on April 17. The dispute was investigated by Mr. L. Pepin, Industrial Relations Officer, Montreal, who arranged a joint meeting of the interested parties. After discussion a satisfactory arrangement was agreed to and work resumed on April 24.

TEXTILE WORKERS, MONTREAL, P.Q.—As the Strathcona Garment Company would not conclude an agreement with the Amalgamated Clothing Workers of America a strike occurred on April 27 when three cutters walked out because a non-union cutter was hired. After mediation by R. Trepanier, Industrial Relations Officer, Montreal, and meetings between the Company's President and union representatives an agreement was signed and the difficulty terminated.

MACHINE CUTTERS, STELLARTON, N.S.—A protest by the Acadia Local of the United Mine Workers of America against cutters' helpers' rates to be paid by the Acadia Coal Company, Limited, of Stellarton, N.S., under a new levelling-up agreement involved 8 machine cutter's helpers in a two-day strike which commenced on April 6. About 70 workers were indirectly affected. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., investigated the situation which resulted in the employees returning to work on April 8 and agreeing to refer the matter in dispute to an officer and a sub-district board member of District 26, United Mine Workers of America for investigation.

PAINTERS, CORNWALL, ONTARIO.—Seventeen unorganized painters employed by the Carter-Halls-Aldinger Company, Limited, on a defence project at Cornwall, Ontario, went on strike for 15 days commencing March 10 on the ground that they had been treated unfairly by their foreman. Mr. Raoul Trepanier, Industrial Relations Officer, Montreal, investigated the case and the strikers went back to work on being assured of good treatment.

COAL MINERS, CAPE BRETON, N.S.—In the early part of March there was a threatened strike at Dominion Coal Co., Ltd., and the Old Sydney Collieries Ltd., Cape Breton Island, when the members of certain local unions of the United Mine Workers of America, District 26, demanded an increase in butter rations for mine workers. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., and representatives of the War-time Prices and Trade Board, held conferences with union leaders at Glace Bay on March 9 and 10. The principles and practices governing the rationing of butter and other staple commodities were fully explained and an undertaking was given to study the distribution of non-rationed goods in order to assure fair treatment for Cape Breton Island. Union officials expressed gratitude for the prompt and thorough action taken by the Government to avert a general strike in the area.

TRANSPORT WORKERS, WINDSOR, ONT.—The demand for a closed shop and the check off

by Local 880 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers (A.F. of L.) led to stoppage of work by about 64 truck drivers and warehousemen on March 10. It affected several carriers including Inter-City Forwarders Ltd., Martins Transport Ltd., Morris Cartage Ltd., Direct-Winters Transport, Raitar Transport and Western Freight Lines, all of Windsor, Ontario. Support was given to the strike by the United Automobile Workers of America whose members at local war factories refused to unload other trucks pressed into service. For a time picketing occurred at the International Border. Mr. J. P. Nicol, Industrial Relations Officer, Toronto, arranged meetings with the interested parties. Through the good offices of officers of Windsor Trades and Labour Council (A.F. of L.) and the U.A.W.-C.I.O., the Teamsters and Chauffeurs Union was induced to accept a signed agreement providing for recognition of Local 880 as bargaining agent for the employees concerned who were members of that organization, and the employers agreed not to recognize any other organization during the life of the agreement. The strike was terminated on March 13.

LAUNDRY WORKERS, GLACE BAY, N.S.—A strike of ten days' duration involving 16 workers began on March 2 in the Glovers Dry Cleaning Company, Glace Bay, N.S. It was caused by the refusal of the Company to recognize the Dry Cleaning and Laundry Employees' Local Union No. 1. The union demanded improved sanitary conditions, two weeks' vacation with pay, Wednesday afternoons off and guaranteed steady work. The employees were willing to return to work on March 6 pending investigation by the Department of Labour, but the Glace Bay Health Inspector refused to grant permission to reopen the plant until certain conditions had been remedied. On March 9 a collective bargaining agreement was signed and by the middle of the month renovations were well under way.

COAL MINERS, MINTO, N.B.—A strike involving 27 employees of the Minto Coal Company of Minto, N.B., began on March 3 and lasted six days. The causes of the dispute were the demands of the night machine-cutting crew for a 75 cent per day increase in basic rates, and an increase in the number of men in the crew. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., arranged conferences between the Manager of the Minto Coal Company and a committee of employees, members of Local 7409, United Mine Workers of America. It was agreed that the matter of increased wages would be re-

ferred to the National War Labour Board. The other questions were settled satisfactorily to all concerned.

PAPER WORKERS, GEORGETOWN, ONT.—On April 9 a strike commenced at the Alliance Paper Company, Georgetown, Ontario, affecting 35 employees and 33 indirectly. The employees were on strike because of dissatisfaction over the wages paid. After striking they joined the International Brotherhood of Pulp, Sulphite and Paper Mill Workers and demanded union recognition along with wage increases. After discussions with both parties, Mr. J. P. Nicol, Industrial Relations Officer, Toronto, arranged a joint meeting and proposed a formula to end the dispute. The formula contained provisions for union recognition and an application concerning the wage rates to the Regional War Labour Board. The strike terminated on April 15.

COAL MINERS, DRUMHELLER, ALTA.—Eighteen mines in the Drumheller Valley were closed down because of a strike on April 15 by members of various locals of District 18, United Mine Workers of America. The strike, which was not sanctioned by the District Officers of the Union, was staged in an effort to compel the management of Rosedale Collieries Ltd., to reinstate a former local union official in employment at Star Mine, Aerial, Alta. Previously, a strike had occurred at the Star Mine which was contrary both to the Union's constitution and Agreement, and to federal Statutes (LABOUR GAZETTE, March, 1943, p. 329). This earlier strike was terminated only after the revocation of the Charter of Aerial Local No. 4685 by District 18 officers, which action resulted in all employees of Star Mine having to make application for re-employment. The Company refused to re-hire four men, three of whom promptly secured work elsewhere. The question of the reinstatement of the fourth man, one Mike Bokos, was referred along with two other matters to arbitration by an Independent Chairman. The decision of the Independent Chairman had not been made known when the strike of all mines in the sub-district was called. All parties were notified on the afternoon prior to the strike that the Chairman's decision was that he could not in the circumstances direct the Company to re-employ Bokos, but in spite of this 2,015 miners ceased work at midnight on April 15. Mr. F. E. Harrison, Western Representative, Department of Labour, Vancouver, B.C., investigated the strike and, on April 27, secured an undertaking from another coal mining company that it would give Bokos employment. Work was resumed at midnight April 28.

METAL WORKERS, WINNIPEG, MAN.—A strike lasting four working days occurred at the Vulcan Iron Works Limited, Winnipeg, Manitoba, on April 20. It involved 245 employees, members of Local 174, International Moulders and Foundry Workers Union, and was caused by a dispute over union recognition. The Company was prepared to sign an agreement with the union if the ballot showed that a majority of employees in the foundry wished the union as their bargaining agent. The union wanted recognition without a ballot being taken. On April 26 Mr. Ronald H. Hooper, Industrial Relations Officer, Winnipeg, conducted a ballot with the question "Are you a member in good standing of International Moulders and Foundry Workers Union, Local 174?" Out of 215 votes cast, 193 voted "Yes" and 20 voted "No"; there were 2 spoiled ballots. Immediately after the result of the ballot was known the Company and the union signed an agreement and the same day work was resumed.

AIRCRAFT WORKERS, FORT WILLIAM, ONT.—Early in March, Mr. R. H. Hooper, Industrial Relations Officer, Winnipeg, dealt with a dispute between the Canadian Car and Foundry Company, Limited, Aircraft Division, Fort William, Ontario, and its employees, members of Lodge 719, International Association of Machinists. The dispute arose out of changes desired by the Company in the clause of its Collective Agreement with the Union relating to adjustment of grievances. An amicable arrangement was secured upon the terms of revision. These set out with more particularity than before the rights and privileges of union representatives in dealing with grievances during working hours. The Company undertook to give consideration to a request that a Union Business Agent should be admitted to meetings between the shop committee and the management.

COAL MINERS, COLEMAN, ALTA.—On March 4, some 1,000 miners in two mines laid off work to discuss the situation created by the lack of a surgeon in the Coleman Miners Union Hospital. This action left both mines idle for the day and other stoppages were threatened unless governmental agencies allocated a surgeon to the institution. The Director of Industrial Relations, Ottawa, and Mr. F. E. Harrison, Western Representative, Department of Labour, Vancouver, appealed to officials of District 18, United Mine Workers of America, to forestall further precipitate action by the men while the situation was canvassed. Although under existing controls, doctors require permits to accept employment as salaried persons, they are left free otherwise and the Government

could not order any doctor to accept the Coleman post. Nevertheless the Minister of Labour asked the Canadian Medical Procurement and Assignment Board to undertake a study of what can be done in the local situation. The problem was solved on March 8 when the hospital itself concluded satisfactory arrangements with a surgeon and increased the hospital fees of the union members by 20 cents per month.

COAL MINERS, RIVER HEBERT, N.S.—On March 3 some 150 employees of the Hillcrest Mining Company, River Hebert, N.S., ceased work ostensibly because of a minor infraction of the Mines Act on the part of a shot firer, which the men claimed to constitute a dangerous practice. The men reported for work on March 8 but the Company refused to resume operations. Owing to a shortage of shot firers, Mr. H. R. Pettigrove, Industrial Relations Officer for the Maritimes, who was investigating the situation on behalf of the Department, took steps to have special shot-firer permits issued by a Deputy Mine Inspector to three employees. The Company then agreed to reopen the mine and work was resumed on March 13, following a loss of nine working days. At about the same time employees of the mine were checked up in regard to leaving work before shifts were finished by having deductions made from the pay of the offenders.

FOUNDRY WORKERS, NEW WESTMINSTER, B.C.—About the middle of March approximately 100 moulders, core makers and helpers, employees of Heaps Engineering (1940) Limited, at New Westminster, B.C., refused to work overtime unless the Company compensated them for the payment of income taxes on overtime wages earned. Messrs. F. E. Harrison and G. R. Currie, Representatives of the Department of Labour, Vancouver, interviewed a committee of employees, and the Manager of the firm spoke to a mass meeting of the workers involved. Later the men voted by 53 to 27 to continue working overtime as required, without remuneration.

COAL MINERS, SPRINGHILL, N.S.—On the afternoon of March 12 certain car shunters employed by the Cumberland Railway and Coal Company, Limited, Springhill, N.S., refused to supervise the delivery of coal to the domestic pocket of the mine unless the man assigned to the task was granted an extra hour's pay per day. This created a shortage of coal for household purposes in the vicinity and all employees, numbering about 1,400, went on strike demanding that domestic coal requirements be supplied. The strikers were

members of Local 4514, United Mine Workers of America. Complicating the dispute was certain unrest within the Union over a special levy of \$1.50 by District 26, U.M.W.A., upon its members, which had already resulted in the threat of a strike scheduled for the following week. Work was resumed after a one-day stoppage. One week later, on March 19, the same group stopped work again claiming that a shortage of domestic coal existed. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, New Brunswick, offered his services to both parties and urged upon the officials of District 26 the importance of settling the dispute in accordance with established grievance machinery. Further complicating factors arose when a considerable number of union members endeavoured to have the company alter the check-off system so that union dues would be paid to the local union instead of the District Office. This move was successfully opposed and the employees agreed to resume work under protest on March 22 and to adopt regular grievance procedure.

AIRCRAFT WORKERS, NEW WESTMINSTER, B.C.—On April 20 employees in the repair plant of Canadian Pacific Airlines, Limited, New Westminster, B.C., protested to the Minister of Labour against the cancellation on April 17, by order of the Director General of Aircraft Production, of two ten-minute rest periods in each eight-hour shift which had been in effect since the plant went into operation. On April 19 and 20 some 950 of the employees, who were members of Aeronautical Mechanics Lodge 756, International Association of Machinists, had taken unauthorized rest periods as a result of which the Director General of Aircraft Products ordered the plant to be closed forthwith. The employees then applied for the appointment of an Industrial Disputes Inquiry Commissioner to investigate the situation and agreed to forego rest periods during the time of the investigation. The management of the Company expressed their concurrence in the request of the employees in the interests of "present industrial harmony and high morale". At the end of the month representations with regard to the appointment of a Commissioner were under consideration.

AIRCRAFT WORKERS, SEA ISLAND, B.C.—On April 13 employees of Boeing Aircraft of Canada Limited, Sea Island, B.C., members of Aeronautical Mechanics Lodge No. 756, International Association of Machinists, requested the initiation of rest periods. The Department of Munitions and Supply refused to permit the Company to grant this request. The employees then proposed taking two ten-minute rest periods without authority. Officials of the Union were warned by Mr. G. R.

Currie, Industrial Relations Officer, Vancouver, against pursuing this course, and on April 20 the Union Executive agreed to cancel its plans and work normal hours. A request was made by wire to the Department of Labour on April 22 for the appointment of an Industrial Disputes Inquiry Commissioner to make an investigation of the merits of the request. The Union Executive and the Shop Stewards of the various plants were not in full agreement in regard to this pacific procedure and at a largely attended meeting a deadline of April 28 was set for the appointment of a Commissioner. When the deadline was reached about 5,000 day-shift employees took an unauthorized rest period, whereupon the Company on instructions closed down operations. Other shifts were refused entrance to the plant, affecting a total of some 6,700 workers. The Department's Industrial Relations Officer kept in constant touch with the situation and urged the Union Executive to bring about a resumption of work, after which the employees' grievance could be dealt with in the customary manner. On March 3 the employees voted by approximately 10 to 1 to return to work and the Union Executive gave the management written assurance that the conditions of the signed contract existing between the Company and the Union would be maintained. The various plants of the Company were reopened with the morning shift on May 4.

METAL WORKERS, SAINT JOHN, N.B.—During March the management of T. McAvity and Sons, Limited, Saint John, N.B., received notice from Lodge No. 835, International Association of Machinists, requesting the negotiation of a new agreement to replace one expiring March 31. The company demanded a check of union records or a vote to establish the present status of the union's membership. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., arranged joint conferences at which a ballot was agreed to by the parties. (The results are given below "Union Representation Vote"). Following the taking of the vote the company, on April 16, executed two agreements, one with a committee of Local No. 835, I. A. of M., and the second with a committee of unorganized employees in its foundries and allied departments.

SHIPYARD WORKERS, VANCOUVER, B.C.—A strike by some 6,000 employees of the North Van Ship Repairs, Limited, Vancouver, B.C., occurred on March 30 after a group of shop stewards posted men at each gate to the yard and prevented the entry of about 70 employees who did not have union cards or who were in arrears with union dues. The company had

been advised of the proposed check-up and co-operated by allowing the shop stewards to post notices regarding it on the bulletin boards. The stewards then demanded that the company refuse admission to the non-members, but the company denied this demand because it could not recognize the self-appointed shop stewards' committee as a union executive. When this information was given to the employees about 4,000 members of the Boilermakers and Iron Shipbuilders Union went out on strike and were joined by some 2,000 men belonging to other craft unions. Conferences were held with the various groups by Mr. F. E. Harrison, Western Representative of the Department of Labour, and Mr. G. R. Currie, Industrial Relations Officer. The company persisted in its refusal to change the customary practice, namely that the union furnishes the names of employees who have not become members or who are not in good standing, after which the management takes action to enforce membership. The parties agreed that the 70 employees who were not members or were in arrears of dues to the union would be given a reasonable time to join up and work was resumed during the forenoon of March 31.

FOUNDRY WORKERS, MONCTON, N.B.—On March 20 a strike was threatened by 59 employees of the Record Stove and Furnace Company, Limited, Moncton, N.B., members of Local No. 236, International Moulders' and Foundry Workers' Union, over the dismissal of four moulders on four consecutive days. These men had been discharged for refusing to use a double mould which the company had just instituted in place of a single mould. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., arranged conferences of the parties and the company agreed to reinstate three employees. The fourth workman had secured another job in the meantime. The company also undertook to have an international representative of the union instruct the workers in the use of a double mould. On March 25 the company signed an agreement including recognition of the union as bargaining agent and grievance procedure.

PACKINGHOUSE WORKERS, ST. BONIFACE, MAN.—On March 29 a foreman of Canada Packers, Limited, St. Boniface, Man., disciplined an employee with a two-weeks suspension for failing to carry out certain instructions. The employee appealed his case and was promised it would be reviewed by the plant superintendent. Later in the day, before the appeal was heard, about 600 employees went on strike without warning, but remained on the premises.

Meetings with the management, officials of Local 216, United Packinghouse Workers of America, and a Plant Relations Committee were held by Messrs. H. S. Johnstone and R. H. Hooper, Industrial Relations Officers, Winnipeg, Manitoba. The employees decided to resume work and the night shift went on duty as usual the same evening. In negotiations the following day the employee whose suspension caused the stoppage admitted that he was in the wrong and his penalty was reduced to a half-day lay-off without pay. There was no relation between the cause of the strike and an application for the establishment of a board of conciliation and investigation, described elsewhere in this issue.

OFFICE WORKERS, FORT WILLIAM, ONT.—When negotiations for a collective agreement between the Canadian Car and Foundry Company, Limited, Fort William, Ont., and certain of its employees, members of the Office Employees Union, No. 23302 (A.F. of L.), became deadlocked during April, the Department was asked for the service of a conciliation officer. Mr. R. H. Hooper, Industrial Relations Officer of Winnipeg, was assigned to the situation and during joint conferences assisted in the negotiation of a draft agreement that was acceptable both to the company and the union committee. The proposed agreement was to be presented to the union membership at an early date, but at the end of the month the department had not been advised as to the outcome.

MUNITIONS WORKERS, CHERRIER, P.Q.—On April 6 some 1,200 employees in the shell filling department of Canadian Car Munitions, Limited, Cherrier, P.Q., went on strike in protest against an alleged delay by the company in making adjustments in wage classifications. This strike had been preceded by a stoppage of work for one hour and a half by a small number of employees in group number one on April 1. Following mediation by Mr. Raoul Trépanier, Industrial Relations Officer, Montreal, P.Q., the union agreed to take up with the company and representatives of the Allied War Supplies Corporation the matter of reclassifications within the existing range of wage rates and to make an application to the Regional War Labour Board for special increases covering some 600 employees retroactive to October 1, 1942. Later, on joint request, the Minister of Labour nominated Mr. Bernard Rose, K.C., Montreal, to act as an independent arbitrator whose decisions in regard to categories and adjustment of classifications within existing ranges of wage rates would be final and binding.

Union Representation Votes

WITH increased industrial activity occasioned by the needs of war, there has been a corresponding increase in the number of disputes requiring the attention of the Industrial Relations Branch of the Department of Labour.

The plant vote, whereby employees indicate at a poll the collective bargaining agency which they desire to represent them in negotiations with their employer has been, particularly since January, 1942, in great use as a technique to aid in the settlement of those industrial disputes where the employer denies that his employees favour a particular organization or where two or more rival bodies both claim to represent the employees.

The votes are taken under the auspices of the Department of Labour in those cases where all parties have reached an agreement as to the details of the ballot. In certain cases involving procedure under the Industrial Disputes Investigation Act votes have been arranged by order of the Industrial Disputes Inquiry Commissioner investigating the dispute but generally mutual agreement regarding voting procedure is obtained from the parties before a vote is taken.

To facilitate the taking of votes the Department has formulated regulations which concern proper balloting procedure with regard to secrecy, fairness, electioneering, protests, etc.

Votes Taken, 1940-43

A summary of the votes taken from January, 1940, to April 30, 1943, is as follows:

Votes taken by the Dominion Department on its own behalf.....	92
Votes taken by the Dominion Department on behalf of the Ontario Department of Labour.....	9
Votes taken by the Ontario Department of Labour on behalf of the Dominion Department	19
Votes taken by the Ontario Department of Labour on its own behalf..	27
Votes taken by the Nova Scotia Department of Labour on behalf of the Dominion Department	3
Total	150

Summary

Dominion Department of Labour Votes.	114
Ontario Department of Labour Votes..	36

Period Covered

This summary covers the period January, 1940, to April 30, 1943. All but 25 votes, however, have been taken since January, 1942.

Votes Taken During March and April

BEDDING COMPANY EMPLOYEES, WINDSOR, ONTARIO. By joint consent of the parties a vote was conducted on March 16 by Mr. G. F. Fenwick, Conciliation Officer, Toronto, among the hourly-rated employees of the Windsor Bedding Company, Limited, upon a ballot reading as follows: "Do you want to bargain collectively with your employer through U.A.W.-C.I.O.?" The vote resulted as follows: voting "yes", 87; voting "no", 13; spoiled ballots, 1.

TEXTILE WORKERS, WINDSOR, ONTARIO. On March 16 Mr. G. F. Fenwick, Conciliation Officer, Toronto, supervised a representation vote among the hourly-rated employees of R. A. Potvin and Company, Windsor. The vote resulted in favour of the U.A.W.-C.I.O. by 34 to 0.

STEELWORKERS, WALKERVILLE, ONTARIO. Following a joint application by the parties, Mr. G. F. Fenwick, Conciliation Officer, Toronto, conducted votes on March 25 among the hourly-rated employees in two plants of the Truscon Steel Company of Canada, Limited, in regard to bargaining collectively through Local 195, U.A.W.-C.I.O. In plant No. 1. there were 130 votes cast in favour of the Union and 50 against. In plant No. 2 the vote was 113 to 36 in favour of the Union. There was one spoiled ballot in each plant.

DAIRY WORKERS, WINDSOR, ONT. By joint consent of the parties a vote was conducted on April 1, by Mr. G. F. Fenwick, Conciliation Officer, Toronto, to determine if the employees of the Peerless Countryside Dairies, Limited, Windsor, Ontario, wished to be represented by the Windsor Milk Drivers' and Dairy Workers' Union (C.C.L.) for the purposes of collective bargaining. The vote resulted in favour of the Union by 25 to 5.

METAL WORKERS, SAINT JOHN, N.B. On March 27, a vote was held by mutual consent, under the supervision of Mr. H. R. Pettigrove, Industrial Relations Officer, to determine the wishes of the employees of T. McAvity, Saint John, N.B., in regard to representation in their dealings with the management through Lodge No. 835, International Association of Machinists. A total of 239 employees voted in favour of the Union as their bargaining agent; 5 voted against the Union and there were 2 spoiled ballots.

METAL WORKERS, TORONTO, ONTARIO.—By joint consent of the parties a vote was conducted on April 6, under the supervision of Mr. H. Perkins, Industrial Relations Officer, Toronto, to determine the wishes of the employees

of Metal Stampings Company, Limited, Toronto, Ontario, in regard to the following question: "Do you want to bargain collectively with your employer through United Steelworkers of America, or do you wish to be represented by an Employees Company Union"? Out of 268 ballots cast, 178 were in favour of the United Steelworkers of America and 88 in favour of an Employees Company Union. There were 2 spoiled ballots.

METAL WORKERS, WINDSOR, ONTARIO.—On March 16, Mr. G. Fenwick of the Provincial Conciliation Service, supervised a representation vote to determine whether the hourly-rated employees of the De Vilbiss Manufacturing Company, Limited, Windsor, Ontario, wished to bargain collectively with the Company through the U.A.W.-C.I.O. Out of a total of 53 votes, 26 were cast for the U.A.W.-C.I.O. and 27 against.

MACHINE TOOL WORKERS, WALKERVILLE, ONTARIO.—A representation vote was conducted by Mr. G. Fenwick of the Provincial Conciliation Service, on March 24 concerning the recognition of the U.A.W.-C.I.O. as the bargaining agency of the employees of the Dominion Forge and Stamping Company, Limited, Walkerville, Ontario. There were 343 votes for the union and 162 against; there were 9 spoiled ballots.

PACKING PLANT EMPLOYEES, ST. BONIFACE, MANITOBA.—With the consent of the parties

concerned Mr. Ronald H. Hooper, Industrial Relations Officer, Winnipeg, conducted a representation vote *re* a collective bargaining agreement between the Swift Canadian Company, Limited, and Local 219 United Packinghouse Workers of America, (C.I.O.). Out of 539 votes cast, 506 were for the union and 27 against. There were 6 spoiled ballots.

STEEL WORKERS, TORONTO, ONTARIO.—The alleged refusal of the Toronto Iron Works, Toronto, Ontario, to deal with a committee of Local 2820 United Steel Workers of America (C.I.O.) was the basis of a demand for a representation vote which was conducted by Mr. J. P. Nicol, Industrial Relations Officer, Toronto, on April 20. Out of 141 votes cast, 88 were for the Steel Workers Union, 42 for the Company union and 7 were against any union. There were 4 spoiled ballots.

METAL WORKERS, WALKERVILLE, ONTARIO.—A vote among hourly rated employees of the Walker Metal Products Limited of Walkerville, Ontario, was conducted by joint request of the parties on March 25, under the supervision of Mr. G. Fenwick of the Provincial Conciliation Service, to ascertain whether or not the employees wished to bargain collectively with the Company through Local 195 of the U.A.W.-C.I.O. Out of a total of 456 ballots cast, the voting favoured the union, 333 to 107 with 16 spoiled ballots.

Strikes and Lockouts in Canada during April, 1943

FOR the month of April, 1943, the record of strikes and lockouts showed an increased number of strikes, with substantial increases in the number of workers involved and in the time loss in man working days as compared with the previous month. There were 37 strikes on record, involving 30,526 workers, with a time loss of 102,685 man working days, as compared with 28 strikes in March, involving 17,008 workers and showing a time loss of 31,183 days. For April, 1942, the number of strikes was 17, with 6,838 workers involved and a time loss of 20,403 days.

During the month four work stoppages, involving coal miners in the Drumheller Valley, pulp and paper mill workers in the Lake St. John District, aircraft factory workers at Vancouver and motor vehicles factory workers at Windsor, accounted for about 80 per cent of the workers involved and 90 per cent of the time loss.

The following table gives information for April and March, 1943, and April, 1942:—

Date	Number of strikes	Number of workers involved	Time loss in man working days
*April, 1943	37	30,526	102,685
*March, 1943	28	17,008	31,183
*April, 1942	17	6,838	20,403

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless 10 days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two strikes, involving 204 workers, were carried over from March and 35 commenced during April. Of these 37 strikes, four resulted

in favour of the workers, thirteen in favour of the employers, one was partially successful, three were compromise settlements and eleven were indefinite in result. At the end of the month five strikes were reported as unterminated, namely: fur factory workers at Toronto, clothing factory workers (cutters), at Montreal, cotton factory workers at Montmorency Village, aircraft factory workers at Vancouver and shipyard workers at Saint John.

The record does not include minor strikes such as are defined in another paragraph, nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such strikes are listed in this paragraph for a period up to one year after their removal from the table of current strikes.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1943*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establish- ments	Workers		
Strikes and Lockouts in Progress Prior to April, 1943				
MANUFACTURING— <i>Boots and Shoes—</i> Shoe factory workers, Quebec, P.Q.	1	180	180	Commenced March 19, 1943; for a closed shop union agreement; terminated April 1; conciliation (provincial; return of workers pending settlement; indefinite.
<i>Metal Products—</i> Sheet metal workers, Windsor, Ont.	1	24	150	Commenced March 31; against order forbidding smoking while at machines; terminated April 8; conciliation (federal); in favour of employer.
Strikes and Lockouts in Progress During April, 1943				
MINING— Coal miners (powder men), Mercoal, Alta.	1	(a) 21	21	Commenced April 2; <i>re</i> delay in issuing powder; terminated April 2; return of workers; in favour of employer.
Coal miners (machine cutters' helpers), Stellarton, N.S.	2	(b) 8	16	Commenced April 6; <i>re</i> adjustments in wages; terminated April 8; return of workers pending reference to Joint Adjustment Board; indefinite.
Coal miners, Glace Bay, N.S.	1	(i) 42	84	Commenced April 9-10; <i>re</i> working conditions; return of workers; in favour of employer.
Metal miners (shaft sinkers) Sudbury, Ont.	1	19	85	Commenced April 11; <i>re</i> discipline of a miner; terminated April 16; negotiations; in favour of employer.
Coal miners, Drumheller District, Alta.	18	2,000	20,000	Commenced April 16; for reinstatement of a worker; terminated April 28; conciliation (federal); (worker given employment in another mine) compromise.
Metal miners (nickel), Le- vack, Ont.	1	100	100	Commenced April 21; against alleged delay in change of management of company hotel; terminated April 21; negotiations; in favour of employer.
Coal miners, Springhill, N.S.	1	100	100	Commenced April 28; <i>re</i> working conditions; terminated April 29; conciliation (federal); in favour of employer.
MANUFACTURING— <i>Rubber Products—</i> Tire factory workers, Kitchener, Ont.	1	(c) 155	155	Commenced April 19; against alleged delay in negotiations <i>re</i> wage adjustments; terminated April 20; return of workers pending settlement; indefinite.
<i>Fur and Leather Products—</i> Fur factory workers, To- ronto, Ont.	1	22	220	Commenced April 19; against agreement signed with another union; unterminated.
<i>Textiles and Clothing—</i> Clothing factory workers, Quebec, P.Q.	1	125	188	Commenced April 9; against check-off and closed shop union agreement with a certain union; terminated April 10; negotiations; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA, DURING APRIL, 1943*

Wholesale grocery employ- ees, Saint John, N.B.	1	8	16	Commenced April 28; against dismissal of five workers; terminated April, 29; negotia- tions; in favour of employer.
SERVICE— Business and Personal— Garage mechanics and servicemen, Regina, Sask.	8	100	1,550	Commenced April 9; for union recognition ; terminated April 28; conciliation (provin- cial); return of workers pending negotiations for a union agreement; indefinite.

* Preliminary data, based where possible on reports from parties involved, in some cases incomplete; subject to revision for the annual review.

† In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 42 indirectly. (b) 70 indirectly. (c) 700 indirectly. (d) 1,200 indirectly. (e) 10 indirectly. (f) 2,953 indirectly. (g) 310 indirectly. (h) 43 indirectly. (i) 1,100 indirectly.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the May, 1942, issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the *LABOUR GAZETTE*, August, 1940, page 760.

The number of disputes beginning in February was 75, and 8 were still in progress from the previous month, making a total of 83 disputes in progress during the month; 16,100

workers were involved in the disputes in progress during the month and the time loss was 34,000 working days.

Of the 75 disputes beginning in February, 13 arose out of demands for increased wages and 21 over other wage questions; 4 over working hours; 10 over questions as to the employment of particular classes or persons; 22 over other questions as to working arrangements; and 5 on questions of trade union principle. Final settlements were reached in 69 disputes, of which 15 were settled in favour of workers, 35 in favour of employers and 19 resulted in compromises; in 10 other disputes, work was resumed pending negotiations.

New Zealand

The number of disputes during the year 1942 was 64, involving 14,282 workers, with a time loss of 51,436 working days, as compared with a time loss of 26,237 working days for 1941.

United States

For the month of March, the number of strikes beginning in the month was 260, involving 72,000 workers in these new strikes. The time loss for all disputes in progress during the month was 230,000 working days.

Post-War Agricultural Education in Great Britain

IN the majority report of the Luxmoore Committee on Post-War Agricultural Education in England and Wales which was published on April 10, it was advocated that a National Council should be set up to provide a comprehensive system of agricultural education for the country and that the school-leaving age should be raised as soon as possible to 15 with provision being made for compulsory part-time education from 15 to 18. The Committee was appointed in July, 1941, by the Minister of Agriculture and Fisheries "to examine the present system of agricultural education in England and Wales and to make recommendations for improving and developing it after the war." The chairman was the Rt. Hon. Lord Justice Luxmoore. The Committee started from the propositions that agricultural education is mainly vocational and that no vocational education can be satisfactory unless it is based on a sound foundation of general education. All the evidence pointed to the conclusion that suitable accommodation and teaching facilities for children

over 11 years of age is generally lacking in rural areas. The defects in the present system were found to be the absence of any authority charged with the positive duty of providing any form of agricultural education, the number of different authorities which now provide such education, and the diversity of sources and available means of finance.

The Committee felt that the establishment of a National Council would eliminate these difficulties. Such a Council should have the duty of providing, at the cost of the national exchequer, for the different branches of agricultural education and the necessary powers to enable it to perform this duty. It should be outside the Ministry of Agriculture but under the control of the Minister, who should be answerable for it to Parliament. It should include representatives of the farming industry, the Board of Education, the Agricultural Research Council and the universities. Its detailed work should be carried out through an organization committee and a technical committee.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Animal Foods

EDMONTON, ALBERTA.—CANADA PACKERS LTD. AND THE PACKING PLANT EMPLOYEES FEDERAL UNION No. 78 (TRADES AND LABOUR CONGRESS OF CANADA).

Agreement to be in effect from January 27, 1943, to January 26, 1944, and thereafter from year to year, subject to notice. The Company recognizes the union as the exclusive bargaining agent for all employees in the plant and will not bargain collectively with any other labour organization for its Edmonton employees while this agreement is in effect.

Hours: 8 per day, 48 per week are basic hours, but may be increased to 10 per day, 50 per week for male employees, and 9 per day, 48 per week for female employees, and overtime over the latter hours is payable at time and one half; for work on Sundays and holidays, time and one half. Vacation: one week with pay annually after one year's service; two weeks annually after 5 years' service; three weeks after 20 years' service for men, 15 years for women.

Minimum hourly wage rates: for regular adult male employees 45 cents; for regular female employees and for male employees under 19 years of age, 36 cents.

Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Textiles and Clothing

FORT ERIE NORTH, ONTARIO.—IRVIN AIRCHUTE CO. LTD. AND THE IRVIN AIRCHUTE WORKERS' ASSOCIATION.

Agreement to be in effect from December 4, 1942, to December 4, 1943, and thereafter from year to year, subject to notice. The Associa-

tion is the sole bargaining agency for all employees. Employees who were members of the Association at date the agreement made were to remain members for the duration of the agreement, but the association agrees not to coerce any employee because of non-membership.

Hours: 9 per day, 5 on Saturday, a 50-hour week, with a ten-minute rest period in each half day. Overtime and all work on Sundays and holidays to be paid at time and one half. Vacation: one week per year, with pay after one year's service.

Basic hourly wage rates: female floor workers commence at 35 cents, with increase to 40 cents after 30 days; machine operators (female) commence at 35 cents, with increase to 40 cents after 30 days and to 45 cents after 90 days; machine operators (male) commence at 50 cents, with increase to 60 cents after 30 days and to 65 cents after 60 days; metal assemblers commence at 50 cents, with increase to 55 cents after 30 days and to 60 cents after 60 days; floor workers and truck drivers commence at 50 cents, with increase to 55 cents after 30 days; lead hands 5 cents per hour extra. For work on night shift, 25 cents per shift extra. A cost of living bonus is payable according to federal government Orders in Council, the amount at the signing of this contract being \$4.25 per week.

Provision is made for seniority rights and for the adjustment of grievances.

Manufacturing: Pulp, Paper and Paper Products

BEAUHARNOIS, QUEBEC.—HOWARD SMITH PAPER MILLS LTD. AND THE NATIONAL SYNDICATE OF THE PAPER WORKERS OF BEAUHARNOIS AND THE NATIONAL CATHOLIC FEDERATION OF PULP AND PAPER EMPLOYEES, INC.

Agreement reached during proceedings of a board under the Industrial Disputes Investigation Act noted elsewhere in this issue. Agreement to be in effect from March 22, 1943, to March 21, 1944, and thereafter from year to year, subject to notice. The company recognizes these unions as representing their membership and will co-operate in retaining members; the union will not intimidate employees to join.

Hours for day workers, 9 per day; for tour workers, 8 per day: mill normally operates 6 days per week. Overtime: for day workers, time and one-half for work before 7 a.m. and after 5 p.m. (3 p.m. on Saturdays); for tour workers, time and one-half if recalled back to work outside his regular shift; time and one-half for all work on Sundays and holidays. Vacation: one week with pay to employees with 18 months' employment. Wage rates to remain as paid at the time the agreement was

made, but the parties may submit a joint request or the parties may request separately the Regional or National War Labour Board for changes in wages and any changes authorized by such board will be put into effect. The cost of living bonus to be paid, as provided for by federal government decrees. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Metal Products

SAINT JOHN, N.B.—T. McAVITY & SONS LTD. AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 835.

Agreement to be in effect from April 16, 1943, to March 31, 1944, and thereafter, subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, May 12, 1942, p. 628, with these exceptions:

A wage scale for female employees is in this agreement: beginners 20 cents, learners 25 cents, productive machine operators and assembly workers 28 to 35 cents, inspection work 28 to 32 cents.

SAINT JOHN, N.B.—T. McAVITY & SONS, LTD. AND EMPLOYEES OF FOUNDRIES AND ALLIED DEPARTMENTS OF THE COMPANY.

Agreement to be in effect from April 16, 1943, to March 31, 1944, and thereafter subject to notice, but wage rates are effective from February 16, 1942, for the duration of the war. The Company recognizes the shop committee as the sole bargaining agency.

Hours: 8 per day, 5 on Saturday, a 45-hour week; if a night shift worked, 9 per night for 5 nights, also a 45-hour week. Overtime is payable at time and one half until midnight; thereafter, double time; double time for work on Sundays and holidays.

Hourly wage rates: floor and tub moulders 45 to 75 cents, machine moulders 45 to 52 cents, machine moulders' helpers 40 to 45 cents, core makers 48 to 68 cents, miscellaneous workers 43 to 55 cents, general labour 38 to 40 cents, firemen 48 and 55 cents, male employees under 18 years of age, 20 cents. Supervisors to be paid 5 cents per hour over the rate for his classification. Piece rates may be established but the minimum wages are guaranteed. Provision is made for the settlement of disputes.

MONCTON, N.B.—THE RECORD STOVE AND FURNACE CO. LTD. AND THE INTERNATIONAL MOULDERS' AND FOUNDRY WORKERS' UNION.

Agreement reached with the assistance of an officer of the Department of Labour. Agreement to be in effect from March 25, 1943, to March 24, 1944, and thereafter until a new agreement made. The company recognizes the union as the bargaining agent for its employees. Questions as to wages may be taken up at any time with the Regional War Labour Board before any action is taken by either the company or the union. Provision is made for the settlement of disputes.

FORT ERIE, ONTARIO.—FLEET AIRCRAFT LTD. AND THE FLEET AIRCRAFT WORKERS' ASSOCIATION.

Agreement to be in effect from November 26, 1942, for the duration of the war and until

a new agreement is made. The Company recognizes the association as the sole bargaining agency for employees. All employees who are or who become members must maintain their membership as a condition of employment, but no discrimination against any employee who desires to remain unaffiliated with it.

Hours: 8 per day, with a 10 minute rest period in each half day, a 48-hour week. Overtime and all work on Sundays and holidays is payable at time and one half.

Hourly wage rates for journeymen: wood pattern maker 95 cents, tool and die maker \$1, aircraft fitter 75 cents, machinist 90 cents; welder, steel, aluminum or arc 75 to 80 cents; other journeymen 75 cents. Other hourly wage rates: tool room improver 90 cents, tool room bench hand 70 to 85 cents, tool room helper 55 cents to 65 cents; class A production workers 65 and 70 cents, class B production workers 55 and 60 cents, class C 40 cents, class D (beginners) 20 to 35 cents; labourers 45 and 50 cents; stores clerks 45 to 70 cents; stock-chasers, material forward ticket writers and shop production clerks 40 to 55 cents; despatchers 55 to 70 cents. For night shift work, 25 cents per shift extra. The cost of living bonus to be paid in accordance with federal government orders in council, the amount at the date the agreement made being \$4.25 per week. Provision is made for seniority rights, for the settlement of disputes and for the employment of learners and trainees.

WINNIPEG, MANITOBA.—VULCAN IRON WORKS LTD. AND THE INTERNATIONAL MOULDERS' AND FOUNDRY WORKERS' UNION, LOCAL 174.

Agreement reached following the strike reported elsewhere in this issue and mediation by an officer of the Department of Labour. Agreement to be in effect from April 26, 1943, to April 26, 1944, and thereafter from year to year, subject to notice. The company recognizes the union.

With regard to hours and wages, if the management and employees cannot agree on a joint submission to the Regional War Labour Board, each party may make a separate submission. Provision is made for seniority rights and for the settlement of disputes.

CALGARY, ALBERTA.—RIVERSIDE IRON WORKS LTD. AND HOURLY RATED EMPLOYEES IN THE CONSTRUCTION SHOP OF THE COMPANY, MEMBERS OF THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS AND HELPERS OF AMERICA, LOCAL 451.

Agreement reached with the assistance of an officer of the Department of Labour. Agreement to be in effect from May 3, 1943, for the duration of the war and thereafter subject to 30 days' notice. No discrimination against any employee by either party on account of membership or non-membership in any union. The company recognizes the union executive (if employees) as the sole bargaining agency for the employees.

Hours: 8 per day, 44 per week. Overtime is payable at time and one half for the first four hours; thereafter and all work on Sundays and holidays, double time. Wage rates may be submitted to the Regional War Labour Board for revision. The full cost of living

bonus is paid in accordance with federal government orders in council. Provision is made for regulation of apprenticeship, for seniority rights and for the settlement of disputes.

Manufacturing: Non-metallic Minerals, Chemicals, etc.

TRANSCONA, MANITOBA.—DEFENCE INDUSTRIES LTD. AND THE WINNIPEG POWDER AND HIGH EXPLOSIVE WORKERS' FEDERAL UNION No. 150.

Agreement reached with the assistance of an officer of the Department of Labour. Agreement to be in effect from April 20, 1943, to April 20, 1944, and thereafter from year to year, subject to notice. No discrimination by either party against any employee for union membership or non-membership or union activity.

Hours: 8 per day, 48 per week. Shift workers to be allowed $\frac{1}{2}$ hour with pay for lunch; day and night workers whose hours are restricted by the transportation facilities of the plant are also allowed $\frac{1}{2}$ hour with pay for lunch. Overtime is payable at time and one half; for work on employees' weekly day of rest and on holidays, time and one half. Penalties of suspension or discharge are stipulated for absence from work without sufficient cause. Subject to the approval of the Regional War Labour Board, vacations with pay are to be granted.

Hourly wage rates as in effect from July 1, 1942, for some classes: craftsmen 82 to 87 cents, tradesmen 75 cents, tradesmen's helpers 53 to 70 cents; operators 60 to 69 cents; operators' helpers 50 to 60 cents; labourers 46 to 53 cents. After six months' satisfactory service, employees are eligible for a 2 cents per hour increase. The cost of living bonus is paid in accordance with federal government Orders in Council.

Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Shipbuilding

VICTORIA, B.C.—VICTORIA MACHINERY DEPOT CO. LTD. AND YARROWS LTD. AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 230.

Supplementary agreement effective from January 1, 1943. (See L. G., April, 1942, p.

481, Feb. 1943, p. 218, April p. 488). Wages: the basic hourly wage rate for inexperienced helpers is 50 cents for first month and 60 cents for next five months; for experienced helpers (those with six months or more at the trade) 67 cents; specialists 75 cents; improvers 80 cents; (Journeyman's rate remains at \$1.); charge hands \$1.10 and \$1.15. Not more than one helper to each journeyman; one improver allowed to seven journeymen. After one year as improver, journeyman's examination to be tried.

Construction: Buildings and Structures

EDMONTON, ALBERTA.—EDMONTON GENERAL CONTRACTORS' ASSOCIATION AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 1325.

Agreement to be in effect from April 1, 1943, to March 31, 1944. Union carpenters to be given preference of employment. Hours: 8 per day, 4 on Saturdays, a 44-hour week. In case of night shifts, $7\frac{1}{2}$ hours' work for 8 hours' pay. Overtime is payable at time and one half, with all work on holidays at double time. Minimum basic hourly wage for carpenters is 95 cents, to which is added a cost of living bonus of 8 cents per hour.

Transportation and Public Utilities: Street and Electric Railways

TORONTO, ONTARIO.—TORONTO TRANSPORTATION COMMISSION AND THE EMPLOYEES OF THE ELECTRICAL DEPARTMENT (MEMBERS OF THE CANADIAN ELECTRICAL TRADES UNION).

The agreement which was summarized in the LABOUR GAZETTE, December, 1938, p. 1413, and January, 1942, p. 107, was amended August 15, 1942. The previous cost of living bonus of 8 cents per hour together with a further increase of 5 cents per hour, making a total increase of 13 cents per hour, is added to the basic rates making these: repairmen 88 and 92 cents, linemen 85 to 91 cents, operators 74 and 85 cents, helpers 74 to 81 cents, chauffeurs 70 $\frac{1}{2}$ cents, lamp tender 73 cents, line foreman \$48.78 per week. A cost-of-living bonus of 60 cents per week is paid.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain

district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by

a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, page 86. Proceedings under the Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the amendment or extension of period of twelve agreements all of which are noted below. A request for the extension of a new agreement for barbers and hairdressers at Valleyfield was published in the *Quebec Official Gazette*, April 24.

In addition, Orders in Council were published in the *Quebec Official Gazette*, during April, approving or amending the constitution and by-laws of certain parity committees, the levy of assessments by certain other parity committees or amendments to previous Orders in Council in this connection.

Manufacturing: Vegetable Foods

BAKERS AND BAKERY SALESMEN, MONTREAL

An Order in Council, dated April 16, and gazetted April 17, amends the previous Orders in Council for this trade (*L.G. Oct.*, 1939, p. 1064; *Sept.*, 1940, p. 970; *Jan.*, 1941, p. 70, *Feb.*, p. 183; *Jan.*, 1942, p. 110, *March*, p. 352, *April*, p. 483). Regular hours for employees (except salesmen, foremen and inspectors) are reduced from 60 to 57 per week; if regular hours consist of less than 57 hours, minimum weekly wages will still be paid for such hours. Overtime is payable on the basis of the minimum wages for the 57-hour week. Vacation: after one year's service, employees to be entitled to an annual vacation of one week with pay; in smaller bakeries it is permitted instead for the employer to substitute 13 days with pay consisting of one weekday each week in June, July and August if employees consent to this.

Manufacturing: Fur and Leather Products

FINE GLOVE MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated April 3, and gazetted April 10, extends the term of this agreement (*L.G.*, *Apr.*, 1941, p. 472, *July*, p. 854; *Oct.*, p. 1314; *Jan.*, 1942, p. 110; *March*, 1943, p. 340) to May 1, 1943.

WORK GLOVE CUTTERS, PROVINCE OF QUEBEC

An Order in Council, dated April 3, and gazetted April 10, extends the term of this agreement (*L.G.*, *March*, 1940, p. 282; *March*, 1941, p. 333, *Oct.*, p. 1314; *Jan.*, 1943, p. 87, *March*, p. 340) to May 1, 1943.

WORK GLOVE OPERATORS AND BLOCKERS, PROVINCE OF QUEBEC

An Order in Council, dated April 3, and gazetted April 10, extends the term of this agreement (*L.G.*, *Sept.*, 1940, p. 971; *March*, 1941, p. 333, *Oct.*, p. 1314; *Jan.*, 1942, p. 110; *March*, 1943, p. 340) to May 1, 1943.

Manufacturing: Printing and Publishing

LITHOGRAPHIC INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated April 14, and gazetted April 17, extends the term of this agreement (*L.G.*, *Dec.*, 1940, p. 1310; *May*, 1942, p. 631; *Feb.*, 1943, p. 219, *April*, p. 111) to May 1, 1943.

Construction: Buildings and Structures

BUILDING TRADES, MONTREAL

An Order in Council, dated April 14, and gazetted April 17, extends the term of this agreement (*LABOUR GAZETTE*, November, 1942, page 1348, December, page 1490; *April*, 1943, page 490) to July 31, 1943.

BUILDING TRADES, HULL

An Order in Council, dated April 14, and gazetted April 17, amends the previous Orders in Council (*LABOUR GAZETTE*, *July*, 1938, page 798, November, page 1300; *March*, 1939, page 335, October, page 1066, December, page 1280; *February*, 1940, page 172; *March*, 1941, page 334, August, page 1012, December, page 1573; *September*, 1942, page 1097; *March*, 1943, page 341) by providing that when paying wages the employer give to each employee a statement of all the amounts deducted from their wages.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, QUEBEC

An Order in Council, dated April 3, and gazetted April 10, amends the previous Orders in Council for these trades (*LABOUR GAZETTE*, *August*, 1941, page 1013; *May*, 1942, page 631, *August*, page 978) by making a change in the arrangement of hours in one zone.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE

An Order in Council, dated April 14, and gazetted April 17, amends the previous Orders in Council for these trades (*LABOUR GAZETTE*, November, 1941, page 1426; *September*, 1942, page 1098; *April*, 1943, page 490) by making a slight change in the hours.

BARBERS AND HAIRDRESSERS, SHERBROOKE

An Order in Council, dated April 14, and gazetted April 17, amends the previous Orders in Council for these trades (*LABOUR GAZETTE*, October, 1941, page 1315; October, 1942, page 234; *April*, 1943, page 490) by regulating the hours in Danville and Asbestos, allowing 52 hours per week during which barber shops may be open.

BARBERS AND HAIRDRESSERS, ST. JOHN AND IBERVILLE

An Order in Council, dated April 3, and gazetted April 10, amends the previous Orders in Council for these trades (*LABOUR GAZETTE*, December 1, 1941, page 1573; *May*, 1942, page 631) by reducing the hours from 56 to 49 per week.

FUNERAL UNDERTAKERS, MONTREAL

An Order in Council, dated April 16, and gazetted April 24, extends the terms of this agreement (*LABOUR GAZETTE*, *March*, 1942, page 354; *March*, 1943, page 353) to June 26, 1943.

Unemployment Insurance

Unemployment Insurance in Canada

Historical Background of Legislation—Outline of Administration of Unemployment Insurance Act, 1940-1943

THE following article constitutes an historical summary of the background and evolution of unemployment insurance legislation in Canada, culminating in the Unemployment Insurance Act of 1940, which set up the Unemployment Insurance Commission and defined its functions. The article outlines the administration of the Act from the time of its formal passage by the Parliament of Canada in August, 1940, until March 31, 1943.

Included also is a description of the functioning of the Dominion employment service under the Act, with an outline of the administration of National Selective Service wartime measures for the control of employment in Canada through the employment offices.

Other sections of the article, describe the scope and coverage of the Act, and deal with contributions and benefit payable.

I. Background of the Legislation

Provisions by means of which persons involuntarily unemployed would receive aid have been under discussion in Canada at intervals since the first Unemployment Insurance Act was passed in Britain in 1911.

Royal Commission of 1919

In June 1919 the report submitted by a Royal Commission, which had been appointed to investigate industrial conditions in Canada, contained the following recommendation:

"We recommend to your Government the question of making some provision by a system of State Social Insurance for those who through no fault of their own are unable to work, whether the inability arises from lack of opportunity, sickness, invalidity or old age. Such insurance would remove the spectre of fear which now haunts the wage earner and make him a more contented and better citizen."

A bill was introduced in 1926 to implement the recommendation of that Commission regarding old age pensions. This legislation was federal in character but each province had the option of coming within the scheme.

It was generally believed that under the provisions of the British North America Act unemployment insurance came within the jurisdiction of the Provinces. In 1929 and 1930 when the Provinces were consulted relative to the possible introduction of a national scheme of unemployment insurance, various objections were raised by a number of the Provinces.

Unemployment Insurance Bill, 1935

The subject continued to be discussed and in 1935 the Government introduced a measure providing for a national plan of insurance against unemployment. The right of the Federal Government to enact such legislation was challenged and on submission of the act to the Supreme Court of Canada it was declared ultra vires of the Federal Parliament, a decision which was upheld by the Privy Council in London in a decision handed down in 1937.

Further investigations were undertaken by the Government and in 1938 the services of Mr. Christie Tait, International Labour Office expert, were obtained. Mr. Tait favoured federal unemployment insurance legislation as against provincial. Both the National Employment Commission report in 1938 and the Royal Commission on Dominion-Provincial Relations at a later date stressed the decisive advantages which would result from the adoption of a federal scheme. Still a number of the Provinces were reluctant to consent to the introduction of legislation providing for a federal plan of unemployment insurance. Eventually, however, consent was given by each province and an amendment to the British North America Act obtained.

Unemployment Insurance Act, 1940

In July 1940 the Government introduced a draft unemployment insurance bill. A House of Commons Committee considered the bill

in detail and heard representations from employer and employee groups on specific provisions of the legislation. The bill received the approval of the House of Commons and the Senate and became law on

August 7th, 1940—the first piece of social legislation to be enacted in Canada and administered by the Dominion Government. Contributions under the Act commenced on July 1st, 1941.

II. Objectives of the Legislation

The provisions of the Act are intended to apply insurance principles and techniques to the uncertainties of employment, that is to the unemployed days of persons normally in employment. For this purpose insurance may be considered as a means of making provision against future uncertainties through the payment of premiums or contributions for protection.

In such a gigantic undertaking, it is not practicable to adhere to every insurance principle with a high degree of theoretical nicety. Some principles are more imperative, or of more universal validity, than other principles, and in practical everyday affairs may swallow up many lesser principles. Again, many principles which have imperative validity in commercial insurance have a lesser validity, or practically none at all, in social insurance. It is important to recognize the insurance principles which do apply to a particular plan of social insurance, and then ensure that care is taken to adhere to them in a practical fashion.

Employment Service Primary Purpose

The primary function of the Act is to provide an employment service. The fundamental objective is to find suitable employment for every employable person who may desire employment. To the extent that there is failure to reach this objective, the Act makes some provision for unemployed persons by way of insurance benefit.

Unemployment insurance is basically concerned with the unemployed days of persons in employment, and "persons in employment" is to be taken to mean "persons in

their employment environment" in the widest sense of that expression. For insurance purposes it becomes necessary in the first instance to draw the line of demarcation between the persons in their employment environment who are considered appropriate for inclusion in insurance, and the persons in their employment environment who, it is felt, must for practical reasons be excluded. The line of demarcation is not susceptible of scientific or logical definition; it must in large part be determined on the basis of practical expediency rather than of theory. It follows that the "persons in their employment environment" so included will show a considerable heterogeneity in important respects. Consequently a good deal of flexibility in the details of an insurance scheme is necessary if it is to answer reasonably well the needs of the diverse classes of persons included.

It is of no less importance that there should be a clear understanding of the broad lines on which the Act distinguishes between unemployed days which may properly be considered as such for benefit purposes and idle days, that is, days on which the insured person would not in the normal course be available for employment or be in fact employed. All such days must be excluded from consideration for benefit purposes if there is to be adherence to insurance principles.

The rationale of the excepted employments is covered in Section V—The Scope of the Act—and the distinction between idle days and benefit days is made in Section VII—Insurance Benefit.

III. Administration

The Act is administered by a Commission of three. Of these, other than the Chief Commissioner, one is appointed after consultation with organizations representative of workers, and one after consultation with organizations representative of employers. The scheme is in fact a co-operative enterprise between employers and workers under Government supervision and direction, and it is hoped that this co-operation will be extended and will develop to the mutual advantage of workers, employers and the public generally.

The term of office of the Chief Commissioner is ten years and for the others five

years, subject to reappointment, but no Commissioner may continue in office beyond the age of seventy years. The purpose of the five-year period is to make the Commissioners representing workers and employers truly representative.

Powers of Unemployment Insurance Commission

The Commission is a body corporate with power to contract, sue and be sued and to acquire, hold and dispose of personal property, and, with the approval of the Governor in Council, real property. Authority is conferred upon the Commission to make

regulations with respect to specific provisions of the legislation, and generally for carrying the Act into effect.

The Commission functions through an integrated and unified network of Employment Offices which have been established in two hundred and sixteen centres across the country. These Offices replace entirely the Employment Service of Canada which was under provincial jurisdiction and was assisted by a grant from the Federal Treasury.

The Employment Offices are open and available to all employers and all workers whether or not they are covered by insurance, but no compulsion is ordinarily imposed in the use of the Offices. This is modified at present by the National Selective Service Civilian Regulations which require employers to notify vacancies to Local Offices, and employees to register at Local Offices to obtain the permits necessary to enter employment. It is insisted that no person using the Employment Offices shall be discriminated in favour of or against by reason of racial origin, religious beliefs or political affiliations. In addition to their functions as Employment Offices, the Local Offices are also responsible for insurance work; as for example, the issuance of insurance books and the registration of claims for insurance benefit.

For convenience of administration the country has been divided into five Regions—Maritimes, Quebec, Ontario, Prairies and Pacific—with Regional Offices at Moncton, Montreal, Toronto, Winnipeg and Vancouver. The Local Offices within a Region are directed and controlled by the Superintendent in charge of that Region. Regional Superintendents are responsible to the Commission with Head Office in Ottawa.

Unemployment Insurance Advisory Committee

Reference may be made here to the Unemployment Insurance Advisory Committee which the Act provides shall consist of a Chairman and not less than four nor more than six other members. The Committee is required to make a report to the Governor in Council not later than the end of February in

each year on the financial condition of the Unemployment Insurance Fund as of the preceding December 31st.

If the Committee considers that the Fund is likely to be insufficient to discharge its liabilities or is likely to be more than reasonably sufficient to discharge its liabilities, its report is required to contain recommendations for the amendment of the Act or the Regulations.

The Advisory Committee may be directed by the Governor in Council to investigate and report upon the extension of the employments covered by the Act and the adjustment of rates of contribution and benefit for insured persons.

National Employment Committee

Likewise there is a provision that the Commission shall establish a National Employment Committee for the purpose of advising and assisting the Commission in carrying out the purposes of the Employment Service.

In the case of both the Unemployment Insurance Advisory Committee and the National Employment Committee, it is provided that one member at least shall be appointed after consultation with organizations representative of workers and an equal number after consultation with organizations representative of employers.

Selection of Staff

The selection of staff for Head Office, Regional Offices and Local Offices is made by the Civil Service Commission. With a staff of more than four thousand persons, including those engaged in National Selective Service work, it is evident that there is a tremendous task to be accomplished in staff training. Due to the extent of the country many of the Local Offices are widely separated, with the result that personal contact between officers to discuss procedures and techniques is difficult. Much of the staff training work is carried out by Travelling Supervisors visiting the Local Offices, as a supplement to the Manuals of Instruction issued by Head Office on the different phases of Local Office work.

IV. Employment Service

The nature of an employment service is such that its operations are largely local in character, as the Local Office is the point of contact between persons in a particular district seeking employment and employers in that district seeking workers. For this reason the pattern of the Employment Service is set in the Local Offices.

The importance of employer relations in each Office is axiomatic and stress has been

laid in the organization on the very real advantages which accrue to the operation of the Service from the maintenance of thoroughly satisfactory contacts with employers. Likewise guidance has been given to the Local Offices in the interviewing of applicants in an intelligent manner in order to obtain the fullest information on background and experience with a view to assisting applicants to the greatest possible extent, and

making the best selection of applicants for referral to employers.

The Offices are graded according to the population of the centre and the surrounding district in which they are located. Thus the number of staff in the Offices varies from one or two in the smaller centres to more than three hundred in Montreal and in Toronto.

Employment Committees

Establishment of National, Regional and Local Employment Committees with membership representative of employers, employees, veterans, women, agriculture, etc., has proven of real benefit in the operation of the Employment Service. All Committees are advisory. Local Committees, of which there are now 43, advise local managers; Regional Committees perform a similar function for regional superintendents. The National Committee, with supervision over both Local and Regional Committees, is advisory to the Unemployment Insurance Commission and the Director of National Selective Service. As the National Committee receives copies of minutes of all meetings held by Local and Regional Committees, it is constantly informed of National Selective Service and employment problems, and can pass on this information for appropriate action.

The value of such a set-up is obvious. Not only can these Committees assist in reaching solutions for employment and National Selective Service problems, but they can in addition act as interpreters of the public viewpoint for the benefit of the official mind and vice versa as interpreters of the official viewpoint to the public. Being in touch at one and the same time with the public and with the Offices they can see both sides and advise accordingly. This is particularly important in a country like Canada where there is great variety of occupation and activity.

In each Regional Office there are a number of Employment Advisors who are concerned with employment problems within the Region, such as assessing labour requirements and the possibilities of supply, and the best use which can be made in the employment of persons with specialized skills and trades, and of women.

National Selective Service Regulations

The introduction in March 1942, of the first regulations controlling employment, the administration being through the Employment Offices, reflected the growing need to direct the flow of labour to industries providing goods and service essential for the prosecution of the war.

These first regulations restricted the entry of physically fit male persons aged seventeen to forty-five into specified occupations without the written permission of a National Selective Service Officer, who is in practice a Local Office official. Similarly, persons engaged in agriculture could not undertake employment outside of agriculture, other than seasonal employment in certain primary industries, without such permit.

The scope of the regulations controlling employment was greatly extended in June, 1942, by providing that, except in agriculture and certain other specified employments, no employer could take any person into employment unless he had received a permit from a National Selective Service Officer.

The third stage of this development was reached in September, 1942, when advertising was brought under control, compulsory notices of separation from employment instituted, and applicants were required to appear personally at the offices in order to secure their permits.

The administration of the National Selective Service Regulations naturally has greatly increased the volume of work passing through the Local Offices, and, by making the use of the Employment Offices compulsory, has changed the arrangement contemplated when the Unemployment Insurance Act was passed.

Co-operation with other Government Agencies

The organization is working closely with the Wartime Bureau of Technical Personnel which has registered all members of the engineering and scientific professions. The regulations regarding control of employment for technical persons are handled exclusively by this Bureau.

The Local Offices are in close association with the Mobilization Boards for the Armed Forces and every effort is made to dovetail the requirements of the Forces and industry in general to the end that each person may be used where he will be of most value. The Local Offices are now acting as information centres for women who wish to serve in the Armed Forces and thereby relieve men for active service.

Control of Employment

A schedule of labour priorities has been established in which whole industries and selected firms have been classified as having very high, high, low or no labour priority. This, together with the requirement that employers shall not interview or engage an employee (unless the occupation in which he is engaged is specifically excepted) without a permit to seek employment, and the

limiting of the issuance of these permits by Local Office officials designated as National Selective Service Officers, has made it possible to direct labour into essential undertakings.

Employers are required to give their employees seven days' notice of separation from employment, and employees are required to serve the same notice of their intention to separate, with certain exceptions; for example, employees engaged on building construction work, or persons employed by an employer for less than a month, etc. This has tended to reduce labour turnover and at the same time has given employers an opportunity to replace workers who are leaving.

This control of employment has made it possible, for example, to utilize agricultural workers in industries of high priority during the winter months when farm work is at a low ebb. Fishermen and farmers have been directed into mines to ease the real shortage of labour there and a campaign has been conducted to encourage farmers to engage in logging this past winter. This feature of inducing workers to engage in particular types of work is one that is not ordinarily found in the Employment Service, but in time of war it has made it possible to utilize the available labour supply to the best possible advantage.

Provision has been made whereby no person may leave Canada with the intention of seeking and entering employment outside the country unless he obtains a Labour Exit permit. The issuance of these permits has been restricted in order that persons whose services are required in the furtherance of the war effort might be retained in this country.

Recruitment of Labour Through Clearance

Another phase of the work of the Employment Service which has felt the impact of wartime requirements is the recruitment of labour from other areas through clearance. While the clearance of labour at any time is of vital

significance, in wartime it is absolutely essential to so distribute labour across the country that maximum production for war may be reached and maintained. For convenience in clearance and labour transfers, the Local Offices are grouped together to form zones of first clearance. Offices constituting a zone of first clearance keep in close correspondence in order that each may be aware of any pending employment changes in the zone of another, to facilitate the clearance of labour. If the required workers are not secured within the zone of first clearance, the Local Office is then required to notify the Regional Office. Action at the Regional Office may be to communicate with particular Local Offices in the region where it is known workers of the type required may be available, or contact all Offices within the Region. If the requirements cannot be met within the Region, the Regional Office may notify Head Office that Inter-Regional clearance is necessary, subject in all cases to the employer's approval. Local Offices have been instructed to give particular attention to Inter-Regional clearance orders.

Some of the transfers of labour which have been arranged are of particular interest. Workers have been obtained from as far east as Quebec for work on the Prince Rupert-Terrace-Quebec highway in B. C. and from as far west as Saskatchewan to meet the urgent needs of H. M. Dockyards at Halifax. Men have been recruited for projects in Labrador and Newfoundland, and from the gold mining area around Kirkland Lake and Timmins have come many of the much-needed workers to increase the production of nickel.

Thus the Employment Service continues in its task of supplying labour requirements in this time of emergency. It is confidently expected that when the controls are relaxed somewhat the experience which has been gained in times of stress will prove of inestimable value when it is necessary to distribute the labour force in the way most suitable for a peacetime economy.

V. Scope of the Act

In broad outline the provisions of the Act apply to all persons employed in Canada under a contract of service unless their employment is specifically excepted. The reasons for the exclusion of certain industries and occupations are considered in the following paragraphs.

It will have been evident from the section on Administration that at the foundation of the administration are the employment offices and the inspection services. Employment Offices are the places where employers will most readily obtain satisfactory workers of

certain classes; the places where certain classes of workers, whether insured or not, will have the best chance of obtaining suitable employment. When unemployed, insured persons must register and keep in touch with the Employment Office as evidence of continued unemployment and availability for work, and so that they may avail themselves of any opportunities for work. For some excepted persons who work for wages or salary, as for example, teachers, civil servants, police, etc., Employment Offices may be of little value in

securing employment, and that fact is reason enough for thinking that insurance is not particularly appropriate for persons so employed; but that is not the only reason. For any class of insurance, whether commercial or social, inspection is essential. For unemployment insurance, continuous and effective inspection is necessary to establish (1) that persons contributing are in fact in insurable employment; (2) that employers are making contributions for all insurable persons; and (3) that persons claiming to be unemployed are in fact unemployed. For practical reasons there are limits to the area which can be served by Employment Offices, and there are limits to the inspection which can be done with efficiency.

Excepted Employments

In the Act, some excepted employments are defined by reference to an industry as a whole, for example, agriculture, fishing, lumbering and logging, hunting and trapping, and transportation by water and air. These industries are usually carried on in such places or under such circumstances as to make sound inspection difficult if not impossible. Certain professional persons are also excluded, such as teachers and nurses, as are employments connected with Government; for example, employment by the Government of any Province unless the Province consents to insure, employment by the Government of Canada and by municipal authorities if the employment is certified to the satisfaction of the Commission to be permanent in character. Other miscellaneous exceptions include domestic service other than in a club or in a business carried on for gain, employment in a hospital or charitable institution not carried on for the purpose of gain, casual employment other than for an employer's trade or business, and persons engaged in professional sport. From the above comments it will be clear the employment to be insurable must be employment under a contract of service and that persons who are "self employed" must be excluded.

It will be seen that the main exceptions exclude certain industries as a whole. The remaining excepted employments are outside industry. Thus, generally speaking, an industry is either wholly within or wholly outside the insurance scheme of the Act. Obviously it would give rise to most serious practical difficulties if an attempt were made to cut across an industry for insurance purposes, insuring some persons employed therein and excluding others.

Generally speaking, those earning high fixed salaries are also fairly independent of the expansions and contractions in industry, whether

seasonal or not. Those earning very high salaries have virtually passed into the employer class; their interests and outlook are of that class although they are technically still wage-earners. Furthermore, the rate of benefit must for several reasons be kept so low that it is not likely to be very useful or attractive to a person of really high salary if he should be unemployed.

Wage "Ceiling"

The present wage ceiling stands at \$2,000 a year. However, in order to afford protection to persons whose earnings exceed this wage ceiling by reason of an increase in earnings due to the war—for example, a cost of living bonus, increased hours or overtime, increase in basic wage rates—an Order in Council was passed on January 7, 1942, providing that where earnings exceed \$2,000 for one or other of the reasons enumerated, the employment continues insurable under the Act.

Representations have been made by a number of groups urging an increase in the wage ceiling. This question has been before the Advisory Committee and a recommendation has been made which, if implemented, will result in a considerable number of persons being insured who are by reason of their earnings at present outside the scope of the Act. Investigations have also been made into the feasibility of extending insurance to employment in stevedoring and in lumbering and logging. These reports have both been placed before the Advisory Committee.

Removal of Anomalies

The Commission is empowered to remove anomalies resulting from the condition of employment of a class of persons insured under the Act being so similar to the terms and conditions of service of a class of persons excepted from the Act, by providing by regulation for the inclusion of the class of persons employed in excepted employment within the insurable classes, or the exception of the class of persons employed in insurable employment.

The Commission has taken action under this provision in the case of miners who work under conditions where, owing to the fluctuation in earnings resulting from methods of payment, it was extremely difficult to estimate annual remuneration with any degree of certainty, making some miners insurable whereas others were excepted. The regulation, which became effective on February 16, 1943, provides for the inclusion within the insurable classes of persons employed in a mine, regardless of total earnings, unless they are paid on a fixed salary basis exceeding in value \$2,000 a year.

An anomalous situation also existed in the case of life insurance salesmen, resulting from those salesmen employed under a contract of service being insured, subject to their earnings not being in excess of the ceiling, whereas others not clearly employed under a contract of service were excepted. By a regulation which became effective on November 21, 1942, the Commission provided for the exception of all life insurance agents.

Determination of Questions

Inquiries as to whether or not a particular employment is insurable are handled in the first instance by the Local Office where they are received. If the case falls clearly within those covered by written instructions, the Local Office may express an opinion on the case.

Any doubtful cases are referred to the Regional Office and if there is a new principle involved the question is referred to Head Office. On the basis of the information available Head Office expresses an opinion as to the application of the Act. If either of the parties concerned is not satisfied with the opinion expressed, the necessary formalities are completed and the case referred to the Commission for a decision under Section 46 of the Act. Any person aggrieved by a decision of the Commission may appeal to the Umpire who is appointed by the Governor in Council from amongst the Judges of the Exchequer Court of Canada and of the Superior Courts of the Provinces of Canada. Provision is also made whereby the Commission may refer any question direct to the Umpire for decision.

VI. Contributions

One of the important principles in social insurance is that there must be an intimate connecting link between the scheme of benefit and the scheme of contributions. It is likewise important that the scale of benefit should meet reasonably well the needs of the insured persons, and contribution rates be determined with a view to financing soundly the scale of benefit considered adequate.

Contribution Techniques

Consideration was given before the Canadian Act became effective to the question of collecting contributions as a direct percentage of wages through an employer wage-reporting system. Bearing in mind the principles enunciated, it may be of interest here to note some of the reasons for the rejection of such a method of collecting contributions in favour of the stamp plan.

(1) Collection of contributions as a percentage of wages would make impossible preferential grading of contributions in favour of the low wage earner, while still retaining the direct insurance relationship between contributions and benefit.

(2) In Canada there is a ratio rule for the duration of benefit requiring a five-year contribution history, and this would hardly be feasible on any wage-reporting system.

(3) To make deductions from the earnings of each individual practical for accounting purposes, percentages must necessarily be in round figures and certainly not at finer intervals than one-half of one per cent. Under a scheme where both employers and employees contributed, this meant that the contributions would have had to be either two per

cent, three per cent or four per cent. Actuarial calculations demonstrated that for the schedule of benefit in the Act, two per cent was insufficient, and three per cent and four per cent oversufficient.

(4) Non-compliance in any wage-reporting scheme has always proved to be high, particularly in industries where there is a heavy turnover. It is almost impossible to extract adequate wage reports from the small employers, thereby limiting coverage.

(5) Wage-reporting makes almost impossible any system of contributions and benefit related directly to exact days of employment and unemployment, which system is the solution to the partial unemployment problem.

(6) The stamp system would probably prove impractical under any percentage system of contribution, unless stamps were issued in a sufficient number of denominations (like currency) to make it possible to arrive at an exact amount.

(7) The stamp system has been found to have specific advantages of its own. In Britain it has made it possible to extend coverage to agriculture and domestic service, and other employments which present difficult administrative problems.

(8) The stamp system makes possible fine adjustments in the contribution table. A one-cent adjustment, for instance, might represent two per cent of a total contribution, whereas a one per cent adjustment in any percentage scheme of deduction would have to be at something like 33 per cent intervals. Under the Canadian scheme, the amount of benefit is a direct multiple of the

employee's contribution—34 or 40 times respectively for a single person or a person with a dependent. A change of one in the multiplying factor would represent only a three per cent change in the rate.

(9) A stamp—adhesive or metered—is direct evidence of payment of a joint employer-employee contribution and, at the same time, by its position in an insurance book, indicates a complete employment history. For large employers generally equipped with mechanical payroll systems, a special bulk payment technique has been devised whereby the employer remits the total amount of the contributions due every month, and records contributions on individual ledger cards for insertion in the insurance book.

The Canadian plan provides for a unified and completely integrated scheme of contributions and benefit based on earnings classes. The contributions of employers and insured persons are equal in the aggregate and the Dominion Government is required to contribute an amount equal to one-fifth of the amount jointly contributed by employers and insured persons. In addition the Government is required to pay the expenses of administration.

The schedule of contributions is as follows:

SCHEDULE OF CONTRIBUTIONS

Reference Number for Class	Class of Employed Persons	WEEKLY RATE	
		Employer	Employed Person
0	While earning less than 90 cents a day or While under 16 years of age.	18 cents	9 cents (paid on his behalf by the employer).
1	Earning \$5.40 but less than \$7.50 in a week	21 cents	12 cents
2	Earning \$7.50 but less than \$9.60 in a week	25 cents	15 cents
3	Earning \$9.60 but less than \$12.00 in a week	25 cents	18 cents
4	Earning \$12.00 but less than \$15.00 in a week	25 cents	21 cents
5	Earning \$15.00 but less than \$20.00 in a week	27 cents	24 cents
6	Earning \$20.00 but less than \$26.00 in a week	27 cents	30 cents
7	Earning \$26.00 but less than \$38.50 in a week or \$2,000 a year	27 cents	36 cents

Payment of Contributions

The contributions of both the employer and of the employed person are paid in the first instance by the employer by affixing a special stamp in the insurance book of the employed person in the space provided for the particular week. For employment of less than a full week, one-sixth of a weekly stamp is required for each day on which work is done. The rate of contribution is based on gross earnings. The employer may deduct the insured person's share of the total contribution from his remuneration except in those cases where the earnings of the insured

person are less than an average of ninety cents a day, where he is under sixteen years of age, or the insured person does not receive any pecuniary remuneration. In these cases the employer is required to pay the insured person's share of the contribution as well as his own.

Examination of a considerable number of insurance books at the time of renewal on March 31st, 1942 and 1943, has shown that with few exceptions the insurance books have been carefully stamped. The issuance of stamps representing the contributions due on earnings in Classes 5, 6 and 7 where wages are paid on a semi-monthly basis has facilitated the stamping of insurance books for the large number of employers with monthly or semi-monthly paydays.

There is provision for one contribution only each day in respect of an insured person, and normally the contribution is payable by the first employer of the day. Provision is made by regulation, however, whereby a joint arrangement may be entered into between two or more employers employing an insured person on the same day, resulting in contributions being made in respect of the combined earnings payable to the insured person. The Commission may require an employer other than the first employer of the day to make contributions in respect of an employee,

if a joint arrangement, as outlined above, is not made.

Contribution Records

After the end of each insurance year (March 31st) the contributions recorded in an insurance book are transferred onto a ledger card, showing for each week the number of days for which contributions have been paid and the amount of the employee's share. These ledger cards are the basis for determining the rate and duration of benefit at such time as an insured person files a claim.

Statistics available at this date indicate that there are 167,529 employers registered under the Act as having one or more insurable employees. The number of persons who have contributed at least for some period since the Act became effective on July 1st, 1941, is approximately three million.

Insurance Revenue Inspectors

The field of work of Inspectors of Insurance Revenue was originally conducted as a check-up of employer registrations and did not extend to the making of a complete examination of unemployment insurance records. The functions of the Inspectors in the early months of operation were more along educa-

tional lines than inspectional and it was not until March 1st, 1942, that complete audits were conducted. In the thirteen months ending March 31st, 1943, there were 35,759 inspections completed and 23,673 investigations of complaints, non-registration, etc. 94.8 per cent of the amount of assessments established to March 31, 1943, has been paid and 34.4 per cent of the balance outstanding represents assessments less than thirty days old.

The experience of nearly two years in the collection of contributions by means of stamps or meter impressions has confirmed the views of those who held that this method of collecting contributions for social insurance has sound advantages.

VII. Insurance Benefit

Unemployment insurance benefit is payable as a right to any insured person who fulfils the prescribed conditions. There is no upper age limit and the receipt of a pension or income other than from employment does not affect entitlement to benefit. To qualify for benefit the insured person must comply with four statutory conditions. Stated briefly, these are as follows:

- (i) The insured person must have made contributions for at least one hundred and eighty days while in insurable employment during the two years immediately preceding his claim for benefit;
- (ii) He must apply for benefit in the prescribed manner and prove unemployment;
- (iii) He must prove that he is capable of and available for work and unable to find suitable employment;
- (iv) He must prove that he duly attended, or that he had good cause for not attending, any course of instruction or training approved by the Commission which he may have been directed to attend by the Commission for the purpose of becoming or keeping fit for entry into or return to employment.

The first statutory condition limits the period within which the minimum qualifying contributions must be paid to two years preceding a claim for benefit, but if during a period within these two years the insured person was incapacitated for work by disease or injury, or was employed in an excepted employment, or was engaged in business on his own account, the two years may be extended to a period not exceeding four years. It is manifestly fair that an insured person should not lose his insurance status by reason of illness or injury, and it is undesirable that

freedom to engage in excepted employment or in business on his own account should be inhibited through the possibility of loss of status under insurance. The date on which an insured person first makes application for benefit and proves that he has contributed for one hundred and eighty days during the preceding two years fixes the date of commencement of his first Benefit Year. The date of commencement of any subsequent Benefit Year is determined in the same manner except that a further condition must be complied with, namely that the insured person has paid contributions for at least sixty days subsequent to the last day for which he received benefit in his preceding Benefit Year. Compliance with this requirement establishes that the insured person who has exhausted his benefit rights in any Benefit Year has thereafter continued in insurable employment.

Disqualifications for Benefit

There are certain disqualifications for the receipt of benefit. These are as follows:

(1) Loss of employment through a labour dispute at the place of work of the insured person. This disqualification does not apply if the insured person proves that he is the innocent victim of the labour dispute. Also, if he becomes bona fide employed elsewhere during the currency of the dispute and later becomes unemployed, such unemployment will be valid for benefit purposes even during the currency of the dispute at his former place of work. The disqualification for loss of employment through a labour dispute continues for the duration of the stoppage of work.

(2) If an officer of the Commission proves that the insured person has refused suitable employment or failed to do what

he reasonably should have done to obtain such employment or follow out the written instructions of an Employment Office with a view to his obtaining suitable employment. The disqualification in this case is for a period not exceeding six weeks.

(3) In case of discharge for misconduct or voluntarily leaving employment without just cause, but discharge by reason of membership in or for lawful activity in a labour organization is not deemed to be misconduct. Any disqualification is for a period not exceeding six weeks.

(4) While under sixteen years of age.

(5) While an inmate of a prison or public institution.

(6) If more than half the number of contributions made on his behalf during the year preceding his claim for benefit are in Class O, resulting from earnings being less than ninety cents a day or the employee being under sixteen years of age.

Claims for insurance benefit (which include registration for employment) are filed at local Employment Offices either by personal call or, if the applicant lives some distance from the office, by mail. The verification of the reasons for separation from employment and the completion of the application for dependency benefit are also handled at the Local Office. Details of the contributions recorded in the current insurance book are noted at the time the claim is made.

Functions of Insurance Officers

The Act authorizes Insurance Officers (specially designated by the Commission for the purpose) to examine all claims for benefit. Insurance Officers are located at present in each of the five Regional Offices and in four District Insurance Offices.

An Insurance Officer may allow any claim for benefit and there is no appeal from his decision to allow a claim. If the Insurance Officer does not consider that he can allow a claim, he advises the applicant of the reason the claim is not allowable.

Within twenty-one days of the receipt of information from the Insurance Officer that he has not allowed a claim, the applicant may appeal to the Court of Referees. The Insurance Officer may refer a claim direct to the Court of Referees for decision also.

Courts of Referees and Umpire

A Court of Referees normally consists of three persons, one member selected from a

panel of employers' representatives, one member selected from a panel representative of insured persons, and a Chairman appointed by the Governor in Council. The members of panels representative of employers and insured persons are chosen by the Commission after consultation with employer and employee organizations. Courts of Referees are empowered to give decisions on all claims for benefit referred to them by Insurance Officers and appeals by claimants. An appeal may be made from a decision of a Court of Referees to the Umpire appointed under the Act; by the claimant if the decision of the Court is not unanimous; with the leave of the Chairman of the Court in other cases; by an Insurance Officer; or by an association of employed persons of which the claimant is a member, in any case. The decision of the Umpire on an appeal from a Court of Referees is final.

Duration of Benefit—Ratio Rule

The benefit rights of an insured person are determined as of the commencement of the Benefit Year and are not affected either by his subsequent employment or his claim experience in that year. His benefit rights in any Benefit Year are determined by what is known as the ratio rule; that is, benefit for one day for every five days' contributions paid by him in the preceding five years, less one day for every three days' benefit paid to him in the preceding three years. Quite apart from the obvious advantages to the worker at all times to seek employment, under this benefit formula there is an added inducement in that every day's work in insurable employment adds something to his benefit rights for the future when he may need protection. There is too, a suggestion to the insured person that it is to his advantage to conserve and not to squander his benefit rights. The insured person with five full years' work to his credit will be entitled to unemployment benefit for a full year if unemployed so long.

The weekly rate of benefit of an insured person is thirty-four times the average contribution he has made as an employee in the previous two years, or forty times if he is claiming for a dependent wholly or mainly maintained by him.

The following table shows the rates of benefit where contributions paid in respect of an insured person during the two years immediately preceding his claim are all in the same contribution class. The daily rate of benefit is one-sixth of the weekly rate.

WEEKLY RATE OF BENEFIT

Class	Single Person	Person with Dependent
	\$ cts.	\$ cts.
1.....	4.08	4.80
2.....	5.10	6.00
3.....	6.12	7.20
4.....	7.14	8.40
5.....	8.16	9.60
6.....	10.20	12.00
7.....	12.24	14.40

Advantages of Graded Benefit Rates

A number of advantages result from the grading of insurance benefit. Grading adjusts benefit to the normal standard of living of the insured person as the benefit rates are in direct ratio to wages while in employment, the ratio varying with each contribution class. The benefit rates of lower paid claimants are in a higher ratio than the rates of those contributing in the higher classes. The grading of benefit makes automatic provision for differences in the cost of living between large cities and small towns, and between one part of the country and another. In Canada this consideration is most important as variations in wage rates between one part of the country and another are very great. Were a flat rate of benefit provided there would be a real danger of over-insurance with the consequent possibility of malingering. The intensity of the desire of the individual to get work is one of the most important factors in his getting work.

Another adjustment which is made automatically—although here a slight time lag is inevitable—is the provision for fluctuations in the value of money, and consequently for fluctuations in the cost of living from time to time. As benefit rates are a multiple of the *average* contributions paid by a worker during the two years preceding his claim for benefit, and as contributions in turn are related to wages, a serious fall in the purchasing value of money may be expected to be followed by a rise in benefit rates. Benefit rates, therefore, will not require incessant amendment. This advantage is particularly pertinent in the fluctuations which may be expected after the war.

Non-Compensable Days

While the benefit formula gives the number of days for which benefit may be drawn in a benefit year, some days of unemployment do not count as benefit days. It would be very costly and unnecessary to undertake to pay benefit for every day of unemployment, for

there are many occasional days or other short periods of unemployment which, if not too frequent, do not constitute a serious burden on the worker. With a view to using the available funds to serve the greatest general good, unemployment insurance schemes in general attempt to exclude such periods.

In Canada, the first nine days of unemployment in a benefit year constitute a waiting period and do not count for benefit purposes. Apart from the considerations outlined above, it is convenient for administrative purposes to have such a period before payment of benefit begins.

Subject to one exception, the first day of unemployment in a week of broken employment does not count as a benefit day. In some employments, for example that of dock workers, a full week of employment may be normally the exception rather than the rule, and if benefit were paid for all unemployed days the Fund would be used to pay benefit which should be provided for in regular wage rates. Dropping the first day of unemployment in any week means that a person who loses one day in the week gets no benefit for that day; for two days of unemployment he gets benefit for one day; for three days he gets benefit for two, and so on. If, however, he should be unemployed for the full week, the Act provides that he shall get benefit for six days. By this means the Fund will not be needlessly used to bolster up industries in which it is normal for employment to be broken to a large extent.

Due to the greatly increased industrial activity resulting from the war, only 38,147 initial claims had been filed to March 31st, 1943. The insured population is, therefore building up potential benefit rights which will be of the greatest value in the period of adjustment in industry which will follow on the cessation of hostilities.

Reciprocal Agreement with the United States

On April 12th, 1942, the Governments of Canada and of the United States entered into an agreement by an exchange of notes to provide for the preservation of benefit rights of insured persons who had changed their place of residence from the one country to the other. The forty-eight States, the Territories of Alaska and Hawaii and the District of Columbia were already co-operating in an interstate scheme for this purpose, under the supervision of the Federal Social Security Board at Washington. The agreement with Canada had the effect of bringing in Canada as an additional co-operating agency for unemployment insurance claims purposes, on a

basis of reciprocal relations with each of the fifty-one agencies that were already enjoying such relations with each other.

Under this reciprocal scheme the unemployment insurance agency of any jurisdiction (a jurisdiction is defined as any State or Canada) may perform services for the agency of any other jurisdiction in the taking and developing of any claim for benefit by an individual absent from such latter jurisdiction and desirous of claiming benefit under the unemployment insurance law of such jurisdiction. An American living in Canada, for example, may have built up benefit credits in previous years in the State of New York. On becoming unemployed he may file a claim with a local office in Canada. The local office, if it cannot find employment for him, will first take his claim for any benefit to which

he may be entitled under the Canadian Unemployment Insurance Act. After this is exhausted, it will transmit his claim to the unemployment compensation authority of the State of New York, where the claim will be adjudicated. The reverse procedure will take place if a Canadian files a claim at any American local office.

This arrangement provides not only that benefit rights are not lost by an insured person's removal from one country to the other, but that duplication of benefit payments for the same period of unemployment is avoided, as no benefit is payable by another jurisdiction until the claimant's benefit rights, if any, under the law of the jurisdiction in which he files his claim have been exhausted or otherwise terminated.

VIII. Insurance Fund

As at March 31st, 1943, the Insurance Fund showed the following position:

Employer & Employee		Benefit Payments	\$ 743,810.68
Contributions	\$ 93,871,960.55		
Gov't. Contribution	18,774,392.11		
Interest	1,861,625.09	Balance	113,764,167.07
	<u>\$114,507,977.75</u>		<u>\$114,507,977.75</u>

Recent Activities of the Unemployment Insurance Commission

FARM LABOUR problems and steps which are being taken to solve them were reviewed by the National Employment Committee at its regular monthly meeting in Ottawa on Monday, May 10. The committee, established under the Unemployment Insurance Act, is advisory to the Unemployment Insurance Commission and the Director of National Selective Service. The Acting Chairman is Commissioner R. J. Tallon, of the Unemployment Insurance Commission, and its membership is representative of employers, employees, women, welfare organizations, veterans, the retail trade, and agriculture. The agricultural representative, R. J. Scott, of Belgrave, Ontario, nominated recently by the Canadian Federation of Agriculture attended for the first time.

The meeting was attended also by H. R. Hare, Employment Adviser for Agriculture to the Unemployment Insurance Commission, and G. V. Haythorne, of the Labour Supply Branch of the Department of Labour, both of whom have been actively engaged in the organization of Dominion-Provincial commit-

tees designed to assist in the organization and distribution of farm labour. Mr. Haythorne and Mr. Hare gave the committee a resume of what has been accomplished thus far in the organization work (*see* page 568) as well as some idea of what is planned for the future.

Mr. Hare said that while Selective Service Offices were located in nearly all centres of any size, it had been deemed advisable to organize agricultural committees in each community which would be immediately available to the farmers. Advantage had been taken of the agricultural extension service of the provinces in organizing these committees which would be used partially to spread farm labour where it would be most productive.

Mr. Haythorne said he thought that these committees, of which there were now more than 800 in the Province of Quebec, would see that labour and machinery for the farm were used to the best advantage. All local committees were voluntary.

Members of the National Committee brought up the question of adequate harvest labour for Western Canada this fall and the

desirability of seeing that it was properly organized in good time so that unsatisfactory features associated with last year's movement from the East to the West would not be repeated.

The question of obtaining gasoline supplies for urban dwellers who were willing to go out and work on the farms was also discussed.

The Committee will make recommendations in respect to some of the matters discussed.

One suggestion made was that industry should be approached to arrange holidays for workers at such times as men would be usefully employed on the farms. A survey of harvest requirements in Western Canada and accommodation available for harvest workers should be made.

The Committee was advised that the holding of "open meetings" in the National Selective Service Offices, at which business men were given a demonstration of the operation of National Selective Service, had proven successful in a number of places. These open meetings are being encouraged in order to familiarize the public with National Selective Service activities. (L.G., April, 1943, p. 497).

Another meeting of the Committee will be held about the middle of June.

Insurance Registration

Reports from Local Offices of the Unemployment Insurance Commission showed that at May 1, 1943, 168,833 employers establishments and 3,939,578 persons were registered. Of the persons registered 3,074,235 were insurable and 865,343 were uninsurable.

The insurable group consisted of insurable employees of registered firms and unemployed persons whose last employment was insurable. The other group of persons registered included employees of registered firms not coming within the coverage of the Act, and partners and proprietors of these firms. Also forming a part of this group were persons unemployed at date of registration whose last employment was uninsurable and women between the ages of twenty and twenty-four not engaged in insurable employment at the time of the recent registration.

Claims for Benefit

The amount paid in claims for unemployment insurance benefit during the period February 1, 1942, to March 31, 1943, was \$743,810.68. In this period 37,796 claims were received for adjudication at the nine offices of the Commission, of which 29,266 claims were allowed, 7,499 claims were not allowed, with 1,031 claims pending.

An analysis of the 7,499 claims not allowed by insurance officers reveals the following reasons for non-allowance: 2,551 claims under Section 28 (i) in which 2,550 had insufficient contributions and 1 was not in insurable employment; 229 claims under Section 28 (ii) in which 145 applications were not made in the prescribed manner, and 84 of the claimants were not unemployed; 146 claims under Section 28 (iii) in which 93 claimants were not capable of work and 53 were not available for work; 149 claims under Section 43 (a) for loss of work due to labour disputes; 53 claims under Section 43 (b) (i) for refusal of an offer of work; 59 claims under Section 43 (b) (ii) for neglect of opportunity to work; 1 claim under Section 43 (b) (iii) for failure to carry out written directions; 4,243 claims under Section 43 (c) in which 775 were discharged due to their own misconduct, and 3,468 were disqualified for voluntarily leaving without just cause; 6 under Section 43 (d) for being under 16 years of age; 2 under Section 43 (e) for being inmates of prisons, etc.; 60 under Section 43 (f), 59 of which were in class "O" contributions, and 1 for other reasons.

Appeals and References

During the period from February 1, 1942, to March 31, 1943, there were 684 references and 54 appeals made by claimants to Courts of Referees. In addition there were 126 references by insurance officers to Courts of Referees. Of the 864 references and appeals, 687 were heard, 110 have not yet been heard, and 67 were withdrawn. The Courts of Referees disallowed 454 claims and allowed 233.

PROGRESS OF REGISTRATION AT APRIL 1, 1943

Total for Canada	168,833	3,074,235	865,343	3,939,578

Appeals to Umpire

Fifteen claimants have sought permission from the Chairman of the Courts of Referees to appeal to the Umpire under Section 58 (c) (ii). Eleven requests to appeal were re-

fused and 1 was granted. In addition, 3 other appeals were made by a claimant or association on behalf of the claimant. Of the four appeals reaching the Umpire, 2 have been heard and disallowed, and 2 have not yet been heard.

Employment and Unemployment

Summary

IN the Employment and Unemployment section of the *LABOUR GAZETTE*, information regarding the employment situation in Canada is based upon reports from the following sources:

The employment situation at the beginning of March, as reported by employers.

—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the *trend* of employment in Canada over a period of years.

This month's article shows a reversal of the seasonal downward trend in employment which set in during December and was first noted in the figures for January 1. The 13,532 establishments co-operating in the latest survey reported a combined working force of 1,818,942 men and women at March 1, as compared with 1,816,505 the month previous. This represented an increase during the month of 2,437 persons.

The index number of employment (based on the average for the calendar year 1926 as 100) rose to 181.5 at the date under review, as compared with 181.2 at February 1. A year previously, at March 1, 1942, the index had stood at 165.1. In spite of the increase, the index was still below the maximum of 186.5 which had been reached at December 1, 1942. At the outbreak of war, the index stood at 119.6.

The same employers also submit each month information regarding payrolls, which is incorporated in this article.

The per capita average wage in the Canadian industries submitting returns rose from \$29.96 a week in the last report to \$30.70 at March 1, 1943. The figure for March 1, 1942, had been \$27.92.

Employment conditions at the end of April as reported by Employment and Selective Service Offices.—Reports from the

Employment and Selective Service Offices of the Unemployment Insurance Commission give a brief survey of the employment situation at the end of April. These reports describe employment conditions in the Maritimes, Quebec, Ontario, the Prairie Provinces, and British Columbia.

Applications for employment, vacancies, and placements, March.—From the Em-

ployment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

Reports of the Employment and Selective Service Offices during the five week period February 26th to April 1st, 1943, showed an increase of over 35 per cent in the average daily placements as compared with those of the four week period ending February 25th, and a gain of 488 per cent in comparison with the records covering the month of March, 1942. Advances in placements over the period January 29th to February 25th, 1943 were noted in all industries except logging and mining, the most pronounced gain being in manufacturing. When a comparison was made with the month of March, 1942, all industries showed an increase in placements, the greatest being in manufacturing with substantial additions in services, construction and transportation. The marked increase over last year was due to National Selective Service Regulations under which employers seeking workers, and persons desiring employment, must notify Employment and Selective Service Offices. Vacancies during the five weeks numbered 274,651. There were 252,039 applications for employment and 177,114 placements were effected in regular and casual employment.

Unemployment in Trade Unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

At the beginning of April, 1943, the percentage of unemployment among trade union

members was 1.3 as compared with percentages of 1.5 in March and 4.5 in April a year ago. The April percentage was based on returns compiled from 2,249 labour organizations with a total membership of 411,662 persons.

It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

The Employment Situation at the Beginning of March, 1943, as Reported by Employers

THE trend of employment in the Dominion as a whole was slightly upward at March 1, in accordance with the movement indicated in 12 of the 22 earlier years for which statistics are available. The 13,532 establishments co-operating in the Dominion Bureau of Statistics' latest survey of employment and payrolls reported a combined working force of 1,818,942 men and women, as compared with 1,816,505 at February 1; the weekly salaries and wages paid at the date under review amounted to \$55,835,282, exceeding by \$1,421,324, or 2.6 per cent the aggregate disbursed at the beginning of February.

The increase of 2,437 employees, or 0.1 per cent, at March 1 slightly raised the index of employment, on the 1926 base, from 181.2 at February 1, to 181.5 at the date under review, as compared with 165.1 at March 1 of last year. The gain was somewhat larger than the average at the beginning of March in the period upon whose experience the seasonal adjustment factors are based; accordingly, the seasonably-corrected figure showed a small advance, rising from 188.2 at February 1, to 189.1 at March 1.

The average weekly earnings of the persons in recorded employment increased from \$29.96 paid on or about February 1, to \$30.70 at March 1, 1943, as compared with \$27.92 at March 1, 1942. In the period since then, the index of employment has risen by 9.9 per cent, and the index of aggregate payrolls, by 20.0 per cent. The pay envelope of the typical employee of the co-operating firms has advanced by ten per cent.

Further expansion was reported in employment in factories at March 1, this, like that indicated at February 1, was rather below-normal for the time of year, but nevertheless raised the crude index to a new maximum. The seasonally-adjusted index, however, again showed a decline. A substantial proportion of the latest gain was reported in iron and steel plants. Lumber mills and electrical apparatus factories also showed considerably more activity. The largest losses in manufacturing at March 1 took place in chemical and clay, glass and stone works.

Among the non-manufacturing classes, logging, communications, construction and maintenance and trade reported seasonal curtailment, which was generally of less-than-average proportions, except in trade. There was improvement in services, mining and transportation, that in the first two being relatively slight, while transportation showed a gain on a rather larger scale. The increase in the latter and in mining were contra-seasonal in character.

Payrolls

The weekly payrolls reported at March 1 by the firms furnishing statistics aggregated \$55,835,282, as compared with \$54,413,958 distributed on or about February 1. The gain amounted to 2.6 per cent. The weekly average earnings of the typical individual in recorded employment reached a new high, standing at \$30.70, as compared with \$29.96 at February 1. The previous maximum was that of \$30.06 at December 1, while the March 1, 1942, figure had been \$27.92.

The latest survey shows that, when the statistics for financial institutions are included, the number of persons in recorded employment was 1,882,309, as compared with 1,879,642 at February 1. The salaries and wages paid in weekly payrolls to these employees were given as \$57,814,396, as compared with \$56,384,323 paid at February 1. The per capita average for the nine main industries, including finance, was \$30.71, as compared with \$30.00 at the beginning of February, and \$27.99 at March 1, 1942. These averages were slightly higher than those given in the preceding paragraph for the eight leading industries, for which records of employment are available for a lengthy period, so that they are used in the general comparisons of this report.

Table 1 summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the eight leading industrial cities, and gives comparisons as at February 1, 1943, and March 1, 1942.

The index numbers of payrolls are based on the amounts disbursed by the co-operating

firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. The report indicates that in the period for which data are available, there has been a general increase of 18.7 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these workers are higher by 43.2 per cent. Including finance, the gain in employment from June 1, 1941, to March 1, 1943, amounted to 18.1 per cent, and that in payrolls, to 42 per cent.

From March 1, 1942, to March 1, 1943, there was an increase of 9.9 per cent in employment in the eight industries, accompanied by that of 20.0 per cent in the weekly payrolls. The explanation previously given for the much greater rise in the latter than in employment may again be stated:—(1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there is a considerable amount of overtime work, (2) the extension of the system of paying a cost-of-living bonus to the majority of workers; the rates at which this allowance has been calculated have been

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

increased on more than one occasion since its institution, and (3) the progressive up-grading of employees as they gain experience in their work. In certain cases, higher wages have also been granted. In spite of these main factors reacting favourably upon the earnings of the typical wage-earner, the average weekly pay envelope, as a result of the continued dilution of labour and other factors, has not shown advances commensurate with those in the index of aggregate payrolls. Thus, the latter has risen by 20.0 per cent from March 1, 1942, while the index of per capita earnings has increased by ten per cent in the 12 months.

Chiefly as a result of wartime demand for manufactured commodities, the growth in employment and payrolls in factories in the period of observation has been much greater than that in the non-manufacturing industries; where the index of employment in the former has risen by almost 33 per cent from June 1, 1941, that of payrolls has advanced by 62.5 per cent. The weekly earnings of the typical individual engaged in factory work have increased by practically 23 per cent, while the all-industries average has risen by 21.6 per cent. The factors given above as influencing the all-industries trends operate with greater force in the case of manufacturing.

The buoyant movement in employment and payrolls in the production of durable goods has been particularly noteworthy in the months

for which data are available; in this class, the index of employment shows a gain of 51.9 per cent, accompanied by an increase of 88.4 per cent in the salaries and wages distributed in the interval from June 1, 1941, to March 1, 1943. Although there has more recently been some contraction in certain non-durable goods, the index number of employment in this group at March 1 was higher by 16.5 per cent than that indicated at June 1, 1941, since when there has been an increase of 36 per cent in the payrolls disbursed by the co-operating establishments.

In regard to the marked variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages.

Employment and Payrolls by Industries

Manufacturing.—There was a further gain in employment in manufacturing at March 1, according to data received from 7,587 establishments with a combined working force of 1,164,853 men and women; as compared with 1,157,832 at February 1, this was an increase

¹ Revised.

of 7,021 employees, or 0.6 per cent. The rise was seasonal, although it was rather below-average for March 1 in the experience of the years since 1920. It was decidedly smaller than the gain at March 1 in either 1941 or 1942. Nevertheless, the improvement at the date under review raised the index to a new high. Standing at 223.4, it exceeded by 14.2 per cent the figure of 195.7 at the beginning of March of last year. The seasonally-adjusted index, however, was slightly lower, at 228.2, as compared with 230.5 at February 1, 1943.

The payrolls disbursed on or about March 1 by the co-operating firms amounted to

\$35,483,216 reported by the same employers at February 1. The per capita weekly average, at \$31.45, was higher than that of \$30.65 in the preceding period of observation. The March 1, 1942, figure had been \$28.58. In the 12 months since then, the index of payrolls has risen by 24.8 per cent, a gain substantially larger than that of 14.2 per cent in the index of employment in manufacturing in the same period. The greater growth in the wages distributed by the co-operating establishments in the twelve months has been dealt with briefly in an earlier paragraph, under the heading "Payrolls".

TABLE II—EMPLOYMENT AND EARNINGS

Number of Persons Employed at March 1, 1943, by the Co-operating Establishments and Aggregate and Per Capita Weekly Earnings of such Employees, together with Index Numbers of Employment and Payrolls as at March 1, 1943, February 1, 1943, and March 1, 1942, based on June 1, 1941, as 100 p.c.

* Revised.

¹ This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

Employment in iron and steel works continued to expand, the staffs recorded at March 1 being larger by almost 6,900 than those indicated in the preceding survey. Shipyards, aircraft and other vehicle and firearm plants again showed heightened activity. Lumber mills and electrical apparatus factories also reported considerable increases, while there were moderate gains in rubber, textile, miscellaneous non-metallic minerals and miscellaneous manufactured product plants. On the other hand, food, beverage, chemical, clay, glass and stone and non-ferrous metal factories released employees. In some cases the reductions were seasonal.

Recent monthly reports on employment and payrolls have pointed out that, largely as a result of wartime shortages of labour, the employment afforded by an increasingly large number of factories turning out consumers' goods has declined from the extraordinarily high levels reached before the labour stringency became so marked; where none of the industrial groups had reported less activity at March 1, 1942, than at the same date in 1941, 18 divisions at the beginning of March, 1943, showed a reduction in the 12 months' com-

parison. Notable among these were the vegetable food, boot and shoe, lumber, pulp and paper, tobacco and beverages and several branches of textiles; in these groups, however, employment was still in greater volume than in the period prior to the outbreak of hostilities. The recent falling-off in many of these classes merits more attention for the reason that, in a great many cases, they are engaged in manufacturing commodities or parts directly required in the war effort. On the other hand, employment in an important number of industries has reached new all-time highs in recent months; especially noteworthy among those in this category are the chemical, electrical apparatus and various metal-using industries.

Based on the weekly salaries and wages disbursed by the reporting employers at June 1, 1941, as 100, the index number of payrolls at March 1, 1943, was 162.5, as compared with 157.4 at the beginning of February, and 129.8 at March 1, 1942. There was thus an increase of 25.2 per cent in the reported payrolls during the 12 months, accompanying that of 14.2 per cent in the index number of employment. An explanation has been given elsewhere in

NOTE.—The relative weight, as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

this report regarding the disparity in the rates of increase in employment and payrolls; the up-grading of employees as they acquire experience is a factor of particular and increasing importance in the manufacturing industries, tending to counteract the effect of the large scale dilution of labour resulting from the

existing shortage. Another factor exercising unusual influence in the case of manufacturing is the changing industrial distribution of the wage-earners in recorded employment. The effect of this is clearly shown by a comparison of the figures for the durable and the non-durable goods groups. Thus, the payroll index

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	¹ Relative Weight	Mar. 1 1943	Feb. 1 1943	Mar. 1 1942

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

* Revised.

in the former at the date under review, was 37.6 per cent higher than at March 1, 1942, while that in the non-durable goods division was 10.1 per cent higher; in the year, the index of employment in durable goods has risen by 26.5 per cent while that in the non-durable classes has gained by only 2.1 per cent.

Since the institution of the payroll statistics early in 1941, there have been especially pronounced increases in the salaries and wages paid in the chemical, iron and steel, non-ferrous metal, miscellaneous manufactured products, electrical apparatus and tobacco industries. The advances in these industries* have been accompanied by important though relatively smaller gains in employment. In practically every case, and notably in the industries just mentioned, the per capita averages in the various branches of manufacturing were considerably higher at March 1, 1943, than at the same date of 1942.

Many factors contribute to the differences found in these averages. Prominent among these is the sex distribution of workers in the various industries, a factor which is associated with that of age, the women workers, in general, tending to belong in the younger age groups, where earnings normally are less than among more experienced employees. The presence or absence of overtime work also substantially affects the per capita average earnings.

Logging.—Employment in logging was rather quieter at March 1. The loss was seasonal, but was considerably below-average for the time of year. Information was furnished by 499 firms, with a staff of 69,151 persons at March 1, as compared with 69,970 in their last monthly report. The index of employment, at 231.1, was lower than that of 258.3 at the same date of last year, the falling-off amounting to 10½ per cent. The reported weekly salaries and wages, at \$1,562,208, were higher than at February 1, 1943, or March 1, 1942; the increase in the payroll index in the latter comparison was 5.6 per cent.

The per capita average earnings rose from \$20.54¹ at February 1, 1943, to \$22.59 at the date under review. The gain partly resulted from better weather; operations at February 1 had been affected by unsatisfactory conditions in this respect. The March 1, 1942, average had been \$18.97. It must be noted that the figures of aggregate and per capita earnings in logging do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations. The high labour turnover in many camps is also an

important factor in lowering the reported earnings.

Mining.—Moderate contra-seasonal improvement was indicated in mining; the extraction of coal afforded slightly less employment, but the mining of other non-metallic minerals and of metallic ores was somewhat brisker. Statistics were received from 441 operators, with a personnel of 75,850, 345 more than at February 1. The index in the mining group rose slightly from 161.4 in the preceding report, to 162.2 at the beginning of March, when it was eight per cent lower than that of 176.4 at the same date in 1942. The index of payrolls showed a decrease of 3.8 per cent over the 12 months. The salaries and wages disbursed at the date under review amounted to \$2,795,007, as compared with \$2,709,967 in the preceding period of observation. The per capita figure rose from \$35.89 at February 1 to \$36.85 at March 1, as compared with \$34.84 at March 1, 1942.

Communications.—Little general change was noted in communications at the date under review, by the 61 employers whose data were compiled, and who had a personnel of 27,473. At February 1, they had reported 27,528 employees. The slight falling-off was below-normal for the season. The salaries and wages paid at the date under review aggregated \$792,737, as compared with \$795,736 in the preceding report. The per capita average declined from \$28.91 at February 1, to \$28.86 at the first of March, as compared with \$27.68 at the same date of last winter. The latest index of employment was 102.8, a few points above that of 100.2 at March 1, 1942, since when the payroll index has risen by 6.9 per cent.

Transportation.—Contra-seasonal expansion was noted in employment in transportation at the beginning of March, when returns were received from 587 employers of 135,247 workers, as compared with 133,223 in their last report. There was a reduction in the local transportation group, but steam railway operation and shipping and stevedoring afforded considerably more employment. The index, at 107.1, was 9.8 per cent higher than that of 97.5 at March 1, 1942.

The persons in recorded employment in transportation at March 1 received the sum of \$4,919,825 in weekly payrolls; those on the staffs of the same employers at February 1 had been paid \$4,820,430. The latest per capita average was \$36.38, 20 cents higher than that at February 1, and \$1.67 more than at March 1, 1942. The index of payrolls then was 14.9

*Except tobacco.

1/ Revised.

per cent lower than that at the date under review.

Construction and Maintenance.—Further curtailment was indicated in *building and highway construction* and maintenance at the beginning of March, but work on railway maintenance moderately increased, largely as a result of seasonal conditions. A combined staff of 154,709 persons was reported by the 1,527 co-operating contractors, who had employed 158,586 in their last return. The weekly payrolls distributed were given as \$4,588,694, as compared with \$4,581,521 at February 1. The per capita average at the latest date was \$29.66, as compared with \$28.99 at the beginning of February, and \$25.28 at the first of March in 1942. The index of employment, at 122.6 at March 1, 1943, was 18.2 per cent higher than that of 103.7 at the same date of last winter, while the latest payroll index was higher by 34.7 per cent.

Services.—There was a minor gain in the services division at the beginning of March, a slight decline in employment in hotels and restaurants being rather more than offset by a small increase in laundering and dry-cleaning plants. The 612 establishments furnishing returns at March 1 reported a personnel of 40,197, as compared with 40,140 at February 1. Improvement on a larger scale is ordinarily indicated at the beginning of March. The salaries and wages paid the persons in recorded employment amounted to \$736,583, a sum higher by 0.3 per cent than that reported at February 1. As compared with March 1, 1942, there were gains of 6.4 per cent in employment, and 14.5 per cent in payrolls. The latest per capita average was \$18.32, as compared with \$18.30 at February 1, and \$16.99 at March 1, 1942. Attention must again be drawn to the fact

that in hotels and restaurants, as in logging, many of those employed receive board and lodging as part of their remuneration; the former division constituted some 61 per cent of the total reported in the service division as a whole at the beginning of February.

Trade.—Further seasonal contractions in employment were indicated in trade at the beginning of March. The percentage loss approximated the average, according to the experience of the years since 1920. Statistics were tabulated from 2,218 retail and wholesale houses employing 151,462 workers, as compared with 153,721 in their last return. The weekly payrolls distributed by these firms amounted to \$3,808,415, as compared with \$3,851,332 at February 1. The per capita average showed a small increase, standing at \$25.14 at Mar. 1, as compared with \$25.05 at the beginning of February, and \$23.84 at March 1, 1942.

The latest index number of employment in trade was 147.1, a figure which was lower by three per cent than that of 151.7 at the same date of last year. Over the 12 months, however, the index of payrolls has risen by 1.9 per cent.

Financial Institutions.—Returns were furnished by 753 financial institutions, with a staff of 63,367, as compared with 63,137 at February 1. The weekly salaries and wages were reported as \$1,979,114, as compared with \$1,970,365 disbursed in the preceding period of observation. The per capita weekly average was \$31.23, as compared with \$31.21 at February 1, 1943, and \$29.88 at March 1, 1942. The index of employment in financial institutions, at 122.7, was the same as that at March 1, 1942, since when the index number of payrolls has risen by 4.5 per cent.

Employment Conditions at the End of April as Reported by Employment and Selective Service Offices

THE following abstract of regional summaries of reports from Local Employment and Selective Service Offices of the Unemployment Insurance Commission indicate that employment conditions across Canada at the end of April were as follows:

Maritime Region

Many farm workers who had been employed in industry under temporary permits during the winter months, were returning to the farms. This was especially true in Prince Edward Island where fairly large numbers

were arriving daily from Nova Scotia and New Brunswick. Work on the land had not become general, but spring ploughing was being done in a few districts. Some farm workers were accepting temporary jobs as river drivers and fishermen, pending the commencement of active operations on the land.

No shortages of fishermen were reported. Fish catches were good and preparations had been completed for the opening of the lobster season on May 1st. Several fish processing plants were having difficulty in obtaining a sufficient number of workers.

River driving was underway in most of the lumbering districts. Hundreds of men were employed in this work and, with the exception of a few small local shortages, there appeared to be a sufficient number available.

All of the mines in Cape Breton were working at capacity. Some salt mines were employing female workers. There was a fairly large labour turnover in limestone quarries and more men were required.

Practically all manufacturing plants were working full time. Skilled craftsmen were needed for work on aircraft, and trainees were being sought for aircraft maintenance and assembly work. Pulp mills, which had been handicapped by the lack of sufficient water, reported that conditions were improving and it was expected that they would be working full time in the near future. Relatively small labour troubles in the steel industry had thrown about 200 men out of work for a brief period, and one of the steel plants in Cape Breton was reported to be employing a small number of women.

Several important building construction companies had commenced operations and a large number of carpenters and labourers were needed. Efforts were being made through clearance to supplement local supplies of such labour. One district reported a small shortage of bricklayers.

Motor truck transportation was being hampered by the poor condition of the roads, but no shortage of truck operators was reported. The coastal steamships trade was getting underway for the spring and summer seasons.

Several stenographers recently graduated from a large commercial school were seeking positions in the business world. Others of them planned to apply for enrollment in the Air Force. The problem of providing sufficient domestic help was still unsolved.

Quebec Region

Farm workers were in general demand throughout the province. A few were being supplied, but difficulties were being encountered in many instances due to the long working hours on farms and to dissatisfaction with rates of pay. The maple syrup season was practically over and only a few men were needed to complete refining operations.

River driving was getting under way slowly and for the time being, farmers and other local labour satisfied the demand for river drivers. However a shortage was in prospect when spring work on farms becomes general. Pulp companies were employing all available woodsmen at a number of centres.

Experienced miners were needed in northern Quebec, but current demands of the base metal mines were being met fairly well. There was a shortage of workers for the production of asbestos and, in one instance, plans for setting up a second shift had to be abandoned as a result.

Paper mills in the Lake St. John area had reopened but production was "spotty", due in part to low water and consequent power shortage. Lay-offs had occurred at some points, although labourers were wanted at Hull and women workers at Beauharnois. Sawmills and furniture factories were working steadily.

Textile mills were active and sufficient unskilled labour was available. However, experienced power sewing machine operators and seamstresses were needed in all textile centres. For the most part, the clothing trades were busy, but shortages of materials were being felt to some extent. Fur workers were required in Quebec and shoemakers in Montreal. Shortages of skilled tradesmen for wartime and heavy industries, as well as for shipbuilding were causing concern. Solderers, electricians and pipe-fitters were wanted at Quebec City. At Lévis, the problem of absenteeism at week-ends was serious. Munitions plants at Montreal and Three Rivers were increasingly active. Difficulties were being encountered in securing 500 helpers and trainees of non-military age in Montreal. Steel production had declined at Hull and about 100 men had been laid off. The demand for workers for the Quebec arsenals had fallen off. Almost all the industries in Montreal, including those engaged in wartime work, were able to obtain only about fifty per cent of the women workers they required. Potmen were needed for the aluminum industry and the situation was being aggravated by the withdrawal of farmers, who had been doing this work under temporary permits, to return to spring work on farms.

Building construction was picking up somewhat. Projects at Lévis and one or two other points were expected to employ all carpenters available, although there were small surpluses at the moment. More painters and strong construction labourers were being employed at Montreal and a shortage of such workers seemed likely in the near future.

Railway maintenance men and truck drivers were in demand. There were sufficient available, but some dissatisfaction appeared to exist concerning the wages that were being paid.

Qualified office workers were very much in demand in Montreal and more salesclerks were being employed as a result of increasing seasonal activity in the retail trade. Hotels

and restaurants in almost all centres were facing shortages of labour. Waitresses and cooks especially were needed. The labour situation in connection with the hospitals in Montreal was growing steadily worse.

Ontario Region

There was a general shortage of farm labour throughout the older portion of the province, in spite of the fact that the late spring was delaying land operations in many sections. There seemed to be widespread dissatisfaction with the wage scales being offered to farm workers.

Logging operations were reported to be progressing favourably, although more bushmen were needed at a few points and in a few instances river drivers were wanted badly. Many sawmills were busy and sawyers and millhands were required in a number of places.

Underground miners were in demand at Sudbury and Kirkland Lake and mine labourers at Sault Ste. Marie. Muckers were required for the feldspar and mica mines at Perth and diamond drill helpers and female mica trimmers at North Bay.

The manufacturing industries in Ontario were handicapped by a shortage of semi-skilled and unskilled workers, both male and female. Aircraft plants needed workers to train as assemblers and fitters. There was a heavy demand for male and female help in the textile industry. Power sewing-machine operators were wanted urgently at Guelph and weavers and menders at Kingston. The graduates from the new War Emergency Training classes at Toronto were finding employment quickly. Foundry help was the most noteworthy need of the iron and steel industries. Men in the skilled trades, such as machinists, lathe operators, welders, grinders, electricians and stationary engineers were urgently required.

Building construction was showing increasing activity. Wartime Housing, Limited had completed projects at two important centres, but the men laid off were readily placed with other employers. Work had been commenced on airport hangars, military training centres and on several other important undertakings. Carpenter's and builder's labourers were in general demand.

Both skilled and unskilled railway workers were needed at Niagara Falls, North Bay and Toronto, and railway machinists, boiler makers and blacksmiths' apprentices were required at Stratford. Steamship companies wanted stevedores and freight handlers and competent garage mechanics were in demand in a few centres.

Experienced office workers, stenographers and typists were required in several places. Clearance was being resorted to in efforts to obtain a large number of gardeners and clean-up men for summer hotels in the Muskoka Lakes district. Mess helpers, both men and women, were needed for Air Force camps and the supply of domestic help for private homes was quite inadequate.

Prairie Region

Although the number of men accepting employment on farms was increasing, the shortage of farm labour was acute.

Large numbers of men were required for the lumbering and logging industries, especially for camps engaged in getting out mining props. As this was seasonal work and essential for mine operations the demand was urgent.

Semi-skilled labourers were being given employment at the Steep Rock iron mines and it was expected that the number would be increased as soon as additional housing facilities had been provided. Base metal and gold mines were in need of certificated miners and unskilled labourers. The base metal mines were being given priority as far as possible. The strike in the Drumheller coal field had been settled and the mine operators were having some difficulty in getting their crews reorganized. There was a shortage of all classes of mine workers and labourers were required for the oil fields in Alberta.

It was proving difficult for meat-packing establishments to obtain sufficient male and female help and milk and bread companies were finding it hard to retain their staffs. In the case of the latter, it was alleged that the wage scales did not seem to attract workers. Sawmills in Northwestern Ontario were taking on additional men. There was a demand for skilled mechanical workers for aircraft plants and for garages. A "change-over" had been completed in a munitions plant at Fort William and its staff will be increased by about 200 within the near future. Most of these will be women, but preference will be given to former employees. The supply of workers appeared to be adequate. Junior girls were being given employment in various industries and a number of girls had been transferred to Toronto for wartime work.

There was an increase in the demand for construction labourers and some builders were employing women for light work. Highway construction, particularly in Northern Alberta, was progressing rapidly. However, due to a revision of the Public Roads Administration Contract there had been definite curtailments in the amount of such work to be undertaken.

As a result, the labour situation was "satisfactory", although operators of various types of road construction machinery, as well as some clerical help, were needed. There was a temporary surplus of carpenters.

The railways were in urgent need of section workers and also men for extra road gangs. There were not sufficient available. Bus and truck drivers were wanted and waterfront firms in Selkirk, Manitoba, were preparing their boats for summer trading operations on the lakes.

Junior clerks were required for banks. Young women were being given employment as service station attendants, truck drivers and in the mechanical part of the motor trade. Experienced salesclerks were wanted for ladies' ready-to-wear establishments and some demand existed for experienced office clerks, typists and stenographers. Cooks and mess men were needed for R.C.A.F. camps and there was a definite shortage of domestic help for hotels, restaurants, institutions and private homes.

Pacific Region

There seemed to be no immediate prospect of supplying the heavy demand for farm workers in British Columbia. The organization of the Provincial Land Army was proceeding, but actual requirements were not yet completely available.

The shortage of loggers was increasing in both coastal and interior areas. Several operators intimated that they might have to close down if adequate labour, especially fallers and buckers, were not obtained in the near future. Every effort was being made to secure experienced loggers from other occupations. Weather conditions had improved in the interior of the province, making more extensive timber operations possible, and the movement of Japanese into the logging camps was assuming larger proportions.

The supply of miners and other mine workers for coal, base metal and gold mines appeared to be hopelessly inadequate. As a result, several base metal mines reported a serious decrease in production. Transport of

men by air to the Takla Landing mercury mine had been discontinued until after the spring break-up.

Saw-mill workers were in urgent demand in the interior and on Vancouver Island. That factor, coupled with a shortage of logs, resulted in an abnormally low production of lumber during the month. Differences in wages and working conditions were said to be responsible for a rapid turnover of labour on the lower mainland.

Skilled and unskilled workers of all kinds were increasingly in demand for the ship-building and metal industries. Additional housing had been provided for shipyard workers at Prince Rupert, but difficulties in obtaining more working conditions were said to be responsible for a rapid turnover of labour on the lower mainland.

On most National Defence projects the shortage of construction workers was becoming acute. The demand for carpenters for such undertakings could not be met, as carpenters in the larger centres were reluctant to accept out-of-town jobs. Building construction was confined almost entirely to essential wartime work. The chief labour requirements in the industry were for Wartime Housing, Limited and Army and Air Force Camps as well as for highway building in the northern portions of the Region.

The demand for men for navigation and other transportation systems was in excess of the supply.

There was a widespread and an acute shortage of waitresses, kitchen help and domestic help in both high and low priority industries.

In general, there was no improvement in the trades and labour shortages in British Columbia, in spite of the fact that a close watch was being maintained on workers leaving essential industries. Housing shortages at centres on Vancouver Island and on the mainland coast prevented the placing in clearance of certain high priority requirements. This condition was attributed in some measure to the influx of families of the armed services.

Applications for Employment; Vacancies and Placements; March, 1943

REPORTS of the Employment and Selective Service Offices during the five week period February 26th to April 1st, 1943, showed an increase of over 35 per cent in the average daily placements as compared with those of the four week period ending February 25th, and a gain of 488 per cent in comparison

with the records covering the month of March, 1942. Advances in placements over the period January 29th to February 25th, 1943, were noted in all industries except logging and mining, the most pronounced gain being in manufacturing. When a comparison was made with the month of March, 1942, all industries

showed an increase in placements, the greatest being in manufacturing with substantial additions in services, construction and transportation.

The accompanying chart shows the trend of employment since January, 1941, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at employment offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications followed upward courses. The ratio of vacancies to each 100 applications being 108.9 during the five weeks ending April 1st, in contrast to 105.0 during the previous period of four weeks January 29th to February 25th, 1943, and 46.9 during March last year.

The average number of vacancies reported daily by employers to the Employment and Selective Service Offices throughout Canada during the five weeks February 26th to April 1st, 1943, was 9,155 as compared with 8,567 during the preceding four weeks and with 1,316 during the month of March a year ago. The average number of applications for employment received daily by the offices during the period under review was 8,402, in comparison with 8,160 during the previous period and with 2,140 during March, 1942. The average number of placements made daily by the offices during the five weeks ending April 1st, 1943, was 5,904, of which 5,717 were in regular employment and 187 in work of one week's duration or less, as compared with a total daily average of 5,702 during the previous four week period ending February 25th. Placements in the month of March last year averaged 1,003 daily, consisting of 686 placements in regular and 317 in casual employment.

During the period February 26th to April 1st, 1943, the offices referred 244,512 persons to vacancies and effected a total of 177,114 placements. Of these, the placements in regular employment were 171,494, of which 112,556 were of males and 58,938 of females, while placements in casual work totalled 5,620. The number of vacancies reported by employers was 174,629 for men and 100,022 for women, a total of 274,651, while applications for work numbered 252,039, of which 162,232 were from men and 89,807 from women. Reports for the four weeks January 29th to February 25th, 1943, showed 205,605 positions available, 195,830 applications made and 136,842 placements effected, while in March, 1942, there were recorded 34,200 vacancies, 55,617 applica-

tions for work and 26,062 in regular and casual employment.

The following table gives the placements effected by the offices, each year from January 1933, to date:—

Year	Placements		
	Regular	Casual	Totals
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935.....	226,345	127,457	353,802
1936.....	217,931	113,519	331,450
1937.....	275,900	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,062	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	309,983	85,638	395,621
1943 (13 weeks).....	434,926	17,381	452,307

NOVA SCOTIA AND PRINCE EDWARD ISLAND

Opportunities for employment, at Employment and Selective Service Offices in Nova Scotia and Prince Edward Island during the five weeks ending April 1, 1943, numbered 359 daily compared with 351 in the preceding period and with 119 in March of last year. There was a daily average of 245 placements compared with 247 during the preceding four weeks and 112 in March, 1942. Except for a nominal decrease in agriculture, all industrial divisions participated in the increase in placements over March, 1942, the most important gain being in manufacturing, with improvement of smaller proportions in construction, trade, services, transportation and mining. Industrial divisions in which most of the placements were effected during the period under review were: manufacturing 2,268; construction 1,803; services 1,581; trade 690; transportation 440 and mining 249. There were 5,135 men and 2,061 women placed in regular employment.

NEW BRUNSWICK

The demand for workers on a daily average as indicated by orders listed at Employment Offices in New Brunswick during the period ending April 1, was 265, as compared with 210 during the preceding four weeks and 30 in March, 1942. The average number of placements effected daily was 171 during the five weeks under review, compared with 172 in the preceding period and 26 during March of last year. When comparing placements by industrial groups during the period under review with March, 1942, the largest increases were recorded in manufacturing, construction and services, with smaller advances in trade, logging, transportation and mining. Placements by industrial divisions included: manufacturing 1,401; services 1,182; construction 1,094; trade 501; logging 374; transpor-

five weeks under review, 2,439 daily in comparison with 2,359 in the preceding period, and with 449 during March of last year. All industrial divisions participated in the increase in placements over March of last year, the gain in manufacturing being the most outstanding, although services, trade, transportation, construction and logging were considerably higher with somewhat smaller increases in finance and mining. Placements by industrial groups numbered: manufacturing 38,424; services 12,814; trade 7,202; construction 5,238; transportation 4,441; logging 2,150; finance 1,020 and mining 967. During the period under review, regular placements numbered 44,318 of men and 27,063 of women in regular employment.

QUEBEC

There was an increase in the average number of positions available daily at Employment Offices in the Province of Quebec during the five weeks ending April 1, there being 2,956, compared with 2,688 in the preceding period and 209 in March, 1942. During the period under review, the average number of placements registered daily was 1,484, in comparison with 1,473 during the period ending February 25, and 108 in March of last year. The pronounced advance in placements over March, 1942, was almost entirely due to a substantial gain in manufacturing, although services, construction, trade, transportation and logging registered noteworthy increases. Placements by industrial groups numbered: manufacturing 25,658; services 5,973; construction 5,377; trade 2,845; transportation 1,877; logging 1,459; mining 584 and finance 439. Placements in regular employment numbered 30,909 of men and 13,137 of women.

ONTARIO

During the five weeks ending April 1, 1943, the daily average of positions offered through Employment Offices in Ontario was 3,411, compared with 3,320 during the four weeks ending February 25, and 531 in March, 1942. Placements showed a higher average during the

MANITOBA

Employment opportunities, as indicated by orders received at Offices in Manitoba during the period under review, showed a daily average of 384, compared with 380 in the preceding four weeks and 107 during March, 1942. A small decrease was shown in placements when compared with the period ending February 25th, but an increase over March of last year, the daily average being 307 during the period under review, 326 in the preceding period and 81 in March, 1942. Fairly large increases in manufacturing, services and trade, with smaller gains in transportation and construction accounted for the improvement in placements over March, 1942, while moderate

losses only were recorded in logging and agriculture. Industries in which employment was found for more than 100 workers included: manufacturing 2,987; services 2,544; trade 1,362; construction 845; transportation 728; logging 272; finance 172; mining 140 and agriculture 106. There were 4,960 men and 3,505 women placed in regular employment.

SASKATCHEWAN

Orders received at Employment Offices in Saskatchewan during the period ending April 1st, called for an average of 196 workers daily compared with 172 in the preceding period and with 57 during March, 1942. There was a

daily average of 150 placements compared with 143 during the four weeks ending February 25th, and 36 in March of last year. When comparing placements by industrial divisions with March, 1942, the most important gains were in services, trade and manufacturing, with smaller increases in transportation and construction. The only declines occurred in agriculture and logging and were unimportant. Industrial divisions in which the majority of placements were effected included: services 1,707; trade 1,040; manufacturing 803; construction 334 and transportation 300. Regular placements numbered 2,072 of men and 2,062 of women.

ALBERTA

Positions offered through Employment Offices in Saskatchewan during the five weeks ending April 1st, averaged 431 daily compared with 408 during the preceding four weeks and with 87 in March, 1942. The average number of placements effected daily was 321 during the five weeks under review, in comparison with 305 in the preceding period and 63 in March of last year. With the exception of a moderate loss in logging and a nominal decline in agriculture, all industrial groups showed improvement over March, 1942, the most substantial advances being in services, trade, manufacturing, construction and transportation. Placements by industrial divisions were: services 2,798; trade 1,672; construction 1,607; manufacturing 1,593; transportation 953; agriculture 343 and mining 306. Placements in regular employment numbered 5,541 of men and 3,343 of women.

BRITISH COLUMBIA

Orders listed at Employment Offices in British Columbia during the period ending April 1st, called for a daily average of 1,153 workers compared with 1,039 during the four weeks ending February 25th, and with 174 in March of last year. Placements showed a higher average during the period under review, 788 daily in comparison with 676 in the preceding four weeks and 127 during March, 1942. A substantial increase in manufacturing and fairly large gains in construction, services, logging, trade and transportation accounted for the advance in placements over March, 1942, improvement being noted also in all other groups. Industrial divisions in which most of the placements were effected during the five weeks under review were: manufacturing 8,203; services 4,312; construction 3,829; logging 2,418; trade 2,201; transportation 1,509 and mining 519. There were 16,035 men and 6,467 women placed in regular employment.

Unemployment in Trade Unions at the Close of March, 1943

UNEMPLOYMENT in the following report has reference to involuntary idleness due to economic causes. Persons, who are engaged at work outside their own trades are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only, to the organizations reporting.

Reports were tabulated at the close of March from 2,249 labour organizations, having a total membership of 411,662 persons. Of these 5,161 or a percentage of 1.3 were unemployed in comparison with percentages of 1.5 in February and 4.5 in March a year ago. The slight increase in available work shown during March was due principally to the moderately higher employment level which prevailed for union members in the manufacturing industries, as the percentage of those without work in this group declined from 0.6 to 0.3 and also to improved conditions for fishermen and for non metallic mineral workers. The unemployment percentages for these members stood at 0.7 and 0.4, respectively, in comparison with percentages of 9.3 and 4.6 in February. As will be seen in the accompanying table II, very minor improvements were observed likewise among lumber workers and loggers

and for union members in the transportation industries. On the other hand, a slight contraction in activity was apparent for members in the building and construction trades, as the unemployment percentage among these workers was up from 8.4 to 9.0. The Dominion percentage of 1.3 as shown for March was the lowest for any corresponding month in trade union records since these tabulations were placed on a monthly basis as from the beginning of the year 1919. From its inception in December 1915 to the end of 1918, the report appeared at the close of each quarter only.

In table I the unemployment percentage is shown for each province. In March, these percentages ranged from 0.4 in British Columbia to 2.2 in Quebec. As in British Columbia the percentages of those without work were under one per cent also in Nova Scotia and New Brunswick. A much higher employment level than that shown in February was indicated in Alberta, as the unemployment percentage dropped from 3.2 to 1.1, while in New Brunswick, British Columbia, and Manitoba also there were appreciably higher employment levels. Very slight increases in available work were apparent in Saskatchewan, while in Ontario the percentage of members without work remained unchanged at 1.1. The percentages of 0.6 and 2.2 in Nova Scotia and Quebec, respectively, were very slightly higher, thus

indicating minor contractions in work. In comparison with the situation at the end of March, 1942, pronounced employment expansion was noted in both Ontario and Alberta, as the unemployment percentage for both these provinces stood at 1.1, in comparison with percentages of 5.7 and 7.0 respectively, a year ago. Substantial betterment was observed, likewise, in the other provinces, although the expansions were not quite so pronounced.

A separate compilation, is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployment ranged from 0.5 in both Regina and Vancouver to 2.3 in Montreal. In Edmonton a marked employment advance was shown over February as the unemployment percentage

conditions were observed, likewise, in Toronto, Winnipeg, Regina and Vancouver. The percentages of members without work in these cities were 1.3, 1.1, 0.5 and 0.5, respectively, as compared with percentages of 5.9, 4.1, 3.9 and 2.2, a year ago. Conditions in Montreal and Saint John were moderately better, while on the other hand, in Halifax, the percentage of unemployment was 1.1, as compared with 1.2 in March, 1942.

The accompanying chart shows the trend of unemployment from January, 1938, to date. The level of the curve in March, 1943, was slightly lower than in the preceding month, thus reflecting a minor increase in work. The point of the curve however, was at a substantially lower level than in March a year ago, thus indicating much better conditions in the period under survey.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

declined from 5.5 to 0.6; this was traced principally to improved conditions among building and construction workers. Union members in Saint John, Winnipeg, Regina and Vancouver indicated appreciable employment increases, likewise, while in Toronto and Halifax there were very slight improvements. On the other hand union members in Montreal recorded a moderate contraction in available work, as the unemployment percentage increased from 1.2 to 2.3. As compared with conditions in March, a year ago, employment for Edmonton members was in much greater volume, as the percentage of those without work was down from 8.1 to 0.6. Although the employment increases were not so pronounced, much better con-

ditions were observed, likewise, in Toronto, Winnipeg, Regina and Vancouver. The combined membership was 229,472 persons, of whom 688, or a percentage of 0.3 were without work, as compared with percentages of 0.6 in February and 3.1 in March a year ago. In comparison with the previous month, unclassified manufacturing workers were much better employed although as the membership is comparatively small not many members were involved in this change; the unemployment percentage among these workers was 5.3 in comparison with 18.9 in February. Conditions were substantially better also for papermakers and butchers, meat and fish packers, as the percentages of members without work among papermakers declined to 0.3, while among butchers, meat

and fish packers, no unemployment was recorded; in the previous month the unemployment percentages for these trades were 1.0 and 6.0, respectively. As will be seen in table II, very slightly higher employment levels were apparent among union members in the printing trades, among woodworkers, textile and carpet workers and members in the iron and steel group. Among the trades with small memberships, metal polishers, etc., chemical products workers and clay, glass and stone workers, recorded minor improvements. Among the organizations, in which the members were employed at both dates were soft drink, cigar and tobacco, rubber workers, jewellery, aluminum and mineral products workers. The percentage of unemployment among hat, cap and glove workers remained unchanged at 0.1. Slight contractions in available work were observed among bakers and confectioners, electric current employees, etc., leather, fur, and garment workers. The percentage of those without work among these members were 0.4, less than 0.1, 7.4, 0.8 and 0.3 respectively, as compared with corresponding percentages of 0.2, 0, 6.1, 0.2 and 0.2 in the preceding month. In comparison with the situation in March, a year ago, the percentage of unemployment for fur workers was reduced from 28.6 to 0.8 and for union members in the iron and steel trades, a much higher employment level, also, was indicated as the percentage of those without work was down from 3.6 to 0.1. Substantial expansions in available work were observed likewise among papermakers, union members in the printing trades, woodworkers, garment workers, which organization includes both men's and women's clothing workers, and unclassified manufacturing members. Among the organizations reported as having no unemployment at either date were soft drink workers, cigar and tobacco workers, butchers, meat and fish packers, jewellery and rubber workers.

Returns were tabulated from 54 unions of coal miners, whose combined membership was 20,460 persons of whom 27, or a percentage of 0.1 were without work, as compared with full employment in February and 4.5 per cent of unemployment in March, a year ago. Whereas no members were reported as without work in February, conditions in March declined slightly; although New Brunswick and British Columbia members were fully engaged, there was very little unemployment in either Nova Scotia or Alberta. As compared with the situation in March, 1942, a pronounced expansion in available work was recorded in Alberta as the unemployment percentage at that date was 12.6. In Nova Scotia and British Columbia there were moderate improvements, while

in New Brunswick there was no unemployment reported at either date.

Reports were received from 8 unions of non-metallic mineral workers. The total membership was given as 3,625, of whom 16, or a percentage of 0.4 were unemployed. This percentage compared with 4.6 in February and 9.5 in March, 1942.

Unions in the building and construction trades returned 209 reports, having a total membership of 34,402 persons, of whom 3,096 or a percentage of 9.0 were unemployed, in comparison with percentages of 8.4 in February and 16.3 in March, a year ago. As compared with the preceding month, union members of bricklayers, masons and plasterers were slightly better employed although the unemployment percentage of 20.8 remained high. Among granite and stonecutters, painters, decorators and paperhangers, wood, wire and metal lathers and hod carriers and unclassified building workers minor increases in work were indicated. The unemployment percentages, as reported for these trades were 5.7, 1.1, 0, and 5.9, respectively. The percentage of members without work among

electrical workers remained negligible. A moderate employment contraction was reflected for carpenters and joiners, as the unemployment percentage was up from 10.0 to 11.5, while for plumbers and steamfitters there was a slight reduction in work, although the unemployment percentage of 1.8 remained low. Among bridge and structural iron workers and steam shovel men there were noteworthy employment recessions, as the percentages of those without work were up from 0.8 and 2.5 to 5.7 and 7.5 respectively. The memberships are very small, however, and consequently very few members were involved. In comparison with the situation in March, a year ago, employment levels for bricklayers, masons and plasterers and carpenters and joiners were much higher. Pronounced increases in activity were reflected, likewise, in returns received from unions of granite and stonecutters, painters, decorators and paperhangers and plumbers and steamfitters, although not as many members were involved in these changes. Among hod carriers and unclassified building workers there was a more moderate employment expansion.

In the transportation industries 888 reports were tabulated. These had a total membership of 82,098 persons, of whom 939, or a percentage of 1.1 were without employment, in comparison with percentages of 1.3 in February and 2.7 in March, 1942. Of the total membership reported in these industries, over 79 per cent was in the steam railway division. As will be observed in the accompanying table II the percentage of those without work in this group was 1.2, as compared with 1.5 per cent in the preceding month. The unemployment percentage for street and electric railway employees remained unchanged at less than .1, while for navigation workers there was a minor contraction in work afforded as the percentage was up from 4.3 to 5.5. Among teamsters and chauffeurs there was a very slight employment decrease, as the percentage stood at 0.6, as compared with full employment in February. In comparison with conditions in March, 1942, noteworthy increases in available work were apparent, among steam railway employees and navigation workers: for street and electric railway employees and teamsters and chauffeurs, the employment trend was but slightly upward.

For the retail and wholesale trades, reports were tabulated from 9 unions with an aggregate membership of 2,269 persons. As in the preceding month and in March, a year ago, no unemployment was indicated.

From unions of civic employees, 108 returns were received having a total membership of 11,360 persons. Of these 17, or a percentage of 0.1 were without work, as compared with percentages of 0.2 in February and 0.4 in March 1942.

In the miscellaneous group of occupations reports were tabulated from 141 unions with a total membership of 12,152 persons, of whom, 190, or a percentage of 1.6 were unemployed, as compared with percentages of 1.4 in February and 1.2, in March, a year ago. In comparison with the preceding month, appreciable improvement was reflected among theatre and stage employees, as the unemployment percentage declined from 4.1 to 2.8. The percentage of those without work among stationary engineers and firemen remained unchanged at 0.7. Although very little unemployment was noted among barbers and unclassified workers, minor declines in activity were apparent in both occupations; among hotel and restaurant employees the percentage of unemployed members was up from 2.9 to 3.8. In comparison with the situation in March, 1942, moderate betterment was apparent for theatre and stage employees and stationary engineers and firemen while among barbers and unclassified workers there were very slight contractions in available work. For hotel and restaurant employees, there was a substantial decline in activity as the unemployment percentage was up from 0.9 to 3.8.

Returns were secured from 3 unions of fishermen having a combined membership of 2,821 persons, of whom 20, or a percentage of 0.7 were unemployed, as compared with percentages of 9.3 in February and 21.6 in March, a year ago.

Reports were tabulated from 3 unions of lumber workers and loggers, in which the combined membership was 3,711 persons, all of whom were working. The unemployment percentages among these members were 2.0 in the previous month and 7.4 in March a year ago.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1932 to 1942, inclusive, and also, the percentage of unemployment for March of each year from 1932 to 1941, inclusive and from March, 1942 to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Quarterly Report of Employment and Selective Service Offices, January 1 to April 1, 1943

BUSINESS transacted by the Employment and Selective Service Offices of Canada during the quarter January 1st to April 1st, 1943, showed a gain over the corresponding quarter of 1942, the increase being 668 per cent in vacancies notified and 544 per cent in placements effected. All industrial divisions registered advances in both cases, by far the largest being in manufacturing. Substantial gains were recorded in services, construction, trade, transportation and logging. Although all provinces listed noteworthy expansions, the most noticeable were in Ontario, Quebec and British Columbia.

The accompanying table gives the vacancies and placements of the Employment and Selective Service Offices by industrial groups in the various provinces during the period January 1st to April 1st, 1943.

From the chart appearing elsewhere in this issue, which accompanies the article on the work of the Employment and Selective Service Offices for the five week period February 26th to April 1st, it will be noted that the curves of vacancies and placements in relation to applications showed downward trends during the four week period January 1st to January 28th, but followed upward courses during the period ending February 25th, and April 1st.

During the period January 1st to April 1st, 1943, there was a ratio of 102.9 vacancies and 68.4 placements for each 100 applications for employment, as compared with 58.7 vacancies and 46.6 placements during the corresponding quarter of 1942.

The average number of positions offered daily during the quarter under review was 8,337, of applications registered 8,581, and of placements effected 5,875, in contrast with a daily average of 1,166 vacancies, 1,987 applications and 925 placements in regular and casual employment during the first quarter of 1942.

During the thirteen weeks January 1st to April 1st, 1943, the offices reported that they had referred 638,312 persons to positions and effected a total of 452,307 placements, of which 434,926 were in regular employment and 17,381 in casual work. Of the placements in regular employment, 291,638 were of men, and 143,288 of women, while casual work was found for 7,581 men and 9,800 women. A comparison with the first quarter of 1942 showed that 70,273 placements were then made, of which 46,806 were in regular employment and 23,467 in casual work. Applications for employment during the period under review were received from 433,364 men and 227,354 women, a total of 660,718, in contrast with a registration of 150,942 during the first quarter of 1942. Employers notified the offices of 680,378 vacancies, of which 445,764 were for men and 234,614 for women, as compared with 88,569 opportunities for work during the first three months of 1942.

In another section of this issue will be found a report in detail of transactions of the Employment and Selective Service Offices for the five week period February 26th to April 1st, 1943.

Employment and Unemployment in Great Britain and Other Countries

Great Britain

Great Britain

IN reply to a question in the House of Commons in Great Britain on February 4, the Minister of Labour and National Service made the following announcement:—

"The relatively small numbers now registering as unemployed consist mainly of persons who are changing from one job to another or are unsuitable, owing to age or physical disability, or for other reasons, for ordinary industrial employment. In view of the pressure of work in my Department and of the necessity for all possible economies in the use of staff, I have decided that the unemployment statistics shall in future be compiled and published only at quarterly intervals. Under this arrangement the next figures to be published will be those for April 12."

The LABOUR GAZETTE will, accordingly, publish figures on the employment situation in Great Britain as they become available.

United States

According to an official report issued by the United States Department of Labour, the total number of employees in non-agricultural establishments in February, 1943, was 37,995,000, about 3 million more than in February, 1942, of which increase 2,205,000 occurred in manufacturing. The gain over the month previous of 133,000 in the total number of employees is about the same as the average seasonal change from January to February.

In manufacturing industries the principal increases in wage-earner employment during the year occurred in those industries engaged in production for war use. The transportation equipment group, representing aircraft, ship-building, railroad equipment, and some ordnance items such as tanks and combat vehicles, employed 2,155,000 wage earners, or about twice as many as in February, 1942 and 88,000 more than in January, 1943. Iron and steel, electrical machinery, other machinery, automobiles, and chemicals each employed about 200,000 more wage earners than they did a year earlier. Smaller increases took place in the nonferrous and in the rubber groups. Employment was lower in most of the other major groups, lumber and timber basic products showing the greatest decrease, 77,000.

Employment in both wholesale and retail trade showed little change over the month, remaining 6 to 8 per cent below that of Feb-

ruary, 1942. Street railways and busses increased by about 2 per cent over January and by about 13 per cent over a year ago. Anthracite, bituminous coal, and metalliferous mining employed about 8 per cent fewer in February, 1943 than in February, 1942. Coal mining changed very little since January, 1943, but metalliferous mining declined about 1 per cent.

Of the aggregate of 2,967,000 employees in the Federal Executive Service in February, 1943, 74 per cent were working in war agencies and 26 per cent in other agencies. Partially offsetting the increases in February of 87,300 in war agencies was a decline of 5,800 in other agencies. From February, 1942 to February, 1943, Federal executive service employment increased 1,161,700.

Sweden

The number of unemployed in Sweden, excluding lumbermen and raftsmen, reported by the labour organizations on November 30, 1942, totalled 43,985, according to the State Labour Market Commission. This figure represented 5.9 per cent of the total number of workers belonging to the reporting trade-unions, and was 39.7 percent below the previous year, when the corresponding figures were 72,908 and 9.9 per cent. On October 31, 1942, the total number of unemployed reported by the labour organizations was 35,622.

During the month ending November 30, 1942, the number of unemployed who applied for relief increased by 294 (4.6 per cent) to 6,671. As of November 30, 1941, the number of unemployed applying for relief totalled 14,781.

Switzerland

The totally unemployed in Switzerland at the end of August, 1942, were reported to number 5,035. This compared with 4,781 totally unemployed at the end of July, and with 6,030 at the end of August of the preceding year. On the basis of number of applications for work, which closely parallel the unemployment figures, this shows a greatly improved position over recent years, applications for work having totalled 12,963 in August, 1940, 27,939 in August, 1939, and 49,606 in August, 1938.

Employment exchanges found positions for 2,381 workers during August, 1942, as against 2,503 in the month preceding and 3,711 during August, 1941.

Out-of-School Employment of Winnipeg School Children

Number of Children Employed Out of School Hours Shown in Survey— Recommendations to Hours of Work and Suitability of Employment

A REPORT on the out-of-school employment of school children in Winnipeg was issued by the Winnipeg Child Health Services Board on March 3. The report was based on replies to a questionnaire sent to teachers and was compiled under the direction of the Superintendent of Schools for Winnipeg. It indicated that a substantial number of young children were working excessive hours and engaged in work unsuitable to their age.

The survey revealed that in January, 1943, a total of 2,532 boys and 621 girls in Winnipeg were employed outside of school hours. Approximately two-thirds, or 2,039 out of 3,153 children, were engaged in outdoor employment. This figure included 992 boys on newspaper routes and 668 delivery boys. Over 600 of the boys were 12 years of age or less, 878 were 13 and 14 years and 1,046 were over 14. Only 83 of the girls were 12 or under, 197 were 13 and 14 years and 341 were over 14.

A school-week of 27½ hours must be added to the hours of out-of-school employment to determine the actual work-week of employed school children. The report indicated that 1,711, or approximately 68 per cent of the boys and 83 per cent of the girls, worked less than 10 hours a week out of school. However, 689 boys and 89 girls were employed from 10 to 25 hours, and 132 boys and 16 girls for more than 25 hours, including 16 boys and 2 girls working over 40 hours a week. Thirteen of the 16 boys employed for more than 40 hours were between 12 and 14 years of age and two twelve-year old boys worked over 30 hours a week.

Of the 872 boys employed in other occupations than that of delivery boy for stores and newspapers, 171 were working as clerks in stores and offices, 81 were pin-boys in bowling alleys, 82 were freight handlers, and smaller numbers were employed as factory help, garage helpers, theatre ushers, telegraph and post office messengers, street vendors of magazines and papers, and in orchestras and bands. Over half the girls were occupied in minding children, 160 worked as clerks, 55 did domestic work and a few were employed as delivery girls, theatre ushers, waitresses, etc.

An analysis of the age-groups and occupations of those who worked more than 15 hours a week revealed that the longest hours

were generally worked by pin-boys, clerks, delivery boys and domestic help, but the majority of pin-boys with these hours were over 14. All ages were represented in the clerk and delivery boy group. Most girls engaged in domestic work for more than 15 hours a week were 16 years and over, although seven 13- and 14-year-olds were included in this group. All the freight-handlers and most of the factory helpers who exceeded 15 hours a week were over 15 years of age. On the other hand, most boys engaged in the street sale of papers and magazines whose hours exceeded 15 were under 15 years of age.

Dangers of Unregulated Employment

While it was recognized that within proper limits and under suitable conditions the employment of boys and girls out of school hours "has definite educational value," it was emphatically stated in the report that

... if such work is continued for long and late hours, is too heavy for the physical development of the boy, or is carried on indoors, the boy will get insufficient sleep, will become fatigued or physically overstrained, and will not get sufficient fresh air. The results will be loss of health, listlessness and sleepiness in school, and retardation of educational progress. There is no doubt that the unregulated employment of young people out of school hours has resulted in abuses which, if not checked, will certainly undermine the health and retard the education of many of our boys.

A system of permits to regulate such employment for both boys and girls was recommended. A permit should not be issued until the school principal had given assurance that the pupil's educational progress would not be impaired by the work, and the school physician had issued a health certificate and declared that the work would not injure the pupil's health. The permit should adjust the number of hours to be worked and the time of beginning and stopping work according to the age of the pupil and the type of work to be done.

Other recommendations stipulated that hours of employment for any boy attending school should not exceed 15 and should be less for those engaged in indoor work and for boys under 15. No boy under 15 should work as a pin-boy. The employment of boys as freight-

handlers was questioned. Boys under 12 should only work out of doors and for not more than one hour on school days and two or three on Saturdays. They should not be allowed to engage in the street sale of papers and magazines.

In regard to girls, it was recommended that there should be some supervision of school girls doing domestic work in order to limit hours and prevent exploitation. Very young girls should not be responsible for minding children nor be kept out till late hours for this work or sent home unescorted. Since most work done by girls is indoors their hours should be rigidly limited.

Present Regulations in Manitoba

Manitoba has been the only Canadian province to regulate the employment of school children under the School Attendance Act. Children between the ages of 7 and 14 are required to attend school for the full term and local school boards may raise the school-leaving age to 15. Children between the ages of 14 and 16 must also continue at school if not regularly employed. Children over 12 may secure exemptions from attendance for a maximum of six weeks in any school term if needed in husbandry or household duties. The Shops Regulation Act forbids the employment of children under 14 in shops except that boys of 13 may be employed in shops for a maximum period of two hours on a school day, eight hours on a school holiday and 48 hours a week. Before employment they must

secure a certificate issued under the School Attendance Act, relieving them from school attendance, one from the Department of Labour, which must be satisfied that the employment will not be harmful to the child and is necessary in the special circumstances of the case.

These provisions were patterned on legislation in Great Britain regulating the employment of school children. By the Education Acts, 1918, local education authorities were authorized to prohibit the employment of any school child if they are satisfied by the school medical officer or otherwise that the employment would be prejudicial to the child's health and physical development or hinder his benefitting from school. Moreover, the Children and Young Persons Acts in Britain forbid (1) the employment of children under 12 except where a local by-law permits them to work for a parent or guardian in light agricultural work; (2) the employment of children under school-leaving age on any school day before the close of school except under a by-law permitting not more than one hour's work before school; (3) the employment of a child of school age before 6 a.m. or after 8 p.m. or for more than 2 hours on any school day or on Sunday; (4) the employment of children under 16 in England and 17 in Scotland in street trading, such as selling newspapers. An article on the Employment of Children and School Attendance in Canada, Great Britain and the United States appeared in the LABOUR GAZETTE for January, 1942, p. 47, and reprints are available.

The Creeping Killer

The Industrial Accident Prevention Associations of Ontario have issued a pamphlet containing information on the universal hazard of carbon monoxide. The pamphlet, entitled "The Creeping Killer", says, in part:

"One of the great hazards of carbon monoxide is that it is fairly common; another is that it gives no warning of its existence. It does not come only from the exhaust of automobiles, but will be found to be present during the melting and pouring of metal, also where acetylene gas is used in welding; it is sometimes present during compressed air work; in tunnels, particularly after blasting; it is found in mines; in some instances in breweries; there is also the hazard in hot metal industries. There are numerous other possibilities of

carbon monoxide poisoning, even in the home or any place where coal, oil, gas or wood, or any substance containing carbon, is burned incompletely."

The pamphlet tells of symptoms, first aid treatment and prevention. It warns: "It is vital to remember that continuous exposure to a very low concentration of carbon monoxide, over a sufficient length of time, can produce the same toxic effect as short exposure to a higher concentration. The hazard is universal, and it is fair to state that the hazard exists, in some degree, in all industries, and in every home."

Copies of the pamphlet may be secured from the offices of the Industrial Accident Prevention Associations, 600 Bay Street, Toronto.

Legislative Proposals of Labour Organizations

Proposals of Canadian and Catholic Confederation of Labour to Quebec Government

THE Canadian and Catholic Confederation of Labour has presented two memoranda of proposed legislation to the Quebec Government. The first was submitted last December and the second on March 16.

The setting up of two Commissions of Inquiry was recommended. One would study producers' co-operatives and the other would examine the structure of labour organization and the means of securing better collaboration between capital and labour. Other major requests were for a law guaranteeing freedom of association and for a compulsory school attendance law in urban centres. The Provincial Government was urged to continue its representations to Ottawa requesting that the machinery of the Quebec Collective Agreement Act should be used in the carrying out of the wages stabilization policy. The difficulty of revising provincial minimum wage orders because of the federal wage stabilization policy was protested. A provincial office to study the cost of living was recommended.

The delegation asked the Minister of Labour to withdraw all permits authorizing night work for women. In establishments where sufficient work cannot be done in daytime, three shifts of six hours each should be arranged for women without any reduction in their pay. This would eliminate work for women between midnight and six a.m. Legislation conforming to the Convention of the 1925 International Labour Conference prohibiting night work in bakeries was urged. Machine workers should not be allowed to work alone at night because of the danger of accident. The hours of work provided for by collective agreements should take precedence over those stipulated in the Industrial and Commercial Establishments Act. The Liquor Act and the Cities and Towns Act should be amended to authorize municipalities to fix closing hours and holidays of licensed grocers to bring them into line with certain collective agreements. Stern measures were urged against employers using the war effort as an excuse for requiring employees to work on Sunday when it was not necessary.

Social Security

The principle of compulsory contributory health insurance was endorsed by the Confed-

eration but it reserved the right to criticize the proposed provincial law on this subject when the draft was available. The Government was commended for its public health work, particularly since the institution of local health units in the province, but attention was drawn to the lack of industrial hygiene, to the unhealthy lodgings of workers, and night work for women. The health of painters should be protected by the compulsory use of a product called "antitox" which, it is contended, renders paint non-poisonous without affecting the properties of the paint. Satisfaction was expressed at the recent increases in mothers' allowances, and the decision to make no deductions from the allowances of mothers receiving dependents' allowances for sons in the Armed Forces. Similar treatment was asked for old age and blind pensioners. Extension of the Pension Act to cover members of the Minimum Wage Commission was also requested.

Workmen's Compensation

Certain changes were advocated in the Workmen's Compensation Act: an increase in compensation from 66-2/3 to 75 per cent of the worker's earnings; fixing the basic wage on which compensation is determined at not less than \$720 a year or 30 cents an hour for 300 days of eight hours each; and the extension of the Act to all employers, including hospitals, and to news-dealers in Montreal (at present the latter are classified as contractors instead of wage-earners). The Workmen's Compensation Board was requested to have notices printed containing the provisions of the Act regarding the worker's right to choose his own physician, forbidding doctors from charging workers for medical aid provided for by the Act or taking action to collect for such service, and requiring workers to submit to medical examination. Employers should be required to post these notices in a suitable place. The delegation asked that diseases arising in cordite plants, asbestosis, tuberculosis-asbestosis, silicosis, and diseases incurred in cotton-printing works, should be made compensable.

Professional Syndicates

Amendments were requested in the Professional Syndicates Act to limit the annual fee charged by any union under the Act to \$5, to require approval by the Minister of Labour of all applications for incorporation under the Act, and to authorize unions to hold examinations and issue certificates of competency to their members. The Act should also compel employers to receive the authorized representatives of a union for purposes of collective bargaining. Federations of unions should be empowered to set up special funds for the benefit of their affiliated unions.

Other Legislation Requested

It was suggested that the Collective Agreement Act should be amended to prevent the legal adviser of any party to an agreement from acting as legal adviser to a joint committee administering a decree under the Act. The Municipal Strike and Lock-out Act should be extended to cover all municipal employees including inside workers and hospital employees. Questions of union recognition and collective bargaining should be submissible to arbitration boards established under the Act. At present the Act applies to policemen, firemen, waterworks, incineration and garbage col-

lection workers. It was suggested that the provisions of the Dominion Industrial Disputes Investigation Act relating to remuneration and travelling expenses of members of boards of conciliation and investigation should be incorporated in the Quebec Trade Disputes Act and the Municipal Strike and Lock-out Act in order to make available more men who could be appointed to boards. Moreover, under both Acts the Minister should be empowered to appoint a commission to investigate any situation where a strike threatens without an application from an interested party.

In the opinion of the Confederation, the Pipe Mechanics Act should apply to all municipalities of 3,000 or more persons and apprentices should be admitted to this trade and to the electrical trade in the ratio of one to every three experienced workers. More complete examinations should be given to electrical workers under the Electricians and Electrical Installations Act and a distinction should be made between electrical workers in the building and manufacturing industries. The publication of a French electrical code was suggested. References testifying to the past experience of candidates for stationary engineers' certificates should be sworn before a justice of the peace.

Nova Scotia Labour Organizations

REPRESENTATIVES of the provincial council of the Trades and Labour Congress, the Nova Scotia Federation of Labour and various unions affiliated with the Canadian Congress of Labour presented a joint memorandum of proposed legislation to the Nova Scotia Government on March 16. A separate brief was submitted to the Workmen's Compensation Board.

The delegation urged reform of the British North America Act to facilitate the provision of adequate social services and the enactment of nation-wide labour legislation which would remove unfair competition between provinces with widely varying labour laws. It requested further representation for organized labour on boards and commissions dealing with matters affecting labour and asked that union labour be given preference on all Government work and contracts.

Trade Union Act

Certain changes were requested in the Nova Scotia Trade Union Act. It was suggested that a phrase be added to the definition of "trade union" to stipulate that a trade union

is an association "which is free from undue influence, restraint, domination or interference by any employer or association of employers"; and that the definition of "employee" be changed from the negative one declaring that the term does not include "officers, officials or persons employed in any confidential capacity" to the following: "Employee' as used herein shall include all employees who are eligible for membership, according to the constitution of their trade union or industrial union". It was also proposed that the section on collective bargaining should be amended to require an employer to recognize and bargain *only* with the representatives of a trade union having the support of a majority of the employees; and that the maximum penalty for employers who refuse to bargain in such a manner be raised from \$100 to \$1,000.

The delegation suggested that the section authorizing deductions from wages for union dues in any industry where by statute or arrangement deductions are made for benefit societies, etc. should be amended to permit the adoption of the check-off system in any industry or employment where a majority

of the employees desire it. Approval by a majority of the employees who are eligible for membership in the union and who actually vote should be sufficient to indicate that a majority of the workers in the industry favours such a scheme. The present practice is to require the approval of a majority of all the workers in the industry.

Workmen's Compensation

As regards workmen's compensation, the delegation asked that compensation for permanent disability be raised from 66½ to 75 per cent of the worker's average weekly earnings or of the difference between his weekly earnings before and after the disability was incurred. It also requested that full compensation be continued until the worker is able to return to his regular work or is provided with suitable alternative employment. The minimum weekly compensation for temporary or permanent total disability should be \$15. At present it is \$8 or the amount of the worker's earnings if less than \$8 a week. Greater promptness in making compensation payments was urged and payment for time lost while attending compensation hearings.

It was proposed that persons receiving compensation under the rates in effect before the 1938 Act was passed should be granted compensation at the new rates and that the change should be retroactive. Workers suffering from silicosis, which was added to the schedule of compensable industrial diseases in 1940, should be granted retroactive payments for all time lost since they were deprived of earning power. Elimination of the 30-day limit for medical aid and of the one-year limit for maintenance of artificial limbs and other apparatus was requested. Workers contributing to hospital costs by a check-off should be entitled to the full 30 days' medical aid at present granted under the Act.

Other changes suggested were that doctors should be authorized to call a nurse for cases requiring one, and that the Board pay the hospital expenses of a worker and his dependents if the worker is unable to pay such expenses because of an injury. Compensation coverage for checkweighers and other union employees should be arranged between the Workmen's Compensation Board and the trade unions or other parties concerned.

An amendment was requested in the section regarding workers found dead in the underground workings of a mine or at a place where they had a right to be in the course of their employment. It was suggested that this section be extended to cover workers found dead anywhere in a coal mine and that the evidence of witnesses present at the time of death

should be necessary to rebut the presumption that the workman died as the result of personal injury by accident in the course of his employment. As regards objections to claims, the delegation asked that the objector should be required to notify the claimant when he files an objection with the Board and the time-limit within which an inquiry into the matter must be held should be reduced from 45 to 20 days after the objection is filed. A final request was that at least once a year an impartial medical man should be brought in to investigate all unsettled claims and his decision should be final.

The delegation asked that the following diseases be added to the schedule of compensable industrial diseases: Ammonia and sulphur poisoning or their sequelae; carbon dioxide and carbon monoxide poisoning; compressed air illness or caisson disease; conjunctivitis and retinitis due to electric and acetylene welding; infection from handling sugar; dermatitis; silicosis in any process involving dust-inhalation; and athlete's foot.

Other Recommendations

Reduction of the pensionable age for old age pensions from 70 to 60 and increase of the minimum monthly payments to \$40 were urged. On the subject of mothers' allowances, the delegation asked that widows with at least one dependent child and wives of men confined to insane or tuberculosis institutions with dependent children be eligible for an allowance of \$50 a month plus \$10 for each child under 18 years of age. As the Mothers' Allowances Act stands at present, the maximum allowance is \$60 a month and allowances are granted only to widows with two or more dependent children under 16 or to a widow with one dependent child under 16 if the widow is physically unable to earn sufficient to support the child or has a second child over 16 who is a permanent invalid. It was strongly recommended that recipients of pensions and allowances under the Old Age Pensions, Workmen's Compensation and Mothers' Allowances Acts should be granted a cost-of-living bonus of 25 cents a week for each point of increase in the cost of living, and that it be retroactive to September, 1939.

Other legislative requests included extension of the coverage of the Industrial Standards Act to all industries in the province, implementation of the Limitation on Hours of Labour Act, 1935, and extension beyond May 1, 1943, of the Nova Scotia Labour Act which forbids the employment of non-residents without special certificates. The delegation also proposed that the learning period for women workers covered by the Minimum Wage for Women Act be limited to three

months for all types of employment. At present it varies from three to 18 months depending on the age of the worker and on the industry. It was also suggested that the special provisions of the Factories Act safeguarding the health and safety of foundry workers such as those relating to lighting, heating, ventilation, sanitary conveniences, wash-rooms, lockers, etc., should be extended to all factories under the Act. An amendment in the Company Doctors Act was requested to give any worker the right to a check-off for any qualified medical practitioner he may specify. At present, if employers make wage deductions for medical services, they must recognize as a regular

medical attendant of the company the practitioner designated by at least 25 per cent of the employees, but there is nothing to compel an employer to introduce the check-off.

Other recommendations dealt with free school text books, hours of liquor sale, increased rates for use of trucks on Government work, earnings of public utilities, broadcasting the price of fish, etc. The Government was urged to co-operate with Wartime Housing Limited in meeting the housing shortage in the province. It was also proposed that legislation be passed to provide for the inspection of electrical installations and of rope, gear, tackle and working ways in the building and transport industries.

Wartime Employment of Women in the United States

“**W**OMEN at Work in Wartime” is the title of a recent pamphlet published by the Public Affairs Committee, Inc. of New York. It deals with the type of work women can do, the numbers that will be needed, and the problems involved in training women for jobs and bringing them into industry. The opportunities for women in the Government Service, the Women’s Service Auxiliaries, on farms and in civilian life are also discussed. The information given in the pamphlet is taken from official sources.

The War Manpower Commission has estimated that a million and a half additional women workers must be recruited into industry before the end of 1943. Many of these will have to be married women, but the writer of the pamphlet states that “women cannot leave home and fit into jobs until their home problems first are solved”. The Commission is opposed to the employment of women with young children until all other sources of labour are exhausted; but it is pointed out that social and economic pressure often push such women into industry. The problem of caring for their children must be met by the community with the assistance of federal funds where necessary. To start a child-care program a planning group representing the chief community organizations must be formed, a survey made to determine the need and resources available and training courses established for staff. Examples of successful community and factory nurseries are given. Children of school age must be cared for through the extension of school facilities. Working mothers may also be assisted by establishing community kitchens and laundries and by counselling services which give advice on specific problems of employed home-makers. Part-time work for women is also suggested.

The problem of absenteeism is often serious among women workers but the number of women staying away from work “has been greatly reduced where proper working conditions exist. Reasonable working hours [eight a day and 48 a week in the opinion of the U.S. War Manpower Commission] adequate rest periods and lunch time, rotation of shifts, proper rest-room and lunch-room facilities are particularly important to the efficiency and health of women workers.” Young girls and women with home responsibilities should not be allowed to work on night shifts. The Women’s Advisory Committee of the War Manpower Commission and the Women’s Bureau of the Department of Labour recommend “that the management provide time and facilities for a hot and nutritious meal; preserve the week-end rest; assure effective health supervision; provide well-trained supervisors; provide good lighting to lessen fatigue and the likelihood of accident; give attention to the workers’ transportation problems; pay a differential rate for work at night, thus providing some compensation for the additional strain”.

Employers were at first reluctant to take on women because they had to comply with protective laws governing women workers and alter plants by lowering benches, and installing lifting devices, rest-rooms, lunch-rooms, etc. The pamphlet states that airplane factories have taken on women more rapidly than any other industry. In most airplane plants women receive the same beginning wage rates as men. The Army and Navy, which employ large numbers of women inspectors, also have an equal wage policy. The War Labour Board has endorsed the principle of equal pay for equal work and the National Manufacturers’ Association and the labour organizations have declared themselves in favour of it.

Labour Law

Recent Regulations Under Dominion and Provincial Legislation

Merchant Seamen—Unemployment Insurance—Industrial Safety and Minimum Wages in British Columbia and Quebec—Hours of Work and Old Age Pensions in British Columbia—Collective Bargaining in Quebec

THE Merchant Seamen Order, 1941, has been amended and consolidated. Changes have been made in the Unemployment Insurance Regulations dealing with contributions, and a new Order in Council permits payment of benefit to persons residing in the United States. An Order under the National Selective Service Civilian Regulations has been issued regarding the transfer of men from non-essential to essential employment; and new agreements were authorized with the provinces regarding agricultural labour. A Proclamation has been issued designating the persons to whom the National Selective Service Mobilization Regulations apply at present; and an agreement was authorized with British Columbia for the use of Alternative Service Workers in forest work. The Post-Discharge Re-establishment Order has been revised and other Orders in Council relating to persons discharged from the armed services have been issued. The selective service measures are summarized in the section on Manpower

(page 566) and those relating to discharged persons in the section on Social Security and Reconstruction (page 587).

The British Columbia Workmen's Compensation Board has issued accident-prevention regulations for the shipbuilding industry and a safety regulation under the Quebec Industrial and Commercial Establishments Act has been revised. A new minimum wage Order has been issued for the fishing industry, including fish-canning, in British Columbia and a regulation under the Hours of Work Act in this province and two minimum wage Orders in Quebec have been renewed. In British Columbia, the administration of the Old-Age Pension Act has been transferred to the new Old-Age Pension Board and regulations under the Teachers' Pensions and Municipal Superannuation Acts have been amended. An Order in Council concerning collective bargaining in pulp and paper mills was passed under the Quebec Forest Resources Protection Act but was suspended shortly afterwards.

Dominion

Merchant Seamen Order, 1941

This Order, which was passed on April 4, 1941, and was amended from time to time thereafter (L.G., 1941, p. 650; 1942, pp. 307, 1045) has been further amended and consolidated by Order in Council P.C. 11397 which was passed under the War Measures Act on December 19 and came into effect on April 15. It provides for the discipline of merchant seamen, including persons carried on the strength of a seamen's manning pool, whose actions are subversive or delay or are likely to delay the departure of a ship. Under it a Committee of Investigation carries out the preliminary examination of the conduct of such seamen and the case may then be referred to a Board of Inquiry which has power to order the detention of a seaman.

The most important amendments made in the consolidated Order are as follows:—(1) a direction of a Committee or an order or decision of a Board is now stated to be final and no appeal may be made from it to any court, tribunal or person; (2) a Board may in any case it sees fit refer the proceedings to the Judge Advocate-General, Department of National Defence, for his opinion on any question involved and may order a seaman detained until this opinion is received; (3) a Board may order proceedings adjourned to such time and place as appears fit and may order the seaman detained in the meantime; (4) the time limit within which a seaman who has been detained under direction of a Committee must be brought before a Board has been extended from 72 to 96 hours; and (5) the phrase "person carried on the strength

of a manning pool" is now stated to include any person who has agreed in writing or verbally to join a manning pool.

Unemployment Insurance Act

Persons resident in the United States who establish their right may now be paid unemployment insurance benefit, by virtue of an Order in Council of March 30, 1942 (P.C. 2555). This Order was passed under the War Measures Act and is a temporary expedient which will remain in effect until the Act itself can be amended. In March and April of 1942 an agreement was reached by an exchange of notes between Canada and the United States whereby benefits will be paid in one country on the basis of contributions made in the other. A few claims have now been established by persons resident in the United States who paid contributions in Canada.

The Regulations dealing with contributions which were approved on May 23, 1941 have been amended by an Order in Council of April 1 (P.C. 2587). A new section has been added which provides that if a worker is ordinarily employed by more than one employer in a day, the employers may, subject to the approval of the Commission, arrange to have one employer pay the contributions on the basis of the total remuneration with that employer being reimbursed by the others. If the employers do not make such an arrangement, the Commission may designate an employer other than the first employer of the day for the purpose of paying contributions and no further contribution will be payable by any other employer of that day.

The sections dealing with insurance books have also been amended. As they now stand they provide that any person who has not

received a registration number from the Commission must within 72 hours of hiring any person in insurable employment notify the nearest Employment and Claims Office of the number of persons in his employ, and that every employer who has a registration number must use it to identify himself in all communications with any office or agent of the Commission. Every employer must obtain an insurance book for each of his workers in insurable employment who has not a book for the current year, and if a worker who changes his employment cannot deliver his book to his new employer, the employer shall apply for a new book. When an employer hires a person in insurable employment he must take possession of that person's book immediately and he will retain it for the purpose of making contributions as long as the worker is employed by him. He is responsible for seeing that the book is not lost or destroyed.

When a worker is separated from his employment, his employer must give him his book not later than the next day. If, however, the employment is ended by death, or the worker has no immediate prospect of resuming insurable employment, or the Commission believes that it is not practicable to deliver the book to the worker, the book must be delivered to the nearest Employment and Claims Office. At the close of each year ending on March 31 or at any other time determined by the Commission, every employer must return all insurance books in his possession to the nearest local office and provide such information as may be required for the issue of books for the succeeding period.

Provincial

British Columbia Female Minimum Wage Act

Order 78, gazetted April 22 by the Board of Industrial Relations, replaces a 1920 Order for the fishing industry (L.G., 1920, p. 169) and adds fish canning to the operations covered by the earlier Order so that it now applies to women engaged in "washing, preparing, preserving, canning, drying, curing, smoking, packing, labelling and reconditioning of containers, or otherwise adapting for sale or use or for shipment any kind of fish or shell-fish." The minimum wage rates have been changed from a weekly to an hourly basis and the learning period reduced.

The new Order sets a minimum rate for experienced workers of 33 cents an hour instead of \$15.50 a week as in the former Order. If employers obtain a licence from the Board

they may employ learners of any age at 28 cents for the first 200 hours of employment but thereafter they must pay them the full rate for experienced workers. The earlier Order provided for a 12-month learning period and learners' rates advanced from \$12.75 to \$14.75 a week. Under the Act, special licences must be obtained to employ persons over 18 at learners' rates and not more than one-seventh of the total employees may hold such licences. The aggregate number of workers under 18 and persons holding special licences may not exceed 35 per cent of the employees. The provisions regarding wages do not apply to persons engaged in heading and filling in the fishing industry, nor to persons covered by other Orders of the Board or employed under a permit issued by the Board to handicapped or part-time workers or apprentices.

Women workers in the fishing industry may not work more than 10 hours a day and 48 hours a week without a written permit from the Board. Employers are required to pay semi-monthly all wages earned up to eight days prior to the date of payment. The Order became effective on May 3.

British Columbia Hours of Work Act

The regulation, first passed in 1935, exempting the fruit and vegetable industry from the eight-hour day and 48-hour week fixed by this Act (L.G., 1935, p. 428) has again been renewed to March 31, 1944. Under minimum wage regulations, time and a half must be paid after ten hours and double time after 12 hours.

British Columbia Old-Age Pension Act

A regulation gazetted April 15 transfers the administration of the British Columbia Old-Age Pension Act from the Workmen's Compensation Board (L.G., 1927, p. 926) to the Old-Age Pension Board which was provided for by a 1943 amendment in the Act (see p. 0000 in this issue). The Board is to consist of three members appointed by the Lieutenant-Governor in Council.

British Columbia Teachers' Pensions and Municipal Superannuation Acts

The regulation under the Teachers' Pensions Act of March 23, 1942 (L.G., 1942, p. 447) specifying the amount by which teachers may voluntarily increase their monthly contributions to the pension fund in order to increase their retirement annuity was amended by an Order in Council gazetted April 8. It is now identical with a regulation also gazetted April 8 under the Municipal Superannuation Act which declares that contributors may increase their minimum monthly contribution to the pension fund by \$1 per month or multiples of \$1 or "by an amount which, together with the minimum contribution required, will provide a retirement annuity of \$1 per month, or multiples thereof". The original regulation under the Teachers' Pensions Act substituted \$10 for \$1 in the latter case.

British Columbia Workmen's Compensation Act

Accident-prevention regulations for the ship-building industry were gazetted by the British Columbia Workmen's Compensation Board on April 8. They make employers responsible for informing workers, particularly those who are young and inexperienced, of the hazards of their employment and for seeing that safety rules are observed. Employers must also provide first-aid equipment in accordance with

the First Aid Service Requirements laid down by the Board (L.G., 1942, p. 693) and post conspicuous signs indicating its location. Workers are required to use all safety devices furnished and comply with safety regulations. They must not use any means of access to work-places except those provided in accordance with these regulations, and are forbidden to tamper with or remove safety devices except for the purpose of making repairs or adjustments.

All machinery, equipment and structures must be guarded and maintained in accordance with the general accident-prevention regulations (L.G., 1935, p. 512; 1939, p. 474; 1941, p. 1502).^{*} Additional specifications are laid down in regard to the construction of stagings, slip-stagings, swing-stagings, horse-scaffolds and other equipment. Only experienced workmen may erect, move or alter stagings. Loose material, hose lines or debris must not be left on stagings nor should workers be permitted on stagings which are slippery from ice, snow, frost or other causes. Welding, burning and riveting are prohibited on staging suspended by fibre ropes. Every man on a swing-staging must be provided with a life-line and the number of men on the staging may not exceed the numbers of fall lines. Forges may not be located on slip-stagings.

Ladders, stairways, runways, walks and all passageways must conform to the specifications laid down in the general regulations. Permanent stairways and rails should be installed as soon as possible. Side-rails are required on stairways and on ladders leading into holds. Men climbing ladders must have both hands free. At all deck landings there should be a platform with guard-rails and service lines for handling tools and light materials. All openings on decks must be provided with a guard kept in place at all times. If hatches are not protected with suitable guard-rails, safety nets must be furnished. For men working in double bottoms or in any place where they may become trapped in case of fire or overcome by gas, there should be a man in attendance at the manhole opening.

Gangways must have guard-rails and toe-boards and be constructed so as to allow for changes of tide and surging of the ship. They must be kept clear of debris, mooring lines, hoses, etc. Every ship must have two movable rope ladders reaching from the deck to the water and two cork life-rings in an accessible and plainly marked place. Life-rings with lines attached must also be kept on fitting-out wharfs, repair-docks, building-slips

^{*}New general regulations were issued recently and will be dealt with in the June LABOUR GAZETTE.

and other places where work is done over water. Stagings, passages and all places where men are working should be adequately lighted and persons are forbidden to tamper with or remove lights.

Cranes, derricks and locomotive cranes must be constructed and operated in conformity with the general regulations. Approved signals should be used and operators must disregard all signals from anyone except a proper signman. Only experienced workmen may hook or sling loads and they should not be unhooked or unsung until safely landed and properly blocked. The working-load on ropes or chains must not exceed the working-strength guaranteed by the manufacturer, and slings should be protected from sharp corners and adjusted to equalize the strain. Locomotive cranes must not be parked so as to obstruct main thoroughfares nor may a train of cars be left standing without cranes until the hand-brakes are set. Locomotive cranes must have whistles, and head-lights for night work.

If workers are under or about a parked engine, red flags and red lights at night must be displayed at both ends. Only crane crews may ride on cranes or cars. Persons are forbidden to stand in front of a moving engine or car preparatory to boarding it or to ride between cranes or cars. Engineers of locomotive cranes are responsible for seeing that their equipment is in good working order before putting it into service and must report all defects to the foreman. If workers are transported on jeeps, lumber-carriers or hysters, seats must be provided. Suitable traffic signs should be installed at dangerous points for these machines which are not to exceed a safe speed.

Precautions in regard to power-tools, air-tools and hammers, sledges, drift-pins, wedges, punches, chisels, etc., are laid down and rules for handling plates by prescribed lifting devices set forth. Persons are forbidden to ride a load or hook. Efforts should be made to avoid passing loads or hot rivets over workers or openings. Drift-pins, bolts or rivets should not be knocked out when there is danger of hitting workmen. All gas manifolds must be distinguished by a different coloured paint for each type of gas and equipped with cocks. Hoses and regulator valves should be free from leaks and regularly tested. Cylinders must not be handled in slings and must be protected against oil and grease, undue absorption of heat, and sparks or flames from welding or cutting torches. Workers are forbidden to play a burning torch on gas tanks or regulators. Gases may not be transferred from one tank to another except by a manufacturer.

Proper ventilation must be provided where dangerous or noxious fumes, gas or smoke are encountered, where painting is being done or plates are being covered with bitumen in confined spaces or where the oxygen content of the air is less than 20 per cent. If effective ventilation cannot be provided workers must wear respirators.

Workers' clothing should conform to the requirements of the general regulations. Safety hats are compulsory for workers on hulls, ways, etc., where there is danger from falling objects. Women working near machinery must wear hair-covering. Workers handling wire rope should wear gloves. If there is an eye-hazard present and particularly where babbitt is being poured each workman must be supplied with goggles which are to be sterilized before being transferred to another worker.

Special rules are made for the protection of painters, welders and burners. Painters must wear suitable protective clothing and be supplied with protective cream and adequate washing facilities. Their lunches should not be kept with their work-clothes and should not be brought within 25 feet of spray-painting. Painters should not work where the paint will contaminate the air breathed by other workers and spray-painters must be provided with respirators.

Welders must wear leather gloves, helmets fitted with the proper glass and their arms should be protected when doing overhead work. Their helpers must be provided with special goggles. Nearby workers should be protected from the flash of the arc by goggles or protective screens. Welding-machines must be shut down at all rest periods, ends of shifts and when lines are being changed to new locations. Operators must be advised whenever a machine is started or stopped by someone else. Stingers must be made dead or protected against grounding when no welding is being done. Wire stubs are to be placed in a receptacle provided for the purpose. Workers engaged in chipping or cleaning welds must have their eyes protected.

Burners are required to wear suitable goggles and gloves and must not wear ragged or oil-soaked clothes. They must wear respirators if proper ventilation is not provided when burning materials give off fumes. Workers who must work beneath burning operations should be adequately protected and care taken to prevent burned sections dropping on them. Necessary help or supervision should be provided for burners and welders when working in a confined or cramped space.

Quebec Forest Resources Protection Act

Under this 1935 statute which was proclaimed on April 10, 1943, an Order in Council concerning collective bargaining in pulp and paper mills was gazetted April 14 and was later suspended by another Order gazetted May 1 when it was decided to appoint a commission of inquiry to report on labour problems in the industry. The first Order was considered necessary because "the disregard of the freedom of organization in certain pulp and paper mills is. . . prejudicial to the interests of the Province in the administration of the public domain". It was passed under the authority in the Act to make regulations "respecting the judicious development of the forest resources of the Province" and "to protect the forest or mill workman as well from the standpoint of health and salary as from that of working conditions".

The suspended Order in Council applied to any person or corporation operating a pulp and paper mill which is wholly or partially supplied with timber cut on public lands or with timber belonging to or controlled by any person licensed to cut timber on public lands. It required such employers to bargain with any professional syndicate or trade union representing their employees with a view to signing a collective agreement regulating working conditions. If the workers in any mill were organized into more than one professional syndicate or trade union, the employer was to negotiate simultaneously with each syndicate or union. The Order also stipulated that employers who had signed a

collective agreement with a union must permit any other professional syndicate or union to adhere to the agreement on the same conditions as the original signatory. Disputes arising out of this Order were to be referred to a council of arbitration set up under the Quebec Trade Disputes Act. Such a council consists of three members appointed by the Minister of Labour, one on the nomination of the employer, one recommended by the workers and a third selected by the first two. Parties must agree to accept the decision of a majority of the council.

Quebec Industrial and Commercial Establishments Act

An amendment was gazetted April 17 in the regulation under this Act requiring women and girls to wear their hair plaited and fastened to their head to prevent it from coming in contact with shafting or machinery in motion or with the materials or substances which they are handling. Women and girls are now required to protect their hair in the manner prescribed by the inspector so as to prevent it from coming in contact with any machinery or materials.

Quebec Minimum Wage Act

Order 13 governing the match industry (L.G., 1942, p. 798) and Order 17 relating to laundry, dry-cleaning, dyeing, carpet-cleaning and allied establishments in the district of Montreal (L.G., 1938, p. 1351) were renewed to June 1, 1944, by Orders in Council gazetted April 24 and May 1.

Labour Legislation in British Columbia, Manitoba and Ontario in 1943

British Columbia

BOTH British Columbia and Ontario have recently made important changes in the law concerning trade unions and collective bargaining and in their Workmen's Compensation Acts. In Manitoba a private member's bill respecting the right of employees to organize and bargain collectively failed to pass. The following article describes these and other developments of interest to labour in the recent sessions of these three provincial legislatures.

Outstanding among the measures enacted by the British Columbia Legislature, during its Session from February 2 to March 18, were amendments in the laws concerning collective bargaining and workmen's compensation. Statutes were also passed to permit, for the duration of the war, the relaxation of rules governing coal miners' certificates and

the making of regulations to cancel any public holidays and to appoint certain days to be holidays. A number of Dominion-Provincial agreements for war purposes were ratified, Acts relating to the welfare of children, regulation of shops, and weekly half-holidays, were revised, and amendments made in laws dealing with regulation of factories and of metal-liferous mines, mothers' allowances, and old-age pensions.

Collective Bargaining

The collective bargaining sections of the Industrial Conciliation and Arbitration Act, 1937, were amended to require an employer to negotiate with the union to which a majority of his employees belong and to

forbid an employer to interfere with or contribute financial or other support to an employees' organization.

"Collective bargaining" is now defined to mean the bona fide conducting of negotiations between bargaining representatives on behalf of employees on the one part and an employer or employers on the other part for the purposes of discussing any matters of mutual concern pertaining to employment relations, reconciling divergent points of view, reaching a common understanding clarifying disputes and arriving at a settlement or adjustment.

As formerly, it is declared lawful for employees to bargain with their employer through representatives elected by a majority vote of the employees affected, but provisions for bargaining through trade union officers were revised. If the majority of the employees belong to one trade union, that union has the right to conduct the bargaining, in which case the officers of that union, or such persons as the union may elect for the purpose, are to be the bargaining representatives on behalf of all the employees affected, whether members of the union or not. "Trade union" is defined as a national or international organization of employees, or a local branch of such organization. "Member of a trade union" means a person who has been duly admitted to membership, has continued to be a member for at least three months, retains his membership and is in good standing according to the constitution and by-laws of the union and is not more than six months in arrears for his dues. The definition of "dispute" was amended to include a dispute or difference between an employer and a trade union in which a majority of his employees in any separate plant or department of his operations are members.

The Minister of Labour must be notified of the election of the bargaining representatives and may take any steps he deems proper to satisfy himself that the election of representatives was properly conducted or that a majority of the employees affected are members of the trade union claiming the right to conduct the bargaining. For this purpose the Minister may inspect the records of the union and of the employer and if he is not satisfied he may order a new election of representatives under his own supervision or reject the claim of the trade union, as the case may be.

If the Minister is satisfied that the bargaining representatives are duly constituted he must notify the employer and the employees or union, and the employer must bargain

with such representatives. Where such bargaining is desired by employer or employees and the bargaining representatives or the employer refuse or neglect for more than twenty-one days after the notification by the Minister referred to above, the party so neglecting or refusing is guilty of an offence against the Act.

Where, in accordance with established trade union practice, the majority of a group of employees who belong to a craft by reason of which they are distinguishable from the employees as a whole, are separately organized into a trade union pertaining to the craft, that group may, if it wishes, bargain collectively on its own behalf through the trade union of which a majority are members. Where a group claims and is entitled to these rights, the employees comprising the craft are not entitled to vote, for any of the purposes of collective bargaining with that employer, except when such bargaining is in respect only of the craft to which they belong, nor may they be taken into account in the computation of a majority in respect of any matter on which they are not entitled to vote.

Where a trade union entitled to bargaining rights has endeavoured to make an agreement with an employer and has failed, or where an employer has similarly failed to get an agreement with such a union, the union or the employer may send written notice to the Minister, giving particulars. The Minister may then refer the matter to be dealt with under the Act as a dispute without first referring it to a Conciliation Commissioner.

Provision is made in the Act for electing new bargaining representatives or for ascertaining if the particular union continues to be the choice of the majority of the employees. Six months from the date when notice as to the bargaining unit has been received from the Minister, the employer or any of his employees may apply to the Minister to hold an election to determine bargaining representatives or to ascertain if the majority of the employees affected continue to be members of the trade union. If, after conducting an election or an investigation by checking the records of the trade union or by any other means deemed necessary, the Minister finds that a majority of the employees affected choose to elect bargaining representatives other than those formerly elected or that a majority of such employees are not members of the trade union, the Minister must notify employers and employees of his findings, after which the former representatives or union will no longer have authority to negotiate. Nothing

in the Act is to be deemed to require any person who is already a member of a trade union to become a member of any other trade union.

It is declared unlawful for an employer to dominate or interfere with the formation or administration of any employees' organization or to contribute financial or other support to it, but he is not prohibited from allowing any employee or representative of an organization of employees to confer with him or attend to the business of the organization during working hours without deduction of the time so occupied in computing time worked for the employer and without the deduction of wages in respect of it.

A number of other changes were made in the Act. The time within which a board of arbitration must make its report may be extended beyond the fourteen days fixed by the Act for such time as may be agreed upon by the members of the Board, instead of with the unanimous consent of all parties, as formerly. The report is not binding on the parties.

Under a new section the clerk of the court, before whom any legal proceeding or prosecution under the Act takes place, is required to make a brief report of the particulars of such proceeding or prosecution, within thirty days after it has been determined, to the Secretary-Registrar, who is to be appointed by the Lieutenant-Governor in Council under another new section.

The decision of the employer or employers and of the employees upon the acceptance or rejection of the award of a board of arbitration must be given to the Minister not later than fourteen days after the date on which copies of the board's award are forwarded to the parties. The Minister may, however, grant further extension for cause.

Where the time fixed by the Act for doing or refraining from doing anything is less than seven days, holidays are not to be reckoned in the computation of the time.

Workmen's Compensation

The Workmen's Compensation Act was the subject of a number of amendments, many of which carry out recommendations made by Mr. Justice Sloan as Commissioner to inquire into the operation of the Act. (L.G. 1942, p. 1158.)

The definition of "dependants" was amended to include a wife, husband, parent or child who satisfied the Board that he or she had a reasonable expectation of pecuniary benefit from the continuation of the life of the deceased workman. "Metalliferous mining

industry" was redefined to include the operations of milling and concentrating but not other operations for the reduction of minerals.

Part I of the Act is not to apply to persons employed by American contractors upon the military highway to Alaska and other projects of the United States in British Columbia since January 1, 1942, when compensation is provided for such persons under the "Long-shoremen's and Harbour Workers' Compensation Act" of the United States Congress, as amended in 1941. Part I applies to any employment by the Crown in right of the Province, including employment by a permanent board or commission. Formerly employees of the Crown were only covered by Part I when their employment was such that Part I would apply if the employer were a private person.

There is a general increase in the scale of compensation. Where formerly \$125 was allowed for burial expenses, the Act now provides for payment of that sum for burial or cremation and requires the employer to bear the cost of transporting the body to the nearest undertaker. If the workman is to be buried in another place within the Province, an additional sum not exceeding \$100 may be paid from the Accident Fund.

Compensation to a widow or invalid widower is unchanged at \$40 per month but payments in respect of children are raised from \$7.50 to \$10 per month for each child under 16 and for each invalid child over that age, together with \$12.50 per month for each child or invalid child while regularly attending an academic, technical or vocational school between the ages of 16 and 18 years. The maximum payment to a widow or widower and children is now \$80 per month instead of \$70 as formerly. Orphan children are to receive \$20 per month each to the age of 18 years, and over that age if invalids, with a maximum total payment of \$80 per month instead of, as heretofore, \$15 a month to each child under 16 and to each invalid child over that age with a maximum monthly total of \$60 a month. Under the new provisions, the monthly payment, except in the case of an invalid child unable to attend school, is to be reduced by \$2.50 while the child is not attending an academic, technical, or vocational school, between the ages of 16 and 18 years. Except as provided above, compensation to a child, other than an invalid child, ceases, as formerly, when the child attains the age of 16 or dies. The amendments respecting invalid children apply from March 18, 1943, when the amending Act came into force, to such children who

were on that date or afterwards become entitled to compensation.

As formerly, dependants other than consort or children, are to receive a sum reasonable and proportionate to their pecuniary loss, to be determined by the Board, but the maximum monthly payment to such dependants is raised from \$30 to \$40, in the case of a parent or parents, and the maximum monthly total from \$45 to \$55. Where the worker leaves a consort without children, or orphan children, and also a dependant parent or parents, the parent or parents may receive up to \$40 per month, instead of \$30, as formerly, and not exceeding, with the compensation otherwise payable, \$80 per month instead of \$70. A new clause provides that where the workman leaves a wife, husband, parent, or child who are not dependent on his earnings at the time of his death but had a reasonable expectation of pecuniary benefit from the continuance of his life, the Board may award them not more than \$40 a month for life, or for a shorter period, but not exceeding, in all, \$1000.

All dependants residing outside Canada, instead of alien dependants only, as formerly, may be awarded compensation at a rate lower than the above but such as, in the opinion of the Board, will maintain them in the same degree of comfort as dependants of the same class residing in Canada. A foster-mother is entitled to receive the same compensation as if she were the widow until the children reach the age of 18 years, instead of 16, as formerly, or until they cease, at an earlier age, to be entitled to compensation. A new section provides that where the workman leaves no widow but has maintained a common-law wife for seven years, the Board may order the payment to the common-law wife of the compensation to which the widow would have been entitled. In addition to other payments, a widow or foster-mother in Canada is entitled to a lump sum of \$100. When an invalid widower who is receiving compensation ceases to be such the Board may cease paying compensation to him. Payments to a widow on remarriage remain at two years' compensation but the limit of \$480 is removed.

Where a dependant is unable, on account of war conditions, to file an application for compensation within the period prescribed by the Act, the Board may extend the period for one year from the date on which the dependent could, in the opinion of the Board, make the application.

Maximum compensation in total disability cases was raised from \$10 per week or average

earnings to \$12.50 per week or average earnings. An amendment relating to permanent partial disability cases, which is retrospective to January 1, 1917, enables the Board, where it deems it more equitable, to estimate the impairment of earning capacity from the nature and degree of the injury, having regard to the workman's fitness to continue in the employment in which he was injured or to adapt himself to some other employment or business. Compensation is to be payable during the lifetime of the workman or for such other period as the Board may fix. The maximum amount of average earnings taken into account in computing compensation was raised from \$2,000 to \$2,500.

Where an accident happens to a workman in the course of his employment as a direct result of enemy action or counter-action taken against such action and compensation has been provided for the workman or dependants by the Dominion Government, the workman or dependants are only entitled to compensation under Part I of the British Columbia Act when the compensation provided by the Dominion Government is less than that provided by the British Columbia Act, and then only to the extent of the difference.

The sections relating to medical aid were amended to provide for treatment other than medical, surgical and hospital treatment and the Board was enabled to make contracts not only with doctors and nurses but with other persons authorized to treat human ailments. Another new provision gives the Board power to make a daily subsistence allowance, not exceeding \$2.50 per day, to an injured workman who, under its direction, is undergoing treatment at a place other than the one where he resides.

The Board is authorized to make arrangements with the Workmen's Compensation Board of any other province to avoid duplication of assessments on earnings of workmen who are protected at the same time under the workmen's compensation laws of two or more provinces and to adjust assessments. The clause which provides that in cases of industrial disease, the disablement shall be treated as the happening of an accident was amended so that all periods of disablement from an industrial disease in any sixty-day period shall be deemed to be the result of one accident.

The provisions relating to silicosis were revised and now apply to workmen employed in coal mining as well as to those in metal mining. As formerly, the workman, in order that he or his dependants may claim com-

pensation, must have been a resident of the Province for three years but an exception is now made in cases where at least two-thirds of his exposure to silica dust was in the Province. The requirement that the workman must have been exposed to silica dust in the Province for an aggregate of three years preceding disablement may now be modified in cases where the workman was not exposed to silica dust anywhere except in the Province. The stipulation that the workman must have been employed in metal-mining in the Province for three months or more in the five years preceding disablement, was deleted. Provisions for filing claims were revised and now require the workman to have filed his claim while usually and regularly employed in the coal or metal-mining industry or to have made and established his claim for potential disability within five years after leaving such employment and, in either case, within one year after becoming disabled. This provision is not, however, to prevent the Board allowing any case due to uncomplicated silicosis that it considers should be allowed. As formerly, if the workman has been exposed to silica dust outside the Province the compensation is to be reduced proportionately. A new section provides that when a workman entitled to compensation for pneumoconiosis has been exposed outside the Province to dust conditions that are deemed to have contributed to the development of the disease, compensation is to be calculated as for silicosis but, if exposure in British Columbia was in two or more classes of industry, the cost of compensation may be charged to such classes in proportion to the periods of exposure.

New sections provide for compensation for hernia on terms similar to those laid down in a number of other provinces viz:—that the hernia is clinical hernia of disabling character and recent primary demonstrability and its onset can be shown to have been immediately preceded by accident. The workman must report to his employer immediately or cease work and report within seventy-two hours. If an operation is deemed advisable, the workman must submit to it within two weeks or compensation will cease to be payable. Where there has been excusable failure on the part of the workman to comply with these provisions, however, the Board may pay compensation, but no benefit is payable for more than seven days prior to the date of operation or for more than 42 days thereafter for uncomplicated hernia.

The Board is now authorized to spend up to \$75,000 from the Accident Fund to assist in the rehabilitation of workmen who are handicapped by their injuries.

In classifying and reclassifying industries, the Board may now withdraw from a class not only a whole industry but any part of any class or sub-class, and may transfer it to another class or form it into a separate class.

The moneys necessary to provide compensation or additional compensation under the amending Act may be levied and collected by the Board from employers carrying on industries under the Act, whether prior or subsequent to the coming into force of the amending Act. The levy may be an addition to the usual assessment or a special assessment.

If an employer liable to assessment is not assessed in any year, he is nevertheless liable to pay the amount for which he would have been assessed.

There is a new section dealing with funds for medical aid, which in British Columbia as in Alberta, is paid for, in part, from contributions by the workers. In the other provinces medical aid is paid from the Accident Fund to which only employers contribute. If the contribution from workmen of one cent a day or part of day, fixed by the Act, proves insufficient to provide one-half the cost of medical aid, the Board is to increase this contribution, from time to time, to such amount as will ensure an equal distribution of the cost of medical aid service between the workmen and employers.

The section providing for a special levy on the employer when failure to comply with the regulations of the Board has been the sole cause of an accident, was amended to provide for such a levy where the accident was due to the employer's gross negligence or to his failure to adopt reasonable measures to prevent accidents. In such cases the Board may levy up to the full amount of compensation payable, instead of one-half, as formerly, but the maximum amount for which the employer is liable is unchanged at \$300.

The claim of the Board for amounts due to it by an employer is to constitute a lien upon the property of the employer which is to be in force for three years from the end of the calendar year in which the assessment was levied.

Moneys in excess of current requirements and not invested are to bear interest at the rate allowed by the bank in which they are deposited instead of at 3 per cent, as formerly.

An employer is now required to send written notice to the Board when its order to install safety devices has been complied with.

The section requiring a permit from the Board for the operation of a plant which has been closed was amended to make it apply also to a plant to which any substantial addition has been made.

Regulations of the Board may now be made retrospective for a period of not more than three months.

Effective January 1, 1943, salaries to be paid to the members of the Board are to be not less than \$6,000 nor more than \$7,500 per annum to the Chairman instead of \$5,000-\$6,500, as formerly, and not less than \$5,000 nor more than \$6,000 to the other members instead of \$4,000-\$5,000, as formerly.

New provisions allow the Board to acquire and dispose of real property, and bring members of the Board under the Superannuation Fund established for Board employees.

The section empowering the Board to withhold or suspend compensation in certain cases was amended to give power to cancel. Any such action may now be taken in the case of a person confined to jail or prison as well as of a person leading an immoral or improper life.

Factories and Shops

A number of amendments were made in the Factories Act. All factories are now regulated by the Act instead of, as formerly, only those in which three or more persons are employed. The section which forbids employment of a child under 15 years of age except by written permission of an inspector setting forth the number of hours the child may be employed in a day, was amended to strike out the provision that such number of hours may not exceed six. The section dealing with hours of work in canneries and similar establishments was redrawn and now provides that the limitation of eight hours a day and 48 a week for women and young girls under 18 years of age, including hours of beginning and ceasing work, shall not be binding upon the employers of such persons in the canning or curing of fish, fruit or vegetables or fruit-packing during the fruit and vegetable seasons and fish-runs, but in all other respects the Act is to apply to such businesses. Formerly, the section did not apply to vegetable-canning and the written consent of the young girl or woman or her parent or guardian was required before the eight-hour limit could be exceeded. Under the Hours of Work Act, seasonal orders

are made fixing the number of hours workers may be employed in these industries.

The clause requiring a sufficient number of sanitary conveniences for employees was amended to stipulate that one sanitary convenience and one urinal must be provided for every twenty-five male employees or fraction of that number and one sanitary convenience for every twenty-five female employees or less.

The Shops Regulation and Weekly Half-holiday Act is a consolidation, without material change, of two statutes, the Shops Regulation Act and the Weekly Half-holiday Act. Regulations and by-laws made under the former Acts are to remain in force until repealed or varied in accordance with the new Act.

Mines

The War-time Coal-mine Employment Act provides that, for the duration of the war, or until the Act is terminated by Order in Council, a person who is not the holder of a certificate under the Coal-mines Regulation Act may, notwithstanding anything in that Act, be employed in a coal mine as manager, overman, shiftboss, fireboss, shotlighter, or coal-miner. It is a condition of such employment, however, that the Chief Inspector of Mines is satisfied that such person is competent, and has issued a written permit for his employment and that not more than twelve men are employed underground at any one time.

The provisions of the Metalliferous Mines Regulation Act dealing with annual medical examinations of workmen were revised and now expressly require that, unless he is exempted by the Workmen's Compensation Board, every workman employed in a mine or in the operations of milling and concentrating ores must undergo an annual examination by a physician selected and paid by the employer. As before, no workman may be employed in such work for more than two months in a twelve-month period without a certificate of fitness for the job but a certificate is not necessary where the ore or rock is crushed in water or in a chemical solution. Workmen employed in other operations for the reduction of minerals are exempt. A new clause stipulates that if the physician finds that the workman is suffering from disease of the respiratory organs so that his employment is a danger to other workmen who are exposed to silica dust, he must give written notice of such finding to the employer and to the Board and upon receipt of such notice, the employer must terminate the workman's employment. In such cases the physician

must furnish the workman, on application, with a copy of his findings in regard to the examination. The Board is to prescribe the nature of the examination and the physician must furnish to the Board, on request, the information and record from which the diagnosis was made. A new provision authorizes the Board to cancel any certificate given by the physician or itself issue a certificate to the workman.

Department of Labour

By an amendment in the Department of Labour Act any person authorized in writing by the Minister of Labour to obtain information under the Act or any person authorized by the Board of Industrial Relations or its Chairman to make any inspection or investigation under the Hours of Work Act, the Female Minimum Wage Act or the Male Minimum Wage Act, may inspect premises and examine and take copies of books, papers or documents. Obstruction of such inquiry is an offence punishable by a fine not exceeding \$30.

Employment Offices

An amendment in the Employment Agencies Act transfers its administration from the General Superintendent of the Provincial Government Branch of the Employment Service of Canada to the Minister of Labour of British Columbia. The Act prohibits the operation of fee-charging employment agencies and requires other legal agencies to keep records and furnish information to the Minister.

Education

A section added to the Public Schools Act enables the board of school trustees of any municipal school district, with the approval of the Council of Public Instruction, to establish and maintain classes for the part-time instruction of persons over 15 years of age. The board may make regulations regarding teachers, school hours and courses of study to suit the needs of the district and may make agreements with employers for the regular attendance of workers at classes.

Mothers' Allowances—Day Nurseries

Amendments to the Mothers' Allowances Act enable an allowance to be paid in respect of a child over 16 and under 18 years of age and also in respect of a child living temporarily apart from its mother, subject, in both cases, to the conditions laid down in the regulations.

The Welfare Institutions Licensing Act was amended to require crèches, day nurseries, and similar institutions where children under 15 years of age are received and cared for during a portion of the day, to obtain licences from the Welfare Institutions Board of the Department of Public Welfare.

Old Age Pensions

The Old-age Pension Act was changed to provide for its administration by a board of three members instead of by the Workmen's Compensation Board. Provision was also made for reciprocal agreements between the Government of British Columbia and the Governments of other provinces for the payment of a cost-of-living bonus to British Columbia pensioners resident in other provinces and to pensioners from other provinces living in British Columbia.

Changes in the Municipal Superannuation Act provide for contributions by municipal employees on a sliding scale instead of at a flat rate of 4 per cent of salary. Contributions are now to be \$4 per month on all salaries up to \$125 per month, \$6 on salaries between \$125 and \$150 per month, and on salaries over \$150 per month a deduction of \$6 with an additional dollar for each additional \$25 or portion of that amount. As formerly, the employee may elect to increase his monthly contribution. In the case of an employee who enters service after April 1, 1939, and is then over 30 years of age the employer may be required from April 1, 1943, to pay a contribution exceeding 7 per cent of salary which is the employer's contribution fixed by the Act, the amount of such larger contribution to be fixed by the Commissioner at a rate necessary to pay for the employee's service pension.

Where an employee discontinues paying contributions for any cause other than resignation or dismissal before reaching retiring age, he may, on again becoming a contributor, reinstate by extra payments the amount of the annuity for which he had been contributing. Where an employer has been paying contributions during the war on behalf of an employee on service with the forces of Britain or any of her Dominions or their allies, the employee is not entitled to receive such contributions as a refund unless he has returned to service with the employer and remained for at least twelve months.

The section dealing with the retirement annuity provided by the employee's contributions was amended to provide that an employee who has been granted a disability pension for any of the war services mentioned

above, if his contributions have been continued during his absence and if he is unfit for further service with his employer, may receive as a refund the reserves maintained, in accordance with the Act, for retirement annuities, as an alternative of being granted the difference between the total disability allowance under the Act and his war service pension. The widow of such an employee who has a pension in respect of her husband's war service is similarly given the option of receiving a refund of the reserves, as above, or the difference between the widow's pension under the Act and the pension for her husband's war service.

Special provisions are made for members of the Provincial Police Force who are appointed when the Force takes charge of the policing of a municipality to which the Act applies.

The section fixing an age limit for persons becoming employees after April, 1939, was amended to provide that the Act shall only apply to persons who are under 35 years of age at the time of entering employment in the case of policemen, firemen and women, or under 40 years of age in the case of other employees. The maximum ages were formerly 30 years for policemen and firemen and 36 years for other employees.

An amendment was made in the section providing that, where a superannuation allowance is granted on the single life guaranteed plan for a term of years certain, provision may be made by the beneficiary that if he should die before the expiration of the term the allowance shall be paid to a person nominated by him. Under the amendment, where both the employee and the nominee die before the expiration of the guaranteed period, the commuted value of the remaining payments is to be paid to the estate of the last survivor.

A change is made in the method of computing. There is also provision for suspending disability pensions which are being paid to persons who recover from their disability and for restoring order to their status as contributors if they take an employment within the scope of the Act.

An amendment, effective from April 1, 1943, for the duration of the present war and for six months after its conclusion, enables a person in receipt of a superannuation allowance to engage in paid work without reduction of the service pension provided by the employer, unless the aggregate of his monthly salary and his monthly service pension exceeds \$150 in the case of a married person or \$100 in the case of a single person, widow or widower. Formerly the maximum aggregate allowed was \$100 for a married person and \$75 for a single person, widow or widower.

Corps of Canadian Fire-fighters

The Corps of Canadian Fire-fighters Act extends to the Corps of (Civilian) Canadian Fire-fighters for Service in the United Kingdom any benefit, right, privilege or exemption conferred by any Statute of the Province on members of any of the Forces of His Majesty or his Allies.

Post-War Rehabilitation

The Post-War Rehabilitation Act, which is retrospective to February 12, 1942, when the principal Act came into force, provides that if a person appointed to the Post-War Rehabilitation Council is a member also of the Legislative Assembly he shall not receive any remuneration, but shall be entitled, without being disqualified as a member of the Legislative Assembly, to accept payment from public funds for travelling expenses, plus a living allowance of \$10 per day during attendance at meetings.

Vocational Training—Recruiting of Farm Workers

The War Purposes Agreements Ratification Act ratifies and confirms agreements between the Dominion and the Province for the training of persons for war industries and service in the Armed Forces and for the vocational training of persons discharged from the Forces; for carrying out the purposes of the Vocational Training Co-ordination Act passed by the Dominion Parliament in 1942; and for carrying out plans for recruiting, transporting and placing on farms in the Province, during the year 1942-1943, male and female workers suitable for farm work who are available in other provinces or in British Columbia. The Government is authorized to extend these agreements, make new ones and pay the cost from the Consolidated Revenue Fund if no special appropriation has been made.

Credit Unions

The sections of the Credit Union Act were repealed which enabled reduction of the share capital in any way authorized by the Companies Act, and forbade use of moneys received on deposit and securities in which such moneys are invested to pay other obligations. Money received from sale of shares may be used to pay the costs of incorporation and setting up of the credit union to an amount not exceeding \$50, or, with the approval of the Inspector, \$100, but must be replaced, in equal annual instalments, out of profits, within three years. The credit committee now has power to make a loan if it is approved by a majority

of the committee. Formerly a majority of the committee had to be present and unanimously approve the loan. A credit union is to have a lien on the deposits as well as on the shares of a member for a debt due it by him. The number of members in a supervisory committee, formerly three, may now be increased to five, with the consent of the Inspector. Seven days' notice, instead of fourteen, as formerly, must be given of the annual general meeting and every general meeting at which an extraordinary resolution is to be proposed. The sections were repealed, which required an annual report to the Registrar and set out the apportionment to be made of profits and reserve fund.

Bills not Passed

Four Bills of labour interest failed to pass. These would have brought farm labourers, fruit pickers and domestic servants under the Female Minimum Wage Act, permitted women over 18 to work in the surface operations of a mine or metallurgical plant, enabled the Board of Industrial Relations to make regulations under the Hours of Work Act calling for two ten-minute rest periods in each shift in any industry, and brought company towns under the provisions of the Town Planning Act.

Manitoba

During the session of the Manitoba Legislature from February 2 to March 17 amendments were made in the laws dealing with regulation of factories, mechanics' liens, and old age and blind persons' pensions. Among Bills which failed to pass was a private member's Bill concerning freedom of association and collective bargaining.

Factories

The section of the Factories Act dealing with employment on certain public holidays was redrawn and now forbids any person to keep open or employ any one in a factory on a holiday without a written permit from the Minister of Labour. Formerly, this section declared it unlawful to keep open a factory or employ any person in it on any statutory or legal holiday, as defined by the Manitoba Interpretation Act, without a written permit from the inspector. The fine for violation of this section remains unchanged at \$100. The holidays named in the Act are:—New Year's Day, Good Friday, Victoria Day, Dominion Day, Remembrance Day, Christmas Day, the twenty-sixth of December, the birthday of the Sovereign or the day appointed

Resolutions

A number of Resolutions passed by the Legislature on March 18th urged the Provincial Government to present certain requests to the Dominion Government. These were—that the Dominion set up as soon as possible a comprehensive plan of social insurance and bring into operation at once a State health insurance plan, recognizing, in each case, the rights and interests of the provinces in the administration of the scheme; that the Dominion Government repeal the Regulations under the Old Age Pensions Act requiring the contributions of the pensioner's children to be taken into account in determining income and requiring computed amounts of dependents' allowance and assigned pay to be deducted from pensions; that in the appointment of advisory and administrative war boards the Dominion consider giving representation from all the provinces to men and women workers, farmers, industrialists and members of the Armed Forces; and that the regulation prohibiting women on dependents' allowances from receiving more than \$40 per month from other sources without deduction, should be relaxed for the benefit of women engaged in seasonal farm labour.

Wages

A provision added to the Mechanics' Lien Act requires that where a claim for lien is made upon an unpatented mining or quarrying claim, the claim, and any judgment, order or other document relating to it, must be registered in the office of the recorder for the mining district in which the land is situated, instead of in the land titles office.

There were verbal changes in the Fair Wages Act and the Minimum Wage Act to bring certain sections into line with amendments made in those Acts in previous years.

Old Age and Blind Persons' Pensions

The Old Age and Blind Persons' Pensions Act was amended to provide for the payment of a supplementary allowance of \$1.25 per month, as from January 1, 1943, to each resident pensioner who qualified in Manitoba

for, and is receiving, a pension under the Act. A portion of the allowance, to be fixed by Order in Council, is to be recovered from the municipalities by an annual levy in the same manner and at the same rate as the municipalities' share of the pension is recovered.

Welfare of Children—School Attendance

An amendment in the Child Welfare Act enables a complaint to be made, or an information laid against any person who contributes to the neglect of a child at any time within twelve months after the offence is committed. The maximum period for taking such action was formerly six months.

Licensing of Workmen

The Highway Traffic Act, which fixes a minimum age of 18 for chauffeurs, was amended to provide that, for the duration of the war, boys of 16 and over may be licensed, as chauffeurs, to drive motor vehicles other than public service vehicles and trucks with a carrying capacity exceeding one ton. The applicant for such a licence must satisfy the licensing authority that he is qualified and has complied with the requirements of the Act and must present the written approval of his parent, guardian or employer and a written recommendation from a magistrate or justice of the peace as to competency and as to the necessity for the issuing of a licence. On similar terms, boys of 14 and over may be licensed to drive farm trucks, and high speed tractors. The minimum age for this work in normal times is 16 years.

A new provision in the Game & Fisheries Act requires guides for fishing to have licences.

Employees' and Trade Union Benefit Societies

Amendments in the Manitoba Insurance Act define more clearly the various types of societies which carry on insurance business, including employees' mutual benefit societies and trade union benefit societies, but these two classes are as formerly, exempt from the necessity of obtaining licences under the Act. Complementary amendments were made in the Companies Act to facilitate co-operation between the Department administering that Act and the Superintendent of Insurance; these changes require that companies before being incorporated or authorized to carry on an insurance business must obtain the approval of the Superintendent. Employees' mutual benefit societies and trade union benefit societies are exempt from this provision also.

Collective Bargaining and Other Bills not Passed

A private Bill which failed to pass would have declared the right of employees to organize and bargain collectively through a trade union or a representative of employees or both, the Minister of Labour being authorized to decide as to the bargaining unit, in case of dispute. In making his decision, the Minister would have been required to select the trade union, unit or group of employees which he considered would best ensure to the employees the full benefit of their right to organization and collective bargaining and to carry out the purposes of the Bill. The Bill proposed that employees in a bargaining unit should select one or more representatives by majority vote for the purpose of collective bargaining and that a collective agreement should enure to the benefit of any employee affected by it, whether a member of a trade union at the time of the making of the agreement or not, and should be enforceable by the employee. Employers would have been forbidden to interfere with employees in the exercise of their rights or to dominate or interfere with the formation or administration of a trade union or to contribute financial support to it, but would not have been forbidden to allow employees to confer with them in working hours without loss of time or pay. Employers would also have been prohibited from compelling or attempting to compel, by intimidation or threat, any employee to be a member or to refrain from being a member or to refrain from serving as an officer of a trade union or voluntary association of employees. They would also have been forbidden to discharge or threaten to discharge an employee because he had filed charges or given testimony under the Act, or to refuse, neglect or wilfully delay to bargain with the representatives of his employees.

The Bill fixed penalties for breach of its provisions and would have compelled an employer convicted of dismissing an employee in contravention of them to reinstate such employee in the position which he held prior to dismissal and at the same wage. The right of an employer to suspend, transfer, lay off or discharge employees for cause would have been preserved.

A Bill to amend the Fair Wage Act would have brought within the scope of the Act the caretaking of buildings used wholly or partly for business purposes or for apartment blocks.

A Bill to amend the Municipal Act would have enabled a municipality which had paid the hospital account of a male public-ward

patient to recover the amount so paid by attaching the moneys due such person from his employer.

Resolutions

On February 18 the Legislature agreed to a Resolution requesting the Government to consider conferring with the other provincial governments with a view to inducing them to unite in requesting the Dominion Government to make amendments in the Old Age Pensions Act enabling the Dominion to join with any province in increasing the old age and blind pension to \$25 per month and to amend Regulation 20 of the Old Age Pensions Regulations to make clear that in appropriate cases the Province, in unorganized territory, or the municipality may advance to a pen-

sioner requiring it, assistance in money or goods to an amount which, with the pension and other income of such pensioner would not exceed \$365 per annum. The Resolution further urged the Government of the Province to consider, in any case, sending a delegation to Ottawa to make the above requests of the Dominion Government.

A Resolution agreed to on March 15 urged the appointment of a Special Committee to inquire into and report upon certain matters relating to education, including equalization of opportunity throughout the Province with particular reference to elementary and technical education, to technical education in the light of present-day and post-war needs and to post-war education.

Ontario

The Ontario Legislature, during its session from February 9 to April 14, enacted a Collective Bargaining Act and amended the laws concerning workmen's compensation, hours of work of drivers of public service vehicles, licensing of electricians, and school attendance. An Act was also passed to provide for a Committee to consider social security and post-war rehabilitation.

Collective Bargaining

The Collective Bargaining Act, 1943, requires an employer to negotiate with the representatives of "a collective bargaining agency" which has been certified as appropriate in accordance with the provisions of the Act. The statute is to be administered by the Labour Court of Ontario or a judge of the Labour Court. This Court, which is provided for under an amendment in the Judicature Act, is to be a branch of the High Court of Justice of Ontario.

The Act is based on the recommendations of the Committee of Inquiry appointed by the Legislature early in the session but differs from them in important respects.

It applies to all employers without regard to the number of their employees instead of only to those having ten or more workmen as was proposed by the Committee. It does not apply, however, to farming or to domestic servants, police, the Hydro-Electric Power Commission of Ontario or to a municipal corporation, school board, or any board or commission established by a municipal corporation under statutory authority, unless such corporation, board or commission has, by by-law, resolution or minute, declared the Act to apply.

A "collective bargaining agency" is defined as any trade union or other association of em-

ployees which has bargaining collectively amongst its objects, but shall not include any such union or association, the administration, management or policy of which is dominated, coerced or improperly influenced by the employer, in any manner whether by way of financial aid or otherwise.

Employees are declared to have the right to form, join or assist any collective bargaining agency and to select or designate any such agency for the purpose of bargaining with their employers.

A collective bargaining agency which claims to represent the majority of the employees of an employer, or a majority of any unit of his employees appropriate for bargaining, may apply to the court to be certified as such. Where a bona fide dispute exists between an employer and a collective bargaining agency, or between two or more of such agencies, as to which agency, if any, has the right to bargain with the employer, the latter may apply to the court for an order to determine the question.

A bargaining agency or an employer may apply to the court, upon grounds set forth in the application, for an order revoking any certificate, but a certificate may not be revoked within a year except on the ground of fraud in the granting of it. The applicant must serve notice of the application on the other party affected. On such an application the court may ascertain what unit of employees is appropriate for the purposes of collective bargaining and determine whether such unit is to be the employer, craft or plant unit or a subdivision of any of these; certify that a collective bargaining agency represents a majority of the employees in such unit, giving the names of the persons who have been appointed or elected representatives; revoke a certification

of a bargaining agency; inspect the employment lists of an employer to ascertain what employees, including any person who, in the opinion of the court, was improperly discharged, are entitled to vote, and may take a vote by secret ballot and authorize any person to enter the employer's premises for that purpose; and may have such inquiries made or things done as it may think proper in carrying out these provisions.

The Act stipulates that no employer may fail or refuse to bargain with the duly appointed or elected representatives of a bargaining agency certified under the Act.

Any party to a collective agreement made under the Act may, on written notice to the other party, apply to the court to construe the provisions of the agreement. The court has exclusive jurisdiction in all matters arising under the Act and there is no appeal from its decisions. No order may be made for costs in any proceedings to determine a bargaining agency or to construe an agreement.

An employer or a collective bargaining agency may apply to the court to inquire into alleged violations of the Act by any person. If it appears that such violation has occurred, the court may restrain such person from continuing this violation; direct him to comply with the provisions of the Act; direct the reinstatement of any person discharged from employment contrary to the Act and the payment to such person of an amount not exceeding the monetary loss he has suffered by reason of such discharge; and may make any other order which it deems proper. The court also has power to determine, on application by any employer or collective bargaining agency, whether any person is an employer or an employee within the meaning of the Act.

With the approval of the Lieutenant-Governor in Council, the court may prescribe forms, fix fees payable in respect to proceedings under the Act and make rules regulating the practice and procedure in the court and for the carrying out of the Act. The Court may delegate any of its powers which are not of a judicial nature to the registrar or to any other person.

Bargaining agencies are required to furnish the court with certain information concerning their organization.

Any bargaining agency, on applying for certification, must file with the registrar of the Labour Court a copy of its constitution, rules and by-laws and a statement of the names and addresses of the officers and notice of any changes must also be filed. An agency which does not comply with this provision may not be given a certificate and if one has been issued it may be revoked.

Moreover, a collective bargaining agency which collects fees from its members must furnish to any member, on request, without charge, a financial statement of its affairs to the end of the last fiscal year. If ordered by the court to do so, it must file with the registrar a similar statement, verified by affidavit of its officers, or of such of its officers as are responsible for handling its funds, and must furnish a copy of such statement to such persons as the court may direct. But no statement, document or proceeding filed in court is to be open to inspection without the consent of the court. The Act expressly forbids wilful interference with any person carrying out any duty required or authorized by the Act or by an order of the court.

A provision in a collective agreement requiring all or any specified employees of an employer to be members of a specified collective bargaining agency certified under the Act is not to be deemed to conflict with any provision of the Act, but no such provision is to apply to a member of a learned or scientific profession.

Protection is given by the Act to members of trade unions or other employees' associations. An employer or employer's agent is forbidden to discriminate against an employee, whether by discharging him from employment or otherwise, on account of his membership in, or activity in connection with, a collective bargaining agency or because he has instituted, or participated in, a proceeding or prosecution under the Act. An employer or his agent is also forbidden to require, as a condition of employment, that any person shall abstain from joining or assisting a collective bargaining agency or from exercising his rights under the Act or under any collective agreement. Coercion, restraint and influencing an employee, whether by financial aid or otherwise, with respect to his exercise of his rights under the Act or under an agreement are also prohibited to an employer or his agent.

Nothing in the Act is to be deemed to give an employee the right to work for, or attempt to organize, a collective bargaining agency in his working hours or to take away the right of any employee to present any personal grievance to his employer.

The Act forbids the issuing, publishing or distributing of any writing relating to any of the conditions of employment with an employer unless the name and full address of the person or collective bargaining agency responsible for the writing is clearly indicated on it.

The provisions of the Reinstatement in Civil Employment Act, 1942, passed by the Parliament of Canada (L.G., 1942, p. 920) are to have effect in Ontario notwithstanding the

termination of the war or the repeal of the Act by Parliament.

In addition to the provisions relating to collective bargaining and to the filing of information with the registrar of the court, the Collective Bargaining Act makes certain changes in the general law of Ontario relating to trade unions. It stipulates that a collective bargaining agency and its acts are not to be deemed unlawful by reason only that one or more of its objects are in restraint of trade. This provision is made by the Dominion Trade Unions Act with respect to trade unions registered under it but only a few unions are registered.

Further, an act done by two or more members of a collective bargaining agency if done in contemplation or furtherance of a trade dispute is declared not to be actionable unless such act would be actionable if done without any agreement or combination. It is also stipulated that a collective bargaining agency may not be made a party to an action in any court nor a collective agreement be made the subject of such an action, unless this can be done irrespective of the provisions of the Act.

Workmen's Compensation

There were a number of changes in the Workmen's Compensation Act, for the most part increasing the benefits. The maximum average earnings upon which compensation may be based were raised from \$2,000 to \$2,500, this provision being applicable to accidents happening on or after July 1, 1943. For accidents happening on or after April 14, 1943, compensation to a widow or invalid widower was increased from \$40 to \$45 a month. Payments in respect of children under 16 years of age are unchanged at \$10 or, where the children are orphans, \$15, but a new provision, which applies without regard to the date of the accident, enables the Board to pay compensation in respect of a child up to the age of 18 years where it appears advisable to continue the child's education. The Board may now pay compensation to the mother of an illegitimate child on the same terms as to a foster-mother.

The section limiting the amount of compensation to dependants was revised and now provides that in the case of accidents happening on or after April 14, 1943, compensation, exclusive of the expenses of burial and the lump sum of \$100, may not exceed 66⅔ per cent of average earnings. The minimum payment to a widow or invalid widower may not, however, be less than \$45 per month or, if the workman's average earnings were less than that amount, the amount of such earnings. Payments to a widow, or invalid widower with

one or more children may not be less than \$55 per month, irrespective of the workman's earnings, with a further payment of \$10 per month for each additional child, unless the total monthly compensation exceeds the workman's average earnings, in which case compensation is to be the amount of such earnings or \$55 per month, whichever is greater.

The section which requires the Board in fixing compensation to take into account any payment or allowance which the workmen may receive from his employer during the period of his disability, was amended to make it clear that only payments made to the workman or his dependents in respect of the accident are to be considered.

The clause giving a workman entitled to an action for damages against a person other than the employer the right to choose between such action and compensation under the Act, was amended to make clear that it refers only to accidents arising out of the workman's employment. A further amendment clarifies the section providing compensation in cases of stone workers' or grinders' phthisis.

A new section entitles a workman or dependants to compensation for an accident happening out of Ontario on a steamboat, ship, or vessel, whether the workman had been previously employed in Ontario or not and regardless of the duration of his employment out of Ontario, if the workman's residence is in Ontario and if either the chief place of business of the owner or charterer are in Ontario or the ship or vessel is registered in Canada.

Licensing of Workmen

Amendments in the Public Vehicle Act reduce the minimum age for drivers of public vehicles from 21 to 18 years and enable the Department of Highways to approve working hours for such drivers in excess of the maximum fixed by the Act, viz: ten hours in any twenty-four hours. An amendment in the Highway Traffic Act reduces the minimum age for operators of motor vehicles from 16 years to 15 years.

Changes were made in the section of the Municipal Act which enables by-laws for examining, licensing and regulating electrical workers to be passed in cities and towns. Such by-laws may now apply to electrical contractors as well as to electricians, master electricians, and journeymen. The definition of "journeyman electrician" was amended to conform with the Apprenticeship Act and now means a person other than a master electrician, "who has been employed in electrical installation and has acquired sufficient skill and knowledge of the trade to be considered a

safe and responsible mechanic," instead of, as formerly, "who has been in the employ of a master electrician for not less than one year and desires to do electrical work as his calling."

Similar amendments were made in the section of the Act enabling by-laws relating to licensing of plumbers to be made in cities, towns, townships, and villages, plumbing contractors being brought within the scope of the section and the definition of "journeyman plumber" being amended in the same manner as that of "journeyman electrician".

Safety of Window Cleaners

A further change in the Municipal Act authorizes councils of urban municipalities to pass by-laws requiring the owner of a factory, shop or office building to provide safety devices for the protection of window cleaners and for regulating and controlling the type and manner of such devices.

Social Security and Post-War Rehabilitation

The Social Security and Rehabilitation Act, 1943, provides for the establishment of a Social Security and Rehabilitation Council of twenty-five members to be appointed by the Lieutenant-Governor in Council. The powers and duties of the Committee include:—making inquiries into methods of conserving and utilizing the natural resources of the Province for the prosecution of the war and the rehabilitation of members of the forces and others who will require employment at the end of the war; examining social legislation in Ontario and elsewhere, including health insurance, and the measures necessary to extend and establish social services in the Province, including the constitutional and financial arrangements involved; preparing estimates of the number of persons who will be unemployed in Ontario at the end of the war, showing those who will be employable and unemployable and those who will have been trained for civil employment, classifying them by occupations; making plans for training, education and re-employment of members of the forces and others; making a study, in collaboration with industrialists, municipal councils, employers and employees, to determine the extent to which wartime industries can be converted to peace-time uses; examining, in consultation with the Dominion Gov-

ernment, municipal councils, farmers, and organizations of employers and employees, projects for post-war development and for their timely inauguration; making plans for scientific research in industry and agriculture; examining the agricultural resources of the Province and formulating plans for agricultural development to provide homes and employment for members of the forces and others at the end of the war; conferring and collaborating with governments, municipal councils, employers, employees and others in all matters referred to the Committee; examining into any matter referred to it by the Lieutenant-Governor in Council and preparing such data, plans and reports as he may require. The Act repeals the Organization of Resources Act, 1939, which provided for a Provincial Committee to aid in conserving and utilizing the natural resources of the Province and their development during and after the war.

A section added to the Municipal Act enables all municipal councils, with the approval of the Department of Municipal Affairs, to provide in their estimates each year during the war for the establishment or maintenance of a reserve fund for use after the war in necessary replacements of, or improvements in, public works. The moneys raised for such a fund are to be paid into a special account and may, with the Department's approval, be invested in trustee securities but may not be applied to any other purpose without the approval of the Department.

Pensions

The Power Commission Insurance Act was amended to authorize the Hydro-Electric Power Commission to enter into agreement with the Government Annuities Branch of the Dominion Department of Labour providing for pensions and other benefits for the employees of a municipal authority. As formerly, the Commissioner may also make such agreements with an insurance corporation.

School Attendance

An amendment in the School Attendance Act authorizes a board of public or separate school trustees to appoint one or more school attendance officers if it employs five or more teachers. Formerly five or more teachers had to be employed in one school before such officers could be appointed.

Prices and Price Control

Report of the Wartime Prices and Trade Board

Review of Price Control Operations from Outbreak of War to the Present Time

FOR the information of Parliament and the public, the Minister of Finance has submitted in considerable detail an account of the operations of the Wartime Prices and Trade Board from the beginning of the war to the present.¹ The Report is divided into two parts with appendices, the first part dealing with the period of selective control over civilian prices and supplies, 1939-41, and the second, which comprises the major part of the Report, covering the period of the overall price ceiling, December 1, 1941, to March 31, 1943.

Development of Price Control

An introduction to the Report by the Minister of Finance reviews briefly the development of price control and operations of the Board, as follows:—

"In establishing the Board at the very outset of war, the Government recognized that the mobilization of the nation's manpower and resources for war would inevitably set in motion strong inflationary forces and that such forces must be held in check if the war program was not to be thwarted and if the economic sacrifices of the war were to be shared equitably and by democratic decision.

"In the first two years of its operations, the Board followed a policy of controlling selected prices and endeavouring to relieve stresses by making special provisions for overcoming the difficulties of supply. For the greater part of this period, price increases were associated with the rise in ocean freight and insurance rates, the depreciation of the Canadian dollar, the imposition of the 10 per cent war exchange tax and a number of other excise taxes, a limited number of cases of interrupted supply, and the recovery of some prices which before the war had been at depressed levels.

"In the same period, the excess profits tax was instituted and the corporation income tax greatly increased. Excise taxes on

specific forms of expenditures were extended, and the personal income tax was raised sharply in successive stages. A broad program of borrowing from the public through the medium of war savings certificates and bonds was instituted and extended. By these means, part of the rapid increase in incomes was turned back to the Treasury. At the same time, the number of direct controls regulating the use of critical materials and equipment was multiplied.

"By the fall of 1941, it was evident that a new period had begun. In the seven months from April 1 to November 1, 1941, the cost-of-living index rose by as much as it had in the preceding twenty months. The increases were predominantly in agricultural prices, and many farm product prices were brought into favourable relationship to other prices. It was clear, however, that a broad inflationary rise in prices was developing. In the preceding two years, there had been widespread upward readjustment of wages, and it was evident that further increases of prices would lead directly to a ruinous spiral of prices and wages.

"On October 18, 1941, the Prime Minister announced sweeping economic measures designed to meet this situation. An overall price "ceiling" was to be adopted, and the prices of all goods and of most services were not to exceed the highest prices at which they sold during the four weeks from September 15 to October 11, 1941—the "basic" period—unless specifically authorized by the Wartime Prices and Trade Board. A ceiling already in effect on rents in certain specified areas was extended to the rents of all real property excepting farm lands.

"At the same time, the system of allowing wage increases only on government authority, which previously had been compulsory in war industries alone, was extended to all industries. Increases were in general prohibited, except for promotion or increased responsibility, and a cost-of-living bonus was provided in the event of a further increase in the cost of living. Provision, however, was made for wage increases in cases where it

¹ Report of the Wartime Prices and Trade Board, September 3, 1939, to March 31, 1943, Ottawa, May 1, 1943, King's Printer, 115 pp.

could be shown that the rates were lower than those prevailing for similar work in the same or comparable localities provided that approval was granted by the appropriate War Labour Board. Salaries were even more rigorously restricted at about the same time.

"It should be emphasized that these measures were undertaken only after broad readjustments of prices and wages had been permitted, and were possible only because a rigorous taxation system had been established (and was to be extended at the next budget) which had the effect of imposing very severe limitations on business profits and incomes above very modest levels.

"These measures, on which decision was made only after the most careful consideration, involved an abrupt change from the methods of selective price control to those of the price ceiling. Selective price control deals with individual prices as indications are given that they are likely to rise, or have risen; a price ceiling means the fixing of all prices at levels reached in a stated period. This decision was based on developing experience and similar experience has since led most other countries to adopt measures of the same type.

"Price increases were occurring so frequently that it was impossible to deal with each case individually as long as the increases could legally take place. It was necessary to adopt a procedure by which cases, in which the pressure of rising costs was threatening the flow of supplies, should be brought to the Board, rather than to leave the Board with the responsibility of investigating price increases after they had occurred.

"In the early years of the war, price increases were special cases to be dealt with in terms of the conditions affecting particular commodities. From the summer of 1941, price increases broadened to affect almost the whole range of prices because the basic scarcities of resources, manpower and plant were making themselves felt everywhere. In these circumstances, the interrelations of prices were of the first importance. The prices of one business are the costs of another. To attempt to hold certain critical prices while leaving others free would be to accept certain defeat. The free industries and trades would bid up the costs of the controlled businesses and render their position untenable. Nothing short of the universal price ceiling could provide a line of defence proof against infiltration.

"The price ceiling has now been in operation for more than a year. Many problems which were anticipated turned out to be less difficult than was feared. Other problems less clearly foreseen have necessitated the adoption of a variety of expedients for meeting them.

Yet, after more than a year's experience, the price ceiling is in effective operation."

Probable Consequences had Price Ceiling not been Imposed

After explaining the Government's reasons for adopting an overall price ceiling in the fall of 1941, the Minister of Finance compares the actual results of price ceiling operations for more than a year with the probable consequences if the price ceiling had not been imposed. The cost-of-living index has shown a rise of only 0.9 points between November 1, 1941, and March 1, 1943. The index in the United States rose by 10.8 points during approximately the same period in spite of the fact that a partial ceiling was in effect more than half of the time. During the comparable period in the last war, November, 1916, to March, 1918, when the proportion of our productive resources devoted to war materials was only about one-quarter of what it is to-day, the Canadian index rose by 25.2 points. It is estimated that, if the price ceiling had not been in effect, the cost-of-living index would have risen by something like fifteen points during the past sixteen months.

As to cost, the Minister of Finance points out that the administrative expenses of the Board and its associate companies during the first fifteen months of the price ceiling (December 1, 1941, to February 28, 1943) came to \$9,689,042.94. Figures for subsidies paid, which are available as at March 31, 1943, amount to \$65,161,506.85, and trading losses on bulk purchases of goods and salvage, which are only available as at February 28, 1943, were \$3,440,528.59. Estimating that every rise of one point in the cost of living index costs Canadian consumers as a whole about \$35,000,000 a year, it is calculated that if the price ceiling had not been imposed, "about \$350,000,000 might have been added to the cost of consumers' goods in Canada during the past sixteen months." The sums representing the cost of operating the price ceiling are, therefore, small in comparison with the costs of inflation, and also, as the Minister of Finance points out, are relatively small in relation to Canada's proposed war expenditure in this fiscal year of approximately five billion dollars.

"It is true," says the Minister of Finance, "that some consumers would have offset this additional cost by the increases in their incomes resulting from the higher prices. It was, however, precisely this unpredictable distribution of the cost of war which the government was desirous of preventing. Strict price control and the careful distribution of supplies insure that the real cost of the war will be distributed more nearly in the manner

directed by the representatives of the people in Parliament through the fiscal measures adopted." The Minister also emphasizes "that the work of Wartime Prices and Trade Board in administering the price ceiling policy and in making provision for assuring adequate civilian supplies and their equitable distribution is but one part of a broad government policy which has for its object the direction of the Canadian economy for the purpose of fulfilling the most effective war program."

Period of Selective Control

Part I of the Report, dealing with "Selective Control over Civilian Prices and Supplies, 1939-41," first reviews the organization of the Wartime Prices and Trade Board and the general policy with respect to prices and supply. It then deals with the various supply controls established during this period, the price controls over certain commodities and the beginning of rental regulations; after which appears a brief summary of enforcement activities. This period is characterized in the Report by the statement, that "for the first two years of the war, while reserves of labour and equipment were being drawn upon to organize all-out production, the Wartime Prices and Trade Board rarely resorted to direct price fixing," and that "underlying all the work of the Board in this period was the belief that if ample supplies were kept available, monopolistic tendencies controlled and sporadic instances of local profiteering dealt with, fair and reasonable prices would be maintained" (p. 4).

It was during this period that the system of Administrators began with the selection of Administrators in October, 1939, to assist in the organization of supply and in the anticipation and prevention of shortages for the major commodity fields of wool, sugar, and hides and leather. Two additional Administrators were appointed in 1940, the first for animal, fish and vegetable oils, and the second for housing rentals. A more detailed account is given of the early stages of rent control (p. 9), which was originally introduced in certain areas where an influx of war population had resulted in acute housing congestion, and of the reasons for the fixing of rentals as of a basic date rather than by means of a formula designed to yield some given rate of net return to the landlords involved. There is also a section on the beginning of control over consumer credit and instalment buying designed "to reduce the pressure on the price level through a curtailment in the volume of floating credit" (p. 5).

The transition period from selective controls to the overall price ceiling (p. 11) is recognized as one in which "the reserves of labour and equipment... had been largely drawn into service... the country was approaching a state of virtually full employment," and "it was clear that further expansion of war activities could be achieved only by curtailment elsewhere." "The increase of money incomes had outstripped the supply of consumer goods, and all the indications pointed to a rapidly increasing pressure in the direction of higher prices." As one part, though a vitally important part, of a broad anti-inflationary program, the government decided on an overall price ceiling policy (p. 12).

Institution of the Overall Price Ceiling

The second part of the Report, on "The Overall Price Ceiling," deals with the operations of the Board since December 1, 1941, when the price ceiling came into effect, to March 31, 1943. This part reviews the powers and duties of the Board, its composition and organization and the problems encountered with respect to prices and supply in general. It deals in considerable detail with the subsidy and bulk purchasing program, certain agricultural problems which required special attention, various types of price adjustments, the price reduction program introduced in December, 1942, and the simplification and conservation program of the Board in nine or ten broad groups of civilian industries. Consumer credit regulations are dealt with in a separate section, followed by a description of the Board's activities with respect to distribution, allocation and rationing. This part of the Report concludes with sections on rentals and housing accommodation, enforcement activities, and a short description of price movements from August, 1939, to March, 1943. For reasons of space, only a few highlights of this part of the Report may be given here.

Powers and Duties of the Board

In outlining the powers and duties of the Board, the Report draws attention to the distinction which is maintained between policy making (the responsibility of the Government) and the administration of policy (the function of the Board):

The position of the Wartime Prices and Trade Board is defined in P.C. 8528. The Board does not determine policy; it administers policies determined and entrusted to it from time to time by the Government. It has the further responsibility of recommending for the Government's consideration additional

measures to meet new problems as they arise. The Minister responsible to Parliament for the activities of the Wartime Prices and Trade Board is the Minister of Finance, and the Chairman and other officials of the Board are in daily consultation with him on all kinds of matters relating to price control and civilian supply (p. 15).

After reviewing briefly the jurisdiction of the Board, the Report explains the general principles on which the division of authority between the Board and the Department of Munitions and Supply and between the Board and the Departments of Agriculture and Fisheries is determined. This section of the Report ends with a reference to the legal status of the formal orders issued by the Board and the Board's Administrators, and in this connection quotes from the judgment of the Supreme Court of Canada, given in January, 1943, that the Governor in Council had power under the War Measures Act to constitute such Boards and to authorize them to exercise the powers vested in them by their own Orders and by Orders made by their Administrators (and Controllers).

Rising Costs and the "Squeeze"

The section on "Problems of Price and Supply" (p. 20) serves as an introduction to the many detailed activities of the Board which are described in the sections following. The two main problems confronting the Board are described as having been "rising costs" and "shortages of materials, power, transportation and labour, together with the export demand for certain Canadian products" (p. 21). The most difficult problem, and one constituting a serious threat to the price ceiling, arose from the fact that notwithstanding the price and wage ceiling many producers and merchants continued—and, for that matter, still continue—to face rising costs. These higher costs, producing what has come to be known as the "squeeze", were due to such factors as "the time lag in prices", higher import prices, higher shipping costs, higher labour turnover, higher wages, higher operating costs, and seasonal prices, particularly for farm commodities. Various programs have been developed to cope with such difficulties, and in many cases one device has simultaneously served two or three different ends, such as reducing costs of production, economizing material, and saving labour.

Time lag problems and unavoidable increases in cost since the price ceiling came into effect have been met wherever possible by having importers, manufacturers, wholesalers and retailers share the burden of higher costs. By "sharing the squeeze", the price ceil-

ing policy has had the effect of stimulating more efficient production. To maintain essential supplies and reduce costs, the Board, in co-operation with the industries concerned, introduced a program of simplification and standardization of production and the curtailment of special services. And finally, as stated in the Report, "if these two methods have proved insufficient, and if continued supply of the commodity is considered necessary, subsidies may be paid, import duties remitted, or commodities purchased in bulk by Crown companies" (p. 21). An illustration of these different methods is given in the case of leather footwear (p. 21), as well as cases in which business has absorbed the entire increases in cost (p. 21-22). Brief mention is made of other pricing problems requiring different handling, as in the case of new goods and seasonal goods not on the market during the basic period, and of primary food products where wide seasonal fluctuations, rising costs and foreign demand have complicated the situation.

Subsidies, Remission of Duties, and Bulk Purchases

The section on "Subsidies, Remission of Duties, and Bulk Purchases" (p. 22), provides a detailed description of the principles underlying these methods of coping with price and supply problems, and of the administrative operations required. This section deals first with domestic subsidies (leather footwear, glove and garment leather, certain groceries, canned goods, milk, butterfat, etc.), and secondly with imported goods. With respect to the latter, "subsidies are payable only on an increasingly restricted range of imports, and other goods may at any time be excluded from eligibility if their importation is considered unnecessary or undesirable for any reason" (p. 27).

In addition to paying subsidies on certain goods and reducing or suspending import duties and taxes in a number of cases to make unnecessary or to reduce subsidy payments, the government has taken a share of a "squeeze" too heavy to be absorbed by industry and trade through purchases of Canadian requirements of certain imports from abroad by the Commodity Prices Stabilization Corporation. Another, and most important, reason for government bulk purchases, says the Report, "is that this is the only possible means of securing supplies of certain essential imports" (p. 30). It cites such factors as wartime disturbances which often make it difficult for private importers to secure supplies at all, the priority systems of United

States and Britain covering many vital commodities, or the requirement in some cases that supplies can be obtained only under the terms of an international agreement. The necessity for inter-governmental purchases has made unavoidable a rapid extension of centralized buying, but, "as far as possible, and especially in distributing its purchases, the Commodity Prices Stabilization Corporation has continued to use normal trade channels in handling the bulk purchase program" (p. 30-1).

Food Products

The next section, on "Agricultural Products", points out that "among the most pressing problems faced by the Wartime Prices and Trade Board, have been those arising out of the effect of increased British contracts and the rapidly rising domestic demands on the supply of livestock and dairy products". There follows a detailed description of the remedial action, centering to some extent on price adjustment, which has been designed to increase output or balance supplies in the face of large and competing demands. It is also pointed out that pricing policy has been complicated by the necessity of maintaining domestic ceilings on food products and by the disturbing effects of a continued rapid rise in United States farm prices, particularly of cattle. The greater portion of this section is devoted to the story of dairy and meat products.

Modifications in Price Ceiling

The section on "Price Adjustments" covers a wide variety of cases in which application of the principle of the individual price ceiling has been modified or the original regulations adjusted. These include cases where, to meet particular problems, it has been necessary to make certain exemptions, re-impose a ceiling, bring additional services under the Maximum Prices Regulations, clarify existing regulations or set standard maximum prices. The section also covers the principles followed in making adjustments in maximum prices already established and in pricing goods not on the market during the basic period. Of growing importance are the principles laid down by the Board for dealing with applications for increases to meet increased costs and for fixing the prices of goods which have been newly introduced or significantly changed through the necessity of substituting different materials or methods of manufacture.

Reducing the Price of Certain Foods

The section entitled "Reducing the Prices of Certain Basic Foods" outlines the reasons for the direct action taken by the government to bring the cost of living part way back to the level of the basic period. Between October 1, 1941, and July 2, 1942, the cost-of-living index rose by 2.4 points, necessitating the payment of an increased cost-of-living bonus of 60 cents a week, and of this rise over 90 per cent occurred in the food index. Four months later, on November 1, 1942, the index had risen by another 0.7 points and "it appeared probable that before long a further increase in the cost-of-living bonus would become necessary." Since increases in the bonus tend to raise production costs, and since increased costs become the basis of application for increased prices, it became clear that increases in the cost-of-living bonus were a source of danger to the government's anti-inflationary policy. On December 3, 1942, the Minister of Finance announced that by the payment of subsidies and/or remission of taxes and duties, the retail prices of certain basic articles of food were to be lowered with the object of reducing the total cost of the consumer's budget. The Report points out that there was another important reason for undertaking this policy. "A rise in the cost of living affects everyone, whereas certain important groups—small proprietors, farmers, pensioners, etc.—do not receive the cost-of-living bonus. Hence greater equity is obtained by checking the rise in the cost of living than by paying the bonus" (p. 45-6). The rest of this section deals with the amount and method of reduction and with reductions in other prices.

Simplification and Conservation

There follows an important section on the Board's program of simplification and conservation which has been designed to reduce costs and conserve scarce materials. "Its essential purpose is to reduce the types of goods produced and services rendered so as to employ fewer resources in the production and distribution of the total supply" (p. 47). The main groups of industries are covered in turn: clothing and footwear; paper products; newsprint; metal products; rubber products; transportation; coal; resins, oils and fats; and fertilizer. In certain cases it has been necessary for the Board to establish control over the use of raw materials—wool and certain oils

and fats are notable examples. In many cases, simplification measures have been accompanied by direct restrictions on output, agricultural implements and metal containers being examples. The final portion of this section deals with the curtailment program as related to the release of manpower.

Distribution of Limited Supplies of Goods

Another important section in this Part of the Report is the one on "Distribution, Allocation and Rationing" (p. 57). Here the question arises as to how limited supplies of goods should be distributed among the people who require them. The problem has been attacked from two sides: distribution within the trade, and distribution to the ultimate consumer. As the Report points out, "from the inception of the price ceiling the Board has required suppliers to make an equitable distribution among their established customers of any goods in short supply" (p. 58), and in October, 1942, certain broad rules were set forth which are summarized in the Report (p. 58-59). With respect to consumer rationing, three methods have been adopted: (1) by permit (e.g., farm machinery); (2) by the "honour system" (e.g., the early rationing of sugar in January, 1942); and (3) by coupon (e.g., the present method of rationing sugar, tea and coffee, and butter). The details of coupon rationing are reviewed in the latter half of this section. The discussion of coupon rationing (p. 59-60) points to "the mechanical problems that often exist, and in some cases the extreme difficulty of achieving equitable as distinct from equal distribution" and to the fact that. . . "no benefit is gained by regarding coupon rationing as a panacea with no drawbacks. It may even on occasion be in the national interest to put up with some irregularity of supply rather than to rush into coupon rationing particularly if the shortage is likely to be temporary and some direction is given to distribution at the wholesale level by reserving supplies for certain priority users or for particular areas." This does not mean that coupon rationing is undesirable; "when shortages in certain commodities become acute and sustained," says the Report, "it is often preferable to face the problems involved in rationing, however great these may be".

Other sections of this part of the Report which are not reviewed here owing to lack of space are those on "Consumer Credit" (p. 56). "Rentals and Housing Accommodation"

(p. 63), "Enforcement", and on "Price Movements, August, 1939, to March, 1943". From a table on the last page of Part II of the Report, showing point changes in cost-of-living index numbers, August, 1939, to March, 1943, it is pointed out that "increases in the 16-month period ending March, 1943, are all much smaller than those for the 8-month period ending November, 1941. . . Secondly, wartime increases to March, 1943, varied greatly for different sections of the budget". Food prices, which represent 31 per cent of the basic index budget, "advanced by 28.6 per cent, while rents and miscellaneous items, representing 42 per cent of the total expenditure budget, increased by only 7.2 and 6.1 per cent respectively. The influence of these two latter groups has been an important moderating factor in the overall cost of living increase" (p. 70).

The main problems which confront the Wartime Prices and Trade Board have been indicated in this brief review of its activities. They are concerned mainly with maintaining civilian production under the price ceiling in the face of continued rising costs, and with providing for equitable distribution within the trade and to consumers in general. "Against inflation," says the Minister of Finance, "our defence must continue to be a rigorous and realistic fiscal policy, overall control of prices and incomes, the allocation of materials and equipment and the equitable rationing of consumers' goods, and, finally, the direction of manpower in the desired proportions into armed services, war production and essential civilian industry."

Appendices

Appendices to the Report consist of a directory of officials; a list of Orders in Council affecting the W.P.T.B.; statements of Administrative policy issued by the W.P.T.B.; Board Orders classified according to subject; Administrator's Orders classified according to Administration; subsidies paid by the C.P.S.C. from inception to March 31, 1943; trading losses of associated companies on commodity operations to February 28, 1943; changes in customs valuation, duties and taxes (made on the recommendation of the W.P.T.B.); administrative expenditures of the W.P.T.B. and associated companies; index numbers of the cost-of-living in two wars; and index numbers of wholesale prices in two wars. In addition, there are several charts dealing with price movements and changes in the cost-of-living index.

Price Control in Canada during April 1943

Rationing of Meat—Pricing Orders on Certain Foods—Simplification and Conservation Orders

PRICES and supply of certain foods and agricultural products were the chief problems which the Wartime Prices and Trade Board dealt with during the month. In view of the urgent war needs for meat, coupled with increased domestic demand, it was decided that meat rationing was the only means of preventing the localized shortages of the past year from becoming more widespread and continuous. At the same time, in order to exercise more specific control over beef prices, retail prices which had been set for the Toronto and Winnipeg areas have now been fixed for many other areas in Canada. These measures, taken in conjunction with previous orders of the Board which had fixed wholesale prices for beef, pork, lamb and poultry and had placed upper limits on the markups which retailers are allowed to use, provide more adequate machinery for controlling meat prices. With prices under strict control and consumer rationing applied, more equitable distribution as between individuals and as between the various regions in Canada will be achieved.

Meat Rationing

The decision to ration meats in Canada was announced by the Minister of Finance in the House of Commons on March 31. Although total production of meats during the past year has been greater than in previous years, and supplies available to consumers were approximately equal to those of 1941, the extremely buoyant demand gave rise during the past eight or nine months to spasmodic shortages. In 1943, the domestic supply, after allowing for existing export commitments, will be no greater than in 1942, and, as the Minister explained, "may be somewhat less, while the potential consumer demand is almost certain to be greater". The necessity of maintaining an adequate flow of supplies overseas, and if possible, of sending more meat to Britain in order to maintain its present relatively low ration, would have resulted in shortages much more widespread and prolonged than those which occurred last year. "With an increased potential demand, and a stationary or decreased supply," pointed out the Minister of Finance, "there are bound to be serious difficulties of equitable distribution . . .".

The proposal to establish a weekly ration for all persons at approximately two pounds

will lead to a moderate reduction (roughly 20 to 25 per cent) in the total consumption in Canada, and, according to the advisory committee on nutrition to the Food Administration, will still allow a quantity of meat which is safely above the minimum nutritional requirements of an adult male worker. It will result in a more equitable distribution of supplies and will make it possible to increase the quantities which can be made available for shipment overseas.

The system decided upon is one whereby each meat coupon will represent a basic quantity of meat. The United States uses a point system for meat rationing, which is complicated but evidently necessary there to meet varying food habits and supply situations. Britain on the other hand allows each person to spend a certain amount of money each week on meat. In Canada, it would not be practical to adopt a value coupon system, and it would not ensure fair sharing since meat is bound to be cheaper in Alberta, where it is produced in quantity, than in Nova Scotia where meat has to be imported from other provinces.

During April only a few details were announced with respect to the rationing scheme which was expected to come into operation sometime in May. Poultry and fish will not be rationed; neither will such meats as kidney, liver, heart, brains, and cuts like spareribs and ox tail which are more than half bone. The two pound ration is two pounds by weight as the meat comes from the carcass, that is, including bone. It is the intention to classify the cuts according to the bone content, and adjust the ration allowance so that in the case of cuts with no bone, the ration will be less than two pounds and in the case of cuts with a good deal of bone the allowance will be higher. The advisory committee on nutrition has advised "that differential meat rationing, on the basis of occupation, is unnecessary from the viewpoint of nutrition," since "a ration allowance of two pounds of meat plus customary and available amounts of milk, eggs, cheese, fish and poultry give more protein from animal sources to satisfy nutritional requirements than is required for a person of any occupation".

As a preliminary step in meat rationing, strict control of live-stock slaughtering came into effect on April 30 (extended from the originally announced effective date of April 19

in order to take care of possible delay in mailing). Introduction of these controls was indicated by the Minister of Finance in his statement to Parliament when he said: "In order to control the supply of meat entering into the channels of trade there will be restrictions on the right of farmers and of other persons to slaughter for sale". The Board Order (No. 261) provides that a permit from the Foods Administration is required for slaughtering live stock or for having live stock slaughtered for the purpose of selling meat. The policy of the Board in issuing these permits will be to restrict, as far as is practicable, the number of establishments where slaughtering is permitted to essential operators from the standpoint of location, volume and efficiency. The control of slaughtering is necessary not only to provide a steady flow of meat into the usual channels of trade, but also to forestall the development of so-called "black markets" in meat. Farmers are not prohibited from slaughtering live-stock or having livestock slaughtered for them in order to obtain meat for their own consumption on their own farm premises or from disposing of such meat to other farmers for consumption on their farm premises. Organizations amongst farmers known as "Beef Rings" may still function, nor is it intended to extend the same degree of control of slaughtering to remote deficiency areas or to small rural centres.

To conserve meat supplies and to avoid discrimination against those who do not make frequent use of restaurants, meatless days have been established in all restaurants, hotels and other public eating places—this being in addition to the usual restrictions on supplies to such establishments that go with all forms of rationing. A system is being worked out for controlling meat in private lockers rented to individuals by cold storage plants.

Pricing Orders—Certain Foods

Butter.—An illustration of how prices and rationing have become interconnected is shown in the case of creamery butter. Previous to the rationing of butter it had been necessary to reduce manufacturers' prices of creamery butter in British Columbia and Saskatchewan since freight rate advantages influenced the movement of butter to British Columbia instead of Eastern Canada. Under rationing, and with control of interprovincial shipments by the Department of Agriculture, differences in prices between certain Provinces in the West (e.g. a lower price in Saskatchewan than in Alberta and Manitoba) were no longer necessary, and consequently uniform maximum manufacturers' prices in three zones (the

Western Provinces, Ontario and Quebec, and the Maritimes) were authorized by the Board. The change in wholesale prices, a one-half cent increase in British Columbia and Saskatchewan, which comes into effect on May 1, will not affect the retail price of butter.

Beef.—The standard pricing system for retail sales of beef, which has been successfully operating in the Toronto and Winnipeg areas since March 1, has been extended to thirteen additional areas, all in Eastern Canada. A detailed schedule, attached to the order, sets out the maximum price which may be charged for any cut. The retailer is required to post this schedule in a prominent place in his shop along with a cutting chart illustrating the cuts and showing their carcass source, (B-260, April 27). Another order advances maximum wholesale prices for carcasses, sides and quarters of beef by 50 cents per cwt. for the period April 29 to May 26, thus allowing for a further seasonal increase in beef prices as announced last October (B-267, Apr. 27). Maximum wholesale prices for cuts of beef have been fixed for the same period, reflecting the seasonal advance in price (A-707, Apr. 26). Consumer prices will show increases of a fraction of a cent per pound. A further increase in maximum wholesale prices of 25 cents will take place on May 27, when the peak level will have been reached, and beef prices will then be free to fluctuate seasonally under that ceiling in accordance with market conditions.

Fish.—It has been necessary for the Board to fix maximum prices for herring packed in tall tins. It was originally intended that the entire pack of British Columbia salmon and herring in 1943 would be taken by the British Ministry of Food, but some adjustments in supplies have been made and the herring packed in tall tins was not required for export. The Board guaranteed that the packers would receive prices equivalent to those paid by the British for the herring, and the new order fixing maximum rates is the result of the agreement (A-686, Apr. 12). In another order, maximum prices have been established at which processors, wholesale distributors and retailers may sell Pacific frozen halibut. (A-708, Apr. 28).

Macaroni.—Because of low ceilings on bulk macaroni, some manufacturers have not been operating to capacity, and a new pricing order has been issued, designed to stimulate bulk production in view of the increased consumer demand. A schedule to the order prescribes the maximum number of grades of macaroni and also limits the number of sizes of packages or containers in which the product may be packed. Prices on sales of packaged macaroni, and on bulk macaroni other than standard are held to basic period ceilings. (A-687, Apr. 12).

Macaroni was formerly included in a list of grocery items on which manufacturers' prices had been reduced in order to permit retailers to sell them at basic period prices.

Corn Syrup.—New maximum prices for corn syrup have been authorized due to the change over from metal containers to a standard glass jar holding $3\frac{1}{2}$ pounds of corn syrup. They are however, in line with prices charged when the syrup was packed in metal containers. It will be recalled that in order to provide additional quantities of corn syrup for household use, the Board last January restricted the industrial use of corn syrup.

Fertilizers and Feeds

Fertilizers and feeds have received considerable attention by the board with a view to keeping the farmer's costs down and helping him to meet the food requirements program set for the present year. The fact that Canada's supplies of raw materials for fertilizer purposes are allocated by the Combined Food Board makes it necessary to allocate Canada's share to various areas and for different crops, having in mind their comparative importance in the war program for foods. To this end, regional offices have been opened in Toronto and Montreal to deal with matters respecting prices and distribution of fertilizers and pesticides. It will be recalled that in February the board, in setting maximum prices for fertilizer materials or complete fertilizers, brought about a reduction in the price to the farmer in Eastern Canada of \$2 a ton by introducing in the industry a program of simplified practice and elimination of extra transportation and selling costs, and that this reduction was later applied in British Columbia.

Several additional orders with respect to feeds were issued during April. In the previous month a considerable saving to the farmer was achieved by an order stabilizing the prices of bran, shorts and middlings by allowing only one intermediate markup in place of the several which formerly prevailed. (Savings estimated on the average at \$1 per ton.) Another order during March set prices for alfalfa meal, following the announcement by the Department of Agriculture that a subsidy would be paid through the office of the Feeds Administrator to manufacturers. During the same month a new order covering meal and animal feed products was issued which amended a previous order in several respects. Ceiling prices were listed according to protein content for animal products, for fish meal and linseed oilcake meal. (A-680, Mar. 30). During April, an order was issued specifying maximum

and minimum contents and proportions of calcium, phosphorus and salt contained in mixed mineral feeds (A-681, Apr. 9). Through these orders and previous ones, feed products have been brought under close supervision and prices stabilized in an effort to assist the farmer in maintaining a high level of output.

Simplification and Conservation

General.—The need to conserve metals and other scarce materials and to make the best possible use of the limited supplies available for civilian manufacture are important factors in the Board's program of simplification and conservation which was extended to several additional products during the month. With respect to certain goods which are in short supply, it has been necessary to place their sales on an essentiality basis. During April amended orders were issued with respect to new electric stoves and ranges, regulations regarding the sale of typewriters were consolidated, and new orders were issued covering protective rubber clothing and fire, signal and alarm equipment.

Metal Products.—Some of the products affected by simplification measures during the month were: cast iron ware (griddles and flatirons, etc.), which may be made only in essential types (A-668, Apr. 1); builders' finishing hardware, cabinet locks and padlocks, types of which have been reduced from 23,000 to 2,300 items, and in the manufacture of which the use of copper and copper base alloys has been restricted (A-675, Apr. 5); plumbing equipment, in which the use of copper and brass has been further curtailed (A-669, Apr. 1); and registers and grilles used in gravity warm air heating systems and fire, signal and alarm equipment in which the use of certain metals is prohibited (A-706, Apr. 26, and A-673, Apr. 1). Electrical supplies such as dry cell batteries have also been restricted to certain types (A-678, Apr. 5).

With respect to certain products, previous restrictions have led to such acute shortages that it has been necessary to issue new regulations designed to alleviate the situation. For example, to meet the increasing demands for repairs for electric stoves, an order was issued reducing the gauge and weight of resistance wire used in making cooking plates and other devices using resistance wire. (A-697, Apr. 16). Shortages of hair pins and bobby pins has made it necessary to increase the metal tonnage quota from 30 to 45 per cent of 1941 consumption (A-672, Apr. 1).

Further orders were issued during the month covering bicycles, identification tags, sewing machines, office and store equipment, and safes

and similar devices following the transfer of jurisdiction over such supplies from the Department of Munitions and Supply to the Wartime Prices and Trade Board. Additional restrictions of a minor nature apply to bicycles and office equipment but all the orders follow the general policy laid down in regulations by the controller of supplies (A-691, A-692, A-693, A-694, Apr. 13, and A-702, Apr. 21.) With respect to electric stoves and ranges which were recently transferred from the Department of Munitions and Supply to the Board, essentiality certificates to purchase new stoves will be required of citizens in all parts of Canada and not just in certain zones as provided in previous regulations (A-701, Apr. 21). Under another order, used domestic sewing machines have been put on the same basis with respect to price and conditions of sale

as used industrial sewing machines, thus encouraging the rebuilding of old machines. (A-695, Apr. 14).

Other Products.—Other products covered by simplification measures were paraffin waxed papers (A-677, Apr. 5), gift wrapping paper (A-703, Apr. 22), and medicinal preparations with respect to packaging (A-693, Apr. 13). Styles of fur garments have been "frozen" and their number reduced, thus eliminating the "peak and valley" production seasons usually experienced by an industry in which fashion plays a major part. (A-688, Apr. 12). Another order places the sale of protective rubber garments on an essentiality basis (A-705, Apr. 26). Controls were also placed on the sale or transfer of fire, signal and alarm equipment (A-673, Apr. 1).

Prices, Retail and Wholesale, in Canada, April, 1943

Cost of Living, Prices of Staple Articles and Index Numbers

NOTE: Owing to misunderstandings which have arisen regarding retail prices published in this section of the LABOUR GAZETTE, the following explanation has been thought necessary:—

1. *The Cost-of-Living Index is calculated by the Dominion Bureau of Statistics and is used in the determination of the Cost-of-Living Bonus. This index is not calculated from the data as to prices, etc. shown in Tables 3 and 4 below.*

2. *Tables 3 and 4 include certain data collected by the Dominion Bureau of Statistics and certain other data gathered by official correspondents of the LABOUR GAZETTE, as indicated below.*

3. *Tables of prices have been printed in the LABOUR GAZETTE along the same lines as at present since 1910—long before the cost-of-living bonus system came into effect.*

4. *As to Tables 3 and 4, it should be pointed out that the prices of certain commodities, especially meats and food products, vary substantially even within a single locality. In most cases the figures given are average figures for each locality.*

ous month and seven-tenths of a point as compared with February 1. However, the index remained three-tenths of a point lower than when the last change was made in the cost-of-living bonus on the basis of the index at July 1, 1942. The index (on the base period 1935 to 1939 as 100) was 117.6 at April 1; 117.2 at March 1; 116.9 at February 1; 117.9 at July 1, 1942; and 100.8 at August 1, 1939. The increase at the beginning of April was due mainly to higher prices for meats, potatoes, cheese, and oranges while an appreciable decline was recorded in the price of eggs. The food group as a whole advanced one full point during the month under review but there were fractional advances also in the clothing and miscellaneous groups. The increase in the former was due to higher prices for women's wear and in the latter to advances in the rates for newspapers and barbers' charges.

Since the outbreak of war the advance in the index has been 16.7 per cent. For the equal period during the last war, that is, between, July, 1914, and March, 1918, the advance was 44.3 per cent. Between October 1, 1941, and April 1, 1943, the period covered since the establishment of the ceiling on prices, the advance in the index was 1.8 per cent. For the comparable period during the last war, October, 1916, to April, 1918, the advance was 25.2 per cent.

Foods have advanced 29.6 per cent between August, 1939, and April, 1943; clothing 20.1 per cent; home furnishings and services 16.7 per cent; fuel and light 13.8 per cent; rent

A FURTHER slight advance, four-tenths of one point, was recorded for the official index number of the cost of living at the beginning of April as compared with the previ-

7.2 per cent; and the miscellaneous group 6.3 per cent.

In compliance with Order in Council P.C. 6219, as amended, the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the special War Revenue Act.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the *LABOUR GAZETTE* the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, farm-made cheese, and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between \$450 and \$2,500 in 1938. The average expenditure was \$1,453.90, divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.50; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index was \$40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100.0; September, 100.0; October, 103.8; November, 104.3; December, 104.3; January, 1940, 104.2; February, 104.3; March, 105.5; April, 105.5; May, 105.3; June, 105.3; July, 106.4; August, 106.8; September, 107.9; October, 108.4; November, 109.7; December,

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1943

BASE: PRICES IN JULY, 1914 AND IN AUGUST, 1939=100

TABLE I—DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA

PRICES AS AT THE BEGINNING OF EACH MONTH

—	Adjusted to base 100-0 for August, 1939	On base of average prices in 1935-1939 as 100*

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—Monthly, Prices and Price Indexes (Canada); annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

110.0; January, 1941, 110.4; February, 110.1; March, 110.2; April, 110.7; May, 110.9; June, 112.7; July, 114.9; August, 117.7; September, 119.4; October, 120.1; November, 121.4; December, 120.6; January, 1942, 119.9; February, 120.3; March, 120.6; April, 120.6; May, 120.9; June, 121.8; July, 123.9; August, 123.5; September, 123.0; October, 123.7; November, 125.0; December, 125.2; January, 1943, 122.5; February, 122.2; March, 122.7; April, 000.0.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922

Explanatory Note as to Retail Prices

Table IV on retail prices and rentals shows the prices at the beginning of April of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class

of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers. The exceptions are milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965 (L.G., 1941, page 1462), the price ceiling established by P.C. 8527 (L.G., 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (L.G., 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 104. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect of January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Albert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Beef prices continued upward reflecting recent increases in wholesale prices under the regulations of the Wartime Prices and Trade Board. Sirloin steak averaged 39·6 cents per pound at April 1, as compared with 39·2 cents the previous month and 34·3 cents at April 1, 1942. Fresh loin of pork was 35·1 cents per pound at April 1, 34·7 cents at March 1 and 33·2 cents at April 1, 1942. Stocks of eggs in cold storage at April 1, were less than one third of the quantity one year ago. The price at April 1, 41·3 cents per dozen, was slightly lower than for the previous month but considerably higher than in April, 1942, when the average was 36·5 cents per dozen. The production of creamery butter during the first three months of 1943 was about 28 per cent greater than for the similar period in 1942 while the production of cheese declined about 5·9 per cent in the same comparison. The price of creamery butter at 40 cents per pound was unchanged as compared with the previous month but was slightly higher than at April 1, 1942, when the average was 39·1 cents per pound. Cheese averaged 34·2 cents per pound at April 1, 34·0 cents at March 1, and 36·5 cents at April 1, 1942. Potatoes averaged 46·3 cents per 15 lbs. compared with 44·1 cents at March 1, and 40 cents at April 1, 1943. Oranges again averaged slightly higher at 40·2 cents per dozen.

Prices in Great Britain and Other Countries

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and certain of the principal industrial and commercial countries appeared in the April issue of the *LABOUR GAZETTE*. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the *LABOUR GAZETTE*.

Since the outbreak of war, control of prices, production and trade have been extended in many countries, resulting in much less movement in prices than occurred in the inflationary period during the last war.

Great Britain

WHOLESALE PRICES.—The index number of the Board of Trade, on the base 1930=100, was 162·2 for March, as compared with the

revised figures of 162·1 for February and January, an increase of 0·1 per cent for the month. No group showed a change of more than 0·2 per cent from the previous month's level. The general increase since August, 1939, is 65·3 per cent.

The *Statist* index number, on the base 1867-1877=100, was 153·2 at the end of February, a decrease of 0·1 per cent. The principle change was a fall of 1·5 per cent in the textile group.

COST OF LIVING.—The *Ministry of Labour Gazette* index number, on the base July, 1914=100, was 199 at March 1, showing no change from the January and February level. An increase of $\frac{1}{2}$ per cent in food prices, of which tea showed the principal increase, was offset by a decline of one per cent in the clothing group. Other groups were unchanged.

Newfoundland

COST OF LIVING.—The index number of the Department of Health and Welfare of the cost of living at St. John's, on the base

October 1, 1938=100, was 144.0 at March 6, a decrease of 2.8 per cent for the month, due to a decrease of 5 per cent in the food group. Lower prices were recorded for cooked corn beef, eggs and tea, and the weighting in the budget was adjusted for sugar and tea to conform to the ration quantities permitted.

New Zealand

WHOLESALE PRICES.—The Census and Statistics Department index number, on the base 1926-1930=1000, was 1477 for December and 1462 for January. The decline in January from the December level was due to considerable declines in foods of vegetable origin (of which agricultural produce fell 11.7 per

cent) and in animal products (of which meats declined 9.4 per cent).

COST OF LIVING.—The official index number of retail prices, on the base 1926-1930=1000, was 1128 for December, a decrease of 0.8 per cent for the month due to lower prices for food, including both groceries and meat.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1935-1939=100, was 103.4 for March, an advance of 0.9 per cent for the month. There was an advance of 3.2 per cent in farm products and of 1.5 per cent in foods; other groups showed little or no change.

Old Age and Blind Pensioners in Canada

Financial and Statistical Summary as at March 31, 1943

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at March 31, 1943. (The text of the Old Age Pensions Act was given in the LABOUR GAZETTE for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds \$125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (LABOUR GAZETTE, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married, or unmarried, is \$240 per annum. If however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to \$120. If a pensioner is unmarried, the maximum pension is reduced by the amount of his income from earnings or other sources in excess of \$200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of \$165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds \$400. If a pensioner is married to a person receiving a pension in respect of blindness,

his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds \$200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

Fatal Industrial Accidents in Canada during the First Quarter of 1943

DURING the first quarter of 1943 there were 293 fatal industrial accidents, including deaths from industrial diseases reported by workmen's compensation boards, etc. This compares with 345 fatal accidents in the first quarter of 1942. Of the 293 fatalities in the period under review, 117 occurred in January, 88 in February and 88 in March. Fatal accidents during each year are recorded by quarterly periods in the issues of the *LABOUR GAZETTE* for May, August and November of that year, and in February of the following year.

The supplementary list of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contains 35 fatalities for 1942.

In this series of reports it is customary to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners, certain other official sources, as well as from the correspondents of the *LABOUR GAZETTE* and newspaper reports.

Classified by groups of industries, the fatalities occurring during the first quarter of 1943 were as follows: Agriculture, 12; Logging, 31; Fishing and Trapping, 5; Mining, Non-ferrous Smelting and Quarrying, 50; Manufacturing, 56; Construction, 33; Electricity, Gas and Water Production and Supply, 6; Transportation and Public Utilities, 72; Trade, 12; Service, 16.

Of the mining accidents, 30 were in "metaliferous mining", 19 in "coal mining", and one in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, three were in "vegetable foods, drink and tobacco", one in "animal foods", one in "rubber products", 10 in "saw and planing mill products", one in "wood products", one in "pulp, paper and paper products", 21 in "iron, steel and products", one in "non-ferrous metal products", five in "non-metallic mineral products", two in "chemical and allied products", eight in "shipbuilding", and two in "miscellaneous products".

In construction there were 15 fatalities in "buildings and structures", 10 in "highway and bridge", and 8 in "miscellaneous".

In transportation and public utilities, there were 34 fatalities in "steam railways", 2 in

"street and electric railways", 19 in "water transportation", 2 in "air transportation", 2 in "storage", one in "telegraphs and telephones", and 2 in "other".

There were three fatalities in "wholesale", and 9 in "retail" trade.

Of the fatalities in service, 10 were in "public administration", one in "custom and repair", and five in "personal, domestic and business".

There was one disaster during the period under review which occurred on January 16, when a freighter foundered and sank in a storm, off Cape Scott, Northern Vancouver Island, and fifteen members of the crew were drowned. The other two members of the crew reached shore in a life boat and survived.

Other accidents involving the loss of two or more lives were as follows:

On February 10, three construction labourers were burned to death in a fire that destroyed a dormitory building at Arvida, Quebec. On February 12, an oiler, a tractor operator and a cookee engaged on highway construction, lost their lives when buried in a snow slide at Skeena, B.C. Two drillers were killed at Skeena on February 19 when struck by a train.

Two fishermen were drowned from a dory, off Lunenburg, N.S., on March 5.

On January 19, an explosion occurred in a smelter converter, at Copper Cliff, Ontario, and a matte charge blew out burning two workers, which resulted in their death. One man died on February 23, and the other on April 3. Two machine runners lost their lives from injuries during blasting operations, near South Porcupine, Ontario, on February 26. A bump in a coal mine, near Fernie, B.C., on March 23, caused the deaths of two miners.

Two ship workers were killed at Lauzon, Quebec, when struck by falling iron plates when a sling slipped, on February 17. Following an explosion of celluloid in a toy factory at Toronto, Ontario, two workers were burned to death, on February 12.

In a boiler explosion and train derailment, at Tapley, Ontario, on January 22, an engineer and a fireman were killed. On February 15, a brakeman and an assistant brakeman were killed when struck by a train. In a collision of two freight trains, near Delamere, Ontario, a trainman and a conductor lost their lives on March 20.

On January 4, two seamen were killed in a boiler explosion on a ship, at Prescott, Ontario.

Supplementary List of Accidents

A supplementary list of accidents occurring in 1942 has been compiled which contains 35 fatalities of which five were in logging, three in mining, non-ferrous smelting and quarrying, 10 in manufacturing, five in

construction, seven in transportation and public utilities, one in trade, and four in service. One of these accidents occurred in April, one in May, one in June, one in September, two in October, four in November, and 25 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1943 BY GROUPS OF INDUSTRIES AND CAUSES

Notes of Current Interest

Encouragement of suggestion systems in Canadian war industry

Designed to encourage the formation of employee suggestion plans in war industry, an Order in Council (P.C. 1/4388) was passed on May 27 permitting war contractors to count awards made to employees for valuable suggestions as deductible expenses in determining income for tax purposes.

With the approval of the Minister of Munitions and Supply employee suggestion plans have been established in a considerable number of plants engaged in war production, notably in the aircraft industry (L.G., Jan., 1943, p. 1). It has been found that in cases where such plans have been established substantial benefits have resulted in the form of reduced costs and greater efficiency in operation.

Such plans provide for the payment of awards on a graduated scale based upon the savings resulting from the adoption of the suggestions for which such awards are paid. The maximum amount which may be paid to any employee by way of award is limited to \$750 and the majority of the awards to date have not exceeded \$100 in any individual case.

Awards so paid by a contractor engaged in carrying out a contract with the Department of Munitions and Supply under which the contractor is entitled to be paid his costs of operation, with or without a fee or profit, are allowed as an item of cost under such contract, subject to approval of the award by Treasury Cost Accountants as being reasonable and proper and properly apportionable to the contract.

The present Order applies to employee suggestion plans which have been approved by the Minister as making provision for awards "for suggestions resulting in reduced costs

and/or greater efficiency in carrying out a munitions contract."

Ontario's Labour Court set up under terms of Collective Bargaining Act

Ontario's new Labour Court, which will administer the Collective Bargaining Act passed during the recent session of the Legislature, came into being on June 14.

The Act stipulates that no Ontario employer may fail or refuse to bargain with the duly appointed or elected representatives of a bargaining agency which has been certified by the Labour Court. (Other powers of the Court were listed in the description of the Act in the LABOUR GAZETTE for May, p. 701.)

It was announced on June 14 that Mr. Justice J. G. Gillanders would be the first judge of the Court, acting until July 31, 1943. He will be succeeded in August by the judge acting as holiday relief judge, and beginning September 7 eight different judges will serve for two-week periods until the end of the year.

Elsewhere in this issue, in the article *Labour Legislation in Alberta and Saskatchewan*, appears an account of collective bargaining legislation passed recently in Alberta and of a bill which failed to pass in Saskatchewan. Last month's issue, in addition to its description of the Ontario Act, contained information concerning a British Columbia Act and a Manitoba bill which failed to pass.

In relation to the Saskatchewan bill, it was announced recently that a commission of three members has been appointed by the Premier to inquire into the principles of the bill. The commission will sit in different parts of the province starting July 15, and will hear representations from organizations interested in

employer-employee relations in Saskatchewan and the principle of collective bargaining. A report on the findings of the inquiry will be submitted to the Legislature at its next session.

Continuous operations plan in B.C. shipyards

A continuous operations plan is now in effect in all Vancouver and Victoria shipyards. Supplementary collective agreements recently signed call for the operation of the yards three shifts a day, seven days a week, with the men working a 48-hour week. (See article elsewhere in this issue entitled *Recent Collective Agreements*.)

The signing of these agreements implements, with certain changes, the findings of the Royal Commission appointed on July 13, 1942 to inquire into the most effective methods to secure maximum production in the shipyards of British Columbia. (The report of this Commission, which was under the chairmanship of Mr. Justice S. E. Richards, was published in the LABOUR GAZETTE, Sept., 1942, p. 1007.)

Subsequent to the submission of this report, Mr. Justice Richards was appointed an Industrial Disputes Inquiry Commissioner to implement the report.

In the course of the negotiations the National War Labour Board gave its approval to adjustments in wage rates for certain classifications of workers, a 6-day vacation with pay, and an attendance premium.

Agreements in the Victoria yards were signed during March (L.G., Apr., 1943, p. 488), and the successful negotiation of agreements in the Vancouver yards brings the continuous production plan into full effect.

Women foundry workers form union

The first union in Canada composed entirely of women foundry workers has been organized at Three Rivers, Quebec, when 117 women employed by the Canada Iron and Foundry Company joined the International Moulders and Foundry Workers' Union and applied for a charter as a separate local.

Cost of living index advances fractionally

The Dominion Bureau of Statistics index number of the cost of living advanced from 117.6 at the beginning of April to 118.1 at the beginning of May due to advances in the food, rent and miscellaneous groups. Higher prices for foods accounted for the major part of the advance in the general index, the index for this group increasing from 128.7 to 129.9 due mainly to advances in meats, potatoes and unions. Egg prices were slightly lower.

The index for rents and for the miscellaneous group each recorded fractional advances.

At the beginning of May the general index was 17.2 per cent higher than for August, 1939, the last pre-war month. For the equal period during the last war the index advanced 45.4 per cent, that is between July 1914, and April, 1918.

Recent pamphlets on planning, reconstruction, and credit unions

Under the title "Social Security Planning in Canada" the International Labour Office has published an analysis of the Report on Social Security for Canada prepared by Dr. L. G. Marsh for the Advisory Committee on Reconstruction, together with a note summarizing the draft Dominion and Provincial Health Insurance Bills contained in the report of the Advisory Committee on Health Insurance under Dr. J. J. Heagerty. Both reports are now under consideration by the Special Committee of the House of Commons on Social Security. The pamphlet is a reprint of an article which appeared in the International Labour Review for May, 1943. A brief summary of the reports appeared on page 429 of the April LABOUR GAZETTE; and the reports themselves are obtainable from the King's Printer, Ottawa.

A reatling list of books, pamphlets and articles dealing with post-war problems was published during April by the Canadian Institute of International Affairs, 230 Bloor St. West, Toronto. The list is in the form of a 62-page pamphlet, and constitutes a select bibliography of the more important and representative publications in the field. The eight main topic headings listed in the table of contents are as follows: I—Reference Books and Agencies for Research; II—Official Documents and Speeches; III—The Peace Settlement and Immediate Problems; IV—Reconstruction: Peace Aims; V—International Organization and Co-operation; VI—Economic: Principles, Problems, and Proposals; VII—Social and Cultural Problems and Policies; VIII—Particular Areas and Countries.

A series of five mimeographed pamphlets giving information on credit unions has been prepared by J. G. Perold of the Economics Department of the University of Toronto. The first pamphlet deals with the history of credit unions, the second with the experience of such organizations, the third with their practice, the fourth with legislation on the subject, and the fifth gives suggestions and advice on the organization and incorporation of credit unions. Copies of the pamphlets may be obtained for 10 cents each from the Workers' Educational Association of Canada, 106 St. George St., Toronto.

Employment and industrial statistics

The table below shows the latest statistics available reflecting industrial conditions in Canada.

The index of employment at the beginning of April was slightly lower than for the previous month. This was in conformity with the trend in 18 of the last 22 years. The decline, which was less than

the average in extent, occurred mainly in logging and construction. The index at April 1 while lower than for the previous month was 9.3 per cent higher than one year ago. During the latter period an increase of 18.7 per cent was recorded in the aggregate weekly payrolls. The weekly average earnings were \$31.09 at April 1, as compared with \$30.72 at March 1, and \$28.41 at April 1, 1942.

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

† Week ended May 27, 1943.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base, June, 1941=100. (4) Base, 1935-1939=100. (5) Adjusted, where necessary, for seasonal variation. (6) Notes in the hands of the public.

(7) Figures for four weeks ended May 29, 1943, and corresponding previous periods.

(8) MacLean's Building Review.

The index of the physical volume of business reflecting activity in the production and distribution of goods, in April, was at the highest point in the record. This index has shown an uninterrupted advance, 21 per cent, since May, 1942. As compared with the previous month four of the five principal groupings recorded advance. These are mineral production, manufacturing, electric power output, and distribution of goods while less activity was indicated for construction.

Comparing the cumulative figures for the first 4 months of 1943 with the corresponding period of 1942 the index of the physical volume of business was 19.3 per cent higher. Manufacturing was 30 per cent higher and mineral production 2.6 per cent higher. The production of flour increased 24.2 per cent, creamery butter production 30.1 per cent while production of cheese declined 53.7 per cent. The production of newsprint in the same comparison declined 19.9 per cent, steel ingot production 4.4 per cent and coke production 5.8 per cent.

Industrial Disputes Investigation Act

Ten applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received during the month of May. Twelve boards submitted their reports; eight boards were established and the constitution of four boards was completed during the month. Seven disputes were referred to Industrial Disputes Inquiry Commissioners and reports were received from Commissioners in eleven cases. Three applications were withdrawn during the month and three applications were rejected. A strike vote was conducted in one case.

British Government to assist demobilized persons in securing advanced education

The British Government recently issued a pamphlet outlining a scheme to provide financial assistance to suitably qualified persons who wish, on demobilization, to undertake or continue interrupted education or training beyond the secondary school. The plan is designed to ensure an adequate supply of trained men and women to fill the higher posts in industry, commerce and the professions and will include a placement service. It is sponsored by the Minister of Labour and National Service, the Board of Education, the Minister of Agriculture and Fisheries and the Secretary of State for Scotland, and will be administered by the Appointments Department of the Ministry of Labour and National Service. (For an outline of the Canadian scheme of a similar nature, see the summary of the Post-Discharge Re-establishment Order, as amended, in the LABOUR GAZETTE, May, 1943, p. 587.)

Assistance will be granted in Britain only to persons who have served in the Armed Forces, auxiliary services, merchant navy, civil defence forces, police auxiliaries or civil nursing reserve, or to persons who have been employed in work of national importance. Applicants must show that their training for a career or profession was interrupted or that they were unable to start it by reason of national service during the war. Trained persons requiring refresher courses or training for a new career because of disability preventing return to their former careers will also be eligible. Part-time national service unless it resulted in disability does not make a person eligible for assistance, nor may persons who have continued their profession during their war service receive grants to train for new professions. Aliens will be eligible for assistance but if facilities in any area are limited, first consideration will be given to British subjects. Further education will also be provided in the Armed Forces for persons whose demobilization after the war is delayed.

Applicants must show that it is in the national interest to assist them. Consequently they must not only present evidence of ability to benefit by a proposed course but must also select courses leading to professions for which there is a national demand. A special committee headed by Lord Hankey has been appointed to consider the prospects of employment at home and abroad in the various professions and to advise on the number of persons who should be encouraged to enter each one.

The amount of the grant will depend on the financial circumstances of the candidate and his family. Disability pay or pension or war gratuities will be disregarded in computing an applicant's income. Provision is made for allowances for a candidate's wife and children. Persons seeking assistance for on-the-job training must be taking a definite course of training as it is not intended that grants should merely subsidize beginners' wage rates. The continuance of grants is dependent on the satisfactory progress and conduct of the recipient.

Assistance will be given for professions which require the attainment of a recognized standard as a condition of entry or for those in which technical or university training would materially improve an entrant's prospects of advancement. Grants will not be made to assist persons to attain the minimum qualifications for entrance to a training course but it is expected that the criterion for admission to courses will be a candidate's ability to profit from the course. Students may attend Dominion and other overseas universities if

they so desire. While full operation of the scheme must be delayed until after the war, persons who have already been discharged from war service through disability or on medical grounds and are not required for other war work may apply for assistance now. It is estimated that 60,000 persons may ultimately be assisted by the scheme.

**British
Government
declares holiday
breaks essential
in wartime**

The British Government has recently issued a statement of policy on the subject of holidays in industry in 1943, declaring that in the fourth year of the war holiday breaks are even

more essential than in previous years "if maximum health and efficiency are to be maintained during what may prove to be the vital year both in the field and in the factories." Subject to the stipulation that "any recommendations to industry on this matter must depend for their observance on the exigencies of the war situation at the particular holiday period," the Government recommends that annual holidays not exceeding one week provided for by agreement or practice in any industry should be granted, and that, in addition, four long week-ends (Saturday to Monday inclusive) should be observed as holidays. In England and Wales the week-ends should be observed at Easter, Whit-Sunday, the first week in August and Christmas or New Year's. For Scotland, where the days to be observed as holidays are usually determined locally, four corresponding periods are recommended. Staggering of holidays and the organization of community holiday-at-home schemes are urged to ensure that no loss of production or crowding of transport facilities will result from holidays. If work is done on any day usually observed as a holiday, payment is to be governed by existing law or collective agreements.

This is a continuation of the Government's policy of 1941 and 1942 in regard to holidays. (L.G., 1942, p. 1055). In May, 1940, when the war was at a very critical stage, the Government asked that annual holidays be cancelled or postponed and issued orders under the Defence (General) Regulations cancelling the Whitsun, August and December bank holidays. However in 1941 and 1942, recognizing the importance of holiday breaks to maintain health and efficiency, the Government restored the bank holidays and urged that customary summer holidays should be continued provided they did not exceed one week and were spread over a long period.

Because of special conditions in the coal-mining industry, a separate announcement is to be issued concerning holidays for coal-miners.

**Three railway
labour unions in
Britain form
joint committee**

common interest to the three unions." participating unions are the National Union of Railwaymen, the Amalgamated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association which may each send four members to the Joint Committee in addition to their President and General Secretary. The three Presidents will act as Chairman of the Committee in rotation.

The Joint Committee is to meet every three months but special meetings may be called by any of the parties. It will advise on subjects of negotiation with the railway authorities but its decisions must be ratified by the Executive Committees of the three unions.

**Canteens for
essential factory
workers in
Great Britain**

Three railway unions in Great Britain have recently formed a Joint Committee "to assist in creating the maximum amount of unity of purpose on matters of

A new Factory (Canteens) Order has recently been issued in Great Britain replacing the original Canteens Order of November 11, 1940, passed under the

Defence (General) Regulations. The 1940 Order authorized the Chief Inspector of Factories to require occupiers of factories on Government work or engaged in munitions production who employed more than 250 persons, to establish and maintain a factory canteen in or near their plants. By April, 1942, according to a statement of the Minister of Labour, 3,221 factories subject to the Order had established canteens and 3,432 others were also operating canteens. A further 800 canteens were under construction, so that about 96 per cent of the factories covered by the Order had canteens in operation or under construction by April, 1942.

The application of the 1943 Order is much broader. It covers all factories with more than 250 workers who are "employed in the performance of services or engaged in operations which are essential for the defence of the realm or the efficient prosecution of the war or essential to the life of the community, and also are employed in circumstances which, in the opinion of the Minister, are, or are likely to be, dangerous to life and limb or injurious to health."

The new Order places the onus on the employer, who must obtain a certificate from the Minister of Labour and National Service to the effect that his factory is not covered by this definition. Such certification, however, may indicate that the business is not essential and therefore its labour supply would be in jeopardy.

The Chief Inspector of Factories may issue written directions requiring any employer not holding a certificate to install a canteen where hot meals can be purchased. The Chief Inspector may also serve notices on employers whose canteens are not satisfactory, whether or not the canteen was established under the Order. He may compel such employers to alter the construction, size, equipment, meals and services supplied or other matters connected with the canteen to remedy the defects mentioned in the notice.

The special Canteen Orders relating to the building and construction industry and dock workers remain in effect. Pithead canteens for miners are being established by the Miners' Welfare Commission.

**United States
recommendation
on shift schedules
in war plants**

Some U.S. war production plants have found they have obtained maximum production by using Sunday for bottleneck-breaking, repair and maintenance, according to a supplement issued on May 11, 1943 to the statement on hours of work for maximum production made in July, 1942, by eight United States Government agencies (L.G., 1942, p. 881). In their original pronouncement, the Army, Navy, Labour and Commerce Departments, the War Manpower Commission, the Maritime Commission, the War Production Board and the Public Health Service urged a 48-hour week made up of six eight-hour days, one day's rest in seven, a 30-minute lunch period and short vacations. While declaring that these recommendations are on the whole "as pertinent to-day as at the time of issuance", the Federal agencies considered the following supplemental statement warranted by present conditions:—

"The continued policy of Government agencies dealing with production is to encourage that type of daily and weekly shift schedules which will secure the most effective utilization of materials and labour supply. Some plants have found that a better co-ordination of supervision and planning results from giving a majority of employees and supervisors the same day off each week. By allocating Sunday for repair, maintenance, and bottleneck-breaking, a more even flow of work was shown to be maintained throughout the week. In such plants production has not suffered since better attendance, better morale, and greater employee effectiveness have resulted from having regularly the customary day of rest. On the other hand many plants through experience have been able to secure more productive efficiency by operating the plant a full 7-day week and still affording a day of rest to workers through a variety of methods.

"Maximum production and maximum utilization of labour supply is the goal which the Government agencies are urging plants to achieve. The type of work schedule is secondary and one of the means to the end."

**Industrial
medical services
for large and
small plants**

A summary of available information on medical services for industrial plants has been published by the New York State Department of Labour under the title "Essentials of Health Maintenance in Industrial Plants". The pamphlet was prepared by three physicians and deals with medical services for both the large and the small establishment. Some of the material relating to large plants appeared recently in the Industrial Bulletin published monthly by the New York State Department of Labour and was summarized in the LABOUR GAZETTE for February, 1943, p. 227.

The need for medical services in industry is evident from a study of the various estimates of man-hours lost through accidents and illness. Their value was indicated by the results of a recent survey by the National Association of Manufacturers of 2,064 plants providing health and safety services. In these plants a reduction was shown of 62.8 per cent in occupational disease, 44.9 per cent in accident frequency, 29.7 per cent in absenteeism, 28.8 per cent in compensation and insurance premiums and 27.3 per cent in labour turnover (L.G., Jan., 1943, p. 11.) Another survey showed that the average annual per capita cost of medical schemes in plants studied was \$5.10.

Attention is drawn to the fact that there are more lost-time accidents in small than in large plants, and although similar figures for occupational diseases are lacking, it is suspected that the small plant also has a higher sickness rate. To meet this situation, it is suggested that small plants employ part-time medical staff, enter into group medical schemes with other factories, improve first-aid facilities and take advantage of assistance offered by such agencies as State labour departments and safety councils.

The section on medical services for large plants deals with facilities and equipment, staff requirements and the scope of an adequate medical service. Stress is laid on the need for preventive work and for considering such matters as workroom conditions, shift systems and rest pauses, noise control, nutrition, recreation, etc. Physical examinations and the prevention of occupational diseases are discussed in some detail.

A selected bibliography on industrial hygiene is included in the pamphlet and there are appendices containing information on factory dispensaries, physical examinations, record forms and sanitary requirements for factories under New York law. Copies of the pamphlet may be obtained from the

Division of Industrial Hygiene of the New York State Department of Labour for 35 cents each.

U.S. mothers in war work aided by Child Care Committees A report from the United States Office of War Information says that nearly 100,000 children are being cared for in federally aided child care centres, as part of a program to help women in war jobs.

In approximately 1,000 communities and in every State, Child Care Committees have been organized. In settlement houses, public schools, churches, and community centres, groups of children are now spending the hours of day or night in which their mothers work on assembly lines or at the many civilian jobs where women are replacing men.

Communities recognizing child care as a problem of great importance have pooled their resources, extended the services of the education, welfare, and health departments to cope with the problems that are growing out of the industrialization of women. Boys and girls up to 14 years of age report to school—in many places at 6 a.m.—for before-school care; others are given supervised play after school until their mothers are off work.

The program has been regarded further as a partial solution to the problems of absenteeism and juvenile delinquency. In some communities, through over-all planning, industries have agreed to employ no mothers without finding out whether provision has been made for their children. Many firms, seeing the advantage of providing attractive, wholesome programs for the care of children as an inducement to mothers to take or hold jobs, have worked with community groups to secure nurseries, foster homes, and after-school recreational centres. Nursery schools made a short cut to production goals. Child Care Committees, usually attached to the local Defense Council, and Government agencies, have discouraged in strongest terms the establishment of any nurseries within war plants themselves, the report says.

Apprenticeship scheme for reclamation projects in United States A basic apprenticeship scheme for workers wishing to enter the skilled trades in projects administered by the United States Bureau of Reclamation has been drawn up by the Bureau

after consultation with the trade unions concerned and with the Apprenticeship-Training Service of the War Manpower Commission. The scheme provides for the establishment of training centres for apprentices at reclamation projects where there are adequate facilities and sufficient candidates. Local joint apprenticeship committees are to adapt the basic plan to local needs, and local boards of educa-

tion will be requested to provide related classroom instruction in co-operation with State boards for vocational education and the U.S. Office of Education.

The scheme is to be supervised by a Director of Apprentice Training responsible to the Chief Engineer of the Bureau. He will decide how many apprentices are to be admitted to each trade after consultation with representatives of the trade. Each local scheme will be administered by a Supervisor of Apprentices under the Engineer in charge of the local project. Supervisors of Apprentices are to assist the Project Engineer in selecting persons for training, make arrangements for both shop and classroom instruction, enforce apprenticeship agreements where the local centre requires such and maintain records showing the progress of each apprentice. All local schemes must be reviewed by the Apprentice-Training Service of the War Manpower Commission which represents the Federal Committee on Apprenticeship (L.G., Jan., 1943, p. 157), and apprentices are to be registered with the Federal Committee.

Supervisors of Apprentices will be advised on all questions connected with their schemes by the local joint apprenticeship committees equally representative of employers and workers. The workers' representatives will be nominated by the central organizations representing the skilled workers on the project. Special consultants may be added to a committee to represent trades with no official representative on the committee and to represent the local vocational school and the Apprenticeship-Training Service. In addition to making recommendations on apprenticeship problems, the joint committees are to co-operate with local educational authorities in arranging for supplementary instruction and selecting instructors.

Candidates for training under the scheme must be 16 years or over, have education equivalent to Grammar school graduation and pass an aptitude test for the trade they propose to enter. Local training centres may fix maximum ages for candidates. The apprenticeship term is to be that recognized for the particular trade but will usually be about 8,000 hours and should include 144 hours a year of related classroom instruction. Provision is made for a probationary period, for periodic examinations to test progress and for granting credit for previous experience. Apprentices must receive credit for overtime hours as well as regular hours, and on projects where wage boards have been established, time-and-a-half must be paid for all hours over 40 a week. Apprentices are to be paid according to a progressively increasing wage schedule and on completion of apprenticeship will receive a certificate if recommended by the joint committee.

Manpower

Compulsory Transfer of Workers Continues

Second Order by Minister of Labour Directs Men from Certain Specified Occupations into Essential Work—Other Selective Service Orders in Council

THE compulsory transfer to essential employment of men in age groups designated under Mobilization Regulations was extended on May 15 to apply to men in a further list of occupations, when the second Order under Section 210 of National Selective Service Civilian Regulations was issued.

The second Order covers men in the following employments:—

1. Any occupation in or associated with retail stores;
2. Any occupation in or associated with the manufacturing of feathers, plumes and artificial flowers; chewing gum; wine; lace goods; greeting cards; jewelry;
3. Any occupation in or associated with distilling alcohol for beverage;
4. Any occupation in or associated with the factory production of statuary and art goods;
5. Any occupation in the operation of ice cream parlours and soda fountains;
6. Any of the following occupations: bus boys; charmen and cleaners; custom furriers; dancing teachers; dish washers; doormen and starters; greens keepers; grounds keepers; porters (other than in railway train service); private chauffeurs.

The Order states that no employer employing any person in any of the occupations specified above may retain in employment after June 15, 1943, any person to whom the National Selective Service Mobilization Regulations apply and who belongs to an age class or part of an age class which has been designated for the purpose of the said Regulations, without obtaining a permit in prescribed form from a Selective Service Officer.

The Minister of Labour has given assurance that men will not be directed to employment where the vacancies arise out of an industrial dispute, and that measures will be taken to ensure fair minimum earnings for the class of work to which a man may be directed. Under the Regulations a man has a right of

appeal to a Court of Referees, if he objects to being transferred.

The first Order made by the Minister under the Regulations was announced on May 4, and described in the *LABOUR GAZETTE* for May, p. 566, together with the procedure to be followed under the Order.

"These two Orders," the Minister of Labour said, "will be followed by further Orders covering certain additional employments, which will be issued just as rapidly as the Employment and Selective Service Offices can handle the job."

In a statement on June 6, Mr. Arthur Mac-Namara, Deputy Minister of Labour and Director of National Selective Service, said that latest reports on the two compulsory transfer Orders showed about 9,000 men registered so far, with about 10 per cent already moved to higher priority jobs.

Other Selective Service Orders in Council

The Order in Council reconstituting the National Selective Service Advisory Board, which was appointed to advise the Director of National Selective Service on matters of manpower policy (*L.G.*, March, 1943, p. 314), has been amended by a new Order (*P.C.* 4496, June 1). Under its terms the Director of National Selective Service is empowered to designate an officer of the Department of Labour to serve as Secretary of the Board.

The rates of compensation payable under the Government Employees Compensation Act to persons required to perform alternative service (*L.G.*, April, 1943, p. 451), have been fixed by *P.C.* 36/4453, June 1, 1943. In the case of permanent disability or death the amount of compensation shall be computed as though the person had been in receipt of a fixed wage of \$12.50 per week; in the case of temporary disability as though the person had been in receipt of \$7.70 per week, provided that \$4.20 shall be deducted if board is being furnished.

The services of employable persons of the Japanese race who have been evacuated from the protected areas of British Columbia and placed in settlements in the interior may be utilized on wood fuel cutting and timber

operations under the terms of Order in Council P.C. 4365, May 28, 1943, which is aimed at alleviating the wood fuel shortage in British Columbia and parts of the Prairie Provinces.

Manpower Policy in the Coal Industry

Declaration of National Emergency—Ex-Coalminers in Other Employment Returned to Mines

THE Government has moved to avert a serious coal shortage in Canada by taking steps to return to the mines workers in other employment who have had previous training and experience in coalmining.

On May 17 the Prime Minister, Rt. Hon. W. L. Mackenzie King, tabled in the House of Commons an Order in Council (P.C. 4091) authorizing the issue of a proclamation declaring that a state of national emergency exists in regard to the production of coal in Canada. The Order stated "that supplies of coal are substantially below the level required to meet the increased national needs resulting from the war; and that, unless supplies of coal are forthwith increased and maintained at an adequate level the war effort and the life and health of the nation will be gravely imperilled."

The following day the Minister of Labour, Hon. Humphrey Mitchell, tabled in the House an Order in Council (P.C. 4092) embodying a manpower policy with regard to the mining of coal.

Provisions of Order

The provisions of the Order (which was in the form of an amendment to P.C. 246, National Selective Service Civilian Regulations, Jan. 19) were outlined by the Minister as follows:—

1. Every employer, regardless of his industry, must advise his employees of the regulations, and he must assist in discovering whether any of his employees have had previous experience as coal mine workers.

2. Every employee, regardless of his industry, who has had previous experience as a coal mine worker, must report that fact to his employer not later than Tuesday, May 25, 1943.

3. A "coal mine worker" for these purposes is anyone who, since January 1, 1935, has worked under provincial certificate or licence in or around a coal mine, or who, since the same date, has been employed for a total of at least twenty-four months in the production

of coal—with the exception, of course, of office workers and trade union officials.

4. Every employer, not a coal mine operator, must report in writing to a selective service officer not later than Tuesday, June 1, 1943, full details on any of his employees who are ex-coal mine workers.

5. Selective service officers are authorized to require ex-coal mine workers to report for interview and to accept work at a coal mine.

6. Selective service officers may require any man in any employment, if subject to mobilization regulations but rejected for military training, and certain others excused from military training, including conscientious objectors, to accept employment at a coal mine.

7. No coal mine operator may terminate the services of any coal mine worker without written permission from a selective service officer.

8. No coal mine worker may leave employment at a coal mine without written permission from a selective service officer.

(These last two rules, the minister pointed out, have been in effect for some time.)

9. Every ex-coal mine worker, returning to the industry under these regulations, will be paid wages at the established rate for the job at which he is placed; and the government will pay wages of 40 cents an hour, eight hours a day and 48 hours a week, to any ex-coal mine worker required to leave his present employment under these provisions, but not placed immediately at coal mining.

10. A board allowance of not more than \$7.50 a week may be paid an ex-coal mine worker now returning to a coal mine, if required to live away from the residence of his dependents.

11. Present and future coal mine workers will be granted postponement from military training to February 1, 1944, by virtue of their occupation. (This rule, too, has been effective for some months, to stabilize the industry.) A new and important rule, however, is that no coal mine worker will be

accepted for voluntary enlistment in the armed forces of Canada, prior to February 1, 1944, except under permit to enlist from a selective service officer.

12. No employer in Canada, except a coal mine operator, may solicit for employment or hire any ex-coal mine worker.

13. Regardless of any dominion or provincial law, male persons at least sixteen years old may be employed as coal mine workers, and female persons at least eighteen years old may be employed as surface coal mine workers.

14. War emergency training classes will be available for training men as coal mine workers.

"The plans have been carefully worked out," the Minister said. "The coal administrator and the chairman of the war emergency coal production board were both taken into consultation. The matter was brought before the national selective service advisory board, on which employers and workers are represented. Drafts also were discussed with the coal mining advisory committee, made up of employers and employees, and their views were secured."

Increased Production Necessary

The Minister declared that a consumption of 41,500,000 tons of bituminous coal was anticipated during the present fiscal year. "Last fiscal year," he said, "we used about 37,381,000 tons, of which 19,219,000 tons were imported from the United States and 18,162,000 tons were produced in the Dominion of Canada. With an increased consumption during the present year we must either raise our production, import more coal, or do both

"Owing to the United States needing more coal, there is no certainty that we can continue to increase our imports from that country. Therefore we must increase Canadian production from the 18,373,255 tons of last year, which, it will be noticed, is estimated to be slightly over our consumption. Our own production was increased by about one million tons in the two years from 1940-41 to 1942-43."

A production increase in anthracite coal would also be required, the Minister intimated.

Need for Additional Workers

"I should like to stress the fact", he continued, "that the Canadian coal industry—workers and management—under the disabilities which are inevitable in Canadian war

economy, has maintained a high level of production and has contributed substantially to our common war effort. The hope of further increases in production must rest largely upon the provision of additional workers to the industry.

"In February of this year the total number of workers engaged in the coal mining industry was 25,089. As of April 29 of this year, unfilled vacancies reported by the coal mines totalled 2,329. The labour shortage each month during the winter was in like volume. At the end of April, 1,324 of the vacancies were in the maritime provinces and 995 on the prairies and in British Columbia.

"In addition to the present mining capacity in the country, the government is seeking to find new sources of production and is helping in the financing of operations. New shafts are being opened in the northern area of Alberta, some new stripping mines in Saskatchewan, and some additional operations in British Columbia and in Nova Scotia. This of course will require man-power in addition to the figures which I have already given.

Skilled Men Required

"I think the house will understand that labour shortages cannot be overcome by simply providing the number of men asked for, without regard to the individual's qualifications. It is estimated that seventy to eighty per cent of the present vacancies are for coal cutters, and the balance for haulage and surface workers. Cutting coal is a skilled trade, and coal miners cannot be made overnight. The provinces require two years' experience before issuing licences to miners. Therefore the main labour supply problem is to locate those who previously were engaged in the industry.

"Provision of surface workers largely is dependent upon securing cutters; if cutters are not found, the work for additional surface workers does not exist. Therefore every effort must be made to find coal cutters. While a limited number can be provided through training courses, it is those with previous training and experience we must return to the mines.

"The labour shortage at the moment arises in large part out of the urgent need for substantially increasing our production over last year.

"Certain measures were taken last year to stabilize employment in coal mining. Undoubtedly these had a beneficial effect, but with the present situation facing us, earlier steps require to be strengthened. That is precisely the purpose of the present order in council.

"Under arrangement with the armed forces, qualified miners in the forces here in Canada have been given the opportunity of applying for leave to return to their old jobs. This was undertaken early last winter. About 1,200 miners volunteered to return. The cases of others who have volunteered are being gone

into at the present time. This is additional to the provision of the present order in council.

"Also last winter some men were returned from west coast shipyards to the mines, but much more must be done along this line, other industries being brought in."

Financial Assistance to Coal Mines

An Order in Council has been passed amending the provisions of the Emergency Coal Production Board. This three-man Board was set up by P.C. 10674 of November 23, 1942, with the object of stimulating coal production (L.G., Dec., 1942, p. 1404). Its powers include opening new mines; re-opening closed mines; and closing small, inefficient mines wherever the labour employed can be transferred to more, efficient operations. It may, after consultation with the provinces and with labour, suspend for the duration of the war any rules or regulations respecting employment in coal mines which may be found to be serious impediments to maximum production; and it has power to direct the production policy of mines.

The present Order (P.C. 4565, June 5) amends its power to provide financial assist-

ance to mines which find themselves financially unable to continue in maximum production. Declaring that in certain cases such financial assistance should be provided by other means than by cash advances made directly by the Board, the Order gives the Board power of

guaranteeing in the name and on behalf of His Majesty the King in the right of Canada the repayment of any advance made by any bank to any person, firm or corporation engaged in the operation of any coal mine in any case where, in the opinion of the Board, the making of such advance and the giving of such guarantee will facilitate the maximum or more efficient operation of such coal mine.

An Order of May 4 (P.C. 3628) extends the scope of the Board by stating that "coal" shall be interpreted to include coke, lignite and peat.

Use of Prisoners of War in Agricultural and Other Labour

AN Order in Council of May 10 (P.C. 2326) authorized the Minister of Labour to utilize the services of prisoners of war in agricultural and other labour. In a statement to the House of Commons the Minister described the procedure to be employed as follows:

"Use of Italian prisoners of war is being made in England on labour projects with satisfactory results, but almost all prisoners of war interned in this country are of German nationality, and the extent to which German prisoners may be successfully employed can only be determined from experience gained in the work projects initially undertaken.

"The intention is that in initiating operations, the prisoners employed will be selected from those volunteering for employment and who are considered sufficiently reliable by the internment camp authorities for transfer to such employment and suitable for work on the employment project to be undertaken.

"The men selected will be transferred by the military authorities to small labour detachments assigned for work. We expect these detachments will be housed in labour camps adjacent to, within the area of, the labour project, or the area in which the detachment may operate, and in some instances, they will be housed in the main internment camp if the employment is within easy access of the camp.

"The Department of Labour will assume responsibility to provide for the operation of the labour camps and the arrangements for employment. A limited number of military personnel will be attached to each detachment for disciplinary purposes, but the responsibility for the labour detachments will be assumed by the Department of Labour.

"The nature of the labour projects undertaken will necessarily be such as will involve the employment of a minimum personnel to supervise the employment and to provide reasonable assurances for the security and discipline of the prisoners employed.

"Wood cutting and mining work and selected types of agricultural work appear to offer the most suitable opportunities for employment. Projects providing suitable employment and for which camp facilities are available or can be supplied with little added cost will receive favourable consideration at the outset.

"Notwithstanding the careful selection of prisoners, hon. members will recognize that greater risks of escape must be accepted in placing these prisoners in useful employment than are involved in their detention in internment camps.

"Canada is a party to the prisoners of war convention concluded at Geneva in 1929, so that the conditions of employment and rates of pay and provision for welfare of prisoners

of war provided in this country will conform to the terms of the convention, and also be in conformity with British practices in this regard."

Student and Teacher Employment during the Summer Vacation

ON May 22 the Honourable Humphrey Mitchell, Minister of Labour, issued an appeal to school teachers and to students, university, college, high school and lower school, to engage at farm work or other useful employment during the long summer vacation this year. "Farmers will be in most urgent need of all the help they can get, all through the summer," the Minister said. "Other important war industries are also short of workers. Therefore, the Government confidently hopes that teachers and students will not regard the closing down of the schools for the summer as a holiday this year, but rather that they will consider the time as giving them an opportunity to aid directly in solving Canada's wartime labour problems. The nation will need all the help these people can give."

The Minister also remarked that, in view of labour shortages, farmers would have to exercise a good deal of patience when some teachers, students and others first begin work in agriculture. "With the shortage of fully qualified workers, all industries have had to take inexperienced people. Industrial plants have shown considerable patience and ingenuity in training workers who were new to the job. In order to develop the labour required from the materials available, it will be necessary that farmers do the same. Last year many farmers showed a good deal of patience in initiating persons not accustomed to farming. It is to be hoped and expected that all farmers will this year give evidence of the same spirit."

The Minister pointed out that National Selective Service is giving attention to helping in absorbing into employment all teachers and students. Plans in effect utilize the services of the Employment and Selective Service Offices and are being carried out in co-operation with the Governments of the Provinces

and the Canadian Teachers Federation. Special attention is being given to employment on farms, and several of the provinces, through their Departments of Education, have permitted students to leave school before the end of the term if they have secured a certain minimum standing, to work on farms. Some provinces are adjusting the dates of the holiday period so that the holiday will coincide with the time of peak demand for seasonal farm help.

Students in medical and dental courses will continue their studies throughout the summer, while those in pure science courses are permitted to continue at some universities during the holidays, if they wish. This is part of the program to speed up the graduation of students in these courses, as their services after graduation are urgently needed. Undergraduates in pure and applied science, other than those continuing their studies, are being directed wherever possible to summer employment of an essential nature which will at the same time be of assistance to the students in their technical training. Employment and Selective Service Offices have received information from the Wartime Bureau of Technical Personnel at Ottawa, as to suitable types of employment, and each university has appointed a senior staff member as consultant to these offices in doubtful cases.

Other students, whether university or high school or lower school, will be induced to accept employment in agriculture where possible, or work in other industries of high priority where they do not go into agriculture.

Arrangements have been made to locate officials of local Employment and Selective Service Offices at universities and colleges for a limited period before the end of the academic term to advise and direct students to summer employment.

Release of Key-Men from Military Service

THERE are various regulations in effect which are designed to prevent the absorption into the Armed Forces of men whose services are essential to war industry and to permit the release for specified periods of such men who are already in training. The National Selective Service Mobilization Regu-

lations (L.G. Jan. 1943, p. 153) provide for the deferment of compulsory military training of key-men, and Section 23 of the Reserve Army (Special) Regulations, 1941, which was re-cast by an Order in Council of May 12, 1942 (P.C. 1916) permits the release of key-men who are already undergoing compulsory

training. Canadian Army Routine Orders of May 6, 1942, as amended on March 20 and April 28, 1943, deal with leave to key-men on enlistment and leave to enlisted soldiers who are already serving. They replace Instructions to District Officers Recruiting of November 1941.

Under the Mobilization Regulations any man who is employed in an essential industry or a seasonal occupation may apply for an order postponing his compulsory military training. The application must be supported by the employer and any employer may or may be required to submit a plan for the postponement of the military training of any group of his employees. The Regulations set up a Mobilization Board in each Division and these Boards consider all applications for postponement orders.

The Reserve Army (Special) Regulations provide that any man who has been called out and is already in training may apply for leave of absence without pay within three months after commencing training and he may be granted leave on the same grounds as would have entitled him in the first place to a postponement order under the Mobilization Regulations. The application is forwarded through the Officer Commanding to the appropriate Mobilization Board. The Board investigates the case and if it sees fit recommends that leave be granted for a specified period. The District Officer Commanding will normally comply with the recommendation of the Board, but if the exigencies of the military situation require that leave be curtailed or refused, the Board's recom-

mendation will be referred to National Defence headquarters for final decision.

The Canadian Army Routine Orders of May 6 as amended provide that when an applicant presents himself for enlistment and it appears that he is a tradesman he will be examined by the Recruiting Officer as to his present employment to determine if he is a key-man in a war industry. If it appears that he is, he will be enlisted but his employer will be given an opportunity to object to his withdrawal from industry. If agreement is reached between the man, the employer and the District Officer Recruiting, the latter may grant the man leave of absence without pay for the period agreed upon. If no agreement is reached the matter will be referred to the appropriate Mobilization Board. Leave may be cancelled at any time, but eight days' notice must be given to both the man and the employer and either of them may again have the case referred to the Mobilization Board.

If an employer wishes the return to temporary civil employment of an enlisted soldier who is already serving in the active army, he may apply to the soldier's Officer Commanding. The application will be referred to a Mobilization Board and leave without pay will normally be granted if the Board so recommends, but the matter may be referred to National Defence Headquarters for final decision. A soldier will be granted leave only in the capacity and with the employer named in the application. He will be subject to re-call to military duties on 48 hours' notice.

Progress of British Manpower Mobilization

THE extent to which manpower has been mobilized in Great Britain is indicated in an article in the May issue of the *International Labour Review*. A large part of the needs of the forces for men must be met from the remaining male labour supply in the munitions industries, the article states.

Manpower needs are also being met by a program of concentrating production in nucleus firms which has been carried out in over fifty industries. Figures released in February show that as a result of this program some 250,000 workers have been released to war work or the armed forces, and 137 million square feet of factory space have been made available for other purposes.

The filling of the places of the men and women withdrawn from industry falls largely to older women and housewives and to the women who can still be transferred from less essential activities. The total number of women between 18 and 46 years of age who

have been registered under the Registration for Employment Order is 8,670,000. The number of women in full-time industrial employment is estimated at 6,700,000. Precise figures of the number of women who are working part-time in industry are not available, but according to the Minister of Labour, "it is probably of the order of 450,000".

In many industries special arrangements have been made for the part-time employment of women with children under 14 years of age, who are not obliged to take employment under the Employment of Women Order (L.G. Apr., 1943, p. 425). Part-time shifts have been arranged so that two mothers can share an eight-hour shift, each working four hours. This makes it possible for women to do team work not only in industry but in caring for their households and children as well. Other part-time shifts are arranged so that some mothers work only three days a week.

Compulsory Arbitration in Great Britain's Coalmining Industry

Plan for Establishing Permanent Machinery to Settle Questions Arising Between Owners and Mineworkers

A SYSTEM of compulsory arbitration has been prepared for the coalmining industry in Great Britain, embodying a comprehensive method of settling all questions, local, district and national, arising between the owners and the mineworkers. This scheme has been evolved by the Board of Investigation appointed in June, 1942, under the chairmanship of Lord Greene to enquire into wages and conditions in the coalmining industry. It is contained in the third Report of the Board, and is stated to have the unanimous approval of the employers' and workers' organizations.

The main features of the scheme are as follows:

(1) A National Conciliation Board is to be established to which all matters of a national character may be submitted, and whose decisions are to be binding.

(2) Questions of a purely district nature are to be dealt with by district conciliation machinery.

(3) Any district question of special importance may be transferred from district conciliation machinery to the national machinery.

(4) An obligation is laid on workers' and employers' organizations to introduce as soon as possible improved methods to deal with pit disputes.

(5) No strikes or dismissals may take place while a dispute is under negotiation.

National Board

The National Conciliation Board is to consist of two bodies: (a) a Joint National Negotiating Committee, of 22 members, one-half nominated by the Mining Association of Great Britain and one-half by the Mineworkers' Federation of Great Britain; (b) a National Reference Tribunal of three permanent members, none of whom shall be engaged in the coalmining industry or be a member of either House of Parliament except in the case of a judicial member of the House of Lords. The permanent members of the tribunal will be appointed by the Master of the Rolls (as well as such temporary members as may be required), and he will nominate one of the permanent members to be president of the tribunal. The tribunal will be assisted by assessors.

There will be two stages in the treatment of national questions—(1) discussion by the

negotiating committee, and (2) failing a settlement by the negotiating committee, reference to the national tribunal "for final decision." If questions are not settled by the negotiating committee in five weeks they will be automatically referred to the national tribunal, though in certain circumstances the period of five weeks may be extended.

Every settlement reached by the Negotiating Committee and every award or decision of the National Tribunal on a national question is to be binding upon the National and District Associations of employers and workpeople and upon their members for the time being, and these Associations undertake to endeavour to ensure that the terms thereof shall be observed by all employers and by all workers affected whether or not they be members of any of the District Associations.

The Minister of Fuel may refer any question to the National Board for decision or report, and on other questions he may, either on his own initiative or at the request of the tribunal, appear in person, or by a representative, and call such evidence as he may think desirable. Decisions on questions referred by the Minister to the National Board or to the National Tribunal are to be binding only with the consent of the Negotiating Committee.

District Conciliation Machinery

District autonomy is regarded as "a fundamental element in the structure of the industry", and the scheme leaves purely district questions to be established by district conciliation machinery. Such machinery where not already in existence is to be established by agreement of employers and workers in the district, or failing such agreement by the National Board. Every district agreement must comprise certain minimum requirements which the Board of Investigation considers to be necessary for its efficient working, including: (a) a District Conciliation Board consisting of representatives of the District Associations who are parties to the agreement, (b) the appointment of a District Referee and reference to such Referee of questions which the District Conciliation Board has been unable to settle, (c) making the settlements reached by the District Conciliation Boards and the awards and decisions of the District Referee binding on the District Associations and their members, and (d) the transfer of district questions to the National Board in accordance with the Scheme.

District questions of special importance may be transferred from the district machinery and dealt with by the National Board in the same manner as national questions. Such transfers are to take place in the following cases:—(a) if the representatives of employers and workmen on the District Conciliation Board both resolve that the question be so transferred; (b) if the Negotiating Committee either on its own initiative or at the request of one or both of the district associations concerned resolves that it be so transferred; (c) if the National Tribunal upon a reference to it by either side of the Negotiating Committee decides that the question is likely to affect or extend to any one or more other districts or otherwise to assume an importance which will not be confined to the district concerned or seriously to affect the national interest; (d) in the case of a question which has been referred to the District Referee, if the District Referee upon the application of either the representative of employers or the representative of workmen on the District Conciliation Board in his discretion decides as in (c); and (e) if the question is one which arises from a failure to agree as to the making of a new agreement or the modification of a then existing agreement in relation to wages or conditions of labour or employment in the district, and either or both of the National Associations at the request of either or both of the District Associations concerned requires the question to be referred to the National Board.

Pit Disputes

The scheme does not provide procedure for the settlement of questions arising at indi-

vidual pits except when they reach the stage of discussion under District Conciliation Agreements. It does, however, place the national and district organizations on both sides of the industry under an obligation to introduce as soon as possible improved methods to deal with pit disputes. In order to assist the industry in the establishment of suitable conciliation machinery in the districts and at the pits the Board append to their Report a model form of District Conciliation Agreement, which may be modified to suit the requirements of particular districts.

Other Provisions

The scheme also includes provisions relating to the method of revision and rescission of settlements made by the Negotiating Committee and of awards and decisions of the National Tribunal owing to changed circumstances, the incorporation of settlements, awards and decisions in the contracts of employment between employers and workmen, arrangements for the adoption of the scheme by non-federated employers, and the obligations of the parties to prevent stoppages of work while a question is being dealt with under the scheme.

The Board of Investigation points out that the scheme is in no sense an emergency provision arising from war-time conditions. It is designed to be a permanent institution and they hope that it will provide an effective method of dealing with questions arising in the industry for the settlement of which no satisfactory machinery has previously existed.

Statutory Holidays to be Observed in Wartime

AN Order in Council of June 7 (P.C. 4671) revokes previous Orders in respect of the observance of statutory holidays in wartime, and makes the following declaration:

A. Apart from Sundays or such weekly days of rest provided in lieu thereof,

(i) the following statutory holidays and these holidays only should be observed by employers and employees during the present war:

- a. New Year's Day,
- b. Good Friday,
- c. Dominion Day,
- d. Labour Day,
- e. Thanksgiving Day,
- f. Christmas Day.

(ii) reasonable opportunity should continue to be allowed to employees for the performance of their religious duties.

B. The provisions of any collective labour agreement that are inconsistent with subsection A. (i) of this declaration of policy should be suspended for the duration of the present war by mutual consent of the parties thereto but, pending such suspension, shall remain in force and continue to be observed.

Although previous Orders had set apart the first Monday in July for observance as a holiday under the name of Dominion Day, it is now stipulated that Dominion Day should be observed on the first day of July.

In regard to the Public Service of Canada it is stated that apart from Sundays or such weekly days of rest provided in lieu thereof the days listed above and none other shall be the holidays to be observed.

In all matters relating to bills of exchange the same days are to be observed as legal holidays or non-judicial days, with the addition of "any day appointed by proclamation for a holiday or a general fast or a general thanksgiving throughout Canada", and "the day next following New Year's Day, Dominion Day and Christmas Day when such days respectively fall on Sunday". In the Province of Quebec the Epiphany, the Ascension, All Saints' Day and Conception Day are also to be observed.

National War Labour Board

Inquiry into Labour Relations and Wage Conditions

THE inquiry into labour relations and wage conditions in Canada undertaken by the National War Labour Board continued into the month of June. Hearings were open to the general public.

The inquiry began with a preliminary session held on April 15 and 16, during which a general canvass took place as to the methods and program to be adopted in the further conduct of the investigation; and the regular hearings opened on May 4. (L.G. May, 1943, p. 577.)

Submissions were made to the Board by the principal employer and employee organizations in the country, including the Trades

and Labour Congress, the Canadian Congress of Labour, the Canadian and Catholic Confederation of Labour, the Railway Brotherhoods, the Canadian Manufacturers' Association, and the Chamber of Commerce, and by various other interested parties. The briefs presented dealt with a wide range of topics relating to labour matters generally.

The complete text of the proceedings is being published by the King's Printer, Ottawa. These reports are available to the public as they appear at a price of 20 cents each, or \$2.00 for a subscription to the entire proceedings.

Western Labour Board Established

PROVISION has been made by a recent Order in Council (P.C. 3870, May 17) for the establishment of a Western Labour Board. The Board will have charge of the administration of the Wartime Wages Control Order, including cost-of-living bonus, and the Fair Wages and Hours of Labour Act, in reference to employment on defence projects in Alberta, British Columbia, the Yukon and the Northwest Territories, in so far as residents of Canada are concerned. The National and Regional War Labour Boards will not continue to deal with the cases in the field assigned to the new Board. Nevertheless, the Western Labour Board is to be guided by general principles and directions given by the National War Labour Board, and may submit any question to the latter for an advisory opinion.

While the jurisdiction of the Western Labour Board will extend only to residents of Canada, it will deal with cases where Canadians are engaged on defence projects being carried out in Canada by the Government of the United States. Provision is made in the Order in Council that, subject to agreements between the Governments of the two countries, and subject to instructions from the

Director of National Selective Service, the Board may pass upon applications put forward asking authorization for the employment of Canadians on American Government projects. The Government of the United States will be invited to name a representative to act as a special consultant to the Board, when United States Government projects in Canada are under consideration.

The Order gives the Board exclusive jurisdiction in respect of hours of work, wage rates and cost-of-living bonuses payable for persons employed in western defence projects and ordinarily resident in Canada. The Order states that notwithstanding any provisions of the Fair Wages and Hours of Labour Act or of the Wartime Wages Control Order the Board may authorize the payment of such wage rates and cost-of-living bonuses as it finds fair and reasonable, "having regard to the necessity of recruiting and maintaining an adequate supply of labour for employment on western defence projects with the minimum dislocation of wage rates in and the supply of labour for other employments and having regard for all other circumstances deemed by it in its discretion to be material."

Members of the Board were appointed by a separate Order in Council on June 10, as follows:

Chairman, Mr. Justice George B. O'Connor, Supreme Court of Alberta; Representative of the Government of the Province of British Columbia, Colonel John F. Keen, Vancouver; Representative of the Government of the Province of Alberta, Mr. George B. Henwood, K.C., Edmonton; Representative of employed

persons, Mr. M. Ainslie, Vice President of the Trades and Labour Council, Edmonton, and Vice President of the Alberta Federation of Labour; Representative of employers, Mr. H. G. MacDonald, President of H. G. MacDonald & Company, Limited, Edmonton; National Selective Service Officer, Mr. William Carnill, Manager of the Edmonton Employment and Claims Office.

Decisions of National War Labour Board

THE National War Labour Board has recently issued decisions in the following cases:

In re Montreal Tramways Company—appeal from decision of Regional War Labour Board for the Province of Quebec;

In the matter of application by Division No. 4 Railway Employees Department (A.F. of L.);

In re H.M.C. Dockyard, Halifax—application of Affiliated Trades Union Council;

In re Port Arthur Shipbuilding Company Limited—application by various unions (A.F. of L.).

In regard to the Montreal Tramways case the Labour Gazette publishes herewith the following documents:

- (a) Reasons on Preliminary Objection as to Status of Applicants (issued by the National War Labour Board);
- (b) Letter of Minister of Labour to Mr. Justice C. P. McTague;

(c) Reasons for Judgment (issued by the National War Labour Board).

In the matter of the shipyard cases, the National War Labour Board ruled (see below) that it did not have authority to consider authorizing any wage adjustment in these cases, as the matter had already been dealt with directly by Order in Council. Subsequent to this ruling an Order in Council (P.C. 4566, June 4) was passed on the recommendation of the Minister of Labour, authorizing the National War Labour Board to authorize or direct wage rate adjustment in shipyards, and specifically stating that "nothing contained in Orders in Council P.C. 629 dated January 26, 1942, or P.C. 3471 dated April 28, 1942, shall be deemed in any way to limit or restrict, with respect to any employer subject to the provisions of the said Orders in Council or otherwise, any of the powers conferred by the Wartime Wages Control Order on the National War Labour Board."

Re: Montreal Tramways Company—application for leave to appeal from decision of the Regional War Labour Board for Province of Quebec. Preliminary objection as to status of applicants.

Reasons on Preliminary Objection

This is an application by the Canadian Brotherhood of Railway Employees and Other Transport Workers for leave to appeal from a decision of the Regional War Labour Board for the Province of Quebec. The applicants purport to act on behalf of the Negotiating Committee provided for in an agreement of the 24th July, 1940, which agreement is recited to be one between the Montreal Tramways Company, on the one part, and the Association of the Employees of the Montreal Tramways Company on the other part.

When the application for leave to appeal came up for hearing, other parties appeared contending that the Canadian Brotherhood of

Railway Employees was without any status either to prosecute an application for leave to appeal or any appeal and raising as a preliminary objection to the proceedings that the Canadian Brotherhood of Railway Employees did not represent the Negotiating Committee functioning under the agreement of the 24th July, 1940. In particular The Amalgamated Association of Street and Electrical Railway Employees of America and Local 790 of that Union appeared asserting that the Negotiating Committee named and provided for in the collective labour agreement of 24th July, 1940, was in fact a Negotiating Committee acting on behalf of Local 790, that in any event the agreement of the 24th July, 1940, vested the right to negotiate for and to represent the employees in respect to any of

the matters arising out of the agreement in the Negotiating Committee specified and provided for in the agreement and that no other Negotiating Committee had status to conduct the proceedings for which leave was now being sought.

There appeared before us also Mr. Gerard Picard of the Syndicat des Employés de Tramways de Montréal, Inc., who stated that he attended on the ground that the agreement of the 24th July was an agreement, not between the Company and any Union, but between the Company and all its employees as represented by the Negotiating Committee of three members provided in the agreement and that, some of these employees being members of the Union represented by him, he was entitled to appear in these proceedings to support the application for leave to appeal and, if leave were granted, to support the appeal.

Mr. A. R. Mosher, appearing on behalf of the Canadian Brotherhood of Railway Employees and other Transport Workers, contended that a completely new situation had developed since the agreement of the 24th July, 1940, as a result of which the Negotiating Committee provided for in that agreement was replaced by a new Negotiating Committee composed of J. E. Corbeil, Paul Valiquette, Aimé Cardinal; that this Negotiating Committee, instead of that specified in the agreement of the 24th July, was the Negotiating Committee now entitled to exercise any rights, or to represent the employees, under the said agreement and that he and his organization appeared in the matter on the authority of that Negotiating Committee.

In support of his contention Mr. Mosher produced a document, signed by one H. Carl Goldenberg over the title of Industrial Disputes Inquiry Commissioner, that document being as follows:—

DEPARTMENT OF LABOUR

Industrial Disputes Inquiry Commission
OTTAWA

Montreal, 31st March, 1943.

D. E. BLAIR, Esq.,
Vice-president and General Manager,
Montreal Tramways Company,
Montreal

A. R. MOSHER, Esq.,
President, Canadian Brotherhood of Railway
Employees and Other Transport Workers,
Ottawa

J. E. BEAUDOIN, Esq.,
President, Local 790,
Montreal Tramways Union,
Montreal

J. A. CHAGNON, Esq.,
Catholic Syndicates Tramways Union,
Montreal

Sirs: *Re: Strike of Montreal Tramways
Company Employees*

After investigation the Commissioner finds that the existing strike is the result of a dispute between certain Unions.

On the basis of further and renewed discussions which I have had with all parties concerned and on the basis of the evidence thereby submitted to me, I recommend as follows:—

1. That in view of present war conditions and of the responsibilities of the parties concerned to provide public transportation in Montreal and vicinity, there be an immediate resumption of all services.

2. That the men now in strike agree to return to work immediately and that they be allowed to return to work without discrimination.

3. That the above mentioned conditions having been first complied with, it is to be agreed between the Company and the Canadian Brotherhood of Railway Employees and Other Transport Workers that the latter shall have the right to appoint forthwith three (3) persons who are employees of the Company to act as a Negotiating Committee and in that event the Company agrees to recognize such Committee as the sole bargaining agency for its employees. The Committee first so named shall remain in office until July 1, 1944, and such Committee shall thereafter be elected annually by secret ballot. Should the Company at any time after July 1, 1944, have reason to believe that the Negotiating Committee does not represent a majority of its employees the Brotherhood agrees that a secret ballot shall be taken under the direction of the Federal Department of Labour to determine the Negotiating Committee for the Employees.

4. It is to be agreed between the Company and the Negotiating Committee that they will discuss any changes in the existing contract between the Company and its employees as may be suggested by the Negotiating Committee or the Company, and if an agreement cannot be reached satisfactory to the majority of the Committee and to the Company it is agreed

that all matters not so settled and determined shall be submitted for decision to the National War Labour Board or such other agency as may be set up by the Federal Government for that purpose. It is agreed by the Brotherhood that there shall be no strikes until recourse has been had to all Federal Government agencies provided for the settlement of industrial disputes.

Yours truly,

(Signed) H. CARL GOLDENBERG,
Industrial Disputes Inquiry
Commissioner."

As is disclosed on the face of the document just quoted the situation purported to be dealt with was that of a strike of some, or all, as the case may be, of the Montreal Tramways employees, and it appears from the representations made before us that during the course of the strike Mr. Goldenberg had been appointed an Industrial Disputes Inquiry Commissioner by the Minister of Labour, under the authority of P.C. 4020, "to investigate the dispute".

The above document appears to be the result of the Commissioner's investigation. On its face it goes beyond the authority conferred upon him by the instrument which appointed him, and which has been produced before us, that instrument only authorizing the Commissioner "to investigate the dispute".

Insofar as P.C. 4020 is concerned the only authority conferred on an Industrial Disputes Inquiry Commissioner is to report on the dispute to the Minister of Labour unless "a mutually satisfactory adjustment" has been reached.

The acceptance of the document of the 31st of March, 1943, by the applicant Union and by the Employing Company was evidently treated by the Industrial Disputes Inquiry Commissioner as demonstrating that such a "mutually satisfactory adjustment" had in fact been reached but there is nothing before us to indicate upon what basis any such conclusion was arrived at by the Commissioner, nor were we informed of anything upon which that conclusion was based other than the acceptances above referred to and the fact that a strike had occurred. The acceptances by only two parties is by no means conclusive because that ignores the rights of other parties who now appear before us claiming the status conferred upon them by the original agreement of the 24th July, 1940, and we decline to accept a strike as evidence of the right of the applicants to appear in these proceedings in place and substitution of the Negotiating Committee provided for in the agreement.

The document of the 31st March, 1943, on its face indicates that in addition to the applicant union and the Company at least two other interests are involved, namely Mr. J. E. Beaudoin, President of Local 790, Montreal Tramways Union, and Mr. J. A. Chagnon, Catholic Syndicate Tramways Union, who admittedly neither accepted nor agreed to the instrument. Mr. Beaudoin and his Union, and the Negotiating Committee set up under the agreement of the 24th July, 1940, of which Mr. Beaudoin was a member, appeared before us vigorously contradicting any suggestion that the instrument of the 31st March, 1943, constituted an adjustment "mutually satisfactory". In view of these facts we feel ourselves obliged to take cognizance of the situation on the general principle that any tribunal is entitled to scrutinize the use of its machinery by parties appearing before it and to guard against the abuse of its proceedings.

The question resolves itself down to the practical one of determining, in the first instance, who are the parties involved and, in the second instance, having regard to these parties, whether the instrument of the 31st of March, 1943, constituted a "mutually satisfactory adjustment".

Some of the arguments before us suggested that the rights to be determined were those of trade unions or other organizations of employees. Having regard to the agreement here, we are unable to view the matter in that light. Whatever the connection or association between Lodge 790 and the Negotiating Committee specified and named in the agreement of the 24th July, 1940, it is clear that as far as the collective agreement itself is concerned the employees were acting through the agency of the Negotiating Committee therein provided for.

Mr. Mosher contends that the employees have since replaced that agency by the Negotiating Committee on whose behalf he appears. That, in our opinion, is a question of fact which, in view of the preliminary objection and the argument before us, is one which has not yet been determined in any orderly or official manner.

If the instrument of the 31st of March, 1943, carried with it any clear indication of how the substitution of agency on behalf of the employees had been achieved and if it indicated that such substitution had in fact been made in a manner free of any element of error, fraud or coercion, it might then have been accepted. But nothing so appearing or having been presented to us we feel that the preliminary objection should be given effect to until by some means, of which this Board

can fittingly take notice, the question of status or representation has been established in fact.

The parties who are in fact entitled to prosecute these proceedings, whether the applicant union or Lodge 790 or either of the Negotiating Committees, can regularize or establish their status by availing themselves of the administrative machinery of the Minister of Labour. We do not regard it appropriate to suggest to the Minister of Labour the method or manner by which the fact of status or representation may be established or ascertained. A vote was suggested during the argument but whether

this or any other method should be adopted is a matter best left to the judgment of the Minister.

We have already stated that "when the matter comes up again in a manner that we can say will be orderly and proper, we will grant the leave to appeal at that time". Upon receiving the certification of the Minister of Labour as to the status or rights of the contending parties, the entity or persons certified to be entitled to represent the employees will be promptly granted leave to appeal and a hearing of the appeal arranged for.
May 19, 1943.

Letter of Minister of Labour

Following the statement of the Board on the status of the applicants and the suggestion contained in the last paragraph of the foregoing that—"Upon receiving the certification of the Minister of Labour as to the status or rights of the contending parties, the entity or persons certified to be entitled to represent the employees will be promptly granted leave to appeal and a hearing of the appeal arranged for"—the Minister of Labour sent the following letter to the Honourable Mr. Justice McTague, Chairman of the National War Labour Board:

Ottawa, May 24, 1943.

Dear Mr. Justice McTague:

With reference to Directions and Findings respecting an appeal registered with the National War Labour Board regarding the Montreal Tramways Employees by the Canadian Brotherhood of Railway Employees and Other Transport Workers, which appeal the Board has decided to not hear until certain information has been obtained from the Labour Department; the Board's report in this connection being issued May 19, 1943.

The Department has made inquiries and finds that there are three unions that are interested in the matter, namely, the Canadian Brotherhood of Railway Employees and Other Transport Workers, the Amalgamated Association of Street and Electrical Employees of America, and the National Catholic Syndicate of Transport Workers, and in the opinion of the Department, the Canadian Brotherhood of Railway Employees and Other

Transport Workers has enrolled as its members the majority of the Montreal Tramways Company employees.

With specific reference to the point at issue we understand the problem arises through an objection registered by the Amalgamated Association of Street and Electrical Railway Employees of America to the appeal being heard by the National War Labour Board on the ground that the Canadian Brotherhood of Railway Employees and Other Transport Workers did not have proper status in the matter.

The Amalgamated Association of Street and Electrical Employees of America, by a statement to the Minister of Labour, have withdrawn this objection.

The Catholic Syndicate, by wire to the Minister of Labour, have stated that they wish to endorse the appeal.

It is, therefore, the opinion of the Minister of Labour that the National War Labour Board is in a position to proceed with the hearing of the appeal and reach a decision and it is recommended that prompt action to this end be taken.

Very truly yours,

HUMPHREY MITCHELL,
Minister of Labour.

Honourable Mr. Justice C. P. McTAGUE,
Chairman,
National War Labour Board,
Ottawa.

Mr. Justice C. P. McTague did not reply to this letter.

In re Montreal Tramways Company—Appeal from decision of Regional War Labour Board for the Province of Quebec

Reasons for judgment

This is an appeal by the Canadian Brotherhood of Railway Employees on behalf of employees of the Montreal Tramways Company, supported by Local 790 of the

Amalgamated Association of Street and Electric Railway Employees and the Montreal Tramways Employees' Syndicate, from a decision of the Regional War Labour Board for the Province of Quebec.

The matter in issue before us resolves itself to ascertaining whether the benefits of Section 110 of a collective labour agreement dated July 24, 1940, are inconsistent with the Federal Government's wartime wages control legislation. The section reads as follows:

"The total gross receipts of the Company from passenger bus and tramways fares (excluding receipts from specially chartered buses and trams) for the period of twelve consecutive calendar months ending on June 30th of each year during the life of this Agreement, will be computed by the Company within ten days after the end of such period.

If such total gross receipts for any such period shall exceed the sum of \$15,000,000 the Company will set aside 25 per cent of such excess as a fund to be paid as additional remuneration to such of its employees who are not officers of the Company and who:

- (a) have earned \$2,500 or less during the said period.
- (b) have been continuously on the Company's payroll during the period in question.

Each such employee will be entitled to receive his share of this fund, which will be the same proportion of the total fund as his earnings for such period bear to the total earnings for such period of all the employees who are entitled to participate in the fund. The Company will pay each employee his share of the fund not later than the 31st of July following the end of such period.

If any employee or employees wish to verify the above-mentioned total gross receipts for any period, such employee or employees shall have the right, at his or their own expense, to appoint an independent chartered accountant practising in the Province of Quebec to examine the books of the Company for the purpose of determining the amount of such gross receipts".

On the 25th of November 1941, shortly after the enactment of the Wartime Wages and Cost of Living Bonus Order (P.C. 8253), the predecessor of the present Wartime Wages Control Order (P.C. 5963), the Company, taking the view that the above quoted section was inconsistent with the provisions of P.C. 8253, wrote to the negotiating committee representing the employees declaring in effect that Section 110 was no longer operative because of section 16 of the Order and that, instead, a cost of living bonus would be paid at the rate of \$1.15 per week.

The relevant part of section 16 read as follows:

"Any provision of any collective labour agreement which is inconsistent with the provisions of this Order shall be brought into conformity with this Order not later than January 1, 1942."

Subsequently an application was made to the Regional Board in respect to the cost of living bonus and in that proceeding the employees raised the question of the status of Section 110. The Regional Board, acting, as is disclosed in the records, upon the recommendation and advice of the National War Labour Board as it was then constituted, issued a Finding and Direction on June 2, 1942, fixing the cost of living bonus at \$1.80 per week and recommending payment of the benefit accruing under Section 110 as of December 31, 1941. The Board proceeded upon the assumption that the Company had properly interpreted the effect of P.C. 8253 upon Section 110 of the agreement. Later in December of 1942 the Regional Board, upon an application for a direction as to the continued operation of Section 110, declined to reconsider its Finding and Direction of June 2, 1942.

In our view, the contention of the Company that P.C. 8253 voided Section 110 or that the provisions of that section were inconsistent with P.C. 8253 is unfounded. The payment contemplated by Section 110, subject to the conditions and contingencies set out in the section as above quoted, is in no way inconsistent with any of the provisions of P.C. 8253 or of the succeeding Order, nor, having regard to Section 11 (1) of P.C. 8253, was the Company justified in discontinuing payment to which the employees were entitled by reason of Section 110.

Having expressed our opinion with respect to this central issue, we feel that the whole matter of the cost of living bonus should be remitted to the Regional Board for action by it. There is nothing before us to indicate the extent to which, if at all, the Regional Board when it rendered its decision in June 1942 assessing the amount of cost of living bonus, was actuated by the view which had been taken with respect to the discontinuance of Section 110. The status of that Section having now been decided by us we feel that the parties should be free to present to the Quebec Regional Board the whole question of cost of living bonus, as they may be advised, subject to any rights of appeal from any decision which that Board may then render.

A Finding and Direction will therefore issue declaring that Section 110 of the agreement of July 24, 1940 is, and has always been operative and, as to the cost of living bonus, as above indicated.

OTTAWA, June 17th, 1943.

In the Matter of Division No. 4 Railway Employees Department (A.F. of L.) and the Railway Association of Canada, and in the Matter of applications by the above-mentioned employees as hereunder set out

Reasons for Judgment

This is an application by Division No. 4 Railway Employees Department (A.F. of L.) for direction:

1. That the railways comprised in the Railway Association of Canada should adopt, and introduce as a provision of the existing agreement, as to the employees represented by Division No. 4, the "holiday with pay plan" now in operation on the Canadian National Railway and the T. & N.O.

2. That such employees be paid for time lost through illness brought about by conditions under which employees work.

3. That time and one half should be paid for all work performed on Sunday to those employees who, while working on Sunday, have an "assigned day off" later in the week.

The application is made, presumably, under Section 29 of Order in Council P.C. 5963, reading as follows:

"The National Board may authorize or direct an employer to alter any term of employment including any rule, regulation or practice governing the working conditions of his employees having the effect of increasing, directly or indirectly, any range of wage rates or single wage rate forming part of the basic scale of wage rates paid by such employer on November 15, 1941, if, in the opinion of the Board, such change is fair and reasonable and is consistent with the principles of this Order, having regard to all the circumstances deemed by it, in its discretion, to be material."

The last revision of the collective agreement between the applicants and the railways affected is known as Revision of Wage Agreement No. 6 and was negotiated in 1929. It has remained in effect since that time without change.

Shortly before the conclusion of that agreement one of the railways, namely the Canadian National Railways, instituted a plan of holidays with pay for its employees represented by Division No. 4 and the T. & N. O. Railway followed suit. No such holidays with pay plan covering such employees has ever been introduced by the Canadian Pacific Railway nor has it been formally incorporated in the agreement with the Railway Association of Canada although Canadian National Railways is a member of

that Association. The net result is that some 60 per cent of the employee group represented by Division No. 4 enjoy holidays with pay although the remainder, in the main employees of the Canadian Pacific Railway Company, do not.

The applicants base their contention as to holidays with pay firstly on the facts above mentioned, namely that 60 per cent of this particular group of employees now enjoy that condition of work and that it should in fairness be extended to the remainder of the group, and further that the institution of holidays with pay has now come to be so generally recognized as appropriate that the existing condition on the Canadian National Railway and the T. & N. O. should be formally recognized as one of the conditions of employment and should be extended to the other employees within this group.

While the Railway Association did not make emphatic reference to the matter in its briefs or argument nevertheless the question as to what bearing an agreement dated July 29, 1941, had on the issue was raised quite strongly by the members of the Board. That agreement dealt in the main with cost of living bonus payments under P.C. 7440 and amending Order P.C. 4643. However, it did contain these two significant clauses:

1. The basic rates of pay and agreements covering working conditions now in effect will continue during the life of this agreement, with the understanding that re-classifications of positions or rates in special circumstances are not prohibited where mutual agreement between representatives of the Railways and of the employees can be reached.

3. This agreement is entered into between the respective railways and the individual organizations representing their respective classes and it is intended between the parties hereto that, subject to any legislation or other governmental action which may alter the bases upon which this agreement has been reached, and subject to mutual agreement in the application of the third and succeeding adjustments in bonus payments, it will remain in effect for one year from the date of proclamation of peace and thereafter subject to termination by thirty days notice by either party.

During the argument the Board rather inclined to the view that the agreement

perhaps had the effect of creating a bar against the relief sought by the applicants. An examination of Section 29, quoted above, and sub-sections (1) and (2) of Section 63 reading as follows:

- (1) Any provision of any collective labour agreement which is inconsistent with the provisions of this Order shall be forthwith brought into conformity with this Order.
- (2) Notwithstanding any provision of any collective agreement with respect to working conditions, directly or indirectly affecting wages, either party to any such agreement may apply to the National Board for the revision or suspension of any such conditions and the Board may direct a revision or suspension thereof not inconsistent with the provisions of this Order as it may deem advisable.

leads to the conclusion that it is quite within the Board's power to deal with questions within its jurisdiction under P.C. 5963 in spite of any term provided for in such an agreement and also regardless of any other special covenants as to wages and working conditions. There can be no doubt that a covenant to accept wage rates and working conditions without change for the period of a collective agreement is a very important factor to be taken into consideration but does not create an absolute bar to any relief authorized by the general Order in Council.

The Railway Association also point to the fact that when the Canadian National Railway shortly prior to the agreement of 1929, introduced the holiday with pay plan, this was instituted as a consideration for the abolishing of an existing system of bonus pay and that that situation does not apply as to the Canadian Pacific Railway. They further contend that conditions have not changed, or have not changed sufficiently, since the agreement was negotiated in 1929, to warrant introduction of a vacation with pay plan, and that the introduction of such a plan at this time would not be consistent with the provisions or basic principles of P.C. 5963.

The question of "Vacations with Pay" is one that has already been dealt with by the National War Labour Board differently constituted by way of directive Bulletin D.B. 17 which would seem to constitute a bar to the granting of this particular application if strictly and literally followed. It is our view, however, that D.B. 17 constitutes a formula that is too rigid to meet the problem in a realistic way.

The general desirability of vacations with pay can hardly be questioned in peace time. In war time as well it may be particularly desirable in conditions where the element of industrial fatigue becomes an important factor in the field of industrial production. It has been accepted practically universally in Sweden for some twenty years. In England and the United States it has and is becoming recognized more and more as a desirable condition of work. In England in 1937 a Parliamentary Committee considered the advisability of legislation to make it compulsory although at the 1940-41 Session of Parliament it was considered advisable to defer any such legislation till after the war. The tendency has been to leave it to the process of collective bargaining. In England and the United States such a principle does not react as unfavourably to the worker as it does here in Canada because there is no such legislative restriction on wages and working conditions in those countries as there is here under P.C. 5963. To make it impossible for the worker to obtain the benefit of the working condition unless his employer is in agreement hardly seems a fair approach. Neither does it seem consistent with Section 29 of P.C. 5963 which gives the Board in plain words the power to *direct* as well as to *authorize*.

In other words the granting or withholding of vacations with pay is a matter of consideration on the evidence of each case. Obviously there are a number of fundamental considerations. First of all a Board must keep in mind that it is exercising a judicial discretion and is not to deal with the matter as if it had the right to legislate arbitrarily an employer into granting vacations with pay. Secondly, a most important consideration is that there is a war on and uninterrupted production and services is the prime need in such a time. Consideration should also be given to the problem of manpower. Vacations with pay should not be granted where conditions are such that an industry will as a result lose too much important production or where to keep it up will make the cost unduly high. Another factor is of course the importance of the product in the war effort or the national interest. Then again there may be the question of ability to pay.

After consideration of such fundamentals, perhaps the most practical criterion is a comparison of the class of employees concerned with the same class in similar industry. If after such tests and any others that may seem important to the Board

concerned, it is determined to impose vacations with pay, there should be further consideration given to the conditions which should accompany such an imposition—namely as to the period of such vacation, as to the length of employment before a person becomes eligible for the privilege and as to what conditions should prevail before such a right should be forfeited in whole or in part.

In applying these principles to the case in hand we have come to the conclusion that the application should be granted and vacations with pay made a term of the collective agreement in question under the same conditions presently enjoyed by the same class on the Canadian National Railways. We think such a ruling in the circumstances where 60 per cent of the workers concerned already enjoy the privilege is generally equitable. As to its being consistent with the principles of P.C. 5963, it may be that it represents to the Railways affected some additional cost but that such an event is contemplated by P.C. 5963 seems amply established by Section 25 as well as Section 29. While Section 25 primarily deals with wages nevertheless the class of employees concerned on C.N.R. and T. & N. O. enjoy a certain wage scale with a vacation with pay privilege while those on the other railways have the same scale without the privilege. It would seem reasonable and logical that the Board should follow the same principle established by Section 25 and thus act consistently within the general principle established by P.C. 5963 as to wage adjustments.

We have already dealt with the agreement dated July 29, 1941, from the point of view as to whether it constitutes an absolute bar to any relief provided in P.C. 5963. There is another phase of the matter, namely, as to whether since that agreement purports to confirm the then existing working conditions as being acceptable to the workers, any new general conditions have intervened between July 29, 1941, and the present date to justify the initiation of vacations with pay by

direction of the Board rather than by agreement between the parties. We are probably justified in taking judicial notice of the fact that in the meantime the manpower situation has deteriorated. Nevertheless P.C. 5963 has come into force since the agreement of July 29, 1941, and has created new rights. In other words there has intervened governmental action which the agreement was made subject to. The matter has been a difficult one to determine but we feel in this particular case that on a strictly comparative basis—the principle governing the relief provided for in P.C. 5963—the overriding equitable solution is to direct the condition applied for.

It is to be noted that the disposition of this particular application is dealt with on its own particular merits. Perhaps the most important consideration is that 60 per cent of the workers involved already enjoy the privilege. The decision is not to be construed in any general way as a precedent for the Board establishing any general vacation with pay plan throughout industry or for that matter on the railways in time of war.

There will be finding and direction establishing vacations with pay on the same terms and conditions as those presently enjoyed by Division No. 4 on the Canadian National Railway.

We do not deem it necessary to enter into any extended discussion of the two remaining claims of the applicants, namely, that the employees be paid for time lost through illness and that employees who work on Sunday in lieu of an assigned day off later in the week should be paid time and a half for Sundays. The applicants have failed to offer any satisfactory evidence of reasonably comparable conditions. It is our view that no case has been made out which would justify us in establishing completely new conditions of work without a solid foundation in evidence. Accordingly the application in respect of these matters is disallowed.

There should be findings and direction accordingly. June 4, 1943.

In re H.M.C. Dockyard, Halifax: Application of Affiliated Trades Union Council

Reasons for Judgment

This is an application of the Council of various trade unions (A.F. of L.) for minimum rates for tradesmen at 85 cents per hour, an increase in the basic wage of helpers from 53 cents per hour to 60 cents per hour and an upward revision of cost of living bonus from \$1.85 per week presently paid to \$4.25 per week.

The application is at this stage of the proceedings chiefly important for the question of jurisdiction which is raised.

In this case we are confronted with a special Order in Council P.C. 3471 dated the 28th of April, 1942, which specifically sets the rates and cost of living bonus for employees of two specific shipyards, namely H.M.C. Dockyard Halifax and Halifax Shipyards Limited.

Thus we have the government, through Order in Council P.C. 5963, establishing this Board to deal with questions of wage rates and cost of living bonus adjustments generally having by special Order in Council P.C. 3471 fixed the wage rates and cost of living bonus in the industry with which this application is concerned. It seems to us quite clear that we cannot assume authority to adjust wages and cost of living bonus set by the very governmental authority which confers on us the only authority we enjoy. In other words, where the general order and the special order conflict, it is our view that the special Order must prevail. It is to be noted that there is no power given to this Board in P.C. 3471.

We have reached this conclusion with reluctance because it does not seem altogether fair that workers should be deprived of an

opportunity to seek adjustments in the same way as the general body of their fellow workers throughout the industry generally. We think we are compelled to take the view we have in the interest of orderly procedure and consistent policy. It does not lie in our province to remedy the situation whatever our own views may be. Adjustments to be made, if any are merited, must be by the Governor in Council which set the rates and cost of living bonus or else we must be given jurisdiction to make such adjustments as we consider proper in the circumstances.

There will be finding and direction that there being no jurisdiction the claims are disallowed without prejudice to the applicants renewing the application if and when jurisdiction is granted us.

May 21, 1943.

In re Port Arthur Shipbuilding Company Limited. Application by Various Unions (A.F. of L.)

Reasons for Judgment

This is an application by The Metal Trades Council representing various Trade Unions (A.F. of L.) for certain increases in pay for tradesmen and labourers and in cost of living bonus.

As in the case of H.M.C. Dockyard, Halifax, we are confronted with a special Order in Council P.C. 629 dated January 26, 1942. In regard to Port Arthur Shipbuilding Company Limited, this special Order in Council provides that "present basic rates are to be *maintained* for all classifications of employees". Further-

more it specifically deals with future adjustments of cost of living bonus.

We are of the opinion that the existence of this special order with no provision to give us any jurisdiction effectively deprives us of jurisdiction to deal with the matters before us under P.C. 5963. It is unnecessary to go into detail. The same matter is dealt with in principle in the reasons In Re H.M.C. Dockyard, Halifax, copy of which is hereto attached.

There should be direction and finding in the same terms as in the H.M.C. Dockyard Halifax case.

May 21, 1943.

Industrial Welfare

Conditions of Work for Women in Britain's War Factories

British Government Establishes Industrial Health Advisory Committee

TWO publications* recently received from Britain, one official and the other issued by a private organization, deal with the health and welfare of industrial workers. In its third report during this Parliamentary Session, the Select Committee of the House of Commons on National Expenditure surveyed health and welfare arrangements for women in factories owned or assisted by the Government and recommended the appointment of industrial health advisory committees to co-ordinate the work of the various agencies in this field. A related study of the effect of hours of work on health and efficiency, made by Dr. H. M. Vernon, formerly of the Industrial Health

Research Board, was published by the British Association for Labour Legislation early in 1943.

Since the publication of the Select Committee's report in December, the Minister of Labour and National Service on March 11 announced the appointment of an Industrial Health Advisory Committee to conduct inquiries and advise the Ministers of Labour and of the Supply Departments on health and welfare matters. Its members include government officials concerned with such matters, prominent medical men, representatives of labour and management, and chemical and engineering experts.

Report of Select Committee on National Expenditure

The Select Committee studied arrangements for securing the health and welfare of workers both inside and outside the factory. It found the general level of physical amenities in factories satisfactory but considered that factory medical services were inadequate and that greater attention should be paid to welfare supervision. Much absenteeism and labour wastage could be avoided if the housing, shopping, and domestic problems of women workers were adequately dealt with.

To overcome the lack of a "central direction of policy", the Committee urged the appointment of both central and regional industrial health advisory committees and the establishment of a bureau to collect and disseminate information on questions relating to industrial medicine. It also recommended an expansion of the medical branch of the Factory Inspectorate, a more efficient utilization of the existing inspection staff and the appointment of women doctors as special advisers on women's problems to the Ministers of Labour and Supply. The Committee agreed with the Government that the primary responsibility

for welfare arrangements rested with the employer, and that the Ministry of Labour's function was to lay down minimum standards of welfare, exercise its statutory powers, discover deficiencies through inspection and advise and assist firms in overcoming them. Nevertheless the Committee considered that the Supply Departments should, in the interests of production, concern themselves more closely with welfare problems, and that the Royal Ordnance Factories could co-operate more fully with the factory inspectors who "have had difficulty in the past in securing improvements in Royal Ordnance Factory conditions which they would enforce upon the managements of private undertakings". The Committee recommended an extension of the work of the local welfare officers of the Ministry of Labour and suggested that older men and women with suitable education and experience should be recruited for these positions and for personnel work.

Working Conditions

While stressing the importance of factory cleanliness and the need for adequate and attractive rest-rooms, wash-rooms, cloak-rooms and canteens, the Committee pointed out that "good accommodation is, however, no substitute for adequate personal care for the workers' well-being and, in addition, responsibility must

* Third Report of the Select Committee on National Expenditure, House of Commons, session 1942-43, "Health and Welfare of Women in War Factories". December 17, 1942.

H. M. Vernon, M.D.—"Hours of Work and their Influence on Health and Efficiency". British Association for Labour Legislation, 1943.

rest upon the workers themselves to make proper use of the facilities provided." It recommended additional washing facilities if there was risk of dermatitis, suggested that, where there were canteens, hot drinks should be served to workers on arrival and criticized employers who curtailed meal-breaks and permitted workers to eat at the work-bench. The Committee believed that the supervision of inexperienced workers was inadequate and recommended the appointment of more safety committees. The rehabilitation of injured workers must also receive more attention if manpower resources were to be fully utilized.

Progress was noted in the reduction of hours to the maxima accepted by the Government, of 60 a week for men and 55 for women, but four of the 42 Royal Ordnance Factories had not achieved this objective with respect to men and three of them were still employing women for more than 55 hours. Absenteeism, the Committee believed could be cut appreciably if employers allowed time off for shopping and domestic duties in an orderly fashion so that production would not be interrupted by unpredictable absences. The addition of one part-time worker to each team of six full-time workers was suggested to allow each woman an additional free half-day a week. "The intelligent use of rest pauses can also do much to reduce industrial fatigue and increase output," the Committee declared, and suggested the publication of a leaflet showing the effect of rest pauses on production. The Committee urged further research and experiment to determine the method of arranging a rotation of shifts which causes least fatigue and inconvenience. A five-day week for women on the two-shift system was recommended.

Medical Services

Despite the increase in the number of part- and full-time factory physicians in the past two years, the Committee declared that "in view of the fundamental importance of health to production it can hardly be said that the present allocation of medical services has reached even the bare minimum necessary." It suggested greater use of women doctors and improving the status, remuneration and security of tenure of factory doctors. A centralized employment register for trained nurses was suggested to assist employers in securing industrial nurses.

Pre-employment medical examinations were considered advisable to weed out persons unsuited to factory work, but in present circumstances they were impracticable. The Committee stressed the importance of regular examinations of workers in filling factories who are in contact with T.N.T., lead and certain

other harmful substances. To reduce the period of contact with T.N.T., it was suggested that T.N.T. workers should be transferred to other work for a fortnight in every two or three months, and that consideration should be given to the possibility of employing women part-time on T.N.T. work. The increase in tuberculosis should be met by mass radiography to discover cases, the provision of additional accommodation in sanatoria, and adequate compensation and rehabilitation of those treated.

The establishment of visual standards for workers in various factory processes was suggested to avoid time-wasting faulty work by persons with inadequate eyesight. Continued efforts to improve factory lighting were urged. The Supply Departments should assist firms in altering black-out arrangements to permit the entrance of daylight and fresh air. Ventilation improvements in filling factories were also recommended.

Welfare Supervision

The importance of considering the human factor in industry to attain maximum efficiency was stressed. In earlier reports the Select Committee had recommended a central personnel department in all large firms and the appointment of trained welfare officers. To meet the special needs of the aircraft industry, it suggested in this report that the Ministry of Aircraft Production should organize training courses for welfare officers in aircraft factories. Where large numbers of women are employed, women officers should be appointed to look after their interests and assist in selecting and allocating labour.

Attention must also be paid to conditions outside the factory if health and efficiency are to be maintained. The committee considered that the shopping problems of women workers had not yet been adequately met, that the scheme of wartime nurseries should be reviewed and that a higher minimum standard for billets should be set by local authorities. It suggested that when workers are being transferred from one region to another, the region and factory to which they are going should be notified so that adequate reception arrangements could be made. It endorsed the Rest-Break Schemes for fatigued workers and suggested better arrangements for caring for workers while sick. Immediate attention should be given to the question of providing maternity benefits to enable working mothers to stay away from work more than the statutory one-month period after childbirth. The amount and nature of the work done by pregnant women should be carefully supervised.

Study on Hours of Work in Relation to Health and Efficiency

In his pamphlet on the effect of hours of work on health and efficiency, Dr. H. M. Vernon gives data obtained during this war which show that long hours not only do not increase production but also have a definitely detrimental effect on health and increase accident rates, labour turnover and absenteeism, particularly of women and young persons. Dr. Vernon was an investigator on the staff of the Industrial Health Research Board for many years and has carried out numerous studies into various aspects of this subject. He concludes that weekly hours should never exceed 60 and should be considerably shorter for men on heavy work and for women and young persons. The hours stipulated by the Factories Act are still, in his opinion, the optimum hours for women and young persons. The Act limits women's hours to 48 a week and those of young persons under 16 to 44 but allows a restricted amount of overtime in times of special need. He concedes, however, that boys aged 16 and 17 seem able to work a 54-hour week without harm. In his opinion, the evidence shows that women are more easily fatigued than men, partly due to their heavier duties outside the factory and partly to the weaker physique and staying power of the average woman.

Investigation showed that actual hours worked by women and young persons in the present war under authority of the emergency orders made under the Factories Act and the Defence Regulations were far in excess of the limits set by the Act. This was particularly true in the period immediately after Dunkirk when hours rose to over 70 a week in many Royal Ordnance Factories which employed large numbers of women. Other plants also had greatly extended hours. The registration and interviewing of boys and girls of 16 and 17 revealed in June, 1942, that a considerable number of young persons were working 60 and even 70 hours a week, sometimes illegally, and many admitted to "a permanent feeling of fatigue". Dr. Vernon warns that "the fatigue incident to such hours, if long continued, is likely to cause a reduction of efficiency, increased liability to accidents, and a considerable rise of sickness absenteeism and casual absenteeism."

Effect on Health

While the long wartime hours of work did not appear to have affected the general mortality rate, there had been an increase of 2,000 in the deaths attributed to tuberculosis

in 1940-41 over the average for the 1937-39 period. Dr. Vernon points out that "recent information strongly suggests that hours of work play a very important part in the causation of pulmonary tuberculosis". For instance, in Glasgow tuberculosis among clerical and shop workers declined in 1940-41 as compared to 1938-39, but it increased 31 per cent among skilled manual workers and 20 per cent among unskilled. Out of 1,600 working women who contracted the disease in 1941 in Glasgow, 86 per cent in medium-heavy industries and 65 per cent in lighter industries worked more than 48 hours a week.

Studies made during the last war showed that "the percentage of time lost by sickness varied regularly with the hours of work". This was again demonstrated in the period after Dunkirk. In one factory the sickness rate for women rose from 21 per 1,000 in June, 1940, when the work-week was increased to 67½ hours, to 47 per 1,000 in August although hours had been reduced to 60 by that time. Dr. Vernon comments that "the women had gotten into a condition of cumulative fatigue and it was not until the hours were reduced to 57 a week that a slight recovery ensued". A similar study for men showed a sharp increase in sickness when hours rose to 70 a week but there was a quick recovery when they dropped to 65. The close relation between hours of work and accident rates was indicated by the experience of a fuse factory in the present war. When this plant reduced its 12-hour day to 10 hours the number of women treated for faintness declined sharply and the women's accident rate dropped to a third of the previous rate but the men's was only slightly affected.

Absenteeism and Labour Turnover

Much casual absenteeism and labour turnover is, in the opinion of Dr. Vernon, really due to fatigue and its effects. The number of absences in Royal Ordnance engineering plants was cut in half when hours were reduced 10 to 12 per cent recently. On the other hand the absence rate in many plants rose sharply when hours were lengthened and seven-day weeks imposed in the period immediately after Dunkirk. In one plant it rose from 2.6 hours a week per woman worker in April, 1940, when a 56-hour was worked, to 8.3 in June, 1940, when hours had been increased to 69.5, and was still at 8.7 in the first three months of 1941 even though hours had been reduced to 63. Consequently the actual hours worked were no greater under

the 63-hour week than under the 56-hour week. "Once the women got into the habit of frequent absenteeism," Dr. Vernon comments, "they never recovered." Many women absented themselves because of shopping difficulties which had been met in some plants by allowing time-off for shopping, but the real solution, in Dr. Vernon's opinion, lies in shortened hours and a 5½-day week.

Particular emphasis was placed on the adverse effect of Sunday labour. In one plant in the last war, weekly output rose by 19 per cent and the number of absences declined when Sunday work was abolished.

Long hours are an important contributing factor to labour turnover which rose as high as 130 per cent a year in some plants before the Essential Work Orders, introduced in June, 1941, prevented persons from leaving essential employment without the permission of a National Service Officer. While turnover has declined since that date, absenteeism and the number of persons seeking discharge on grounds of medical unfitness have increased. This problem can best be met, in Dr. Vernon's opinion, by shortening hours of work and giving attention to workroom conditions such as lighting, heating, ventilation, seating accommodation and to the welfare of workers both inside and outside the factory.

Effect on Production

Since long hours have such adverse effects on sickness, absenteeism and labour-turnover rates, they inevitably affect production. In the period immediately after Dunkirk when hours were increased abnormally, production rose temporarily but did not maintain its new level for more than two or three months. One factory which raised hours from 56 to 69·5 in June, 1940, reported a 26 per cent increase in production the first week, 15 per cent the second week and 11 per cent in the third and fourth weeks, but less than a year later when a 63-hour week was being worked, production was back to the level attained

under the 56-hour week before Dunkirk. Dr. Vernon comments:—

There can be little doubt that the super-human effort made by our munitions workers after Dunkirk, though it caused an immediate improvement of output, did lasting harm to their productive powers. It induced a condition of cumulative fatigue with its inevitable accompaniment of increased absenteeism and this habit of absenteeism persisted after the hours of work were reduced to reasonable limits.

Reduction of working hours, on the other hand, at first results in a decline in production almost in direct proportion to the shortened hours. Then, however, "owing to the increase of vigour experienced as the result of the lighter work, the workers gradually, and *unconsciously*, get into the habit of speeding up their rate of production." The final result is usually a higher rate of production than under the longer hours. For example, a plant which cut weekly hours from 74½ to 55½ and abolished Sunday work showed no change in production for the first four weeks but in the next three four-week periods production rose 4, 11 and 14 per cent respectively until it levelled out at a point 13 per cent higher than that achieved under the former hours.

The shift system most conducive to health and efficiency is, in Dr. Vernon's opinion, the scheme of two eight-hour shifts a day because it avoids night work and gives women time for shopping and household duties. If properly organized, three-shift systems are also satisfactory, but a 40-hour break must be granted at week-ends and adequate transport and supervision provided. Night workers who changed over to day work every other week were almost as efficient as day workers but those who changed less frequently were from 2 to 17 per cent less productive. The value of rest pauses was also pointed out as an aid to production. A 1938 study of 1,000 factories in large industrial centres showed that two-thirds granted rest breaks of 10 or 15 minutes in work-spells lasting from four to five hours.

Problems of Industrial Safety and Absenteeism in the United States

THE Division of Labour Standards of the United States Department of Labour has issued two new special bulletins on war-time problems of industry. The first, entitled *Safety Speeds Production*, is addressed directly to supervisors and the second summarizes the experience of some 200 war plants in dealing with absenteeism.

Supervisors and Accident Prevention

The role which the alert and energetic supervisor may play in accident prevention is pointed out in the safety pamphlet. The importance of developing safe habits of work in inexperienced employees and of enlisting the co-operation of workers in safety cam-

paigns is stressed. Supervisors are urged to study accident statistics and to discover the cause of each accident so that its repetition may be prevented. Pointers are given on good housekeeping, guarding machinery, supervising weight lifting and the care of tools. A list of other publications "for those who haven't had enough" is printed at the end.

Absenteeism

The pamphlet on absenteeism contains reports by officials dealing with this problem in shipyards, aircraft plants, electrical and chemical firms, precision instrument companies, utilities, textile mills, food concerns, and other war plants. The opinion is expressed that "wilful absence represents a small proportion of the whole problem," but that much wartime absenteeism is due to inconvenient working and living conditions. It is concluded that "established concerns with well-developed industrial relations programs control absenteeism more successfully even when they are expanding under pressure of war orders."

The control of absenteeism is considered to be primarily the responsibility of management, but trade unions, labour-management committees, the Government and the community have helped to solve the problem in many plants. A sound personnel policy is recognized as the basis of any attack on the problem. Interviewing returning absentees has proved one of the best control methods. Some plants send letters or telegrams, or telephone absentees, and others follow up with a visit by a personnel officer to discover the cause of the absence and offer help. Foremen, shop stewards, labour-management committees and union officials are enlisted to assist with interviews and conduct attendance campaigns.

Plants reported poor results from penalty lay-offs or monetary rewards which are not effective in a period of labour shortage. Paying absentees in Axis money or posting their names aroused resentment and even increased absenteeism in some cases. Most plant officials agreed that positive efforts to build

employee morale were preferable to punitive measures directed against individuals. Some firms required two-hours notification of all absences and were then able to make adjustments to prevent interruption of production.

Improvement of working conditions had good effects on absenteeism rates by reducing accidents, industrial disease and fatigue. Alteration of hours schedules to suit the convenience of workers and ensure maximum output was also found to reduce the number of absences. Attention to nutrition and health resulted in better attendance in many plants.

Psychological reasons for absence must be considered, the report states. Officials attempted to counteract boredom and indifference by rest pauses, snacks, music, planned recreation and holidays. Workers were made aware of the importance of their job by posters, movies, visits by war heroes, etc. Transfers were arranged to place workers in the jobs to which they were best suited. Most officials agreed that lay-offs due to material shortages had a very bad psychological effect and should be avoided by planned production and shifting workers to other work. The employment of both men and women counsellors to help workers solve personal problems had good results in reducing absenteeism.

Methods used by various plants to solve problems of transport, housing, child care, recreation and shopping included appointing transport co-ordinators and housing directors, arranging variations in store and bank hours, installing barber and beauty shops on the premises, and providing facilities for cashing cheques and securing ration books. Some plants supplied equipment for recreation on company property while others arranged with community agencies for part-time use of facilities. Plant authorities co-operated with community organizations in developing housing and child-care schemes.

Employers are urged to keep absenteeism records in order to discover the causes of absences in their plant. A supplementary pamphlet showing the forms used by war plants as a basis for controlling absenteeism will be available shortly.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Recent Proceedings under the Industrial Disputes Investigation Act, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Industrial Disputes Investigation Act.—This article gives an account of all applications for Boards of Conciliation and Investigation, and the disposition of these applications. In cases where Boards are established, the *LABOUR GAZETTE* publishes in due course the full text of their reports, as submitted to the Minister of Labour.

Since the outbreak of war and the extension of the Industrial Disputes Investigation Act to cover disputes in war industries, the number of applications for Boards of Conciliation and Investigation has greatly increased. In recent months the majority of applications for Boards have been referred to Industrial Disputes Inquiry Commissioners for preliminary investigation, to determine whether the circumstances warrant the establishment of a Board. Reports of Commissioners appointed under the Act are summarized in this article.

Disputes which concern wage demands come under the jurisdiction of the National and Regional War Labour Boards.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published month by month in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1941 appeared in the *LABOUR GAZETTE* for May, 1942.

The latest available information as to strikes and lockouts in Great Britain and other countries appears from month to month.

Penalty Established for Failure to Comply with Order of Minister Implementing Recommendation of Industrial Disputes Inquiry Commissioner

BY Order in Council (P.C. 4175, May 20, 1943) any person refusing or failing to comply with an order of the Minister of Labour made under Section 5 of P.C. 4020 is now guilty of an offence and liable upon summary conviction to a fine not exceeding five hundred dollars for every day that such failure to comply continues.

Under Section 5 of Order in Council P.C. 4020, the Minister of Labour is authorized to issue whatever order he deems necessary to give effect to the recommendations of an

Industrial Disputes Inquiry Commissioner appointed to investigate the dismissal of employees allegedly for union membership and/or activity; or to investigate the alleged coercion or intimidation of employees for the purpose of having them join a trade union.

By section 5, it is provided that the Minister's Order implementing the recommendation of Industrial Disputes Inquiry Commissioners shall be final and binding upon the employer and employees and any other person concerned. The latest amendment of

this Order therefore adds a penalty for the failure or non compliance with the Minister's Order in such matters.

The text of the amending Order in Council follows:

Whereas the Minister of Labour reports that it is desirable to amend Order in Council P.C. 4020, of June 6, 1941, as amended, so as to provide a penalty for failure to comply with an order of the Minister of Labour made under section 5 thereof;

Therefore, His Excellency the Governor General in Council, on the recommendation of

the Minister of Labour and under the authority of the War Measures Act (Chapter 206, Revised Statutes of Canada 1927) is pleased to amend Section 5 of Order in Council P.C. 4020 of June 6, 1941, as amended, and it is hereby further amended by the addition thereto of the following subsection:

(2) Any person refusing or failing to comply with an order of the Minister made under this section, shall be guilty of an offence and liable upon summary conviction to a fine not exceeding Five Hundred Dollars (\$500.00) for every day that such refusal or failure to comply continues.

Recent Proceedings under the Industrial Disputes Investigation Act

IN the month of May twelve Boards of Conciliation and Investigation submitted their reports in connection with the following disputes:—

- (1) Between the Davie Shipbuilding and Repairing Company, Limited; Morton Engineering and Dry Dock Company, Limited; and George T. Davie and Sons Limited, and their respective employees, members of Locals 3, 6 and 7, Boilermakers and Iron Shipbuilders Union of Canada.
- (2) Between the Consumers' Gas Company, Toronto, Ontario, and its employees, members of Local 12291, District 11, United Gas, Coke and Chemicals Workers of America.
- (3) Between Babcock-Wilcox & Goldie-McCulloch, Limited, Galt, Ontario, and its employees, members of Local 2859, United Steelworkers of America.
- (4) Between Shurly-Dietrich Atkins Company, Limited, Galt, Ontario, and its employees, members of Local 2895, United Steelworkers of America.
- (5) Between Galt Metal Industries, Limited, Galt, Ontario, and its employees, members of Local 2894, United Steelworkers of America.
- (6) Between the Galt Brass Company, and its employees, members of Local 2903, United Steelworkers of America.
- (7) Between Whitehall Machine and Tools, Limited, Galt, Ontario, and its employees, members of Local 2871, United Steelworkers of America.
- (8) Between the R. McDougall Company, Limited, Galt, Ontario, and its employees, members of Local 2890, United Steelworkers of America.
- (9) Between the J. A. M. Taylor Tool Company, Limited, Galt, Ontario, and its employees, members of Local 2903, United Steelworkers of America.

(10) Between the Canadian Machinery Corporation, Galt, Ontario, and its employees, members of Local 2905, United Steelworkers of America.

(11) Between the Galt Malleable Iron Company, Limited, and its employees, members of Local 2899, United Steelworkers of America.

(12) Between the Howard Smith Paper Mill, Limited, Beauharnois, P.Q., and its employees, members of the National Catholic Syndicate of Pulp and Paper Workers of Beauharnois.

The text of the reports of the Boards will be found at the conclusion of this statement.

Applications Received

Ten applications* for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of May. These were:—

1. From employees of the Atlas Steels, Limited, Welland, Ontario, members of the United Electrical, Radio and Machine Workers of America. The dispute, which was said by the applicants to affect employees, concerns union recognition and the negotiation of a collective labour agreement. On May 10, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

* By P.C. 5963, the National and Regional War Labour Boards are specially charged with the duty of adjudicating wage demands. Therefore all applications for the establishment of Boards of Conciliation and Investigation in which rates are the sole cause of the dispute are removed from the ambit of the Industrial Disputes Investigation Act and the applicants are referred to their respective War Labour Board.

2. From the employees of the Universal Fur Dressing and Dyers, Limited, Toronto, Ont., members of the International Fur and Leather Workers Union of the United States and Canada. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, was said by the applicants to affect 41 employees directly and 2 indirectly. Mr. J. D. McNish, K.C., Toronto, Ont., was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

3. From the employees of the International Nickel Company of Canada, Port Colborne, Ont., members of Local 637, International Union of Mine, Mill and Smelter Workers. The dispute, which was said by the applicants to affect 1,340 employees directly and 200 indirectly, concerns union recognition and the negotiation of a collective labour agreement. On May 27, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

4. From the employees of the Canadian Ingersoll-Rand Company, Limited, Sherbrooke, P.Q., members of Local 2982, United Steelworkers of America. The dispute, which was said by the applicants to affect 229 employees directly and 800 indirectly, concerns union recognition and the negotiation of a collective labour agreement. On May 21, Mr. Bernard Rose, K.C., Montreal, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

5. From the employees of Peacock Bros., Limited, Ville La Salle, P.Q., members of Local 21, International Moulders & Foundry Workers' Union of North America. The dispute which concerns union recognition and the negotiation of a collective labour agreement was said by the applicants to affect 59 employees. The application for a Board of Conciliation and Investigation was withdrawn by the applicant union on May 24, an agreement having been signed between the parties concerned in the dispute.

6. From employees of Sable, Limited, Montreal, P.Q., members of Local 54, International Fur and Leather Workers Union of the United States and Canada. The dispute, which was said by the applicants to affect 139 employees, concerns the negotiation of a collective labour agreement.

7. From employees of the Anglo-Canadian Leather Company, Limited, Huntsville, Ont., members of the International Fur and Leather Workers Union of the United States and Canada. The dispute, which concerns union recognition and the negotiation of a collective

labour agreement, was said by the applicants to affect 160 employees.

8. From employees of the Dunlop Tire & Rubber Goods, Company, Limited, Toronto, Ont., members of Local 132, United Rubber Workers of America. The dispute, which was said by the applicants to affect 650 employees, concerns the refusal of the Company to agree to a maintenance of membership clause being inserted in an agreement sought by the applicant union. On May 29, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ontario, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute.

9. From employees of Electric Steel Company, Limited, Cap de la Madeleine, P.Q., members of Local 409, International Moulders and Foundry Workers' Union of North America. On May 29 the application was returned to the employees for revision.

10. From employees of the Saint John Dry Dock & Shipbuilding Company, Limited, East Saint John, N.B., members of Local No. 3, Industrial Union of Marine & Shipbuilding Workers of Canada. The dispute, which concerns union recognition and the negotiation of a collective labour agreement, was said by the applicants to affect 1,600 employees.

Boards Established

On May 27, a Board of Conciliation and Investigation was established to deal with disputes between the Ford Motor Company of Canada, Ltd., and its employees, members of Local 240, United Automobile Workers of America and employees, members of the Formocan Employees' Association (L.G., Mar., 1943, p. 326). Following the receipt of the application, Mr. Louis Fine, Chief Conciliation Officer, Ontario Department of Labour, was authorized as Industrial Disputes Inquiry Commissioner to investigate the disputes. The Commissioner recommended that, with the consent of the applicant organizations, one Board of Conciliation and Investigation be established to deal with the two disputes, the employees' nominee on the Board to be appointed by the Minister of Labour. Subsequently both employees' organizations agreed to the proposal that the Minister of Labour appoint the employees' nominee, and on May 28 Dr. H. A. Logan, Toronto, Ont., was appointed employees' representative on the Board. At the end of the month the Department was awaiting the Company's nominee for appointment to the Board.

A Board of Conciliation and Investigation was established on May 6 to deal with a dispute between the Massey-Harris Company, Limited, Weston, Ont., and its employees,

members of the United Automobile Workers of America (L.G., Mar., 1943, p. 324). On May 1, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, who had been authorized as Industrial Disputes Inquiry Commissioner, reported that he had been unsuccessful in bringing about a mutually satisfactory settlement and recommended the establishment of a Board. The personnel of the Board which was fully constituted on May 28, was as follows: His Honour Judge Ian M. Macdonell, Judge's Chambers, City Hall, Toronto, chairman, appointed by the Minister of Labour in the absence of a joint recommendation of the other two members; Senator J. J. Bench, St. Catharines, Ont., appointed on the nomination of the employer and Mr. Drummond Wren, Toronto, appointed on the nomination of the employees.

On May 10 a Board of Conciliation and Investigation was established to deal with a dispute between the B. Greening Wire Company, Limited, Hamilton, Ont., and its employees, members of Local 2950, United Steelworkers of America. (L.G., May, 1943, p. 598). Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, who had been authorized on April 16 as Industrial Disputes Inquiry Commissioner to investigate the dispute, recommended that a Board be established. The personnel of the Board is as follows: Dr. Alexander Brady, Toronto, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Henry S. Robinson, K.C., Hamilton, appointed on the nomination of the employer and Mr. John J. Sullivan, Hamilton, appointed on the nomination of the employees.

A Board of Conciliation and Investigation was established on May 24 to deal with a dispute between the Dominion Glass Company, Limited, Hamilton, Ont., and its employees, members of Local No. 3, Canadian Brotherhood of Glass Workers (C.C.L.) (L.G., Apr., 1943, p. 472). Following receipt of the application for the establishment of a Board, His Honour Judge Ian Macdonell was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner found that the dispute came within the scope of the provisions of the Industrial Disputes Investigation Act as extended by P.C. 3495 and recommended that a Board of Conciliation and Investigation be established.

On May 26, a Board of Conciliation and Investigation was established to deal with a dispute between the Office Specialty Manufacturing Company, Limited, Newmarket, Ont., and its employees, members of Local No. 7, National Union of Furniture Workers (C.C.L.)

(L.G., May, 1943, p. 597). The Commissioner reported that he had been unable to affect a mutually satisfactory settlement of the matters at issue and recommended that a Board be established.

On May 15, a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Pacific Railway Company, Montreal, P.Q., and its dining car employees, members of the Brotherhood of Railroad Trainmen (L.G., May, 1943, p. 598). Following the receipt of the application, Mr. Bernard Rose, K.C., Montreal, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute. In his report the Commissioner recommended the establishment of a Board of Conciliation and Investigation. At the end of the month Messrs. George B. Bagwell, Toronto and Victor A. Sinclair, K.C., Toronto, had been appointed to the Board on the nomination of the employees and employer respectively, and were conferring with a view to making a joint recommendation of a person for appointment as third member and chairman.

In connection with the constitution of the Board of Conciliation and Investigation established in April to deal with a dispute between Sawyer-Massey, Limited, Hamilton, Ont., and its employees, members of Local 520, United Electrical Radio & Machine Workers of America (L.G., May, 1943, p. 594). Dr. Christian Sivertz, London, Ont., was appointed on the nomination of the employees and Mr. Gordon R. Munnoch, K.C., Toronto, appointed on the nomination of the employer. At the end of the month no recommendation had been made concerning the chairman of the Board.

On May 10, a Board of Conciliation and Investigation was established to deal with a dispute between Sorel Industries, Limited, Sorel, P.Q., and its employees, members of the Metal Trades Council of Sorel. (L.G., May, 1943, p. 594). Mr. Bernard Rose, K.C., Montreal, who was authorized as Industrial Disputes Inquiry Commissioner on April 20 to investigate the dispute, recommended that the application for a Board be approved. The personnel of the Board is as follows: Hon. Mr. Justice Joseph Archambault, Montreal, chairman, appointed on the joint recommendation of the other two members; Messrs. Paul Fournier, Montreal, and J. A. L'Heureux, Sorel, appointed on the nomination of the employees and employer respectively.

A Board of Conciliation and Investigation was established on May 24 to deal with a dispute between the Morrow Screw & Nut Company, Limited, and Ingersoll Machine & Tool Company, Limited, and their employees, members of Local 2918, United Steelworkers of

America (L.G., May, 1943, p. 594). Following receipt of the application, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ont., was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute, and being unable to bring about a mutually satisfactory settlement of the dispute, the Commissioner recommended the establishment of a Board. At the end of the month Mr. John J. Sullivan, Hamilton, appointed a member of the Board on the nomination of the employees and Mr. J. J. Robinette, Toronto, appointed on the nomination of the employer, had been requested to confer on the joint recommendation of a person to act as chairman and third member of the Board.

Other Board Fully Constituted

The constitution of the Board of Conciliation and Investigation established on April 21 to deal with a dispute between Defence Industries Limited, Brownsburg, P.Q., and its employees, members of the Munitions Workers Federal Union (T. & L.C.), (L.G., May, 1943, p. 596) was completed on May 7. The personnel of the Board is as follows: Mr. Gerald H. Brown, Ottawa, Chairman, appointed on the joint recommendation of the other two members; Messrs. D. A. Paterson and A. Feiner, both of Montreal, appointed on the nomination of the employer and employees respectively.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

An application for the establishment of a Board of Conciliation and Investigation was received in April from employees of the Lake St. John Power & Paper Company Limited, Dolbeau, P.Q., members of the National Catholic Syndicate of Pulp & Paper Workers of Dolbeau (L.G., May, 1943, p. 594). On May 18 Mr. Raoul Trepanier, Industrial Relations Officer, Dominion Department of Labour, Montreal, was appointed as Industrial Disputes Inquiry Commissioner to investigate the dispute.

On May 24, Mr. Bernard Wilson, Industrial Relations Officer, Dominion Department of Labour, Ottawa, was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute between the Canadian National Railways (Work Equipment Department) Winnipeg, Manitoba, and its employees, members of Divisions 142 and 226, Canadian Brotherhood of Railway Employees and Other Transport Workers. (L.G., May, 1943, p. 594).

Other Reports of Industrial Disputes Inquiry Commissioners

In the dispute between the H. J. Heinz Company, of Canada, Limited, Leamington, Ont., and its employees, members of the Leamington Cannery Workers Union (C.C.L.) (L.G., Apr., 1943, p. 470), a report was received from Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner reported that in his opinion the dispute could not be considered as coming within the scope of the Industrial Disputes Investigation Act as extended by P.C. 3495. The Commissioner's report was concurred in and the interested parties were advised that a Board of Conciliation and Investigation could not be established.

On April 14, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner to investigate a dispute between the Breithaupt Leather Company, Limited, Kitchener, Ont., and its employees, members of Local 300, International Fur and Leather Workers Union of the United States and Canada (L.G., May, 1943, p. 594). The Commissioner was successful in having the Company consent to a representation vote being taken of the employees and also secured the consent of the Company to recognize the applicant union as the bargaining agency if they received a majority of the eligible votes. In the representation vote which followed the applicant union obtained a majority of the votes cast. The Commissioner reported that the Company, in accordance with its previous undertaking, immediately entered into negotiations with the applicant union for the purpose of consummating a collective labour agreement.

During the month a report was received from Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Cockshutt Plow Company, Limited, Brantford, Ont., and its employees, members of the United Automobile Workers of America (L.G., May, 1943, p. 595). In view of the rejection of the applicant union by the employees of the Company in a representation vote, the Commissioner recommended that the application for a Board be denied. The report of the Commissioner was concurred in, and the interested parties advised that a Board would not be established.

On April 15, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Commonwealth Electric

Corporation, Limited, Welland, Ont., and its employees, members of the Commonwealth Electric Shop Union (L.G., May, 1943, p. 594). A representation vote conducted on May 21 indicated that the applicant union did not represent a majority of the employees and consequently the Commissioner recommended against the establishment of a Board of Conciliation and Investigation. The interested parties to the dispute were subsequently advised that a Board would not be established.

Applications Withdrawn

The Department was notified on May 11 that the application for the establishment of a Board of Conciliation and Investigation to deal with the dispute between the Canadian Copper Refiners Limited, Montreal, P.Q., and its employees, members of Local 23184, Copper Refiners Union (A.F. of L.) (L.G., Nov., 1942, p. 1247) had been formally withdrawn as the applicant union did not wish to proceed with the making of a presentation to the Board.

On May 10, the application for the establishment of a Board of Conciliation and Investigation to investigate a dispute between Genelco

Company Limited, Peterborough, Ont., and its employees, members of United Electrical Radio & Machine Workers of America (L.G. Jan. 1943 p. 70) was withdrawn, a collective labour agreement having been signed by representatives of the Company and the union.

Strike Vote

On March 19, the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Hamilton Bridge Company, Limited, and its employees, members of Local 2537, United Steelworkers of America (L.G. April 1943, p. 478.). The members of Local 2537 of the United Steelworkers of America rejected the report of the Board and requested that a strike vote be taken under the supervision of the Department of Labour as provided for in Order in Council P.C. 7307. The vote was taken April 20, and resulted in 611 voting in favour of going on strike and 113 against, with 26 spoiled ballots. Later, a strike occurred when the Company and the union failed to reach an amicable settlement of the dispute.

Report of Board in Dispute Between the Davie Shipbuilding and Repairing Company, Limited; Morton Engineering and Dry Dock Company, Limited; and the George T. Davie & Sons Limited, Lauzon, Quebec, and their Representative Employees

On May 12, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with disputes between the Davie Shipbuilding and Repairing Company, Limited; Morton Engineering and Dry Dock Company Limited, and the George T. Davie and Sons Limited, Lauzon, Quebec; and their respective employees members of Locals 3, 6 and 7, Boilermakers and Iron Shipbuilders Union of Canada (L.G., May, 1943, p. 597).

The personnel of the Board was as follows:

Mr. Ernest Godbout, Quebec, P.Q., Chairman, appointed by the Minister of Labour in the absence of a joint recommendation of the other two members; Mr. Walter A. Merrill, Montreal, P.Q., appointed, on the nomination of the employer; and Mr. Guy M. Desaulniers, Montreal, P.Q., appointed, on the nomination of the employees.

The report of the Board was signed by the Chairman and Mr. Desaulniers. Mr. Merrill submitted a minority report.

The texts of the report of the Board and the minority report follow:

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a Dispute between Davie Shipbuilding and Repairing Company, Limited, Morton Engineering & Dry Dock Company Limited and Geo. T. Davie & Sons Limited and their Employees respectively Members of Locals Nos. 3, 6 & 7 of the Canadian Union of Boilermakers and Iron Shipbuilders of the Canadian Congress of Labour.

To The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Parliament Buildings,
Ottawa.

Honourable Mr. MITCHELL:—

The Board of Conciliation and Investigation that you have established to take knowledge of the dispute between the Davie Shipbuilding & Repairing Company, Limited and Morton Engineering & Dry Dock Company, Limited and Geo. T. Davie & Sons, Limited and their employees, respectively members of Locals 3, 6 & 7 of the Canadian Union of Boilermakers and Iron Shipbuilders

of the Canadian Congress of Labour, has the honour to submit to you its report.

The Board has been constituted as follows:

Walter A. Merrill, K.C., of Montreal, recommended by the employers;

Guy M. Desaulniers, lawyer, of Montreal, recommended by the employees, and

Ernest Godbout, lawyer, of Quebec, named under your authority.

These members have duly taken oath and have conducted the procedures according to law.

The Board held its sessions at the Court House, in Quebec, on the 19th, 23rd and 24th day of April, 1943, and visited the shipyards of the Davie Shipbuilding, Morton Engineering and G. T. Davie Companies, on the 20th, 21st and 22nd day of April, 1943.

During its sittings, the Board heard the following gentlemen, on behalf of the Employers: Messrs. R. B. Thomson, vice-president and general manager of the Davie Shipbuilding, R. W. Morton, president of Morton Engineering, C. G. Davie, president of the G. T. Davie, T. H. Kerr, K.C., and R. Drouin, lawyers, representing these companies, and also some of the principal officers of these companies; and on behalf of the union members; Mr. A. R. Mosher, president of the Canadian Congress of Labour and also most of the presidents and secretaries of the Locals of the Union, and also a few workmen.

On the occasion of its visits to the shipyards, the Board obtained information on the shipbuilding industry in the Quebec region, the state of the shipyards, the labour conditions and the state of mind of the employers and the employees, with regard to the present conflict.

Since the establishment of this Board and during the whole period of its sittings, the parties have submitted to the Board statements of facts or briefs, projects of collective agreement and exhibits, they have caused witnesses to testify and have exposed their contentions eloquently. The Board transmits all these documents.

The Board has had to deal with the following litigious questions, out of which the dispute arose to wit:

- I—The establishment of a union-management co-operation through joint production committees;
- II—The raising of rates in the shipyards up to the level of those now being paid for corresponding work in the shipyard operated by the Canadian Vickers, Limited, in Montreal;
- III—After study by the parties of a proposed collective agreement, the adoption of the clauses concerning:

- (A) the determining of the rates of pay for the supplementary hours of work. (overtime rates)
- (B) the deduction by the employers from the employees' salaries of the contributions payable by the latter to the union. (check off)
- (C) the establishment of Closed Shop.

The two first items have been settled by mutual agreement of the parties. No decision could be arrived at concerning the third item.

I

The union members had annexed to their request for the establishment of a Board of Conciliation and Investigation, a memorandum of agreement for the setting up of a joint production committee. It was a project of collective agreement for the creation of a committee composed of employers and employees, with a view of increasing production.

The union members alleged that the existence of such committees improves the co-operation and good understanding between employers and employees. The satisfaction deriving for both parties from such joint production committees stimulates production in the shipyards. The employers benefit by the suggestions, quite opportune at times, made by experienced tradesmen. The workers accept more easily, certain directions or decisions of the companies concerning the performance and the condition of work, because they are brought to their attention and explained to them by well-informed fellow workers.

In wartime collaboration between employers and employees is recommendable to the highest extent. Similar committees exist in important numbers in Canadian industry and certain government authorities would have approved of them.

It has been recognized by the companies that they should not be opposed to offers of co-operation which are reasonable. The companies have accepted the project for a collective agreement submitted by the union members, the parties will accommodate one another regarding a few secondary questions when it is put in force.

The terms of agreement which follow were adopted:

An agreement has been reached between the companies and the union to set up Joint Production Committees, on the basis with the memorandum of agreement submitted to the Board subject however to such changes as may be mutually agreed upon.

The Board recommends that the memorandum of agreement regarding the establishment of a joint production committee, submitted by the union members be signed as soon as possible by each of the companies with its local section of the union. This memorandum is annexed to the present report as Exhibit "A".

II

The union members requested an increase in salaries in the shipyards up to the level of those now being paid for corresponding work in the shipyard operated by the Canadian Vickers, Limited, in Montreal.

The union members have admitted without discussion that it did not belong to the Board to decide on such a litigation, on account of the Order in Council governing salaries in wartime, P.C. 5963, issued in virtue of the War Measures Act. They, however, declared that the difference between salaries paid in Montreal and those paid in Quebec for corresponding work was unjustified, and they have especially compared the rates paid by the Vickers Company and the Davie and Morton Companies.

The Companies have accepted these representations favourably. They agreed that the cost of living bonus could be made uniform in the shipyards of the Province of Quebec, with the rates and according to the computations prescribed by the Order in Council, P.C. 5963. They accepted as justifiable an increase in the rates paid to labourers in the shipyards of the region of Quebec, but they reserved their opinion as regards the level this increase should attain.

The union members have contended that this difference in salaries created an unsatisfactory situation, detrimental to production and therefore harmful to the war effort. The labourers have assured of their contribution to the Country by the enlistment of numerous members in the armed forces and the energetic efforts of the workers; that they pay the same taxes as do the other fellow citizens, subscribed generously to national loans, bear the strain of working conditions which are rigorous due to the kind of work itself and variable climatic conditions existing in the region of Quebec; supported large families and, having endured the economic depression, are subject to wartime restrictions and must face the high cost of living now that they have found work and are earning a salary. The union members have proven that the employers would suffer no prejudice by the fact of the salaries being increased because the difference between the wages actually paid and those asked for the future will be liquidated by the State, the Companies building warships for the Allied nations.

The Companies have replied that increases in salaries had already been given by them to their employees, either willingly or upon instructions from the Government, pursuant to the following industrial investigations:

"Board of conciliation and investigation, under the chairmanship of the Honourable

Judge Gillanders, in the spring of 1940, relative to the dispute between the DAVIE SHIPBUILDING COMPANY and its employees;

Board of conciliation and investigation, under the chairmanship of the Honourable Judge Savard, in the fall of 1941, concerning the dispute between MORTON ENGINEERING and its workers;

Royal Commission to investigate concerning the shipyards of Eastern Canada, presided by the Honourable Senator Leon Mercier Gouin, "K.C.", during the year 1941".

The Companies have alluded to the considerations expressed in the Royal Commission's report, that in certain regions or zones of a country numerous conditions influence the cost of living and the price of services. As an example, the Companies mentioned the law on minimum wages of the Province of Quebec, which determines zones where rates of pay are lower than in other regions.

The employers have discussed the probability of inflation which is possible on account of an exaggerated trend of wages. They have set forth the argument that they expect to maintain a demand for labour after the war in the Quebec shipyards, providing that excessive salaries do not erect a barrier. They have affirmed that a greater quantity of specialists are employed in the Metropolis.

Seeing its limited jurisdiction in the matter, and the understanding of the parties in the settlement arrived at on this problem, the Board may dispense itself from judging this argumentation upon its merits. The Board believes that it is its duty to conclude that the contentions of the labourers as a whole seem justified and reasonable.

It is the opinion of the Board that the principle of zones or regions created ill-feelings and rivalry when it becomes known that the State pays the different wages for corresponding occupations through the medium of certain companies bound by wartime contracts and out of monies collected from all the citizens. The labourers are wondering why the Government administration does not equally favour all the workers of the Country.

The Board is of opinion that presently specialized labour is distributed in practically equal proportions among the large industries which devote their activities to wartime enterprises; that all over Canada the employers must hire all available labour, even if it be partly unexperienced; that an increased salary for the employees of the Quebec & Lauzon shipyards, even if it should reach the level of wages paid in other shipyards of the Province of Quebec for similar work, will not affect in an appreciable way the wartime or peacetime economy of the Quebec region.

Consequently the Board submits its recommendation, so that if the Honourable Minister deems it proper, it may be brought to the knowledge of the National War Labour Board, before which the parties have agreed to present a joint demand for the purposes and according to the terms of the following agreement, to wit:

"The parties to the dispute before your Board agree to make joint representations to the National War Labour Board expressing the opinion that the existing differentials between rates of pay and cost of living bonus as in shipyards in Montreal and those in Quebec and Lauzon are not now justified and that the rates at Quebec and Lauzon should be increased, the Union contending that the entire spread and differential should be wiped out, the Companies contending it should be wiped out only in part; an effort will be made as soon as possible to reach an agreement as to the rate that should prevail at Quebec and Lauzon and, in case such agreement is arrived at, the parties will join in attempting to have the same approved by the Board, but failing an agreement, the parties reserve the right to make their respective representations to the Board on the question".

III

The study of a project of collective agreement between the parties has given rise to difficulties regarding Clauses 7, 15 and 16. The parties have agreed on the other clauses.

Clause 7-D reads, in the first place, as follows:

"Any work performed other than during the regular hours of work herein provided shall constitute overtime and shall be paid for at the rate of time and one-half, except where double time is payable. Provided however that if such overtime does not exceed fifteen minutes, it shall be paid for at straight time".

The Companies and the union members have agreed on this clause, as follows:

"Any work over 48 hours in one week from Monday to Saturday or in excess of twelve hours in any one day shall be paid for at the rate of time and a half except where double time is payable provided that if overtime does not exceed fifteen minutes, it shall be paid for at straight time".

Clause 7-E reads as follows:

"Any work performed by day shift employees after 10 p.m. on any of the first five days of the week, after 5 p.m. on Saturdays, on Sundays and on the following Statutory Holidays shall be paid for at the rate of double time:

New Year's Day, Epiphany, St. John the Baptist Day, Labour Day, All Saints Day, Immaculate Conception Day, Christmas Day.

Should any of the said holidays fall on Sunday, the day observed by the public will be treated and paid for as the holiday".

Actually the Davie Companies pay overtime for extra working hours, according to the following tariff:

Time and one-half: after forty-eight (48) hours per week;

Double time: on Sundays and certain holidays.

The Morton Company pays:

Time and one-half: after forty-eight (48) hours per week;

Double time: after 10 p.m. on any of the first 5 days of the week and after 5 p.m. on Saturday, Sunday and certain holidays.

The Companies have objected to the payment of Double Time after 10 p.m. on the first 5 days of the week and after 5 p.m. on Saturday, for the three following major reasons: The Davie Companies have never paid this double time after 10 p.m. and on Saturday; the Morton Company should not pay this double time, if it must in the future act with the other Companies in conformity with Clause 7-D. It is desirable to establish a uniform tariff for extra hours of work in the shipyards of the Quebec region because it is in the interest of both the Companies and of the Union that a collective agreement be adopted to apply in the same manner in the three shipyards.

The union members have insisted on the equity of Clause 7-D, as already accepted by the parties; they have refused to abandon double time after 10 p.m. and on Saturday at Morton's; they suggested as a compromise that things remain as they are in both the Davie Companies and at the Morton Company, regarding double time.

The Companies refused this arrangement; they definitely put a condition to their first acceptance of Clause 7-D, that Clause 7-E be exactly the same for the three Employers, and should read as follows:

"Work performed on Sundays and the following Statutory Holidays shall be paid for at the rate of double time:

New Year's Day, Epiphany, All Saints Day, St. John the Baptist Day, Labour Day, Immaculate Conception Day, Christmas Day.

Should any of the holidays fall on Sunday, the day observed by the public will be treated and paid for as the holiday".

The Board is informed that, in the Quebec region, many public enterprises or important industries, equivalent to shipyards, remunerate their employees on the basis of time and one-half for work performed even after an eight (8) hour day. The Board therefore is of opinion that Clause 7-D is reasonable and just and recommends that it be inserted in the collective agreement.

The Board admits that it is not essential for the Companies' interests that the three collec-

tive agreements to be passed between the parties, contain the same Clause 7-E; it believes that the Morton employees would take exception to the disappearance of double time after 10 p.m. and on Saturday and that this would affect wartime production. It considers that the employer is the sole judge as to whether work should be performed or not after 10 p.m. and on Saturday; it finds that the attitude adopted by the employees is suitable and conciliating and recommends that Clause 7-E in the collective agreement with the Morton Company be the one originally proposed by the union members and that Clause 7-D in the collective agreement with the two Davie Companies be the one drawn up by the Employers. The texts of these clauses have been cited previously.

The Board is of opinion that if Clause 7 (D and E) is to apply in its entirety, it must be approved by the National War Labour Board, in compliance with Order in Council, P.C. 5963. It recommends that the parties include this request in their joint demand that they will address to the Board in order to raise the cost-of-living bonus and salaries.

Clause 15:

This clause reads as follows:

"The Company agrees to deduct from the wages of each employee, upon written request, the amount of dues payable to the Union, namely One Dollar per month, such dues to be deducted weekly or monthly as may be arranged, and to remit said dues monthly to the representative of the Union designated by it".

The discussion of the parties on this point is resumed thus: on the first part, the Employer must help the Union because it deserves it; on the other part the Union is in a position to collect its dues.

The Board believes that to retain out of the employees wages, dues payable to the Union would be an additional effort to the onerous task already imposed upon the Companies by administrative regulations. Clause 15 does not provide for any remuneration for this service.

The Board is confident that although this clause is not included in the collective agreement, employers and employees may come to an understanding when necessary, on this question. It does not withdraw this clause from the contract but recommends that if the Companies oppose it persistently, it be cut out.

Clause 16:

This clause stipulates:

"No employees occupying a position governed by the terms of this agreement shall be retained in the service of the Company for a period exceeding thirty days except those who are members in good standing in the Union". This is the debated problem of Closed Shop.

The union members has asked for Closed Shop in the first place; the Companies had objected; then Union Shop was proposed, this was objected to; then a benefit called Maintenance of Membership was offered and this was refused.

The workers have asked the Board for the establishment of Closed Shop and argued in its defence.

The significance generally given to the expressions: closed shop, union shop and maintenance of membership, is the following:

"Closed Shop": a shop where one must be or become a member of the Union and remain so, in order to work;

"Union Shop": a shop where one must be or become a member of the Union, after a certain length of time and retain membership, in order to work;

"Maintenance of membership": a shop where one must remain a member of the Union, to work.

The union members have presented the following arguments:

Closed Shop creates a closer collaboration between the employer and the employees, it facilitates mutual understanding, it abolishes offensive and defensive attitudes between them, it augments mutual confidence; it reduces union strifes and quarrels between workers; it encourages the labouring class, reminds the labourers of their duties and responsibilities; it guarantees general welfare and a better productivity on the job in a peaceful atmosphere.

Closed Shop allows the Union to protect the justified rights of the workers in a more efficacious manner; it prevents competition, preferences and injustices, it assures the putting in force of collective agreements; it permits a better control of union workers; it contributes to the equitable distribution of duties among the employees who benefit by the union's efforts; it develops the spirit of solidarity which is so necessary to the interests of the labourers and assures of the permanent existence of the union in the shipyards.

Closed Shop recognizes more clearly the right of the workmen to associate; it establishes a just preference between the rights of the collectivity of workers and the liberty of the individual worker; it constitutes a progressive phase in the rational evolution of labour unionism.

Closed Shop is recognized and favoured in certain countries.

Ninety per cent (90%) of the employees of the Davie and Morton shipyards request the establishment of Closed Shop.

The Companies have denied the contentions of the union members and replied in substance as follows:

It seems that Closed Shop is not recommended, although it is not forbidden by the laws of the country. It comes in conflict with Wartime Regulations. It is in opposition with the privilege that other existing legal syndicates have to claim the same rights.

The Provincial and Federal laws governing the labour problem in Canada have not yet attained the degree of maturity as that of legislation in other countries concerning this matter. In such cases a control is exercised over the Unions; Closed Shop is subject to rulings.

Closed Shop cannot be imposed in law, the Companies must give their consent; they refuse to do so.

Public opinion is not in sympathy with the Closed Shop; in general, it is not accepted favourably by Canadian industry.

In wartime Closed Shop is not a profitable experience. The union which is favoured by it arouses the rivalry of other syndicates. The union profits at the present time by the excessive but temporary hiring of workers in the shipyards. The union member who is dissatisfied takes the risk of going on strike or becomes member of another union and the trouble is renewed.

With Closed Shop the Companies will have to deprive themselves of 10 per cent of their non-syndicate workers and among them are competent and deserving employees. They will have to dismiss the workers who are in conflict with the Union and refuse to engage a technician who does not choose to become member of the Union.

Individual freedom and freedom to work are in contradiction with the establishment of Closed Shop.

The Companies doubt that the Board is in authority to judge this question.

The Companies propose to substitute the following article to Clause 16:

"In order that the Union may be assisted in exercising over its membership such measure of control as may be necessary to enable it to carry out the purposes of the present agreement as set forth in article No. 1 hereof, both the Union and the Company will collaborate and co-operate either through the Grievance Committee or otherwise in fully and impartially investigating any cases where employees of the Company, whether members of the Union or not, have acted in a manner contrary to the spirit and intent of the present agreement as regards the proper keeping up of production or the maintenance of efficiency or harmonious relations between the Company and its employees, and the Company will either discharge or suspend from its employ any worker who, in the opinion of the Company and after joint investigation by the Union and the Company, is considered to have acted in a manner inconsistent with the letter and spirit of the present agreement but this

article shall not apply to any complaint based solely upon differences of opinion between the employees and the Union as regards purely Union matters".

The union members do not agree to this.

The Board makes certain suggestions in order to bring the parties to a better understanding. It reminds them of the offers made for Union Shop and Maintenance of Membership. The parties held their ground.

The Board is of opinion that the law allows it to take cognizance of the dispute in this case and make recommendations accordingly.

The Board admits that Closed Shop can legally exist in the Davie and Morton shipyards, through the consent of the parties for a collective agreement acknowledging this consent.

The Board believes that recent legislation is developing in Canada in favour of the labour collectivity. It notices that the State has a marked tendency to intervene in the field of industrial economy, being desirous to exercise a control over certain organizations of public interest or determine labour conditions in an imperative way.

The Board believes that public interest restricts more than ever, at this time, individual liberty and that the rights of the labour collectivity reduces to a smaller scale presently the liberty to work; it discovers two reasons: the first: private property belongs for a large part to associations of persons or of capital; the second: the grouping or agreements arrived at by the enterprises compel workmen to associate themselves:

The Board submits that unionism has rendered great services to the labouring class and that the laws of the country authorize the unions to organize the workers.

The Board believes that in the Davie and Morton shipyards which employ 8,000 persons in all, the Union, recognized by the Companies as operating on the system of Closed Shop, in conformity with the desire of 90 per cent of the workers, will be in a position to improve the lot of the employees without harming the interests of the Employers; on the contrary the shipbuilding enterprises in the Quebec region and consequently the war industry will benefit thereby.

The Board recommends that Clause 16 be inserted in the collective agreement. This clause should stipulate however that it will be effective only for the actual union members and those who will enter the service of the Companies from the date of the signature of the agreement. The application for this clause and for all clauses of the collective agreement must be subject to wartime laws and regulations. With these reserves the Companies and the non-union employees actually in their

employ, will suffer no prejudice and the war-time requirements will be respected. This collective agreement should be signed without delay by the Companies and the respective locals of the Union. The project for such an agreement is annexed to the present report as Exhibit "B".

The Board expresses its thanks to the Employers, the Employees, their representatives and all persons who have assisted the Board in the accomplishment of its duties.

Respectfully submitted.

Ernest Godbout,
Chairman.
Guy M. Desaulniers,
Member.

Quebec, May 3, 1943.

PIECE "A" (EXHIBIT "A")

MEMORANDUM OF AGREEMENT BETWEEN (NAME OF THE COMPANY) AND LOCAL NO. CANADIAN UNION OF BOILERMAKERS AND IRON SHIPBUILDERS, FOR ESTABLISHMENT OF A JOINT PRODUCTION COMMITTEE

I. Name

1. The name of the Committee shall be "The Joint Production Consultative and Advisory Committee," referred to hereafter as the Committee.

II. Object

2. The object is to establish in the shipyards of the Davie Shipbuilding and Repairing Company, Limited, Lauzon, Quebec a consultative and advisory committee for the regular exchange of views between the Management and the Workers on matters relating to the improvement of production, to increase efficiency for this purpose and to make recommendations thereon.

III. Functions

3. The functions of the Committee shall be to consult and advise on matters relating to production and increased efficiency for this purpose, in order that maximum output may be obtained from the yard. Illustrative of the questions to be considered and discussed are: (a) maximum utilization of existing machinery; (b) upkeep of equipment, tools, etc.; (c) improvement in methods of production; (d) efficient use of the maximum number of productive hours; (e) elimination of defective work and waste; (f) efficient use of material supplies; and (g) efficient use of safety precautions and devices.

IV. Limitation of functions

4. The Committee shall not discuss matters which are trade questions, such as wages and like subjects, or which are covered by agreements between the Company and the Union, or are normally dealt with the approved machinery of negotiation and discussion through Grievance Committees.

V. Management Representatives

5. Apart from and in addition to the Manager of the Yard who shall be ex officio Chairman of the Committee, the representatives of the management shall not exceed twelve in number, and shall be appointed by the Company.

VI. Workers' Representatives

6. Representatives of the workers, not exceeding twelve in number, shall be selected by the Union, covering as far as possible, the various shops, departments, or sections of the yard.

VII. Membership of the Committee

7. All organized workers who have served for a period of not less than twelve months at the yards at the date on which the election takes place shall be eligible for election.

VIII. Elections

8. The first election will take place during the month of January, 1943, and subsequent elections will be held annually during the month of January.

IX. Filling Vacancies

9. In the event of worker-representative on the Committee ceasing to be employed in the establishment or being transferred to another shop or department or retiring or ceasing to be a member of the Union, a successor shall be elected by ballot conducted by the Union, and hold office for the remainder of the current term of the Committee.

X. Number on each side of the Committee

10. Apart from and in addition to the General Manager of the yard, who shall be ex officio Chairman of the Committee, the number representing the Management and the Workers on each side of the Committee shall be equal.

XI. Officers of the Committee

11. In the event of the Manager being unable to act as Chairman on any occasion, he shall nominate a deputy for this purpose.

XII. Secretaries

12. The Management and the Workers' sides of the Committee shall each appoint a Secretary from its respective members of the Committee. Such Secretaries shall act as joint Secretaries to the Committee.

XIII. Meetings of Management Side of the Committee

13. In order to expedite procedure the Management side of the Committee, together with its Secretary, shall meet weekly, or as may be required, to discuss and consider the items or subjects which they wish to put on the agenda for discussion and consideration by the Committee. The Secretary of the Management side of the Committee shall, within twenty-four hours thereafter, provide the Secretary of the Workers' side of the Committee with a list of such items or subjects.

XIV. Meetings of Workers' side of the Committee

14. The Workers' side of the Committee, together with its Secretary, shall meet weekly, or as may be required, to discuss and consider

items or subjects which they wish to put on the agenda for discussion and consideration by the Committee. The Secretary of the Workers' side of the Committee shall, within twenty-four hours thereafter, provide the Secretary of the Management side of the Committee with a list of such items or subjects.

XV. Meetings of the Committee

15. Regular meetings of the Committee shall be held fortnightly or as may be required. Meetings of the Committee ordinarily shall be held during working hours by arrangement with the Management.

XVI. Accommodation for Meetings

16. Accommodation for holding meetings of the Committee will be provided by the Management.

XVII. Payment for Attendance

17. Members of the Workers' side shall be paid at the rate of their normal earnings for the period of their attendance at the meetings of the Committee, (The Joint Production Consultative and Advisory Committee).

XVIII. Special Meetings

18. In cases of urgency or emergency, special meetings of the Committee may be held on request by either side of the Committee, through the respective Secretaries. Twenty-four hours' notice of such request shall be given and the subject of the meeting shall appear on the notification convening it.

XIX. Agenda for Meetings of the Committee

19. The agenda for meetings of the Committee shall be prepared by the joint Secretaries and shall be issued by the Secretaries to each member of the Committee at least four days before the meeting, except in the case of Special Meetings dealt with under item No. 18 hereof.

XX. Minutes

20. The joint Secretaries of the Committee shall prepare and issue to the members of the Committee minutes of its proceedings.

XXI. Sub-Committees

21. The Committee shall have power to appoint joint Sub-Committees to deal with any particular question. The joint Secretaries of the Committee shall function in connection with the work of any such Sub-Committee and prepare a report or minutes of the proceedings of such Sub-Committee for submission to the Committee.

XXII. Duration

22. This Agreement shall continue in force for one year, and from year to year thereafter, unless revised by mutual agreement on thirty days' notice by either party before the expiration of any one year.

.....
(Name of the Company)

.....
Local No. Canadian Union of
Boilermakers and Iron Ship-
builders.

PIECE "B" (EXHIBIT "B")

This Agreement dated the day of 1943, is entered into between the (Name of the Company) (hereinafter referred to as the "Company", and Local No. Boilermakers and Iron Shipbuilders Union of Canada, Quebec, affiliated with the Canadian Congress of Labour, or its successor (hereinafter referred to as the "Union.")

Article No. 1

Preamble and Recognition

(a) It is the intent and purpose of the parties hereto that this agreement will promote and improve industrial and economic relationships between the Company and its employees and to set forth the basic agreement covering hours of work and conditions of employment to be observed by the parties hereto.

(b) The Company recognizes the Union as the collective bargaining agency for the employees of the Company.

(c) The Company agrees that during the life of this agreement it will not recognize any bargaining agency other than Local No. 6, Boilermakers and Iron Shipbuilders Union of Canada, unless and until some other organizations demonstrate to the satisfaction of the Department of Labour of Canada that it represents the majority of employees involved.

Article No. 2

Employee

(a) The term "Employee" as used in this agreement shall apply to all employees of the Company excepting foremen, assistant foremen and persons of higher rank, watchmen or any salaried or confidential employees.

It is agreed that an employee shall be classed as a confidential employee who:

- (i) does work of a confidential nature.
- (ii) has occasion to make reports of the work of employees or certifies to the hours worked by other employees.
- (iii) has access to information which is not available on request to the public or other employees.
- (iv) has occasion to certify to or on behalf of the Company, particulars of goods disposed of or rendered to or by the Company to or by persons other than employees.

Charge hands shall be covered by this agreement.

(b) A temporary charge hand who directs and supervises the work of others and who may or may not work himself, depending upon the nature of the job, shall receive while so employed a minimum of five cents per hour over his regular hourly rate, .05 cents paid by Ottawa, Order in Council 629.

Article No. 3

Management

The Management of the plant and the direction of the working forces including the right to hire and discharge, is vested in the Company. However, should the union be of opinion that the suspension, layoff or discharge of any worker covered by this agreement has been unjustifiable the union may bring the matter before the company management for further investigation.

*Article No. 4**Rates of Wages*

(a) It is agreed that where an employee is assigned temporarily not exceeding seven days to perform work in a classification paying a lower rate than his own, he shall be paid his regular rate.

(b) Any employee performing work in a higher rated classification than his own shall receive the higher rate of pay while occupying the said higher rated position where practicable. Ability and seniority shall be considered before assigning men to those positions.

Article No. 5—Posting Notices

The Union shall have the right to post on notice boards provided on the property of the Company notices of meetings and such other notices as may be approved by the General Superintendent of the Company.

Article No. 6—Dirty Work

(a) Men performing what is recognized in the industry as dirty work shall receive time and a quarter while so employed.

(b) In the event of difference of opinion arising regarding dirty work, the matter shall be decided by reference to the grievance procedures set out in this agreement but no interruption of such work shall occur pending the decision on the question submitted.

It is understood that the term "dirty work" will not apply to ships under construction but will only apply to the repairing ships.

Article No. 7—Hours of Labour

(a) The regular working day starting and quitting time for single shift work, shall be anywhere between 7 hrs. A.M. and 6 hrs. P.M. with meal period 12 hrs. Noon to 1 hr. P.M. and shall be fixed as 8 hours.

(b) When nightshift is worked the hours of starting and quitting shall be agreed upon between the Company and the Union and said Agreement shall become part of this contract.

(c) In cases of emergency, when men are requested to work through their regular lunch period, they will be given their lunch period as soon as possible after the emergency has passed.

(d) Any work over 48 hours in one week from Monday to Saturday or in excess of twelve hours in any one day shall be paid for at the rate of time and a half, except where double time is payable provided that if overtime does not exceed fifteen minutes, it shall be paid for at straight time. (*For Morton Engineering & Dry Dock Company Limited*)

(e) Any work performed by day shift employees after 10 p.m. on any of the first five days of the week, after 5 p.m. on Saturdays, on Sundays and on the following Statutory Holidays shall be paid for at the rate of double time:

New Year's Day
St. John the Baptist Day
Epiphany
Labour Day
All Saints Day
Immaculate Conception
Christmas Day

Should any of the said holidays fall on Sunday, the day observed by the public will be treated and paid for as the holiday.

(*For Davie Shipbuilding & Repairing Company Limited and Geo. T. Davie & Sons Limited*)

(e) "Work performed on Sundays and the following statutory holidays shall be paid for at the rate of double time."

New Year's Day
St. John the Baptist Day
Epiphany
Labour Day
All Saints Day
Immaculate Conception
Christmas Day

Should any of the holidays fall on Sunday, the day observed by the public will be treated and paid for as the holiday.

(f) As far as practicable, excessive overtime shall be avoided. When overtime is worked it shall be distributed as evenly as possible among the employees capable of doing the work required. Employees desiring overtime will be given preference where practicable. Any employee who has worked four hours overtime on one day may decline to work for more than two hours overtime on the next day if he informs the foreman before leaving his regular shift.

(g) Time worked by men called out on emergency jobs at night shall be classed and paid for as overtime. Whatever the time worked, such employee shall receive at least the equivalent of four hours' pay at straight times rates.

(h) In the event of men being called for work and no work available or men not being notified before leaving the plant or before leaving home for work that they are laid off and they return to work on their next regular shift, they shall receive one hour pay at straight times rates.

(i) Sundays and legal holidays shall be considered as the 24 hours elapsing between midnight and midnight.

(j) If the necessity for increased production or greater efficiency requires the working force to be organized on a three-shift basis, the hours of work to be adopted shall be as agreed between the Company and the Union.

(k) A short signal whistle blast will be blown out ten minutes prior to the quitting hour whistle each day, in order to give employees an opportunity of cleaning up, and a short blast signal whistle will be blown five minutes before the starting whistle, in order to permit employees to be at their job promptly at the starting whistle time. Employees will be severely disciplined if this rule is not fully observed and in case of laxity in this regard the rule may be withdrawn.

Article No. 8—Seniority

(a) Ability being equal, seniority in employment with the Company shall be the governing factor in lay-off, rehiring, promotion and demotion.

(b) Employees who are laid off shall be given preference of employment when work which they are capable of performing is available in other departments of the plant and in such event shall be paid at the rate of the classification in which they will then be working.

(c) The Company shall have the right to give necessary training in view of a promotion to employees who are specially qualified to be trained for executive positions, as far as ability being equal, the seniority shall govern.

Article No. 9—Grievance Procedure

(a) Should differences arise between the Company and the Union or any of its members

employed by the Company as to the meaning and application of the provisions of this agreement, or should any other disputes arise in either of the plants of the Company, there shall be no suspension of work on account of such differences, but an earnest effort shall be made to settle the same in the following manner:

(b) The Union shall appoint a Grievance Committee of three, and the personnel of such Committee shall from time to time, as changes in the same may occur, be communicated to the Company.

(c) All grievances shall in the first instance be taken up with the foreman directly concerned. If the grievance affects one employee it may be presented as such employee desires, either directly by such employee in person or through a member of the grievance committee of the plant in which such employee is engaged. If the grievance affects a group of employees, the same shall be presented through a member of the grievance committee of the plant in which such employees are engaged; the foreman concerned shall communicate his decision to the employee or when the grievance has been presented by a member of the grievance committee, to such members of the grievance committee with the least possible delay after the submission of the grievance.

(d) Failing adjustment or settlement, the matter shall then be taken up by the Grievance Committee, or a sub-committee thereof, of the plant with the Superintendent or such other officer as may be called upon, who shall render a decision within three days after submission and communicate the same to the Committee.

(e) Failing adjustment or settlement, the matter shall then be taken up by the Grievance Committee with the General Superintendent of the plant at the next ensuing regular meeting with him as hereinafter provided and the General Superintendent or equivalent officer shall render his decision in writing within five days after such meeting.

(f) Where practicable meetings with the General Superintendents or their representatives, if there is business to be transacted, shall be held twice a month on the day at the time agreed upon subject, however, to the arrangement of special meetings to deal with any serious or emergency situation.

(g) Written notice shall be furnished to the General Superintendent of any grievance at least twenty-four hours before the time of the meeting at which the grievance is to be dealt with.

(h) The Grievance Committee shall be entitled to have present with it at any meeting with the General Superintendent one other representative of the Union and also the employee or one of the group of employees whose grievance or complaint is involved.

(i) Meetings or attendances of members of the Grievance Committee with Company Officials other than with the General Superintendent shall be on Company time if during their regular working hours.

Article No. 10—Discharge Cases

(a) In the event a member of the Union shall be discharged from his employment from and after the date hereof, and the Union believes that he has been unjustly dealt with, such discharge shall constitute a case arising under the method of adjusting grievance herein provided.

(b) In the event it should be decided under the terms of this Agreement that an injustice

has been dealt the employees with regard to the discharge, the Company shall reinstate such employee and pay full compensation at the employee's regular rate for the time lost. All such cases of discharge shall be taken up within five (5) days from the date of discharge and prosecuted to conclusion as rapidly as possible.

Article No. 11—Leave of Absence

(a) An employee selected by the Union for any Union position which requires him to leave the employ of the Company will be given leave of absence for the duration of such appointment or of holding of Union Office and the standing of such employee will be continued as if during the period of holding such Union office he was still working for the Company in the same classification as he was working when such leave of absence was granted.

(b) Upon the expiration of such Union duties and if and when employment in his classification is available, such employee will be given employment at the plant in his classification and upon his seniority standing provided that nothing in this article shall entitle an employee to a higher rate of pay than that he was receiving when his leave of absence began.

Article No. 12—Safety Sanitation and Health

(a) The Company shall make reasonable provisions for the safety, sanitation and health of its employees at the plant.

(b) Protective devices and other equipment for the purpose of protecting employees from injury shall be provided by the Company.

(c) It is mutually agreed that both parties hereto will co-operate to the fullest possible extent towards a prevention of accidents and the promotion of safety and health.

(d) All operating machinery and equipment will be inspected periodically by a proper officer of the company.

(e) All staging required to be constructed in dangerous places shall be constructed under the direct supervisions of a competent stager; or in the case of slung staging, a rigger.

Article No. 13—Military, Air and Naval Services

Any employee who enlists or is called into the Military, Naval or Air Services of the British Empire or her allies, while the British Empire is at war and who, within ninety days after his honourable discharge from such service, registers for employment with the Company, shall for the sole purpose of determining seniority rights under this agreement be deemed to have been in continuous service with the Company during the time that he was so engaged in the Military, Naval or Air Services of the British Empire or her allies.

Article No. 14—Payment on Leaving Service

Any employee being laid off or quitting of his own volition shall receive all wages and personal property on the next regular pay day—provided he has his tool clearance.

Any employee discharged for cause, shall receive all his wages and personal property within 24 hours, provided he has tool clearance on legal hours.

Article No. 15—Check-Off

The Company agrees to deduct from the wages of each employee, upon written request, the amount of dues payable to the Union, namely One Dollar per month, such dues to be

deducted weekly or monthly as may be arranged, and to remit said dues monthly to the representative of the Union designated by it.

Article No. 16—Closed Shop

No employee occupying a position governed by the terms of this agreement shall be retained in the service of the Company for a period exceeding thirty days except those who are members in good standing in the Union.

Article No. 17

In so far as any of the matters in this agreement are within the jurisdiction of the National War Labour Board this agreement is made subject to direction from time to time by the Board and no provision of this agreement shall be deemed to authorize or approve any act or action by either of the parties hereto which is illegal or contrary to the directions of the National War Labour Board or any Dominion legislation governing labour relations.

Article No. 18—Periodical Conferences

With the object of maintaining harmonious relations between the two parties, it is agreed that the representatives of the Company, and the Employees' Grievance Committee will confer periodically for the purpose of adjusting any problem that may arise under this agreement, or for the purpose of negotiating amendments to this agreement, or for the purpose of dealing with any cases of mis-application, non-application or interpretation of this agreement or for anything that could not have been foreseen.

Article No. 19—Expiration of Agreement

This agreement shall become effective on the day of 1943 and shall remain in effect for a period of one year and will continue from year to year thereafter unless terminated or revised on thirty written days' notice by either party signatory hereto.

Article No. 20—Obligations

All provisions and terms of this Agreement are hereby mutually agreed to, by and between the Morton Engineering and Dry Dock Company Limited and all members of Local No. 6, BOILERMAKERS AND IRON SHIPBUILDERS UNION OF CANADA, and signed by the representatives of the parties hereto who have been duly authorized to execute the same on behalf of the Morton Engineering and Dry Dock Company Limited and on behalf of Local No. 6, Boilermakers and Iron Shipbuilders Union of Canada, respectively.

The fulfilment of this agreement and that of any subsequent joint agreements entered into shall be fully observed by the Officers and Members of the Union and by the Company, and it is their duty to see that all such agreements are carried out both in the letter and spirit.

SIGNED ON BEHALF OF LOCAL NO. BOILERMAKERS, AND IRON SHIPBUILDERS UNION OF CANADA.

Minority Report

To:

The Honourable Humphrey Mitchell, P.C., M.P., Minister of Labour, Ottawa, Ont.

IN RE: Conciliation Board established in respect of disputes between Davie Shipbuilding and Repairing Company Limited, Geo. T. Davie & Sons Limited, and Morton Engineering & Dry Dock Company Limited, Employers: and Members of Locals 3, 7 & 6 Boilermakers and Iron Shipbuilders' Union of Canada, Employees.

REPORT AND RECOMMENDATIONS FOLLOWING HEARINGS OF A BOARD OF CONCILIATION AND INVESTIGATION IN THE ABOVE MATTER:

The Board of Conciliation having been established by the Minister of Labour, composed of Mr. Ernest Godbout, advocate, of Quebec, as Chairman, Mr. Guy M. Desaulniers, advocate, of Montreal, nominee of the employees and Walter A. Merrill, K.C., of Montreal nominee of the employers; the members of the Board met on the morning of the 19th of April, 1943, at Quebec, to discuss the procedure to be adopted and the suggestion that all three disputes be dealt with simultaneously in accordance with the issues of the parties and the Minister.

A first formal public hearing before the Board took place at 2.30 p.m., on the 19th of April, 1943, in the Court House, Quebec.

Mr. A. R. Mosher, on behalf of the employees, read and filed a brief setting forth the demands of the employees and reasons in support of such demands.

The Board decided to adjourn until Friday, April 23, to permit the employers to answer the brief of the employees.

The Board re-convened on Friday, April 23; all parties being represented, and the employers filed briefs in answer to the employees' brief.

The hearing lasted all day, and the following morning, April 24.

In the briefs of both parties, the matters in dispute resolved themselves into the following three subjects:—

1. Employees demand that wage rates in the three shipyards be raised to the level of those being paid for corresponding work in the shipyard operated by Canadian Vickers Limited, in Montreal;
2. The establishment of a closed shop;
3. The establishment of a Joint Production Committee.

At the outset, the representatives of the employers made it clear that, under no circumstances, would they agree to the establishment of a closed shop, but, at the suggestion of the Board, the parties agreed to meet on adjournment on April 24 to ascertain if

their differences on the other two matters in dispute could not in some manner be reconciled.

When the Board re-convened on Saturday, April 24, 1943, it was stated that the parties had been able to agree in regard to the following:—

(1) *That* the Companies and the Union will join in making representations to the National War Labour Board, expressing the opinion that the existing differentials between rates of pay and cost of living bonus as in shipyards in Montreal and those in Quebec City and Lauzon, are not now justified; the union contending that the entire spread and differential should be wiped out, the Companies contending it should be wiped out only in part.

(2) *That* the rates at Quebec and Lauzon should be increased; an effort will be made as soon as possible to reach an agreement as to the rates that should prevail at Quebec and Lauzon. And in case such agreement is arrived at, the parties will join in attempting to have the same approved by the Board but failing an agreement, the parties reserve the right to make their respective representations to the Board on the question.

(3) *That* the Companies and the Union will execute joint production committee contracts in the terms of the draft contracts submitted by the Employees with their Applications for Boards of Conciliation, subject to such changes as may be mutually agreed upon.

The parties and the Board then took up paragraph by paragraph a draft agreement which had been prepared as a basis of agreement between the Union and the employers, which—after certain changes and amendments had been made—met with the approval of all the parties, with the exception of three clauses; one dealing with wages affecting overtime in the Morton Shipyards and the two others with closed shop.

(i)

OVERTIME

As regards the question of overtime, the three Companies were prepared to join in an application to the National War Labour Board and agree to time and one-half in excess of 48 hours per week.

The employees insisted, however, that because the Morton Shipyard were at present paying double time for overtime after 10 p.m., or 5 p.m., on Saturdays, all the Companies should pay time and one-half for overtime in excess of 48 hours per week and double time for overtime after 10 p.m., or 5 p.m., on Saturdays.

The Union absolutely refused to compromise in this respect, notwithstanding the offer of the Companies to insert clauses in the two Davie contracts embodying the conditions presently existing in these two yards as to

pay for overtime and a different clause in the Morton Shipyard contract embodying provisions to conform to the rates of pay for overtime presently existing in this latter shipyard.

The employers were prepared to concede that, in addition to payment of time and one-half in excess of 48 hours per week, to pay time and one-half in excess of 12 hours in any day. As it had been the practice of the Morton Shipyard to pay double time after 10.00 p.m., or 5.00 p.m., on Saturdays, the employees of the Morton Shipyard insisted on retaining this in addition to what the employers were willing to concede.

The matter was thereupon left in the hands of the Board to consider and, if thought fit, to make its recommendation.

As the matter of wages and overtime is one exclusively within the jurisdiction of the National War Labour Board, and it has been agreed between the parties, as already stated, to join in an application to the National War Labour Board in respect to the question of wages and cost of living bonus paid in Quebec and Montreal, it would seem that the proper course to pursue is not to make any recommendation in this regard, but permit the matter to be dealt with by the only authority which can render a decision which will in any manner bind the parties.

(ii)

CLOSED SHOP

Mr. Mosher, on behalf of the employers, emphatically stated that the employees insisted on nothing less than a closed shop, and it was stated with equal emphasis by the representatives of the Companies that under no circumstances would a closed shop be agreed to.

It was admitted and is indeed a fact that a closed shop at this time and in the present stage of developments of the three shipyards would necessarily involve the dismissal of a certain percentage of employees who are not members of the Union or who would refuse to become members.

The employees submitted that a closed shop would give the Union greater control and make for greater efficiency and discipline, while at the same time doing away with discrimination as between Union and non-Union workers, thus creating harmony in the plant.

The employers, on the other hand, submitted that it was not the function of a Board of Conciliation to rule upon or make recommendations in this regard, as the matter was entirely one for decision by the employers in the conduct of their business, that it was undemocratic and, under present war conditions, impracticable.

As regards the question of control and discipline of employees, the Companies submitted the following clause, which they were prepared to insert in any agreement they entered into with the Union:—

"In order that the Union may be assisted in exercising over its membership such measure of control as may be necessary to enable it to carry out the purposes of the present agreement as set forth in Article No. 1 hereof, both the Union and the Company will collaborate and co-operate either through the Grievance Committee or otherwise in fully and impartially investigating any cases where employees of the Company, whether members of the Union or not, have acted in a manner contrary to the spirit and intent of the present agreement as regards the proper keeping up of production or the maintaining of efficiency or harmonious relations between the Company and its employees and the Company will either discharge or suspend from its employ any worker who, in the opinion of the Company and after joint investigation by the Union and the Company, is considered to have acted in a manner inconsistent with the letter and spirit of the present agreement but this Article shall not apply to any complaint based solely upon differences of opinion between the employee and the union as regards purely Union matters."

This clause would appear to give the Union, with the co-operation of the employer, such measure of control over all employees as would be ample and the authority granted in the clause to the Union commensurate with its interest, as, after all, the employer is assumed to be the owner of the business and should have some say as to whom he shall hire and fire.

It is questionable whether a closed shop might not even be considered illegal as contrary to the provisions of the National Selective Service Regulations, as for example if, in the event of an emergency, it became necessary to transfer a number of employees of other plants, who are members of other Unions or who refuse to join any Union, to the Lauzon Shipyards who have a closed shop agreement with the Canadian Congress of Labour, could either the Shipyards or the Union refuse these men employment in order to carry out the closed shop agreement?

The attention of the Board was drawn to Order-in-Council of the Province of Quebec No. 1012, dated the 14th of April, 1943, a copy of which was filed, and although this Order-in-Council is applicable to the Pulp and Paper Industry only, it, nevertheless, expresses the principle which has always been recognized, at least in the Province of Quebec, that a closed shop would be considered an interference with the liberty of a workman to freely engage in his occupation where his work and services are required.

It must be borne in mind that the Davie Shipbuilding and Repairing Company Limited and its Employees, Members of Local No. 3 Boilermakers and Iron Shipbuilders' Union of Canada, as the result of the Gillanders Board of Conciliation are bound until the termination of the War by the recommendations contained in that report, to which they unanimously agreed, and that any matters already submitted to and dealt with by that Board are no longer open to investigation and recommendation by the present Board.

The subjects dealt with by the Gillanders Board of Conciliation, and agreed upon, can only be changed or amended by mutual consent of the parties.

It should be pointed out that as regards Morton Shipyards, Local No. 6 Boilermakers and Iron Shipbuilders' Union of Canada has been operating in the plant for less than three months, as was stated in evidence by the President of the Local.

RECOMMENDATIONS

The Board, having succeeded in its task of conciliating the parties on two of the three matters in issue, the undersigned is of the opinion that the following recommendations should be made:—

1. *That* the three Companies and the Union be permitted to join in an application to the National War Labour Board for the purpose of making representations relative to the differential in wages and cost of living bonus between the Shipyards in Quebec and the Shipyards in Montreal, and that the question of payment for overtime be included in such Application.

2. *That* a closed shop in the three Shipyards would, in the opinion of the undersigned, not only preclude the Companies from engaging skilled and unskilled Non-Union workers in a rapidly diminishing labour market, but would also be a cause of continual discord between the Union and the Employers, who have declined to enter into an agreement with the Union in this respect, and therefore the undersigned is of the opinion that a closed shop should not be recommended, but, as an alternative, the undersigned recommends that the following clause, which has been submitted by the Employers, should be included in any agreements between the Union and the three Shipyards:—

"In order that the Union may be assisted in exercising over its membership such measure of control as may be necessary to enable it to carry out the purposes of the present Agreement as set forth in Article No. 1 hereof, both the Union and the Company will collaborate and co-operate either through the Grievance Committee or otherwise in fully

and impartially investigating any cases where employees of the Company, whether members of the Union or not, have acted in a manner contrary to the spirit and intent of the present agreement as regards the proper keeping up of production or the maintaining of efficiency or harmonious relations between the Company and its employee, and the Company will either discharge or suspend from its employ any worker who, in the opinion of the Company and after joint investigation by the Union and the Company, is considered to have acted in a manner inconsistent with the letter and spirit of the present agreement but this Article shall not apply to any complaint based solely upon differences of opinion

between the employee and the Union as regards purely Union matters."

3. That the three Companies and the Union execute Joint Production Committee Contracts in the terms of the draft Contracts submitted by the Employees with their Applications for Boards of Conciliation, subject to such changes as may be mutually agreed upon.

Quebec, P.Q., May 4, 1943.

The whole respectfully submitted:

(Sgd.) Walter A. Merrill

Member of the Board.

Report of Board in Dispute between the Consumers' Gas Company, Toronto, Ont., and its Employees

On May 5 the Minister of Labour received a unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the Consumers' Gas Company, Toronto, Ont., and its employees, members of Local 12291, District 11, United Gas, Coke and Chemical Workers of America (LABOUR GAZETTE, Jan. 1943, p. 69).

The personnel of the Board was as follows: His Honour Mr. Justice J. G. Gillanders, Supreme Court of Ontario, Toronto, Chairman, appointed on the joint recommendation of the other two members; Messrs. V. A. Sinclair, K.C., and Mr. Drummond Wren, both of Toronto, appointed on the nomination of the employers and employees respectively.

The unanimous report of the Board follows.

Report of Board

Re Industrial Disputes Investigation Act and re dispute between the Consumers' Gas Company of Toronto, Ont., and its employees, members of Local 12291, District 11, United Gas, Coke and Chemical Workers of America.

To The Honourable Humphrey Mitchell,
Minister of Labour, Ottawa, Ontario.

The Board of Conciliation and Investigation appointed by you in this matter begs to submit its report.

Sittings were held in Toronto, Ontario. The applicant Union was represented by Mr. Bora Laskin as counsel, and Mr. H. Leach, president of the applicant local Union; Mr. R. F. Wright, vice-president of the applicant local Union, and Mr. W. Edmiston, International Representative of the United Gas, Coke and Chemical Workers of America. The Company was represented by Mr. Edward J. Tucker, general manager of company, and Mr. Powell, superintendent of personnel of the company.

In view of the provisions of sec. 42 of the Act, it should be noted that the company representatives and the Board consented to have Mr. Laskin appear as counsel on behalf of the applicant Union.

The nature of the dispute referred to the Board as shortly stated in the application by the Union for the Board's establishment is:

The refusal (by the Company) to negotiate any form of closed shop agreement or check-off system of dues collection, or to consider any wage increases or adjustments or to permit the office workers to be covered by the terms of the proposed agreement.

It is admitted by both parties that any question of wage increases or adjustments is a matter for the Regional War Labour Board, and that this Board has no jurisdiction in that respect.

In so far as the dispute involves a demand for a closed-shop agreement and provision for a check-off system of dues collection, if the question was open there might be room for argument whether or not either of these matters constituted a dispute within the provisions of the Act. That point was not raised by either party and, in fact, is not open before this Board, in view of the fact that the Board has been established on the Minister being satisfied that the dispute is one to which the provisions of the Act apply. It has not been brought to the Board's attention that either of these questions, *i.e.*, a demand for a closed shop agreement and a check-off system of dues collection, has previously been the subject of a reference to a Board of Conciliation established under this Act.

FACTS

Before discussing the questions raised either in principle or in application to the situation here, it is convenient to make a brief state-

ment of the facts concerning the history of the Company and its labour relations.

The Company was incorporated March 23, 1848, for the purpose of manufacturing and distributing gas in the city of Toronto. Subsequently, it was authorized to extend its operations to adjacent suburban territories and the area now served extends some 17 miles from east to west and 8 miles from the city's water-front to the north. Since incorporation the Company has maintained its corporate identity. There have been no financial re-organizations of any kind, no subsidiary companies have been formed, and no alliance arranged with other institutions. It is subject to a large measure of public control. This embraces among others the following points:

- (a) statutory restriction of profits payable to shareholders;
- (b) compulsory selling of its capital shares in the open market by tender to the highest bidders;
- (c) restriction on the accumulation of a general reserve out of profits;
- (d) annual auditing by the auditor of the City of Toronto; and
- (e) the presence of the Mayor of Toronto on the board of directors.

It is said that employment with the Company has had the desirable feature of permanence not only over the years but in the main from week to week.

The following statement shows the service records of the employees concerned in the present dispute:

Years of Service	Distribution, Meter Readers, and Lockmen			Per Cent of Total
	Production	Total		
2 or less	31	112	143	21.4
3 to 9	44	42	86	12.9
10 to 20	92	141	233	34.8
Over 20	66	141	207	30.9
	233	436	669	100.0

The following statement shows the number of employees in various age groups:

Years of Service	Distribution, Meter Readers, and Lockmen			Per Cent of Total
	Production	Total		
Under 40	66	134	220	32.9
40 to 49	57	97	154	23.0
50 to 59	61	128	189	28.3
60 and over	29	77	106	15.8
	233	436	669	100.0

Over 67 per cent of the men employed are forty or more years of age and 66 per cent have ten or more years of service to their credit. Of these employees who are forty years of age and over, nearly 90 per cent

have been in the Company's service for ten years or more. These figures do not include 81 permanent employees now serving in Canada's active service forces. The average age of this group is thirty-four years, and their length of service with the Company averages ten and a half years each. In accordance with the provisions for re-instatement under the Civil Employment Act, 1942, this group will be entitled to re-employment at the termination of their military service. In addition, there is a group of 30 employees serving in His Majesty's Forces who were employed by the Company after the declaration of war and are, therefore, in the category of temporary employees. The rights of these men to re-employment according to seniority should be preserved.

Relations between the Company and a portion of its employees have been the subject of collective bargaining agreements at least since April 1, 1939. An agreement was made covering approximately 240 employees of the distribution and meter departments which was in effect from April 1, 1939, to March 31, 1940. This was replaced by another agreement covering the same employees, effective to September 30, 1941. As of October 31, 1941, a new agreement was executed between the Company and the applicant Union in respect of approximately 669 employees of the distribution, meter and gas production departments.

The applicant Union was formerly affiliated

with the United Mine Workers of America. When this organization withdrew from the

Congress of Industrial Organization (C.I.O.), the local Union severed its connection with the U.M.W.A. and affiliated with the United Gas, Coke and Chemical Workers of America, which was organized in September, 1942, and

affiliated with the C.I.O. The membership of the local Union was substantially identical before and after transferring its affiliation from the U.M.W.A. to the newly organized United Gas, Coke and Chemical Workers of America.

There are approximately 660 employees engaged in the distribution, meter and gas production departments of the Company. Of these at least 52 in number are not members of the applicant Union.

THE CLAIM FOR A CLOSED SHOP

Both parties made able and helpful submissions to the Board in connection with the principle of the closed-shop and the check-off of Union dues which the applicant Union sought to be incorporated in their proposed agreement.

It is not desirable in this report to discuss these questions exhaustively, but it is necessary to indicate clearly what they involve and the practical application of what is sought to the facts in question. As pointed out to the Board the term "closed-shop" is not a term of art, but is one of convenience. Various forms of what may be called a closed-shop were discussed:

- (a) A closed-shop in its more restricted sense where, by agreement, the Company binds itself to employ only Union members and employees must become and remain Union members to retain their employment.
- (b) It also may be said to include what is more correctly termed a "union shop" in which non-members may be employed, but to retain employment must within a fixed period become and remain Union members.
- (c) A broader, but somewhat related, form of agreement called the "preferential shop" agreement contains provisions whereby Union members are given preference in hiring, lay-off, or other matters that may be more specifically set out in the agreement.

A further provision termed the "membership maintenance clause" was also discussed. This cannot be called a closed-shop provision. A form of this clause has recently found favour with the National War Labour Board in the United States. This, in short, is a provision in the agreement whereby within a fixed period all employees are free to decide whether or not to remain in the Union. Those who decide to retain union membership are bound to remain members in good standing during the currency of the contract.

Considerable information was given to the Board respecting the history of closed-shop agreements, and various types and examples of such agreements both in Canada and elsewhere were discussed. Among submissions

made in support of the principle of closed-shop agreements were:

- (1) That it would eliminate strife and dissension among the workers themselves by making the Union the exclusive permanent agent for all workers, or, to borrow from the written submission of the Union, "the closed-shop would eliminate a deep source of friction that exists by organizing union parasites to receive benefits without responsibility and who are potential instruments of dissension to be used by opponents of the Union;"
- (2) That it makes for better control and discipline; the Union being in a position to exercise a large measure of control over all workers;
- (3) It eliminates repeated demands for concessions made for the purpose of holding membership;
- (4) Again, to quote from the applicant Unions brief: "A closed-shop is the consummation of the Union's desire to be recognized as a partner in industry consistent with true democracy."

On the other hand, among the objections urged to such a policy are:

- (1) It interferes with the fundamental democratic right of every worker to decide freely for himself whether or not he desires to become a member of a labour union;
- (2) It puts the economic freedom of each employee in the hands of the Union by making his continued employment conditional on remaining a member of the Union in good standing;
- (3) It deprives management of the right to select its own employees and tends to create a labour monopoly.

Beyond stating the matter briefly, it is unnecessary to consider the various points except in so far as they are important in relation to the facts of the particular case in hand.

In giving consideration to the matter of a closed-shop the Board noted that while the Company, opposing the request, and the Union, urging a recommendation in favour of a closed-shop, were both before the Board, the persons who would probably be most vitally affected by such an agreement, that is, the non-union employees, were not represented.

In view of this fact the Board felt that their views should be recorded. On the Board's suggestion, and with the willing co-operation of both the Company and the Union, an invitation and opportunity was afforded to non-union employees to record in writing their reasons for preferring to remain non-union. In response to this invitation 44 non-union employees recorded their reasons in writing. These are illuminating. A number of the employees gave more than one reason. As some

indication of the trend of the answers received. It may be noted that:

- (a) 21 indicated by answers that they were not interested in union membership;
- (b) 10 indicated they object to compulsion in being forced to join a union to retain their jobs;
- (c) 9 indicated some objection to the Applicant Union or its affiliation;
- (d) 6 objected on religious grounds;
- (e) 3 objected to the expense or payment of dues.

A number of those answering gave the length of their service with the Company. These answers indicated:

- 1 had been an employee only 2 weeks;
- 1 for six years;
- 3 from 10 to 20 years;
- 10 from 20 to 30 years;
- 4 for 30 years or over.

In so far as the Company's employees who are now on active service with His Majesty's Forces are concerned the applicant Union did not suggest that they should, or would, be in any way affected by any proposed closed-shop agreement, and agreed that they should be excluded from its provisions.

Keeping in mind, among other considerations, the length of service, the reasons given for desiring to remain non-union by the present non-union employees, it seems abundantly clear that no instrument of compulsion should be used which would make their continued employment with the Company dependent on their membership in a union against their will. Under the circumstances, to do so would be clearly unjust and inequitable. In fact representatives of the applicant Union during the discussion indicated they did not ask that such employees be affected, and agreed that all present non-union employees, whether now in His Majesty's Forces or not, be excluded from the operation of the agreement which they proposed. They urged, however, that it be applied to new employees.

Order in council No. 2685 stating and approving certain principles "for the avoidance of labour unrest during the war" enunciates (inter alia):

- "6. That employees should be free to organize in trade unions, free from any control by employers or their agents"
- "9. That workers, in the exercise of their right to organize, should use neither coercion nor intimidation of any kind to influence any person to join their organization."

Under any circumstances strong reasons should be shown for compelling a workman against his wish to become a member of a union if he wishes to accept or continue in employment for which an employer wishes to engage him or keep him. In the present circumstances, however, it is unnecessary to

generalize further. There is at the present time an acute shortage of man-power owing to war-time conditions. It would be against the national interest to incorporate any provisions in an agreement which might operate to deter any man from accepting and doing a job where he could be useful.

The Company is engaged in supplying an essential commodity to the public. Representatives of the applicant Union fully realize the importance of the services being rendered, and take commendable pride in the contribution which their members are making in various ways to the war effort. The consideration that a closed-shop provision might operate to limit in any way the man-power that would otherwise be available to the Company in the present emergency must be paramount to all other considerations. It therefore seems unnecessary to analyze the various submissions that might otherwise be considered for or against the principle of a closed-shop.

CHECK-OFF

The question as to the compulsory check-off of union dues in the absence of any provision for a closed-shop is one on which no recommendation should be made. If some, or all, of the present member of the applicant Union desire to have the Company check off their union dues, and the Company is willing to accede to such a request and satisfied with the authority presented, that is a matter that could well be worked out by negotiation between the parties. No recommendation is made by the Board.

MEMBERSHIP MAINTENANCE CLAUSE

During the course of the negotiations before the Board the sittings were adjourned to permit the parties to discuss between themselves the possibility of agreeing upon a membership maintenance clause that would be satisfactory in form to both parties. Although the parties were unable to agree upon the form of such a provision in principle, both parties indicated that it has some merit. If freedom of choice is given to each new employee at the outset, either to stay out or become a member of the Union, it seems reasonable if he joins that he should be bound to remain as such and support the bargaining agency he has chosen during the currency of the contract entered into by the Union.

Representatives of the Union on behalf of their organization and its members zealously urged the inclusion of a provision for a closed-shop. While this is not recommended under the circumstances here, it seems fair that the

members of the Union as of the date of the agreement should be bound to remain members of the Union during the currency of the agreement negotiated.

A maintenance of membership provision is not uncommonly joined with some covenant on behalf of the Union against strikes during the term of the agreement. The Board recommends that the parties negotiate a new collective agreement embodying herein maintenance of membership provisions and an appropriate covenant by the Union against strikes during the currency of the agreement. In case the parties are unable to agree upon the form of a satisfactory maintenance of membership clause, the Board recommends a clause in the form of Appendix "A" attached hereto.

OFFICE EMPLOYEES

Among the requests of the Applicant Union was the claim that the office workers should be covered by the terms of the proposed collective agreement. In the past this has covered only employees of the Distribution, Meter, and Production Departments. During the course of the hearing the Board expressed the opinion to the parties that the office workers and clerical employees, excluding in a general way officers, officials, and persons employed in a confidential capacity, should not be included in the same bargaining unit with those covered by the present agreement, but should constitute a separate appropriate bargaining unit. It was further suggested that a vote be taken of the office employees to determine whether or not a recommendation should be made that a collective agreement be negotiated on their behalf through the Union.

At the request of the Board the Department of Labour conducted a vote of such employees. The ballot submitted was as follows:

"Re Industrial Disputes Investigation Act and Re Dispute between The Consumers' Gas Company of Toronto, Ont., and its Employees, Members of Local 12291, District 11, United Gas, Coke and Chemical Workers of America.

- (1) Are you a member of Local 30, District 11, United Gas, Coke and Chemical Workers of America?

Answer: Yes

No

- (2) Do you wish to negotiate a collective agreement with your employers through Local 30, District 11, United Gas, Coke and Chemical Workers of America?

Answer: Yes

No

(Place an "X" opposite the answer you desire to give in each case)".

Briefly the result of the vote was that out of 235 employees voting on the question, after deleting spoiled ballots or answers, 85 answered Question No. 1 "Yes" and 141 answered "No", indicating that out of 235 employees only 37.8 per cent indicated that they were members of the Applicant Union. In answer to Question No. 2, out of 235 the same number of employees voting after deleting spoiled ballots 126 voted "Yes" and 108 voted "No" indicating that out of the same number of employees a majority, being 53.6 per cent expressed the wish that the applicant Union negotiate a collective agreement on their behalf.

In the absence of any statutory provisions or recognized rules as to what the result should be under these circumstances the result raises questions of some difficulty.

After consideration of all the circumstances of this particular case, including the result of the vote taken, it is recommended:

- (1) That the office employees be recognized as a separate appropriate unit for the purpose of collective bargaining;
- (2) That if under the circumstances the applicant Union desires to assume the responsibility of entering into a collective agreement on behalf of the office workers, that the Company and the Union negotiate with a view to the conclusion of such an agreement.

The Board wishes to express its thanks and appreciation to the representatives of both the Company and the Union for the co-operation and able assistance rendered.

All of which is respectfully submitted.

Dated at Toronto, this 29th day of April, 1943.

APPENDIX "A"

Re Industrial Disputes Investigation Act and Re Dispute between The Consumers' Gas Company of Toronto, Ont., and its Employees, Members of Local 12291, District 11, United Gas, Coke and Chemical Workers of America.

Suggested Form of Maintenance of Membership Provision

Every employee who is a member of the Union in good standing as of this date must, as a condition of employment, maintain his membership in good standing in accordance

with the Constitution and By-laws of the Union for the term of this agreement.

It is understood that every employee who is not a member of the Union, and every new employee, is to be free to decide whether or not to join the Union. If any such employee in any Department of the Company affected by this agreement hereafter joins the Union and becomes a member in good standing, he must, as a condition of employment, maintain his membership in accordance with the Constitution and By-laws of the Union for the term of this agreement.

The Union will promptly furnish to the Company a list certified by a statutory declaration of one or more of its responsible officers of its members in good standing as of this date. The Union will furnish similar proof from time to time respecting employees who may become members of the Union during the term of the agreement.

If any employee on such list or lists asserts he was not a member of the Union as of this date, or withdrew therefrom prior to this date, or that he is not a member of the Union in

good standing and any dispute arises, the question shall be decided by an arbitrator appointed by the Minister of Labour for the Dominion of Canada, and the decision of such arbitrator shall be final and binding on the Union, the employee, and the Company.

The Company agrees that there shall be no discrimination against any employees because of union or non-union membership. The Union agrees that neither it nor any of its officers or members will intimidate or coerce employees into membership in the Union; and, further, that there shall be no solicitation of employees for Union membership or dues in working hours on Company premises or at their place of employment. If any dispute arises (as to whether there has been any violation of this pledge or whether any employee affected by this clause has been deprived of good standing in any way contrary to the constitution and by-laws of the Union), the dispute shall be regarded as a grievance and submitted to the grievance machinery provided in the agreement for final determination.

Report of Board in Dispute between the Babcock-Wilcox & Goldie-McCulloch Ltd., Galt, Ont., and its Employees

On May 25 the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Babcock-Wilcox & Goldie McCulloch Ltd., and its employees, members of Local 2859, United Steelworkers of America (L. G. April 1943, p. 471).

The personnel of the Board was as follows: His Honour Judge James Parker, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette, appointed on the nomination of the employer and Mr. F. Andrew Brewin, appointed on the nomination of the employees. All three reside in Toronto.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette. Mr. F. Andrew Brewin submitted a minority report.

The texts of the report of the Board and the minority report follow.

Report of Board

To the Honourable The Minister of Labour.
Re: Industrial Disputes Investigation Act, and re dispute between the Babcock-Wilcox and Goldie-McCulloch, Limited, and Local 2859 United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held meetings at Galt and Toronto. At the sittings in Galt written submissions were filed and read,

oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by Robert F. Wilson and David J. Woods, President and Financial Secretary, respectively, of Local 2859, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by W. A. Osborne, General Manager, Hugh McCulloch, President, and J. C. Baird, Personnel Manager.

The sole question for determination is whether or not the company should be compelled to recognize this union as a collective bargaining agent of its employees.

This company has been in business in Galt since 1859 and has always enjoyed harmonious relations with its employees.

No suggestion or proof of any grievance on the part of the employees has been made, except with reference to the question of union recognition. The company has not refused to negotiate a collective bargaining agreement with all its employees, but urges that it should not be called upon to recognize this union as a collective bargaining agent of its employees.

The books of the Union would indicate that the union claims a membership of approximately 53 per cent of the total number of eligible employees of the company.

Shortly after this union commenced its activities in the City of Galt, about the first

of this year, a large number of the employees formed an employees' association, which, according to the evidence of one worker, was formed to combat the strike-minded attitude of the union.

It would also appear that in this instance the field representative of the union adopted tactics to persuade employees to become members of the union, which, to say the least, were not commendable.

Therefore, considering the fact that no substantial grievance in working conditions has been suggested and that the union claims but a bare majority of the total number of employees in the plants, we are of the opinion that no recommendation for union recognition should be made in this case.

All of which is respectfully submitted.

(Sgd.) J. PARKER, *Chairman*.

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the dispute between Babcock-Wilcox and Goldie-McCulloch, Limited, Galt, Ontario, employer, and its employees, members of Local 2859, United Steelworkers of America.

This is the first of nine disputes in nine different plants in the City of Galt which have been referred, under the provisions of The Industrial Disputes Investigation Act, to Boards of Conciliation, all of which are constituted as in the present case. All of these nine plants are engaged in whole or in part in the manufacture of various steel products for war purposes.

In all of the disputes the sole question is whether or not the various employers should recognize various local unions of the United Steelworkers of America as the collective bargaining agencies on behalf of their employees or some of them.

Each case must be dealt with on its merits but, as there are some features which are common to all, I will refer to them in this report but not repeat them in the other eight reports.

I would have found no difficulty in making a very brief report in all of these cases. I would have thought that it would have been sufficient to point out that in each one of these cases a majority of employees desires to be represented by the various locals of the United Steelworkers of America and that, therefore, in each case the provisions of P.C. 2685, which sets out the wartime policy in these matters of the Dominion of Canada, the public policy of the Province of Ontario as set

out in the recent Collective Bargaining Act, the dictates of common sense and industrial practice in all civilized industrial countries alike required the employers to accept the wishes of the majority of their employees and I would, therefore, have recommended recognition of the unions as bargaining agencies on behalf of the employees in the respective plants without more ado. But, as my colleagues in some cases take a contrary view and in all cases a somewhat different view to mine, I have found it necessary to go into the matter at greater length.

Trade unionism seems to have been more or less new to both the employers and employees in these various plants in the City of Galt. However, when in November and December, 1942, an opportunity arose to join an industrial union, the majority of employees in each of the nine plants very soon became members of various locals of the United Steelworkers of America. Written requests for appointments for the purpose of collective bargaining were then presented by the unions to the various employers, accompanied in most cases by a draft agreement. This draft agreement contained clauses dealing with the maintenance of membership and check-off, which seem to have aroused the alarm of the employers and which had been put forward as a reason for their refusal to accept the unions as collective bargaining agencies. It was made clear, however, in the correspondence and throughout the hearings before the Board that these draft agreements were put forward merely as a basis for negotiation and that the unions would probably not have insisted upon these clauses remaining in the contract if, after discussion of their advantages, the employers remained unwilling to accept them. The employers, however, in every instance rejected the request of the union for a meeting and they have ever since, without exception, remained adamant in the view that they will not negotiate with, or recognize, the union.

The submissions of the companies have indicated some individual reasons for their objection to entering into collective bargaining agreements recognizing the unions. However, I am sure that the concerted refusal of all these employers even to discuss the matter with union representatives is caused not so much by any of the reasons put forward in the formal argument but rather upon a common suspicion as to the purposes and methods of industrial unions. This suspicion is based not upon actual knowledge or experience of the unions but upon the mischievous myths which are sometimes current as to the alleged financial irresponsibility of unions, their sup-

posed propensity to violence and intimidation, their supposed exclusive interest in dues, and their alleged practice of sending money out of the country and being unwilling to abide by negotiated contracts.

It was my hope that during the course of the proceedings before the Board the employers would see that these myths were without foundation in fact and would recognize that the United Steelworkers of America was a responsible organization which had contracts with innumerable companies, large and small, both in this country and the United States of America, including Crown companies and many of the greatest industrial war plants in this country, contracts whose mutual benefits and whose loyal observance were indicated by renewals from time to time. I hoped that they would realize that their fears and suspicions were groundless and that recognition of the union would be helpful, not only so as to maintain a satisfactory relationship with their employees but also so as to increase production, a consequence which naturally flows from the sense of partnership where there is genuine collective bargaining.

Unfortunately, however, the various employers have taken a different point of view. They have almost without exception and in various degrees encouraged the formation of employees associations as an alternative to, and a defence against, recognition of the Steelworkers Unions. In no case, however, have these employees associations been able to secure the support of a majority of the employees or win away from adherence to the union more than a handful of members despite the encouragement, greater in some cases than in others, that they received from the various employers. This is significant in determining what seems to me the crucial question, and that is, what is the effective will of the employees or their preference as to a bargaining agency on their behalf.

I would commend heartily to all the employees in these cases and their advisers the words of Mr. Justice McTague, Chairman of the National War Labour Board, in a recent speech at Montreal: "It is my view that industry's day of being paternalistic and deciding by direct or indirect means just what type of union it will deal with has long gone by."

The Government of Canada, by P.C. 2685, reaffirmed in P.C. 10802 and in innumerable pronouncements by the Government spokesmen, have laid down the principle that the proper basis for industrial peace and full war production is the conclusion of collective bargaining agreements with the representatives chosen by employees free from any control

by employers or their agents. This principle in my judgment can only be made effective by observing the rule that the choice of the majority as to the collective bargaining agency must prevail. It is impossible to have effective collective bargaining with a number of different agencies in the same unit. The whole practice of collective bargaining will be impossible if the right of the majority to choose the representatives of all the employees is not recognized.

Since this Board was constituted the Legislature of Ontario has clearly recognized this principle in the recently enacted Collective Bargaining Act. This is the law in this province and lays down the public policy of the province, which it seems to me should be given effect to unless it is inconsistent with some Dominion Statute or Order-in-Council. In my opinion it is clearly not inconsistent. By this Act a bargaining agency selected by a majority of employees in the unit concerned is entitled to be certified and then the employer must bargain collectively with that agency representing the majority *in respect to his employees in the unit (without exception)*.

It is true that to obtain the advantages of enforcement conferred by the Ontario Act it is necessary to apply for certification by the Labour Court of Ontario. It seems to me, however, that recommendation of a Board of Conciliation in this province should be consistent with the principles that will no doubt be applied by the Ontario Labour Court in administering that Act and that any recommendation of a Board that is inconsistent with the Ontario Act will only lead to a prolongation of the dispute involved.

I therefore conclude that, in accordance with the policy laid down by the Dominion Government, the public policy of the Province of Ontario and what I think are the dictates of common sense in these days of industrial development, wherever a majority of employees has clearly evinced their preference for a particular bargaining agency, then that preference should be accepted by the employer. Unless there is some clear and overriding reason why this general principle should not apply, I would have thought it the clear duty of a Board of Conciliation, once it has ascertained the wishes of the majority of the employees, to recommend that those wishes be accepted by the employer.

In every one of these cases there is no dispute that the local union of the Steelworkers has a majority of the eligible employees as its members and, therefore, I feel bound by reason of the principles set out above to

recommend recognition unless the evidence discloses some reason why the normal salutary rule that the will of the majority is to prevail should be disregarded.

I understand that in several of the nine cases with which we have to deal, including this case, my colleagues are unwilling to recommend recognition of the union and that the consideration which have moved them to this conclusion are in general terms as follows:—

- (a) The majority of eligible employees who are members of the local union is a bare majority;
- (b) There are no grievances in regard to wages or conditions which require to be rectified through the representations of a union;
- (c) In some cases there was an illegal stoppage of work for some hours at the time a vote was taken of the members of the union upon which the application for the Board of Conciliation was based;
- (d) Some reference appears in the majority report to the tactics of the union representative in securing membership not being commendable. This is so vague a reference that I am quite unable to deal with it. A suggestion was made in some of the briefs to the effect that there were misrepresentations as to the possibility of unions securing wage increases for their members. Although the matter was referred to in the submission of some of the employers, in no single case were the particulars of any alleged misrepresentation put before the Board or any substantiation of the charge attempted. We were not told what was said, by whom, or to whom. No court or any other responsible tribunal can, it seems to me, base its decisions on allegations of misrepresentation or misconduct of which there are neither particulars nor proof.

(a) I am at a loss to understand why the fact that the majority of employees in the union is only a small majority is any reason why recognition of the union should not be recommended. As I have said before, the democratic rule of the choice of the majority seems to me the only practicable and feasible method of arriving at effective collective bargaining. It also seems to me to have the sanction of practice and of the public policy of the Province of Ontario. While it would obviously be more satisfactory if the majority were a large one, the fact that it is not so large does not seem to me to effect the principle involved at all.

When, after an election, a government is formed by a party representing a small majority or even a minority of the electorate, those who voted against the party forming the government nevertheless accept and are bound to accept the government in good

grace during its term of office. I can see no reason why the same democratic rule should not be applied to the choice of a collective bargaining agency. Democratic government would be impossible unless such a rule were adopted. Democracy in industry requires precisely the same acceptance of the expressed will of the majority until the next opportunity arises to make a change through a new election. This rule is applied in the innumerable free organizations which are so important an element in our society. I see no reason why a majority for the purposes of selecting a collective bargaining agency should be fixed at 60 per cent, 75 per cent, or any arbitrary figure above 51 per cent, the majority recognized in practically all other affairs in a democratic system.

It should also be pointed out that the true test is not whether or not a majority of the employees are members of the collective bargaining agency but whether they are willing to be represented by the collective bargaining agency.

In all these cases a majority of the employees are actually members of the union. No doubt there are others who are not members who would be willing to be represented by the union, so that the majorities desiring to be represented for collective bargaining purposes by the union may well be considerably larger than the percentages given as of the actual union membership. It is unnecessary, however, to take a vote to ascertain how large a number these are, as the majority membership in the unions is the most cogent proof of the fact that a majority of employees wish to be represented by the union.

(b) To my mind it is entirely irrelevant to the issue in dispute here that there is no evidence of the existence of present grievances in the various plants in regard to wages and conditions. The Boards did not sit for the purpose of hearing whether such grievances existed or not and no doubt the representatives of the unions would have been criticized had they seen fit to occupy the time of the Board in bringing forward a series of detailed grievances if such existed. The only question the Board is required to determine is the question of recognition of the unions and in my opinion the right to recognition of the bargaining agency chosen by the majority is in no sense dependent upon the existence or otherwise of other current grievances than the refusal of recognition.

Mr. James McCallum, a witness in this case and a steward in the union, put the matter very well when he stated that the em-

ployees, in seeking recognition of the union, believed that it could give them security in the future and that the interest of the employees in union membership was based upon their recollection of what happened during the depressions before the war and their fear that similar conditions might arise in the future unless they had the protection of strongly organized international unions. It seems to me that this is a perfectly legitimate reason why employees should, if they see fit, choose to be represented now by international unions and that industrial harmony at the present time depends upon the acceptance by employers of the bona fides of the conviction of employees that union recognition now is important to their security for the future. Recognition sought now in the remembrance of an unsatisfactory past and the hope of a different future is the bone of contention. It is a present issue of grave importance that requires to be settled now and if possible conciliated. To look for other grievances or reasons why employees seek recognition does not aid in solving the present problem.

(c) In some of the plants, including the one discussed in this report, there was an illegal stoppage of work for some hours at the time that the strike vote was taken upon which the application for a Board of Conciliation was based.

At the present time Subsection (2) of Paragraph 16 in The Industrial Disputes Investigation Act requires an application for a Board of Conciliation to be accompanied by a statutory declaration setting forth that, failing an adjustment of the dispute or a reference thereof by the Minister to the Board, a lock-out or strike will be declared.

The natural result of this provision is that where employees are seeking a Board of Conciliation they must impress the Department of Labour with the seriousness of the dispute and the likelihood of a strike if a Board is not appointed.

The Act does not outline any procedure for taking this vote and it seems to me quite natural that this provision should lead to stoppages of work. In a city like Galt, in which industry has grown rapidly, in which many of the employees come from some distance to the various plants and there is more than one shift, it is difficult to obtain a representative meeting to discuss a strike vote. While these stoppages were technically wrong, it seems to me that they were largely based upon the weaknesses in the procedure of the Act to which attention has been called from time to time by the various Congresses of Labour and by other persons. Although my

colleagues mention this matter, I do not believe that they consider these stoppages a serious reason for refusing recognition as they are prepared to recommend recognition in cases in which stoppages took place but are not willing to recommend recognition in cases in which there was no stoppage.

In short, I cannot believe that the reasons suggested by my colleagues for their unwillingness to recommend recognition of the bargaining agency preferred by a majority of the employees are valid and I am, therefore, bound to dissent from their opinion and in each of these cases recommend that the employer enter into negotiations with the local union of the United Steelworkers of America with a view to a written collective agreement recognizing such union in respect to all employees in the plant for a period to be set out in the agreement.

Even at this stage I feel bound to express the hope that industrial strife may be avoided by the willingness on the part of employers to negotiate with the unions chosen by the majority of their employees. From what has been said before the Board, I fear that some of the employers do not yet recognize the depth and sincerity of the conviction on the part of their own employees that the union is a necessary and important instrument to establishing their security, their dignity, and their status. I do not believe this desire for recognition of the union is a reflection upon the past conduct of the employers, as some of them seemed to think it was. It is a natural and inevitable development in every industrial country of the prevailing conception of industrial democracy.

To turn to the particular facts in this case, it appears that there are 630 employees eligible for membership in the union. At one time there were 380 members but it appears that some of these have left the employment of the company and only some 335 are now members of the union. This represents a small majority. It is relevant, however, to consider that an employees association was formed in March, 1943, but that this association has only secured 144 members, or 22 per cent of the eligible employees.

For the reasons which I have outlined above, I would recommend that the company enter into negotiations with the representatives of Local 2859 of the United Steelworkers of America with a view to a written collective agreement with them on behalf of all the employees.

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between Shurly-Dietrich Atkins, Galt, Ont., and its Employees

The Minister of Labour received on May 25 the report of the Board of Conciliation established to deal with a dispute between the Shurly-Dietrich Atkins Company, Ltd., and its employees, members of Local 2895, United Steelworkers of America (L.G., April 1943, p. 471).

The personnel of the Board was as follows: His Honour Judge James Parker, Toronto. Chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette and Mr. F. Andrew Brewin, both of Toronto, appointed on the nomination of the employer and employees respectively.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette; and a minority report was submitted by Mr. F. Andrew Brewin.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and re dispute between Shurly-Dietrich Atkins Co., Limited, and members of Local 2895, United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by A. Snow and S. Anderson, President and Financial Secretary, respectively, of Local 2895, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by P. Dietrich, President, E. Dietrich, Plant Superintendent, and J. Shaw, Secretary.

The sole issue for determination in this case is whether or not the company should be called upon to recognize this union as a collective bargaining agent for its employees. The number of eligible employees for membership in the union is 302, and the union claims a membership of 170. No grievance with respect to working conditions was suggested or established.

In view of the relatively slight majority claimed by the union and considering the unfair and hasty methods adopted by this union in the City of Galt, we are of the opinion that

the company should not be called upon to recognize this union.

All of which is respectfully submitted.

(Sgd.) J. Parker,

Chairman.

(Sgd.) J. J. Robinette.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the dispute between Shurly-Dietrich Atkins Company Limited, Galt, Ontario, employer, and its employees, members of Local 2895, United Steelworkers of America.

It is unnecessary for me to repeat the views which I have expressed in the similar case of Babcock-Wilcox and Goldie-McCulloch Limited.

In this case out of 302 eligible employees, some 170, or 56.3 per cent, are actual members of the union. Mr. Williams, representing the union, stated that there were other employees who do not wish to be involved in actual membership while recognition is still being opposed but who would be satisfied to be represented by the local union.

In this case the employers, after learning of the organization of the union, saw fit to encourage some of their employees to promote a ballot throughout the plant to determine whether the employees favoured a shop union. The result of the ballot was 137 for the shop union and 150 against, with three spoiled ballots.

In these circumstances, it seems to be clearly established that Local 2895, United Steelworkers of America, is the collective bargaining agency approved by the majority of the employees and I would, therefore, recommend that the Company enter into negotiations with the representatives of the union with a view to entering into a written agreement with them as the bargaining agency on behalf of their employees.

I should perhaps note that in the Company's submissions there is a reference to promises of higher wages made by union representatives to secure membership in the union. However, the Company representatives, although invited to do so, did not see fit to particularize or to substantiate this statement in any way. It seems to me, therefore, that it should be disregarded.

Mr. Williams for the union assured the Board that the necessity for applications to

the appropriate War Labour Boards for any increase in wages was clearly put before the members of the union by its representatives and indeed it would seem to me that any union which failed to disclose the necessity of applications to the Boards and the limita-

tions which exist at the present time upon the power of employers to grant wage increases would be asking for trouble.

Respectfully submitted.

(Sgd.) F. A. Brewin.

Report of Board in Dispute between the Galt Metal Industries Ltd., Galt, Ont., and its Employees

On May 25 the report of the Board of Conciliation and Investigation established to deal with a dispute between the Galt Metal Industries, Ltd., Galt, Ont., and its employees, members of Local 2894, United Steelworkers of America was received by the Minister of Labour (L. G., May 1943, p. 596).

The personnel of the Board was as follows: His Honour Judge James Parker, Chairman, appointed on the recommendation of the other two members; Mr. J. J. Robinette, appointed on the nomination of the employer and Mr. F. Andrew Brewin, appointed on the nomination of the employees. All three reside in Toronto.

The report of the Board is signed by the Chairman and Mr. J. J. Robinette; Mr. F. Andrew Brewin submitted a minority report.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and re Dispute between Galt Metal Industries Limited and members of Local 2894 United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by G. Roberts and H. O'Neil, both officers of Local 2894.

The company was represented by H. A. Elliott, General Manager, B. W. Smeed, Chief Engineer and E. C. Penney, Personnel Manager.

The only matter before the Board for determination is whether or not this union should be recognized by the Company as a bargaining agent for the employees.

The total number of employees eligible for membership in the union is 388, and the union claims from its records a membership of 315.

On March 26th, 1943, the union caused an illegal stoppage of work at the plant of the company.

The illegal strike called by the union causes us to hesitate to recommend recognition of the union, but in view of the fact that the union appears to have a substantial majority we are of the opinion that the company should recognize this union as the collective bargaining agent for the members of the union. We are not prepared to disturb the rights of the minority employees by recommending that the union should be recognized as the sole and exclusive bargaining agent for all the employees.

Therefore, our recommendation in this case is that the company recognize the union as the bargaining agent for its own members.

All of which is respectfully submitted.

(Sgd.) J. PARKER, *Chairman.*

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the dispute between Galt Metal Industries Limited, Galt, Ontario, employer, and its employees, members of Local 2894, United Steelworkers of America.

This is another case in which there is a substantial majority who are members of the union and I am glad to concur in the recommendation of the Board, thus making it unanimous, with the exception, however, that, as in the case of the R. McDougall Company, Limited, I believe that recognition of the union should be as the bargaining agency on behalf of all the employees in the plant and not simply on behalf of the employees who are members of the local. My reason for this difference is set out in the McDougall case and need not be repeated.

Respectfully submitted,

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between the Galt Brass Company, Galt, Ont., and its Employees

The Minister of Labour received on May 25 the report of the Board of Conciliation and Investigation established to deal with a dispute between the Galt Brass Company, Galt, Ont., and its employees, members of Local 2903, United Steelworkers of America (L. G., May 1943, p. 596).

The personnel of the Board was as follows: His Honour Judge James Parker, Toronto, Chairman, appointed on the joint recommendation of the other two members; Messrs. J. J. Robinette and F. Andrew Brewin, both of Toronto, appointed on the nomination of the employer and employees respectively.

The Chairman and Mr. J. J. Robinette signed the report of the Board while the minority report was submitted by Mr. Andrew Brewin.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and Dispute between Galt Brass Company and members of local 2903 United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by D. Williams, President, R. McFarland, Secretary, and W. Byron, Steward, all of Local 2903, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by J. S. McGaw and J. W. Archer, who are officers of the company.

Unlike the other companies in Galt considered by the Boards of Conciliation, we find that this company is not engaged in the production of war materials or supplies except to the extent that only one-fifth of one per cent of the company's total sales for the first three months of 1943 were shipped directly on orders from the Department of Munitions and Supply.

Therefore, we are of the opinion that the alleged dispute in this case does not involve a company engaged in the production of munitions of war or supplies within the meaning of P.C. 3495 of 1939, and, therefore, we are of the opinion that the Board of Con-

ciliation has no jurisdiction to determine the alleged dispute in this case.

All of which is respectfully submitted.

(Sgd.) J. PARKER,
Chairman.
(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the Dispute between Galt Brass Company Limited, Galt, Ont., Employer, and its Employees, Members of Local 2903, United Steelworkers of America.

In this case, 48 out of 75 eligible employees are members of the union.

No substantial reason is suggested as to why, in accordance with the Orders in Council, the principles of the Collective Bargaining Act of Ontario and the ordinary principles of industrial relationship that are applied in all civilized industrial countries, the choice of bargaining agency of the employees should not be accepted by the employer. In this case, however, the majority of the Board take the view that the Board has not got jurisdiction on the grounds that the employers and employees are not engaged in the construction, execution, production, repairing, manufacture, transportation, storage or delivery of munitions of war or supplies, as defined in P.C. 3495, dated November 7, 1939, as amended by Order in Council P.C. 1708 of March 10, 1941.

In this Order in Council, which extends the application of the provisions of The Industrial Disputes Investigation Act, the word "supplies" is very broadly defined as follows:—

"'supplies' includes materials, equipment, ships, aircraft, automotive vehicles, goods, stores and articles or commodities of every kind required or intended for war purposes including, but not restricting the generality of the foregoing (1) articles and equipment which, in the opinion of the Minister of Labour, would be essential for the needs of the Government or of the community in war; and (2) anything which, in the opinion of the Minister of Labour, is, or is likely to be necessary for or in connection with the production, storage or supply of any such article as aforesaid."

In paragraph 7 of the Industrial Disputes Investigation Act it is laid down by sub-

section (2) that the decision of the Minister as to the granting or refusal of a Board shall be final and when a Board is granted by the Minister it shall be conclusively deemed to be authorized by and to be in accordance with the provisions of the Act.

Information was given to the Board by the employers to the effect that only a very small percentage, one-fifth of one per cent., of the company's total sales for the first three months of 1943 was shipped direct on orders from the Department of Munitions and Supply. The products produced by the Company are plumbers' brass goods, valves and composition toilet tanks.

The Board did not investigate nor does it seem to me that it had the facilities to investigate the question of whether or not the persons who did secure the products of the Company had contracts with the Department of Munitions and Supply and whether or not these products were in fact supplies which in the opinion of the Minister of Labour were essential for the needs of the Government or the community in wartime.

This is a matter which it seems to me is clearly within the discretion of the Minister of Labour and I know no reason to believe that his discretion in appointing the Board

was not a sound discretion, nor any reason to believe that in his opinion the products of this Company were not essential for the needs of the Government or of the community in war. I believe that the appointment of the Board by the Minister concludes any question of his authority to appoint it and that, in the words of Section 7 of the Act, it must be conclusively deemed that the Board was granted in accordance with the provisions of the Act.

Furthermore, I do not know of any reason why, if even the smallest percentage of supplies is going to actual war purposes, the Minister of Labour has not then jurisdiction to appoint a Board.

I therefore cannot agree with my colleagues that we have not got jurisdiction in this case and consistently with reports made by me in the other cases I would recommend that the Company should be required to recognize Local 2903, United Steelworkers of America, as the collective bargaining agency on behalf of their employees and enter into negotiations with them forthwith with a view to a collective bargaining agreement.

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between the Whitehall Machine & Tools Ltd., Galt, Ont., and its Employees

On April 25 the Minister of Labour received a report from the Board of Conciliation and Investigation established to deal with a dispute between the Whitehall Machine & Tools Ltd., Galt, Ont., and its employees, members of Local 2871, United Steelworkers of America (L.G., May 1943, p. 596).

The personnel of the Board was as follows: His Honour Judge James Parker, Chairman, appointed on the nomination of the other two members, Mr. J. J. Robinette appointed on the nomination of the employer and Mr. F. Andrew Brewin, appointed on the nomination of the employees. All three reside in Toronto.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette. Mr. F. Andrew Brewin submitted a minority report.

The texts of the report of the Board and the minority report follow.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and re Dispute between Whitehall Machine and Tools Limited and members of Local 2871, United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral

representations made and argument heard on behalf of both parties.

The applicant union was represented by A. C. Hillman and W. M. Hunt, both officers of Local 2871, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by H. C. McLaughlin, President, and F. Dorner, General Manager.

The only question for determination by the Board is whether the company should be called upon to recognize this union as a collective bargaining agent for the employees at the present time.

Due to lengthy litigation the present management of the company has been in control of the plant only since March of this year. Therefore, the present management has had no adequate opportunity to date to establish a relationship with its employees.

We, therefore, feel that we should make no recommendation in this case at the present time, but that the matter before the Board should be left open for a period of three months for determination.

All of which is respectfully submitted.

(Sgd.) J. PARKER, *Chairman.*

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the dispute between Whitehall Machine and Tools Limited, Galt, Ontario, employer, and its employees, members of Local 2871, United Steelworkers of America.

In this case, 59 out of 66 employees, or 89 per cent, are members of the union.

The union was formed in December, 1942, and the membership of the union has remained constant.

I understand that the majority of my colleagues are in favour of recommending a delay of three months in dealing with this matter until after the present employers have had a longer opportunity of getting to know the employees in the plant.

It appears that a Government Controller has been in actual possession of this plant as there was some dispute amongst the shareholders as to who had the controlling interest and that the present management has only had full possession from the 1st of April.

I feel bound to dissent vigorously from the opinion of my colleagues as I regard delay in these matters as being almost inevitably productive of disagreement and strife and further friction. I cannot conceive of any proper inducements or reasons that might be put forward by the new employers to change the desire of the vast majority to be represented by the local union of the Steelworkers of which in such overwhelming numbers they have become members. The choice of bargaining agencies is entirely a matter for employees and one with which the employer is not entitled to interfere.

There seemed to me in this case to be a trace of the attitude which appeared in a good many of these other cases that the desire of employees to be represented by an international union was in some way a reflection upon the ability of the management to get along with its employees, and that the management should be prepared by satisfying some of the wishes of the employees to eradicate any desire to be represented by the union. It seems to me that this is a profoundly mistaken attitude and that the management in this case, which has only recently taken control of this plant, would have started out upon their relationship with their employees on a far happier and more satisfactory basis had they been willing to accede promptly to the evident desire of their employees that the relations between them be on the basis of the collective bargaining through the union.

I regret that the hearing in this case was not completed owing to an unfortunate incident and I would have been glad to hear any further representations that the Company might wish to make but, as my colleagues have decided that on the material already before them this is a proper case for delay or for not recommending recognition of the union at the present time, it is not necessary to continue the hearings.

I would, therefore, recommend in this case, as in the other cases, that the employer enter into negotiations forthwith with Local 2871, United Steelworkers of America, with a view to a collective bargaining agreement with them on behalf of their employees.

Respectfully submitted,

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between the R. McDougall Company, Ltd., Galt, Ont., and its Employees

The Minister of Labour received on May 25 the report from the Board of Conciliation and Investigation established to deal with a dispute between the R. McDougall Company, Ltd., Galt, Ont., and its employees, members of Local 2890, United Steelworkers of America (L.G., May, 1943, p. 597).

The personnel of the Board was as follows: His Honour Judge James Parker, Toronto, Chairman, appointed on the nomination of the other two members; Messrs. J. J. Robinette and F. Andrew Brewin, both of Toronto, appointed on the recommendation of the employer and employees respectively.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette and a minority report was submitted by Mr. F. Andrew Brewin.

Report of Board

To The Honourable The Minister of Labour.
Re: The Industrial Disputes Investigation Act and Disputes between The R. McDougall Co. Ltd., and members of Local 2890 United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made and argument heard on behalf of both parties.

The applicant union was represented by J. McIlhinney and J. Ginsod, President and Secretary, respectively, of Local 2890 and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by A. R. Oliver, Managing Director and James Marshall, Engineer.

This company has 163 employees eligible for membership in the union and the union claims a membership of 139.

No grievance against the employer has been suggested or proven and on February 9, 1943, the union caused an illegal stoppage of work lasting one-half day.

Because of the illegal stoppage of work caused by the union, this case presents some difficulty as to whether we should recommend that the union under the circumstances should be recognized by the company. However in view of the substantial majority which the union claims we are of the opinion that the company should recognize the union as the bargaining agent for the members of the union only. The rights of the employees who are not members of the union must be respected and we do not think the company should be called upon to recognize this union as the sole and exclusive bargaining agent. Therefore we recommend that the union be recognized by the company as the bargaining agent for the members of the union only.

All of which is respectfully submitted.

(Sgd.) J. PARKER.

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the Dispute between R. McDougall Company Limited, Galt, Ontario, Employer, and its Employees, Members of Local 2890, United Steelworkers of America.

In this case, a very large majority of employees are members of the union and I am glad to be able to concur in the recommendation of the majority of this report that the Company enter into negotiations with the representatives of Local 2890.

I should note that this is the only case in which there is any suggestion of intimidation by representatives of the union and no effort was made to particularize or substantiate such charges. If such charges were proven, I for one would regard them very seriously but in the circumstances they must be disregarded.

Although concurring in the report of the majority, I am bound to express my dissent from the limitations suggested as to the form of recognition to be recommended. The majority report recommends recognition "on behalf of the employees, members of the union". This seems to me to leave open the possibility of negotiations or collective bargaining by the Company with some minority group during the term of the agreement with the union which represents the majority. In my view it is quite impracticable to have more than one bargaining agency in any one appropriate unit and it is not suggested that there is more than one appropriate unit in this plant.

It seems to me that the only practicable method of achieving collective bargaining is that, once a majority of employees in any unit have freely and clearly chosen their bargaining agency, then such majority representatives must act for all employees.

It seems to me that the form of recommendation which I suggest is consistent with the public policy of this province as set out in Section 6 of the Ontario Collective Bargaining Act, which provides that once a bargaining agency has been certified by the court as representing a majority of employees, then an employer is required to bargain collectively with it in respect to his employees without exception.

I therefore concur in the recommendation of the majority of the Board with this exception that I would substitute the words "on behalf of the employees of the plant" for the phrase "on behalf of employees, members of the Union" recommended by my colleagues.

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between the J. A. M. Taylor Tool Company, Ltd., Galt, Ont., and its Employees

The Minister of Labour received a report from the Board of Conciliation and Investigation established to deal with a dispute between the J. A. M. Taylor Tool Company, Ltd., Galt, Ont., and its employees, members of Local 2903, United Steelworkers of America, on May 25 (L. G., May 1943, p. 597).

The personnel of the Board was as follows: His Honour Judge James Parker, Chairman,

appointed on the recommendation of the other two members, Mr. F. Andrew Brewin appointed on the nomination of the employees and Mr. J. J. Robinette appointed on the nomination of the employer. All three reside in Toronto.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette; Mr. F. Andrew Brewin submitted a minority report.

The texts of the report of the Board and the minority report follow.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and re dispute between J. A. M. Taylor Tool Company, Limited, and members of Local 2903, United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by Charles Smith, Guard, and Miss Bernice Duncan of Local 2903, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by J. A. M. Taylor, President and General Manager, A. R. Taylor, Vice-President and R. G. Hurde, Sales Manager.

This company carries on business in the City of Galt and compared to the other companies involved it has a small plant. The number of employees eligible for admission to the union is 30 and the union claims a membership of about 15. In such a small plant the relations between the employer and the employee can adequately be put on a personal basis.

Therefore, considering the small number of employees and the fact that the Union claims only a slight, if any, majority, we are of the opinion that we should not recommend that the company be called upon to recognize this union.

All of which is respectfully submitted.

(Sgd.) J. PARKER, *Chairman.*

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Report of Board in Dispute between the Canada Machinery Corporation, Galt, Ont., and its Employees

The Minister of Labour on May 25 received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canada Machinery Corporation, Galt, Ont., and its employees, members of Local 2905, United Steelworkers of America (L.G., May, 1943, p. 597).

The personnel of the Board was as follows: His Honour Judge James Parker, Chairman,

Minority Report

In the matter of the Industrial Disputes Investigation Act and the Dispute between J. A. M. Taylor Tool Company, Limited, Galt, Ontario, Employer, and its Employees, Members of Local 2903, United Steelworkers of America.

Once again I would refer to my dissenting report in the Babcock-Wilcox and Goldie-McCulloch Limited case for the general principles that I think are applicable in matters of this sort.

This is a small shop but I fail to see why any different principles should be applied for that reason. Out of 28 eligible employees, I understand that 15, or 57 per cent, are members of the union. In this case, perhaps because of the smallness of the plant, the employer took a particularly strong line against the union, as is apparent from the submissions put forward by the Company to the Board. In the written submissions the employer makes reference to the employees being "mere children". Again it is stated that the President and General Manager is old enough to be the father of 90 per cent of the workers and intends to look after their interests. I feel bound to say that this paternalistic outlook, however high-minded its origin, seems to me to be out of tune with the developments of the present day and likely to lead to trouble. I would respectfully suggest that the treatment of all employees as fully responsible adults and an attitude of partnership with the representatives of the employees would achieve better results.

In this case also I can find no reason why the choice of the majority of employees of Local 2903, United Steelworkers of America, as their bargaining agency should not be recognized by the company and I recommend that the employer enter into negotiations with the union with a view to an agreement with them on behalf of their employees.

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and Dispute between Canada Machinery Corporation and Members of Local 2905, United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by E. Bechtel, an officer of Local 2905, and by Arthur Williams with the Canadian Congress of Labour.

The company was represented by J. C. Scanlon, General Manager.

The following representatives of the Employees' Association were also present: R. McHendry, T. Lawrence, and G. Gallagher.

In this case the number of employees of the company eligible for membership in the union is 347, and the union claims a membership of 188.

In view of the fact that the union claims only slight majority of the employees and considering the absence of any grievances, we are of the opinion that no recommendation with respect to union recognition should be made in this case.

All of which is respectfully submitted.

(Sgd.) J. PARKER.

Chairman.

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the Dispute between Canada Machinery Corporation, Galt, Ontario, Employer, and its Employees, Members of Local 2905, United Steelworkers of America.

This case differs in some ways from the other cases discussed.

Once again there is no necessity for repetition as to the general principles that are applicable, in my judgment, where recognition of a union is the matter in dispute.

In this case the membership of the union according to the evidence is 189 out of 347 eligible employees, or approximately 54 per cent. We have, however, additional evidence of the real feelings of the employees. On February 22nd a letter asking for negotiations

with the union was sent to the management. On February 23rd a vote was held at a meeting, arranged before February 22nd it is true. This vote was held on the Company premises and in the Company time after an address by the Manager. The vote was as to whether the employees were in favour of a Shop Committee. Seventy-nine, or 22 per cent, of all the eligible employees were in favour of the Shop Committee, 162 were opposed. Nevertheless, on February 25th, the Company entered into an agreement which recognized the employers association as an exclusive bargaining agency for its employees.

According to the terms of the agreement it was to be for one year's duration and from year to year unless notice of abrogation or amendment was given in writing thirty days before the expiration (presumably by one or other of the parties to the agreement). It is interesting to observe that this employer apparently had no objection to entering into an exclusive bargaining agreement although the group with which he chose to deal had been clearly indicated to be a very small minority of the employees. In my opinion this agreement is clearly contrary to the whole intent and purpose of the government policy under the Orders in Council and the public policy of this province as set out in the Collective Bargaining Act of Ontario. It is a device to prevent collective bargaining with the union chosen by the employees free from any interference by the employer (P.C. 2685). In my view it should be disregarded by the Board.

I understand that my colleagues agree that their recommendation should not be affected by the agreement arrived at in this way but they are nevertheless unwilling to recommend recognition of the union because of the smallness of the majority of actual union membership.

It seems to me that the effect of making no recommendation will be to give sanction to an arrangement by the Company which, as I have said, seems to me entirely contrary to the whole spirit of government policy.

In this particular case there was no illegal stoppage and absolutely no suggestion of misrepresentation or misstatement by union representatives. It is true that the majority of the employees who are members in the union is a bare majority but nevertheless the preference of the employees was clearly shown in the vote on February 23rd.

I cannot for the life of me see any good reason why recognition of the union in this case should not be recommended and I

suggest with some confidence that in this case the only recommendation that can be made consistent with the Orders in Council and the law of this province is that the employer should enter into negotiations with

Local 2905 with a view to a collective bargaining agreement on behalf of the employees in the plant, and I so recommend.

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between the Galt Malleable Iron Co., Ltd., Galt, Ont., and its Employees

On May 25 the Minister of Labour received the report of the Board established to deal with a dispute between the Galt Malleable Iron Co., Ltd., Galt, Ont., and its employees, members of Local 2899, United Steelworkers of America (L.G., May, 1943, p. 597).

The personnel of the Board was as follows: His Honour Judge James Parker, Chairman, appointed on the joint recommendation of the other two members; Mr. J. J. Robinette, appointed on the nomination of the employer and Mr. F. Andrew Brewin appointed on the nomination of the employees. All three reside in Toronto.

The report of the Board was signed by the Chairman and Mr. J. J. Robinette. A minority report was submitted by Mr. F. Andrew Brewin.

The texts of the report of the Board and the minority report follow.

Report of Board

To The Honourable The Minister of Labour.

Re: The Industrial Disputes Investigation Act and Dispute between The Galt Malleable Iron Company, Limited, and Members of Local 2899 United Steelworkers of America.

The Board of Conciliation and Investigation established in this matter has held sittings at Galt and Toronto. At the sittings in Galt written submissions were filed and read, oral representations made, and argument heard on behalf of both parties.

The applicant union was represented by M. McIntosh and W. H. Ellis, President and Financial Secretary, respectively, of Local 2899, and by Arthur Williams of the Canadian Congress of Labour.

The company was represented by H. J. Bassett, General Manager.

The number of employees eligible for membership in the union is 175 and the union claims a membership of 112.

The company has expressed its willingness to enter into a collective bargaining agreement with a committee of the employees.

In view of the reasonably substantial majority claimed by the union we think that the company should recognize the union as the collective bargaining agent for its own members. We do not think that the rights of the minority employees should be disturbed to the extent of a recommendation that the union be recognized as the sole and exclusive bargaining agent for the employees.

Therefore, our recommendation in this case is that the company recognize the union as the collective bargaining agent for its own members only.

All of which is respectfully submitted.

(Sgd.) J. PARKER.

(Sgd.) J. J. ROBINETTE.

Toronto, May 24, 1943.

Minority Report

In the matter of the Industrial Disputes Investigation Act and the Dispute between Galt Malleable Iron Company, Limited, Galt, Ontario, Employer, and its Employees, Members of Local 2899, United Steelworkers of America.

In this case, I understand that my colleagues are recommending that, in view of the substantial majority, i.e. 64 per cent of the eligible employees being members of the local union, the Company recognizes the union as the bargaining agency on behalf of the employees, members of the union.

While I concur in the recommendation of the majority that there should be recognition of the union, once again I am bound to dissent from the form of recognition recommended.

I need not repeat what I have said in my report in the R. McDougall Company case. In my view the only practicable and proper rule is that, once a collective bargaining agency has been chosen by a majority within any particular unit, then it must speak for all the employees during the term of the agreement and no leeway should be permitted for competing agencies during the currency of the agreement.

I therefore concur in the recommendation of the majority of the Board with this exception that I would substitute the words "on behalf of the employees of the plant" for the

phrase "on behalf of the employees, members of the union".

Respectfully submitted.

(Sgd.) F. A. BREWIN.

Report of Board in Dispute between Howard Smith Paper Mills, Ltd., Beauharnois, P.Q., and its Employees

On May 4 the Minister of Labour received a unanimous report from the Board of Conciliation established to deal with a dispute between the Howard Smith Paper Mills, Ltd., Beauharnois, P.Q., and its employees, members of the National Catholic Syndicate of Pulp and Paper Workers of Beauharnois (L.G. Dec., 1942, p. 1376).

The personnel of the Board was as follows: Honourable Mr. Justice Alfred Savard, Quebec Superior Court, Quebec, P.Q., Chairman, appointed on the joint recommendation of the other two members; Mr. C. N. Moisan, Montreal, P.Q., appointed on the nomination of the employer and Mr. Maximilien Caron, Montreal, P.Q., appointed on the nomination of the employees.

The text of the Board's report is printed below.

Report of Board

Montreal, April 20, 1943.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Howard Smith Paper Mills, Ltd., at Beauharnois, P.Q., and its Employees.

The Board of Conciliation and Investigation appointed under your sanction to investigate and conciliate the difficulties between the Howard Smith Paper Mills, Ltd., at Beauharnois, and its employees, has the honour to submit its report.

The facts may be summed up as follows:

Up to the Fall of 1942, and for many years previous, the employees of the Howard Smith Paper Mills, Ltd., at Beauharnois, were associated with the American Federation of Labour, and were members of a local of the aforementioned trade union, at Beauharnois. They had their own officers, but the negotiations between the Company and its employees were generally carried out through the medium of a Mr. Reynolds, a travelling business agent appointed by the head office of the American Federation of Labour.

At the end of 1941, a contract was drafted to govern the working conditions which were to prevail at the mill during 1942. It was submitted for approval to the members of the local, at Beauharnois. The employees, at that time, wanted a readjustment of salaries in certain departments. One of the clauses

of the agreement was not clear. The men were given to understand that they could, at any time, apply to the Regional War Labour Board to have the matter of salaries reconsidered. They were prevailed upon to accept the agreement, and were given to understand that the fact of their signatures would not be a bar to any request which they might present. The Company was not made aware of this.

When the demand for readjustment of salary came before the Regional War Labour Board, the employees were told that a contract had been signed and that the same wages were to prevail during the year 1942.

The employees met again at Beauharnois, and expressed their dissatisfaction to Mr. Reynolds who advised them to take a strike vote which he was not to press immediately but which he was to keep in his pocket and use it if he saw fit to do so. The Company, apparently, was not advised to that effect.

These disappointments left the men entirely dissatisfied with the service they were receiving from the American Federation of Labour. They withdrew en bloc from the above Union and decided to strike. The Department of Labour has declared this strike to be illegal.

Some of them consulted Mr. Maxime Raymond, K.C., M.P. for Beauharnois, who advised them to return to work and to honour their contract for its duration. He suggested to them that it might be to their advantage to associate themselves with the Syndicats Catholiques.

This suggestion was finally accepted; they returned to work, joined almost en bloc the Syndicat Catholique. A local was organized, and the Syndicat Catholique is now the trade union serving the employees at Beauharnois.

An application was made to the Department of Labour for this Board of Conciliation.

At the outset of the sittings, before proceeding any further, the Company expressed the desire to investigate what had brought the men to strike. This demand was granted, and the board held a sitting at Beauharnois. The full facts were placed before the board by the employees who were questioned by the officials of the Company and its counsel.

There was an adjournment, and it was decided to call the officials of the American Federation of Labour to secure their version.

Mr. D'Aoust and Mr. Reynolds appeared before the board and were questioned at length.

After the completion of this examination, it was decided by all parties to carry on further the work of the board. Such examination was not, perhaps, within the scope of the work of the board, but it did contribute to clarify certain issues and smoothen relations between both sides.

The petition requesting the appointment of the board did not contain any statement of facts concerning the issues which were to be considered.

The employees were requested to present a brief covering the questions which were to be submitted.

At a subsequent meeting, the employees formulated the following demands:

1. The recognition by the Company, of the Syndicat as bargaining agent for its employees;
2. The negotiation of a collective agreement;
3. The granting to the employees of the same schedule of wages as the one prevailing at Cornwall.

Adjournment was granted to the Company to consider these demands.

At the next meeting, the Company reported that it was willing to negotiate with the Syndicat as the bargaining agent, that it was willing to enter into a collective agreement. As to the wages, it was represented that they were relevant of the jurisdiction of the Regional Board, only.

As the question of wages was the main issue raised by the employees, it was suggested that both parties return to Beauharnois, discuss between themselves the matter of wages, obtain a ratification from the Regional War Labour Board, and embody the schedule as approved in the agreement to be signed. This was accepted.

Some weeks previous, the Company had prepared a general increase in the Booklet Department.

It had been submitted to the Regional War Labour Board which had given its approval. The employees had not been consulted, but apparently were satisfied with its provisions.

In the course of the discussion, at Beauharnois, on the question of the readjustment of wages, the Company, in addition to the increase granted in its Booklet Department, agreed to give a raise to thirteen other employees.

The parties came back before the board, and after considerable discussion, agreed to sign the agreement, with the understanding that the Syndicat was to apply to the Regional War Labour Board and submit the demand in the cases where no increase had been granted.

The contract was signed with that reserve. Before being signed, the draft agreement was submitted to the general meeting of the employees who voted its approval, and authorized its officers to sign it. It is the intention of the men to appear before the Regional War Labour Board to press their demand for readjustment of wages.

A certain number of the employees have not yet received any increase. It is not within the province of this board to deal with the question of wages, and without wishing to interfere outside of its sphere, this board feels that it would be in the interest of better relations between the Company and its employees if it would meet them some way in their request, and if the board would ratify such increase.

We take this opportunity of expressing our thanks to the officials of the Company and to their attorneys, and also to the representatives of the employees who have shown a sincere desire of understanding and conciliating their respective contentions.

The whole respectfully submitted.

(Signed) Alfred Savard.

C. N. Moisan.

Maximilien Caron.

Conciliation Work of the Department of Labour during May, 1943

SIXTY-SIX industrial disputes came to the attention of the Industrial Relations Branch of the Department during May, and were dealt with by Industrial Relations Officers and, in Ontario, by the additional services of the Conciliation Officers of the province working in co-operation with the Federal Department. In nearly every instance an amicable adjustment of the matters in dispute was secured by the investigating officer. The disputes of peculiar interest or importance are

summarized in the statement below which represents a partial review of the activities of the Branch during the month.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Fredericton. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and North Western Onta-

rio; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the Province of Quebec and one officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

TANK PARTS WORKERS, BRANTFORD, ONT.—Early in May information reached the Department that a strike had occurred on May 1, 1943, among employees in the tank parts division of the Market Street Plant of Massey-Harris Co. Ltd., Brantford, Ont. There were 99 women belonging to three shifts and 3 heat-treat men of one shift involved in the dispute, which arose out of the institution of new piece-work rates based on time studies, which were considerably lower than temporary rates which had been in effect since early March. An Industrial Relations Officer, Mr. F. J. Ainsborough of Toronto, immediately proceeded to the scene of the strike and after negotiations lasting three days brought about an agreement upon conditions for a return to work. The strikers had joined the United Automobile Workers of America, but were content to have direct negotiations on their behalf carried on through an Industrial Plant Council. Both the Council and a mass meeting of the strikers with Union representatives in attendance endorsed the solution reached. Some employees resumed work on May 8 and production was fully restored on May 10.

SUGAR REFINERY EMPLOYEES, SAINT JOHN, N.B.—During May Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., investigated a dispute involving a threatened strike by some 330 employees of Atlantic Sugar Refineries, Ltd., Saint John, N.B. The dispute arose over allegations by Local No. 20, Sugar Refinery Workers' Union (T. and L.C.), that the Company had violated the clause of its Agreement concerning seniority and a demand of the Company's checkers for payment of punitive overtime wage rates. A signed understanding supplementing the Collective Agreement between the Company and the Union was reached in regard to seniority provisions and vacancies which would be posted on bulletin boards. The wage dispute was referred to the Regional War Labour Board for New Brunswick.

MOTOR VEHICLE WORKERS, HAMILTON, ONT.—On May 1, 1943, the Department was advised by an officer of Local Union No. 2868, United Steelworkers of America, Hamilton, Ont., that a brief stoppage of work had occurred on

April 30 by a small group of employees in the scout car department of the International Harvester Company, Ltd., Hamilton, Ont., because of the Company's refusal to meet a Union committee to discuss union recognition. A further strike was threatened on May 7 unless the Company agreed to negotiate with a committee representing the employees who were members of the Union. Mr. H. Perkins, Industrial Relations Officer, Toronto, entered the situation on May 5 and got the company to agree to hold an election under Departmental supervision to determine the wishes of the employees in regard to a bargaining agency. The results of the vote are given below under "Union Representation Votes". Negotiations in regard to union recognition have not yet been concluded.

COAL MINERS, SYDNEY MINES, N.S.—On May 20, 625 employees of Old Sydney Collieries, Ltd., working at the Princess Colliery, Sydney Mines, N.S., went on strike when members of Local No. 4535, United Mine Workers of America, refused to work with eight non-union employees. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., endeavoured to secure a settlement of the dispute by conferring with officials of the Company and of District No. 26 of the Union. Work was resumed on May 25th, after all the non-union workers had signed union membership cards.

FREIGHT HANDLERS, FORT WILLIAM AND PORT ARTHUR, ONT.—A six-hour strike of employees of the Steamship Forwarding Company, a subsidiary of Canada Steamship Lines, Ltd., occurred on May 4, when the company announced a two-shift working schedule to overcome problems created by the refusal of the men to work overtime. The strike involved some 550 workmen, members of Lodges 408 and 418, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Negotiations covering proposed wage adjustments were later arranged between representatives of the employing Company, the local lodges and the General Chairman of the Interior Steamship Board of Adjustment of the Union, with Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, representing the Department of Labour. After three days of discussions agreement was reached between the Company, the General Chairman and the Union Committee upon the terms of a joint application to the National War Labour Board. However the terms of this proposal were rejected by the membership of the two lodges. Further conferences were scheduled for June 9.

UTILITY WORKERS, NEW WATERFORD, N.S.—Intervention by Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., averted a threatened strike during May by 21 employees of the Seaboard Power Corporation Ltd., New Waterford, N.S., a subsidiary of Dominion Steel and Coal Corporation, Ltd. The employees, members of Local No. 4528, United Mine Workers of America, contended that by custom their wage rates were established on a basis similar to those paid by Old Sydney Collieries, Ltd., and Acadia Coal Co., Ltd., and that accordingly they were entitled to an adjustment when the rates of the latter two companies were brought up to the same level as those of the Dominion Coal Company. This was agreed to by the management of Seaboard Power Corporation which applied for permission to make such adjustment to the Regional War Labour Board for Nova Scotia. Permission was granted as of the date of the Company's application, April 30, 1943. The employees then threatened to strike unless the increased wage rates were made retroactive to February 1, 1941, the date of the Dominion Coal Company's agreement with District No. 26, U.M.W.A. Settlement was reached upon the basis of a new joint application to the Regional Board for authority to pay the increased rates retroactively to October 3, 1942, when the rates of the other two subsidiaries were levelled up.

SHIPYARD AND DOCKYARD WORKERS, VICTORIA AND ESQUIMALT, B.C.—During April employees of Yarrows, Ltd., Esquimalt, B.C., Victoria Machinery Depot Co., Ltd., Victoria B.C., and H.M.C. Naval Dockyard, Esquimalt, B.C., members of Local No. 2, Boilermakers and Iron Shipbuilders Union of Canada decided not to work overtime although they received punitive wage rates for so doing. Approximately 1500 men were involved. The workers based their objections on the effect of income taxation on overtime rates. Mr. G. R. Currie, Industrial Relations Officer of Vancouver, investigated the situation in company with F. G. Coburn of the Treasury Department and explained the income tax to the workers. The men then decided to work overtime as required, but reiterated their protest against the tax situation.

As a result of the settlement of this dispute it was decided between the Department of Labour, the Finance Department and the Department of National Revenue that steps would be taken to have a competent official in each of the District offices of the Income Tax Division of the Department of National Revenue available, in the case of industrial disputes, to explain the details of income tax.

TEXTILE WORKERS, MILLTOWN, N.B.—In April, 1942, the Department was asked by the United Textile Workers of Canada, Local Union No. 10, to conduct an investigation of labour conditions at the St. Croix Mill of Canadian Cottons, Ltd., Milltown, N.B., with particular reference to the Company's refusal to permit maintenance men to be covered under its collective agreement with the Union, differences concerning the unwillingness of a Union official to accept a promotion which would prevent his continuance as a union member; allegations that battery hands were compelled to assume added responsibility with no increase in wages; seniority problems; a general wage increase and wage grievances of weavers and junior employees. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., conducted joint conferences of the parties and succeeded in settling some of the matters at issue and in having others referred to the Regional War Labour Board of the Province. Some of the more important issues were still in dispute at the end of the month.

SHIPYARD WORKERS, NORTH VANCOUVER, B.C.—When a competing union put forward claims to bargaining rights on behalf of a group of employees in the stores department of Burrard Dry Dock Co., Ltd., North Vancouver, B.C., the Dock and Shipyard Workers' Union, C.C.L., and the Company requested the Minister of Labour, through Mr. F. E. Harrison, Western Representative of the Department, to nominate an independent Arbitrator to decide the question. The Minister appointed Mr. Arthur M. Whiteside, K.C., of Vancouver, B.C., who was called upon to interpret an agreement between the parties, one clause of which stated that "this Union shall cover all Labourers in all departments not otherwise covered by another Union. . . ." The Arbitrator ruled that 26 workmen employed under charge hands in the stores department were labourers within the meaning of the clause and therefore came under the jurisdiction of the Dock and Shipyard Workers' Union, but the remaining employees in the department were mainly stock clerks, rather than manual labourers.

On May 19 an investigation into certain working conditions in the electrical department of the Burrard Dry Dock Co. Ltd., was requested by the Electrical Workers' Unit No. 3, Amalgamated Building Workers of Canada. Among the allegations put forward by the Union were anti-union activities and intimidation on the part of a supervisory official and mismanagement of the men. Mr. F. E. Harrison conferred with the management and a large delegation of employees and secured the adoption of a new system of grievance

procedure which eliminated the source of what the Union members considered intimidation. By direct negotiations agreement was reached in respect of complaints that the Company required considerable overtime to be worked at time-and-one-half pay but would not allow the employees on naval refitting work to perform overtime on the sixth, or bonus, day when double-time would be paid.

AIRCRAFT PARTS WORKERS, BELLEVILLE, ONT.—Towards the end of May a request was made by the United Automobile Workers of America for a representation vote among employees of the Reliance Aircraft and Tool Co., Ltd., Belleville, Ont. Mr. H. Perkins, Industrial Relations Officer, Toronto, was assigned to deal with the situation. After preliminary conversations it was mutually agreed that if, after an independent examination of the Company's payroll records and the Union's membership cards by Mr. Perkins, the result showed a majority of the employees were members of the Union, the Company would dispense with a vote and recognize the U.A.W. as bargaining agency. An examination of the records indicated that the Union had 61 per cent of 450 employees as members, and at the end of the month a draft agreement was being drawn up for consideration by the parties.

Unions Representation Votes

MOTOR VEHICLE WORKERS, HAMILTON, ONT.—By joint consent of all parties concerned, Mr. H. Perkins, Industrial Relations Officer, Toronto, supervised a vote among employees of the International Harvester Co., Ltd., Hamilton, Ont. Out of 1,591 ballots cast, 510 were marked in support of the question, "Do you want to bargain collectively with your employer through the Works Council?"; 946 marked their ballots opposite the question, "Do you want to bargain collectively with your employer through Local 2868, the United

Steelworkers of America, C.I.O.?" and 115 voted opposite the statement, "I do not desire to be represented by either of the above organizations". There were about 2100 employees concerned and 20 spoiled ballots.

MOTOR VEHICLE WORKERS, TORONTO, ONT.—By a majority of 231 to 67, employees of W. D. Beath and Sons, Toronto, Ont., voted on May 17 in favour of bargaining collectively with their employer through the International Association of Machinists, A.F. of L., in preference to the W. D. Beath and Sons Shop Committee. There were 5 spoiled ballots among the 303 votes cast. Mr. G. F. Fenwick, Conciliation Officer, Toronto, supervised the vote by joint consent of the parties.

RUBBER WORKERS, BOWMANVILLE, ONT.—Employees of the Goodyear Tire and Rubber Co. Ltd., Bowmanville, Ont. voted on May 17th to decide whether or not the workers wanted to deal with their employer for purposes of collective bargaining through Local Union No. 189, United Rubber Workers of America. Out of 255 ballots cast, 249 polled their votes in favour of the Union and 5 voted against it. There was 1 spoiled ballot. The vote was taken by joint consent of the Company and the Union under the Supervision of Mr. H. Perkins, Industrial Relations Officer, Toronto.

SANITARY FIXTURE WORKERS, PORT HOPE, ONT.—By joint consent of the parties a ballot was conducted on May 6, 1943, among employees of the Port Hope Sanitary Manufacturing Co. Ltd., Port Hope, Ont., under supervision of Mr. H. Perkins, Industrial Relations Officer, Toronto. The ballot read: "Do you want to bargain collectively with your employer through the Port Hope Industrial Union, Canadian Congress of Labour?" A total of 265 employees cast their ballots as follows:—Voting "Yes", 220; voting "No", 42; spoiled ballots, 3.

Strikes and Lockouts in Canada during May, 1943

WHILE the number of strikes and lockouts recorded for May was higher than the previous month both the number of workers involved and the time loss in man working days decreased sharply, being about 50 per cent lower than in April. The figures for May show 39 strikes, involving 15,351 workers, with a time loss of 46,792 days, as compared with 37 strikes in April, with 30,526 workers involved and a time loss of 102,685 days. During May, 1942, there were 32 strikes, involving 6,904 workers, with a time loss of 18,047 days.

During the month three strikes, involving aircraft factory workers in Vancouver, motor vehicles factory workers at Hamilton and metal factory workers at Galt, accounted for about 55 per cent of the workers involved and over 70 per cent of the time loss.

Five strikes, involving 8,196 workers, were carried over from April and 34 commenced during May. Of these 39 strikes five resulted in favour of the workers, thirteen in favour of the employers, two were compromise settlements and 12 were indefinite in result work being resumed pending final settlement of

each dispute. At the end of the month, therefore, there were seven strikes reported as un-terminated, namely: Coal Miners at Stellarton, N.S., fur workers at Toronto, Ont., fur factory workers at Point aux Trembles, P.Q., fur factory workers at Quebec, P.Q., motor vehicles factory workers at Hamilton, Ont., metal factory workers at Galt, Ont., and machinists at Ville LaSalle, P.Q.

The record does not include minor strikes such as are defined in another paragraph, nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such strikes are listed in this paragraph for a period up to one year after their removal from the table of current strikes.

The following table gives information for April and May, 1943, and May, 1942:—

Date	Number of strikes	Number of workers involved	Time loss in man working days
*May, 1943.....	39	15,351	46,792
*April, 1943.....	37	39,526	102,685
*May, 1942.....	32	6,904	18,047

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless 10 days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1943*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		

Strikes and Lockouts in Progress Prior to May, 1943

MANUFACTURING—				
<i>Fur and Leather Products—</i>				
Fur factory workers, Toronto, Ont.	1	22	500	Commenced April 19; against agreement signed with another union; un-terminated.
<i>Textiles and Clothing—</i>				
Clothing factory workers (cutters), Montreal, P.Q.	1	65	195	Commenced April 27; against employment of a non-union worker; terminated May 4; (conciliation federal); (union agreement signed), in favour of workers.
Cotton factory workers, Montmorency Village, P.Q.	1	(b) 420	420	Commenced April 29; for union recognition; terminated May 1; conciliation (provincial); return of workers pending negotiations for a union agreement; indefinite.
<i>Metal Products—</i>				
Aircraft factory workers, Vancouver, B.C.	4	6,739	13,400	Commenced April 28; re adoption of rest periods; terminated May 3; return of workers; in favour of employer.
<i>Shipbuilding—</i>				
Shipyard workers, Saint John, N.B.	1	950	500	Commenced April 30; for reinstatement of a worker and dismissal of a charge hand; terminated May 1; conciliation (federal); return of workers pending arbitration; in favour of workers.

Strikes and Lockouts Commencing During May, 1943

MINING, ETC.—				
Quarry workers, Scotch Lake, N.S.	1	32	640	Commenced May 3; for increased wages; terminated May 25; return of workers pending reference to the National War Labour Board; (increased cost of living bonus approved) compromise.
Coal miners, Minto, N.B...	1	(c) 128	128	Commenced May 5; against conveying timber in the day shift; terminated May 5; conciliation (federal); in favour of employer.
Coal miners, Bellevue, Alta.	1	240	240	Commenced May 7; re transportation to mine; terminated May 7; return of workers; in favour of employer.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May, 1942, issue, in the review of "Strikes and Lockouts in Canada and other Countries, 1941". The latter included a table summarizing the principle statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in March was 152 and 7 were still in progress from the previous month, making a total of 159 disputes in progress during the month; 47,400 workers were involved in the disputes in progress during the month and the time loss was 122,000 working days.

Of the 152 disputes beginning in March, 40 arose out of demands for increased wages and 39 over other wage questions; 6 on questions as to hours; 26 over questions as to employment of particular classes or persons; 35 over other questions as to working arrangements; 2 on questions of trade union principle; and 4 were sympathetic strikes. Final settlements were reached in 118 disputes, of which 20 were settled in favour of workers, 67 in favour of employers and 31 resulted in compromises; in 30 other disputes, work was resumed pending negotiations.

United States

The number of strikes beginning in April was 395, involving 200,000 workers in these new strikes. The time loss for all disputes in progress during the month was 675,000 man-working days.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods

MEDICINE HAT, ALBERTA.—THREE FLOUR MILLING COMPANIES AND THE MEDICINE HAT FLOUR AND CEREAL WORKERS FEDERAL UNION No. 121.

Agreements to be in effect from March 16, March 31, and April 5, 1943, respectively, each for a period of one year and thereafter subject to 60 days' notice. The companies recognize the union as the bargaining agent for its members.

Hours: 8 or 9 per day according to conditions prevailing in various departments. Overtime: all work over 9 hours per day or 54 per week is payable at time and one half; for work on holidays and on Sundays (except those who normally work on Sundays and are given another day off), time and one half. Vacation: employees of two of the above companies have one week's vacation annually after two years' service and two weeks after ten years' service.

Hourly wage rates for some classes: employees of one company—trick millers 60 cents, smutters 46 cents, oiler 47½ cents, packers 42½ to 47½ cents, warehouse loaders 47½ cents, assistant millwright 60 cents, power operator 47½ cents; employees of the second company—trick millers 64 cents, smutters 51½ cents, oilers 48½ cents, packers and loaders 48½ cents, assistant millwrights 63 cents; employees of the third company—bolters and grinders 60 cents, smutters 48 cents, oilers 44 cents, packers 40 and 46 cents, loaders 46 cents, assistant millwright 55 cents. In the case of the first two companies, the agreements provide for a cost of living bonus in accordance with federal government regulations.

Provisions are made in all three agreements for seniority rights and for the settlement of disputes.

Manufacturing: Metal Products

LACHINE, QUEBEC.—DOMINION ENGINEERING WORKS LTD. AND THE HOURLY RATED EMPLOYEES AS REPRESENTED BY THE METAL TRADES COUNCIL OF MONTREAL.

Agreement to be in effect from April 1, 1943, to November 23, 1943, or for another year if required notice is not given in 1943. No discrimination against any employee on account of union membership, and the union not to coerce employees into membership.

Hours and overtime: time and one half for all hours in excess of 9 per day and 5 on Saturdays except for yardmen and labourers who are paid time and one half for all work in excess of 9 per day, Monday to Saturday inclusive; double time for work over 12 hours in any day and for all work on Sundays and holidays.

Hourly wage rates for some classes: male trainees over 18 years or those younger who have a certificate from a recognized training school, 35 cents for first 12 weeks, 40 cents for second twelve weeks; male trainees not holding such a certificate 25 cents during first 4 weeks and 30 cents during second 4 weeks; after the completion of 12 weeks at 40 cents, trainee to be classified as an "improver" at 45 cents, with increases of 5 cents per hour each four weeks until rate for the job is reached. Minimum hourly rates for certain classified operations: babitter 60 cents, blacksmiths 60 to 80 cents; carpenters 55 and 65 cents, chippers 55 to 75 cents, operators 55 to 80 cents, electricians 60 to 80 cents, engineers 60 and 70 cents, fitters and assemblers 55 to 80 cents, helpers (general) 50 cents, horizontal boring machine operators 55 to 90 cents, inspectors 55 to 85 cents, labourers 45 cents, layout men 60 to 90 cents, machine shop maintenance 60 to 80 cents, milling machine operators 55 to 90 cents, painters 50 and 60 cents, pipefitters 55 to 75 cents, slingers 50 to 75 cents, toolmakers 80 to 95 cents, welders 60 to 80 cents. Minimum wage rates on night shift are 5 cents per hour over the day scale.

Provision is made for seniority rights and for the settlement of disputes.

ST. LAURENT (MONTREAL), QUEBEC.—THE ROBERT MITCHELL CO. LTD. AND UNITED SEELWORKERS OF AMERICA, LOCAL 2830 (FOUNDRY WORKERS).

Agreement reached following application (later withdrawn) for a board under the Industrial Disputes Investigation Act, to be in effect from January 19, 1943, to January 18, 1944 (or 1945 if required notice not given for 1944). The agreement covers employees who are members of this union. No discrimination against employees because of union membership, and the union will not coerce other employees into membership. All employees who were

members of the union when the agreement was reached and all who later become members shall remain members for the duration of this agreement.

Hours: 8 per day, 48 per week. For female employees, rest periods of 15 minutes are allowed morning and afternoon. Overtime is payable at time and one half for the first four hours and double time thereafter; double time for all work on Sundays and holidays. A cost-of-living bonus to be paid in accordance with existing governmental regulations.

Apprentices are limited to one to each eight journeymen and they are to serve four years when they will become journeymen. Seniority rights are established and the method for settlement of disputes.

PETERBORO, ONTARIO.—GENELCO LTD. AND UNITED ELECTRICAL RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 524.

Agreement to be in effect from April 29, 1943, to April 28, 1944, and thereafter from year to year, subject to notice. No discrimination against any employee on account of union membership and the union will not intimidate employees into membership.

Hours: 9 per day, 5 on Saturdays, a 50-hour week. Overtime is payable at time and one half, including all work on Sundays and holidays. Wages: It is the policy of the Company to pay wage rates equal to or better than the average rates paid in the community for comparable work, subject to government legislation; wage rates to be adjusted in accordance with the schedule mutually agreed on. A cost-of-living bonus is paid in accordance with instructions of the National War Labour Board.

Night work: a bonus of 5 per cent will be paid for recognized second and third shifts. Seniority rights and methods of settlement of disputes are provided for.

In a supplementary agreement of the same date, the parties agree to negotiate the question of vacation with pay, and if they cannot agree either party may make a submission to the Regional War Labour Board. Further more detailed provisions are made for seniority rights and for the settlement of grievances.

LEASIDE (TORONTO), ONTARIO.—CANADIAN AIRCRAFT INSTRUMENTS AND ACCESSORIES LTD. AND INTERNATIONAL ASSOCIATION OF MACHINISTS, AIRCRAFT LODGE 1625.

Agreement reached following a dispute and the mediation of an official of the Department of Labour. Agreement to be in effect from May 3, 1943, to May 2, 1944, and thereafter from year to year, subject to notice. The Company agrees to bargain exclusively with the union as long as this local represents a majority of the hourly paid employees. No discrimination against any employee on account of union membership or activity, and the union will not intimidate any employee into membership.

Hours: 48 per week. Overtime is payable at time and one half. For work on Sundays and holidays, double time. Vacation: All employees who have been with the company from the beginning of the calendar year are entitled to one week's vacation with pay during the summer.

Minimum hourly wage rates: Production workers—beginners 40 cents, learners 45 cents, classified production workers 50 to 75 cents, set-up men 60 to 90 cents, inspectors and checkers 85 cents, journeymen 80 cents, journeymen's

helpers 60 cents, tool makers 90 cents to \$1.10, toolmakers' assistants 70 cents. Provision is made for seniority rights and for the settlement of disputes.

WALKERVILLE (WINDSOR), ONTARIO.—THE CANADIAN BRIDGE CO. LTD. AND HOURLY RATED EMPLOYEES OF ITS NOS. 1 AND 2 PLANTS WHO ARE MEMBERS OF THE INTERNATIONAL UNION, UNITED STEEL WORKERS OF AMERICA, LOCAL 2471.

Agreement to be in effect from March 1, 1943, to February 28, 1944, and thereafter from year to year, subject to notice.

The company recognizes a plant committee as bargaining agency for the employees. Employees are free to join or to refrain from joining any union or association. The company is not to discriminate against any employee on account of union membership, and union members are not to coerce other employees into union membership. Seniority rights and methods of settlement of disputes are provided for.

Manufacturing: Shipbuilding

Following the recommendations of the Royal Commission (L.G., Sept., 1942, p. 1007) and further negotiations (p. 732 of this issue) the following supplementary agreements have been signed implementing the "continuous operation" plan. Similar agreements for Victoria shipyards were noted in the LABOUR GAZETTE, April 1943, p. 488.

VANCOUVER, B.C.—BURREAD DRY DOCK CO. LTD. OF NORTH VANCOUVER, NORTH VAN SHIP REPAIRS LTD. AND THE BLACKSMITHS AND HELPERS' UNION OF CANADA, LOCAL No. 1.

Supplementary agreements to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreements will be reverted to and these supplementary agreements terminated except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreements. (The basic agreement for the North Van Ship Repairs Ltd. was noted in the LABOUR GAZETTE, January, 1942, p. 106 and that for the Burrard Co. in the June, 1942, issue, p. 737.)

Upon 60 days' notice given after the cessation of hostilities, negotiations will be entered into to reduce the hours of work in order to take care of returned service men and post war problems.

Hours: The shipyards operate seven days per week and three shifts per day, and employees work six consecutive shifts and have the seventh day off as a day of rest; these days of rest are to be rotated; with a change every four weeks. If required to work on his weekly day of rest, an employee to be paid double time. For the day shift, 8 hours to be worked, 48 per week, with pay for 51 hours; for the second shift, 7½ hours to be worked, 45 per week, with pay for 9 hours a shift, 56 hours a week; for the third shift, 7 hours to be worked, 42 per week, with pay for 9 hours a shift, 56 hours a week. Premiums thus included of one hour's pay per week for the first shift, two hours' pay each for the second and third shifts are payable only on working six shifts in a calendar week unless prevented from doing so by the company or by injury incurred during one of these shifts. The additional premium of two hours' pay per week for the day shift is for working

the last half of the sixth shift and is to be paid even if six consecutive shifts are not worked. The number of statutory holidays is reduced to six, in accordance with Order in Council 8682 (L.G., Oct., p. 1171).

Vacation: After one year's service, one week's vacation with pay during the succeeding year.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, BURRARD (VANCOUVER), DRY DOCK CO. LTD., NORTH VAN SHIP REPAIRS LTD. AND BOILERMAKERS AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL No. 1.

Supplementary agreements to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreements will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. These agreements terminate the supplementary agreements of April, 1942 (L.G., Feb., 1943, p. 217). (The original agreements for the Burrard Dry Dock Co. Ltd. of North Vancouver and the North Van Ship Repairs Ltd. were noted in the *LABOUR GAZETTE*, March, 1940, p. 278; an amendment (applicable to both of these firms) was noted in the June, 1941, issue, p. 700; a second amendment to each of these two agreements was noted in the April, 1942, issue, p. 481. The original agreement for the Burrard (Vancouver) Dry Dock Co. Ltd. was noted in the *LABOUR GAZETTE*, June, 1942, p. 737.)

The terms of these three supplementary agreements of May 1, 1943, are the same as those for the blacksmiths' union as noted above.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS, LTD. AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 452.

Supplementary agreement to be in effect from May 1, 1943, until the cessation of hostilities when the basic agreement will be reverted to and this supplementary agreement terminated, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. (The basic agreement was noted in the *LABOUR GAZETTE*, Oct., 1942, p. 1208.) The terms of this supplementary agreement are the same as in the agreement for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, BURRARD (VANCOUVER) DRY DOCK CO. LTD., NORTH VAN SHIP REPAIRS LTD. AND AMALGAMATED BUILDING WORKERS OF CANADA, SHIPYARD SECTION.

Supplementary agreements to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreements will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. These agreements terminate the previous supplementary agreements of April, 1942 (L.G., Feb., 1943, p. 218). (The basic agreement for the Burrard Dry Dock Co. Ltd. of North Vancouver was noted in the *LABOUR GAZETTE*, Oct., 1942, p. 1208; that for the Burrard (Vancouver) Dry Dock Co. Ltd., in the issue of Feb., 1943, p. 218; and that for the North Van Ship Repairs Ltd., in the issue of Dec., 1941, p. 1570.)

The terms of these three supplementary agreements of May 1, 1943, are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, BURRARD (VANCOUVER) DRY DOCK CO. LTD., NORTH VAN SHIP REPAIRS LTD. AND AMALGAMATED BUILDING WORKERS OF CANADA, ELECTRICAL WORKERS' SHIPYARD SECTION.

Supplementary agreements to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted to and this supplementary agreement terminated, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreements. These agreements terminate the previous supplementary agreements of April, 1942 (L.G. Feb., 1943, p. 217). (The basic agreements were noted in the *LABOUR GAZETTE*, December, 1941, p. 1570, with amendments as noted in the April, 1942, issue, p. 481.)

The terms of these three supplementary agreements of May 1, 1943, are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, BURRARD (VANCOUVER) DRY DOCK CO. LTD., NORTH VAN SHIP REPAIRS LTD., WEST COAST SHIPBUILDERS' LTD., AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 692.

Supplementary agreements to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreements will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreements. (The basic agreement for the Burrard Dry Dock Co. Ltd. of North Vancouver was noted in the *LABOUR GAZETTE*, July, 1940, p. 728, and that for the North Van Ship Repairs, Ltd., in the issue of Feb., 1941, p. 180; amendments to both were noted in the April, 1942, issue, p. 481.)

No basic agreement between this union and the Burrard (Vancouver) Dry Dock Co. Ltd. is on file in the Department. With reference to the West Coast Shipbuilders Ltd., no basic agreement was signed, but this supplementary agreement was signed nevertheless. The terms of the supplementary agreements of May 1, 1943, are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, AND NATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 3.

Supplementary agreement to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement; it terminates the previous supplementary agreement of April, 1942 (L.G., Feb., 1943, p. 218). (The basic agreement was noted in the *LABOUR GAZETTE*, June, 1940, p. 606, and an amendment in the April, 1942, issue, p. 481.) The terms of this supplementary agreement are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—NORTH VAN SHIP REPAIRS LTD. AND INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL 115.

Supplementary agreement to be in effect from May 1, 1943, until the cessation of hostilities,

when the basic agreements will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. (The basic agreement was noted in the *LABOUR GAZETTE*, Feb., 1943, p. 217.) The terms of this supplementary agreement are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, NORTH VAN SHIP REPAIRS LTD. AND BROTHERHOOD OF PAINTERS, DECORATORS & PAPERHANGERS OF AMERICA, LOCAL 138.

Supplementary agreements are to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreements will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreements; it terminates the previous supplementary agreements of April, 1942 (*L.G.*, Feb., 1943, p. 218.) (The basic agreements signed by both companies, was noted in the *LABOUR GAZETTE*, May, 1940, p. 493, and amendments in the April, 1942, issue, p. 481.) The terms of these supplementary agreements are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, AND AMALGAMATED BUILDING WORKERS OF CANADA, PATTERN-MAKERS' UNIT.

Supplementary agreement to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. (The basic agreement was noted in the *LABOUR GAZETTE*, December, 1941, p. 1570, with amendment in the April, 1942, issue, p. 481.) The terms of this supplementary agreement are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, NORTH VAN SHIP REPAIRS LTD. AND UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS AND STEAMFITTERS, LOCAL 170.

Supplementary agreements are to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement; they terminate the previous supplementary agreements of April, 1942 (*L.G.*, Feb., 1943, p. 218.) (The basic agreement for the Burrard Dry Dock Co. Ltd., was noted in the *LABOUR GAZETTE*, July, 1940, p. 728, and that for the North Van Ship Repairs Ltd., in the issue of Feb., 1941, p. 180; amendments to both agreements were noted in the issue of April, 1942, p. 481.) The terms of these supplementary agreements are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, AND SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL 280.

Supplementary agreement is to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted

to, except as to the provisions for vacations with pay and rates of pay, which shall remain in force and become part of the basic agreement; it terminates the agreement of April, 1942 (*L.G.*, Feb., 1943, p. 218.) (The basic agreement was noted in the *LABOUR GAZETTE*, July, 1940, p. 729, and an amendment in the issue of April, 1942, p. 481.) The terms of this supplementary agreement are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—BURRARD DRY DOCK CO. LTD. OF NORTH VANCOUVER, NORTH VAN SHIP REPAIRS LTD. AND DOCK AND SHIPYARD WORKERS' UNION OF VANCOUVER, LOCAL No. 2.

Supplementary agreements are to be in effect from May 1, 1943, until the cessation of hostilities, when the basic agreement will be reverted to, except as to the provisions for vacations with pay and rates of pay, which shall remain in force and become part of the basic agreements; they terminate the agreements of April, 1942 (*L.G.*, Feb., 1943, p. 217). The basic agreements were noted in the *LABOUR GAZETTE*, December, 1941, p. 1570, with amendments in the issue of April, 1942, p. 481.) The terms of these supplementary agreements are the same as those for the blacksmiths' union, as noted above.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LTD. AND AMALGAMATED BUILDING WORKERS OF CANADA, WELDERS AND BURNERS' UNIT No. 4.

Supplementary agreement to be in effect from May 1, 1943, until the cessation of hostilities when the basic agreement will be reverted to, except as to the provisions for vacations with pay and rates of pay which shall remain in force and become part of the basic agreement. (The basic agreement was noted in the *LABOUR GAZETTE*, October, 1942, p. 1208.) The terms of this supplementary agreement are the same as those for the blacksmiths' union, as noted above.

'Transportation and Public Utilities: Water Transportation

NORTH SYDNEY, N.S.—NEWFOUNDLAND RAILWAY AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL 1259.

Agreement to be in effect from January 1, 1943, to December 31, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect which was noted in the *LABOUR GAZETTE*, December, 1942, p. 1485, with these exceptions:

The hourly wage rate is increased by 5 cents to: 55 cents for day work, 65 cents for night work; the cost of living bonus of 7 cents per hour is continued. Provision is now made for the settlement of disputes.

MONTREAL, QUEBEC.—CERTAIN STEAMSHIP COMPANIES (OCEAN NAVIGATION) AND INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL 1657 (CHECKERS AND COOPERS).

Agreement to be in effect from April 15, 1943, to December 31, 1943, and thereafter from year to year, subject to notice. (The previous agreement for these workers was with another union and was noted in the *LABOUR GAZETTE*, June, 1940, p. 729.) Preference in employment

to be given members of the above local union, when available.

Hourly wage rates: for checkers, 64 cents for day work, 74 cents for night work; for coopers, 63 cents for day work, 73 cents for night work; checkers employed as head checkers, in office work or on stowage or as warehousemen, 5 cents per hour extra. A war bonus of 6 cents per hour is paid. In addition to hourly wage rates and the war bonus, there is a cost of living bonus of 8 cents per hour which is to be adjusted with changes in the cost of living, in accordance with federal government regulations. Meal hours are fixed, and if required to work through them, men are to be paid at double time until relieved; double time for all work on Sundays and three holidays; employees called to work mails, express or baggage on Sundays or holidays to be paid from time of reporting, with a minimum of two hours at the prevailing rate.

Arrangements are made for the settlement of grievances.

Transportation and Public Utilities: Air Transportation

CANADA.—CANADIAN PACIFIC AIR LINES LTD. AND ITS EMPLOYEES ENGAGED ON AIR TRANSPORTATION, FIELD MAINTENANCE AND SHOP EMPLOYEES ENGAGED IN THE MAINTENANCE OF AIRCRAFT, AERO ENGINES AND SUCH OTHER EQUIPMENT AS MAY BE USED IN AIR TRANSPORTATION, AS REPRESENTED BY A DULY ACCREDITED COMMITTEE OF THE SAID EMPLOYEES.

Hours: For field maintenance employees, 8 hours to be specified if possible; if required to work more than 48 hours per week, compensatory time off to be allowed. For shop employees, the normal working day to be 8 hours; for work in excess of 48 hours in a week, compensatory time off to be allowed. Vacation: after one year's service, monthly rated employees to have two weeks' vacation with pay.

Monthly wage rates for certain classes: air engineer (senior) \$175, journeymen \$165, inspector \$175, air engineer \$115 during first year to \$155 during fifth year and after; dopers, upholsterers, fabric workers \$110 and \$130, junior mechanic \$105 to \$125, helpers \$60 to \$100, cleaner and labourer \$75, apprentices \$60 to \$150, storekeepers \$100 to \$125, shipper and receiver \$110 and \$115, issuer \$60 to \$90, truck driver \$85 to \$100. Apprentices, if accepted, are to serve five years, when they will be journeymen mechanics or air engineers in their respective classifications. Provisions are also made for seniority rights and for the settlement of grievances.

Trade

CALGARY, ALBERTA.—TWO WHOLESALE GROCERY ESTABLISHMENTS AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS, LOCAL 528.

Agreement to be in effect from April 1, 1943, to March 31, 1944, and thereafter from year to year, subject to notice. No discrimination against employees on account of union activity.

Hours: 48 per week; overtime at time and one half; work on Sundays or holidays, double time. Monthly wage rates: shippers \$120, head packer \$115, receivers \$115, truck drivers \$105,

warehousemen \$105, junior warehousemen \$85, pickup boys \$60. Inexperienced help (except pickup boys) to receive \$10 less than the regular rate for first six months and \$5 less during second six months. Vacation: After one year's service, employee entitled to a vacation of 10 days, with pay. Seniority rights and procedure for the settlement of disputes are provided for.

Service: Public Administration

CALGARY, ALBERTA.—CITY OF CALGARY AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 348.

Agreement to be in effect from January 1, 1942, to December 31, 1943, and thereafter from year to year, subject to notice. The general working rules and conditions in the agreement applicable to all civic employees at Calgary were noted in the *LABOUR GAZETTE*, December, 1938, p. 1420, and are still in effect.

Hours: 40 per week, except operators who work for 44 hours. Overtime: time and one quarter for first hour, time and one half for next three hours and double time thereafter; double time for Saturdays (as long as 40 hour week is in force), Sundays and holidays.

Daily wage rates: journeymen cable splicer \$8.70; line, repair and testing, maintenance and trouble, trolley, welding, station, inside and ear wiring, armature winding journeymen \$8.05, apprentices to these trades \$3.35 to \$6.40, groundman \$5.85, arc trimmers \$6.60, motor and controller man \$6.90, line inspector \$8.80, station and operating departments—operator \$155.20 to \$170.82 per month, apprentice operators \$3.20 to \$4.20.

Vacations are to be governed by the general agreement for all civic employees except that operators on shifts to have three weeks vacation with pay after three years' continuous service in that work. Apprentices to serve four years, and one apprentice allowed to three journeymen except for inside wiremen and operators where one apprentice allowed to one journeyman.

Service: Business and Personal

GLACE BAY, N.S.—A DRY CLEANING ESTABLISHMENT AND THE DRY CLEANING AND LAUNDRY EMPLOYEES, LOCAL NO. 1.

Agreement reached following strikes noted in *LABOUR GAZETTE*, April, p. 486, to be in effect from March 1, 1943, to February 29, 1944. Hours: 44 per week, and each employee has the right to work each day of the week. Overtime is payable at time and half, double time for all work on Sundays and holidays. Vacation: the parties are to negotiate the proposal that employees with six or more months' service have one week's vacation with pay, and those with one year's service, two weeks. Wages: employees may refer the matter of wages to the Regional War Labour Board, whose finding shall be embodied into this agreement.

CALGARY, ALBERTA.—CERTAIN OPERATORS OF RESTAURANTS AND THE HOTEL AND RESTAURANT EMPLOYEES INTERNATIONAL ALLIANCE, LOCAL 282.

Agreements to be in effect from January 1, 1943, to December 31, 1943, and thereafter from year to year, subject to notice. All employees must be or become union members.

Hours: 8 per day, 48 per week, with one day off in seven. Overtime is payable at time and one-half. Minimum weekly wage rates: female employees \$14, except apprentices or learners who may be paid from \$10 during first month to \$12 during third month, waitresses on a lunch counter (counter girls) \$16, female short order cooks \$18, bus boys \$15, part time female em-

ployees 40 cents per hour with a minimum of \$1.60 on each occasion. A cost of living bonus is payable in accordance with federal government regulation. Where meals are furnished, 15 cents may be deducted from wages for every meal taken. Vacation: after one year's service, one week's vacation with pay each year.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, page 86. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of three new agreements, the amendment of one and the extension of the period of another, all of which are noted below. Requests for the extension of new agreements for funeral undertakers at Montreal and checkers and coopers (ocean navigation) at Montreal were published in the *Quebec Official Gazette*, May 8, and for a new agreement for building trades at Ste. Agathe, in the issue of May 29. Requests for the amendment of the agreements for police department employees, firefighters, municipal employees (outside services) and municipal employees (permanent) all in Quebec city, and tanneries throughout the province were published in the issue of May 1; for the amendment of the agreements for the paper box (uncorrugated paper) manufacturing industry throughout the province, garages and service stations at Montreal, barbers and hairdressers at Three Rivers and building trades at St. Hyacinthe in the

issue of May 8; for the amendment of the agreement for the fur industry at Quebec city, in the issue of May 22; and for the amendment of the agreement for hardware stores at Quebec, retail stores, etc., at Magog and the sheet metal industry at Montreal, in the issue of May 29.

Manufacturing: Fur and Leather Products

FINE GLOVE MANUFACTURING INDUSTRY, PROVINCE

On Order-in-Council, dated April 28, and gazetted May 1, makes obligatory the terms of a new agreement between certain manufacturers of fine gloves and La Fédération Nationale des Gantiers (The National Federation of Glove Makers). The agreement is to be in effect from May 1, 1943, to December 31, 1943, and thereafter from year to year, subject to notice. It applies throughout the province of Quebec.

Hours: 9 per day, 4 on Saturday, a 49 hour week.

Apprenticeship to be for two years for table cutting of gloves and mitts; one year for stitching gloves and mitts; no apprenticeship for examining, blocking, block cutting, machine cutting (clicking) and cutting around the pattern (knife cut) of fine gloves and mitts. One apprentice table cutter allowed to every 20 table cutters or fraction thereof employed by one employer, and one apprentice operator to each ten operators or fraction thereof. Wages are \$6 to \$12 per week for apprentice table cutters and \$7 and \$9 for apprentice operators.

An employer may not have mitts or gloves cut or blocked at his employee's home, but may have them sewn and examined there if he wishes. Employers not to charge needles to operators.

Wages for stitching, examining and blocking: the former basic piece rate schedule which has been adjusted for a few classes and enlarged from time to time, remains in effect. In this schedule the piece rates for cities and towns of less than 15,000 population are 10 per cent below the larger cities (other than Quebec and Three Rivers). The increase payable over the basic rates is now 21 per cent.

Wages for cutting operations: the former piece rate schedule for this section of the industry which had been adjusted for some classes, remains in effect, as also the provision that the piece rate for cities and towns of less than 15,000 population is 10 per cent less than in the larger cities. The increase payable over the basic rates is now 32 per cent.

WORK GLOVE MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council,

dated April 28, and gazetted May 1, makes obligatory the terms of a new agreement between certain manufacturers of work gloves and La Fédération Nationale des Gantiers (The National Federation of Glove Makers). The agreement is to be in effect from May 1, 1943, to December 31, 1943, and thereafter from year to year, subject to notice. It applies throughout the province of Quebec and replaces the two agreements which formerly were separately in effect, one for cutters, the other for other operations.

Hours: 9 per day Monday to Thursday, 8 on Friday, 4 on Saturday, a 48 hour week in the cutting departments; 9 per day, 4 on Saturdays, a 49 hour week in the other departments. Apprenticeship is two years for cutting and one year for stitching; no apprenticeship for other operations. One apprentice allowed to every ten cutters or fraction thereof for cutters and for operators. Weekly wages of apprentices \$7 and \$9 during first year. Home work is forbidden. Employers not to charge needles to their employees.

Wages: For the cutting departments, the basic wage schedule, which from time to time has been adjusted and subject to general percentage increases, remains in effect; the percentage increase over the basic rates is now 37½ per cent. For other departments, the basic wage schedule also remains in effect; the percentage increase over the basic rates for these departments is now 21 per cent. For all departments in cities and towns of a population of 15,000 or less, wage rates are 10 per cent less than in the larger cities.

Manufacturing: Textiles and Clothing

DRESS MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, dated May

19, and gazetted May 22, amends the previous Orders in Council (L.G., Oct., 1940, p. 1075, Nov., p. 1202; March, 1942, p. 353; March, 1943, p. 340) by a change which does not affect the summaries as previously given.

Manufacturing: Printing and Publishing

LITHOGRAPHING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, dated April 28, and gazetted May 1, makes obligatory the terms of a new agreement between certain lithographing firms and the Amalgamated Lithographers of America Local 27, which is to be in effect from May 1, 1943 to December 31, 1943, and thereafter from year to year, subject to notice. It applies throughout the province of Quebec.

The terms of this agreement are similar to those of the agreement previously in effect between this same union and the Canadian Lithographers' Association, Province of Quebec Branch (L.G., Dec., 1940, p. 1310; May, 1942, p. 631; Feb., 1943, p. 219, April, p. 490) with these exceptions:—

The hourly wage rates for feeders and feeder operators in the press department are increased by 4 cents per hour for the lower paid classes to 6 cents for those receiving over 60 cents per hour. Vacation: After one year's service, all employees to have an annual vacation of one week with ½ week's pay.

Service: Business and Personal

HAIRDRESSERS, MONTREAL.—An Order in Council, dated May 12, and gazetted May 22 extends the term of this agreement (L.G., Oct., 1941, p. 1315, Dec. p. 1573; July, 1942, p. 857; April, 1943, p. 490) to June 6, 1944.

Protection on the Home Front

At the annual meeting of the Industrial Accident Prevention Associations, last April, Mr. T. A. Rice, retiring president, spoke in part as follows:

"To-day all the world is engaged in building barriers against an enemy. Our air force, our army, our navy, are all barriers which we as a nation are erecting at great expense against a common foe. In order that these national barriers may remain strong enough to resist attack and help us to win a victory, the second line barriers must be effectively built in all our workshops on the widespread home front. . . . Do we realize that every time a barrier is allowed to fall, another man or woman goes off the production line to the hospital? In these times a barrier lost on the home front, in your shop or mine, may be just as important as an outpost lost in Libya, in the Solomons, or on any other fighting front. A man down on the home front is a man lost to the cause, temporarily at least."

Mr. Rice referred to some specific barriers as follows:

"Goggles—a barrier between sight and blindness. Often the difference between a good

workman doing a fine job and a total loss to production and liable to become in the end a drain on society.

"Safety Shoes—a barrier between a man who can walk perfectly while he performs a worthwhile job and a casualty who draws our sympathy and needs attention.

"Guards on Saws or Punch Presses—all barriers between a good workman able to use all his faculties and a maimed man or woman who must forever be given sympathetic preference and put on light work of a minor nature.

"Safety Feet on Ladders—often the only barrier between a workman performing a dangerous job overhead and a workman who ultimately arrives in the hospital as a casualty from a fall due to a sliding or broken ladder.

"Locked Starting Boxes on Electrical Equipment—very often the only barrier between the maintenance repair man doing repair work and possible electrocution or mangling of an innocent victim when the prime mover is started by someone who does not know a man is working on the equipment."

War Emergency Training

Statistical Summary for the Month of April, 1943—Training for Farm Work—Cost of Program during Fiscal Year 1943

AT the end of April, 1943, 18,631 persons were attending the various classes being carried on under the provisions of the War Emergency Training Program. As compared with the enrolment on April 30, 1942, this total represents an increase of approximately 3,500 trainees.

While there was a sharp decrease in the number training in the pre-employment industrial classes there were substantial increases in the part-time industrial, R.C.A.F., Navy and plant school totals. The total enrolment in the pre-employment classes on April 30, 1943, was 2,954, as compared with 4,899 at the end of April, 1942. It is believed that the peak enrolment in this type of training has been passed.

In part-time industrial classes, however, there were 4,167 individuals in training at the end of April, 1943, an increase of about 2,300 persons, as compared with 1,871, the total in training on April 30, 1942. There is little change in the Army totals, but the enrolment in the Navy classes has increased from 178 to 945 trainees.

At the end of April of this year there were 1,282 trainees enrolled in plant schools as contrasted with 371 for April, 1942.

The supply of trainees for full-time pre-employment classes has shrunk and in some areas it has been impossible to enrol a full class.
